# THE OFFICIAL GAZETTE

OF THE

# United States Patent Office.

Vol. 376—No. 1. TUESDAY, NOVEMBER 6, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,545,204, W. P. Schirmer, Rotary pump, decided September 27, 1928, claims 10 and 11.

Pat. 1,642,032, H. L. Keith, Control system, decided September 26, 1928, claims 4 and 5.

---

Final decisions in interference have been rendered against the following trade-marks:

T. M. 178,525, Jelly soap, A. R. Holder, Abilene, Tex. Registered January 15, 1924. Decided September 17, 1928.

T. M. 222,061, Chemical compound for cleaning upholstery and carpets, W. K. Lepper, Gloversville, N. Y. Registered December 21, 1926. Decided September 17, 1928.

---

## Access to Pending Applications.

No person except the applicant, the assignee whose assignment is of record, or the attorney of record will be permitted to have access to the file of any application, except as provided for under the interference rules, unless written authority from the applicant, assignee, or attorney, identifying the application to be inspected, is filed in the case to become a part of the record thereof, or upon the written order of the Commissioner, which will also become a part of the record of the case.

# NOTICE.

## WITHDRAWING CASES FROM ISSUE.

## RECORDING ASSIGNMENTS.

**The job of printing the Official Gazette with approximately 1,200 original cuts each week and of issuing over 1,200 patents, designs, and trade-marks each Tuesday, is so stupendous that it has been necessary for the Patent Office to rigidly enforce Rules 165 and 188 in order to make certain that the Gazette and patents will be issued on the day they are dated. The first of these rules is against withdrawing a case from issue after the final fee has been paid and the other makes it necessary for an assignment to "be recorded in the Patent Office at a date not later than the day on which the final fee is paid." Every now and then a request is made for the Office to make exceptions to one or the other of these rules. Therefore this notice is published so that those doing business with this Office may know that these rules are of necessity being rigidly enforced and that no exceptions can be made to them.**

**Oct. 18, 1928.**

**THOMAS E. ROBERTSON,**
**Commissioner.**

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decision.

EX PARTE PETERSON.

*Decided October 15, 1928.*

1. APPLICATION—ABANDONMENT—NONRESPONSIVE AMENDMENT.

Where, following an Office action in which some claims were rejected and others allowed, an amendment was filed canceling some of the rejected claims, amending others, and adding two new claims, with only a statement that the amendment responds to the Office action, that one of the new claims virtually replaces a claim and involves a specific result of an element and the other claim pertains to the general structure and is believed to be a good claim, *Held* that this amendment is not responsive, and when the Examiner reached the case for action after the year he properly held the application abandoned.

2. SAME—SAME—SAME—PURPOSE OF ORDER 2801.

Order 2801 was intended merely to emphasize the necessity of the enforcement of rule 68 as to the presentation of proper arguments, reasons, or showing of patentability.

3. SAME—SAME—DUTY OF THE EXAMINER.

"If the examiner had noticed when the amendment was filed that it did not completely conform to the rule and the order, he should have called the attorney's attention to that fact; but in view of the vast amount of work before this Office, it is not deemed practical or expedient to burden the Examiner with a positive requirement that he make such preliminary examinations of amendments when they are first received as to enable him to always send such warning notice, nor can his failure so to act be held to excuse the attorney's neglect."

PETITION to revive.

CHAIR AND STEPLADDER COMBINATIONS.

*Mr. Louis M. Schmidt* for Peterson.

KINNAN, *First Assistant Commissioner:*

The applicant petitions that this case, held by the Examiner to be abandoned by reason of failure to make a complete response within the period required by law, be revived.

The record shows that on September 24, 1926, certain claims in this case were rejected and others were held allowable. On September 6, 1927, an amendment was filed canceling three of the rejected claims, making a slight amendment in one of the others, and adding two new claims, numbered 10 and 11. This amendment was accompanied only by a statement that—

The above responds to Office letter of September. 24. 1926. Claim 11 virtually replaces claim 3 and involves a specific result for the catch devices,

and that—

Claim 10 pertains to the general structure and is believed to be a good claim.

On December 21, 1927, the Examiner held the application abandoned for lack of sufficient prosecution, which holding was repeated on May 15, 1928, in response to an argument filed February 10, 1928, and this petition was filed May 28th. The fact should be noted the applicant delayed until nearly the expiration of the year before filing the amendment of September 6, 1927, so there was not much time within which to notify him of the incomplete nature of his amendment.

The petition is not accompanied by any further explanation of why the new claims are supposed to be patentable or how they avoid the reference, but after arguing that the amendment was sufficient includes the statement—

If more were needed for any reason whatsoever, more would willingly be supplied upon proper advice.

It is obviously the duty of an applicant to present to the Examiner, while the application is pending before the latter, any and all reasons the applicant desires to have considered as to why the claims should be allowed over the art of record to the end that a just decision may be reached and unnecessary appeals be avoided. It is also important the entire history of the prosecution of an application, including all arguments and reasons advanced for the allowance of the claims of the patent, be of record in order that subsequently, when necessary, the true scope of the protection granted may be properly determined.

The requirement of rule 68 that, in amending, an applicant must clearly point out the patentable novelty which he thinks the case presents and must show how his amendment avoids the references or reasons presented by the Examiner has been in force for about half a century. Order 2801 was intended merely to emphasize the necessity of its enforcement as to the presentation of proper arguments, reasons, or showing as to patentability. It must be presumed registered attorneys are familiar with the proper practice in connection with the presentation of amendments to claims and in offering of new claims.

It is the plain duty of Examiners to cooperate with attorneys and inventors, so far as is reasonably possible, in all proper efforts to bring about the prompt issue of valid patents and to avoid accidental or unintentional lapses of rights by abandonment. If the Examiner had noticed when the amendment was filed that it did not completely conform to the rule and the order, he should have called the attorney's attention to that fact; but, in view of the vast amount of work before this Office, it is not deemed practical or expedient to burden the Examiner with a positive requirement that he make such preliminary examinations of amendments when they are first received as to enable him to always send such warning notice, nor can his failure so to act be held to excuse the attorney's neglect. This view seems justified and particularly so where, as above noted, the applicant delayed making any response at all until the statutory period had nearly expired.

The meager statement made by the attorney obviously complied neither with the rule nor the order and, as noted above, no sufficient response has as yet been filed.

The petition is therefore denied but without prejudice to its prompt renewal accompanied by a proper statement.

## U. S. Circuit Court of Appeals—Third Circuit.

RICHES, PIVER & CO. *v.* NITRATE AGENCIES CO.

*Decided March 23, 1928; rehearing denied May 25, 1928.*

[25 Fed. Rep. (2d) 860.]

PATENTABILITY—PROCESS OF MANUFACTURING CALCIUM ARSENATE AS AN INSECTICIDE—CLAIMS BROADER THAN INVENTION.

Where the disclosure of the patent is that the addition of electrolytes of sodium hydroxide and calcium nitrate to solutions at the time of reaction prevents the occlusion of soluble compounds of calcium and arsenic and the claims are not only for these electrolytes but for all hydroxide electrolytes, *Held* that the claims are invalid as being broader than the invention, since "whatever the invention of the patent may be, it is certain that not all electrolytes or compounds added in accordance with the teaching of the patent prevent occlusion of undesirable water solubles."

APPEAL from the District Court of the United States for the District of New Jersey; William Clark, Judge.

Patent infringement suit by Riches, Piver & Co. against the Nitrate Agencies Company. Decree for defendant, and plaintiff appeals. Affirmed.

*Mr. George H. Mitchell* and *Mr. Lewis J. Doolittle* for the appellee.

*Mr. Stephen H. Philbin* and *Messrs. Fish, Richardson & Neave* for the appellee.

Before BUFFINGTON, WOOLLEY, and DAVIS, Circuit Judges.

DAVIS, *Cir. J.*:

This is an appeal from a decree of the district court holding invalid United States Letters Patent No. 1,237,815, issued to George R. Riches and William C. Piver, on August 21, 1917. The patent relates to a process for the manufacture of calcium arsenate, a widely used insecticide, free from "soluble arsenic" or "acid salt." The defenses were invalidity and noninfringement. The district judge found the patent invalid, but did not pass upon the question of infringement.

The problem in its manufacture is, in the first place, to produce a substance which will kill insects without damaging plants and plant life on which it is used, and, in the second place, to produce it economically and in such condition that it will adhere to plants on which it is used. It is made by causing lime and arsenic acid to react, so as to form a salt, or calcium arsenate, but in order to be sure of obtaining it an excess of lime is employed in the defendant's process. In manufacture there are formed four calcium arsenates—mono-calcium arsenate, di-calcium arsenate, tri-calcium arsenate, and the basic arsenate. The third salt, tri-calcium arsenate, but usually called calcium arsenate, is the salt of the patent. The first and second salts are soluble in water and readily decompose, forming arsenic acid, which injures plants and foliage.

The patent deals with the problem of avoiding the formation of these undesirable and injurious arsenic salts or water solubles by the use of electrolytes added to the solution at the time of reaction, which, the patentee says, will prevent the occlusion of these soluble arsenic compounds. The defendant, on the other hand, does not control or prevent these water solubles by the addition of electrolytes, as the patent teaches, but prevents them by means of temperature and agitation, which plaintiff recognizes, but says are unimportant and make slight difference. In this respect, the defendant's practices differ from the teaching of the patent.

Again, the plaintiff, not only did not teach the necessity of the use of excess lime in the manufacture of calcium arsenate, but actually taught the contrary. The disclosure of the patent is that the addition of electrolytes of sodium hydroxide and calcium nitrate to solutions at the time of reaction prevents the occlusion of soluble compounds of calcium and arsenic. The claim is not only for the electrolytes of sodium and calcium nitrate, but for all hydroxide electrolytes. Whatever the invention of the patent may be, it is certain that not all electrolytes or compounds added in accordance with the teaching of the patent prevent occlusion of undesirable water solubles. Claims 1 and 2 are, therefore, broader than the patent.

Many catalytic agents had been used in the prior art in the manufacture of lead arsenate and calcium arsenate, before the disclosures of the patent in question. Nitric acid and acetic acid had been used. Lead arsenate and calcium arsenate were manufactured by both the plaintiff and defendant. The Patent No. 892,603, to Luther and Volck, relates to the manufacture of arsenate of lead, a similar insecticide, by the use of an electrolyte. This is made by the reaction of arsenic acid and calcium oxide. "The reaction is effected after a catalyzing agent has been added."

It was old in the insecticide art, prior to Riches and Piver, to employ an independent electrolyte for the purpose of bringing about a complete combination between arsenic acid and a basic oxide. The record shows that the manufacture of calcium arsenate by the reaction of lime and arsenic acid in the presence of sodium hydroxide was well known, and so the patent discloses an expedient well known in the art.

In claim 1, a compound is used to prevent occlusion; in claim 2, an independent electrolyte is used; and in claim 3 sodium hydroxide is used. The defendant did not use any of these to prevent occlusion. The defendant used soda ash to control the density or bulkiness of the finished product, and it had no other function. On the other hand, plaintiff never used soda ash in its commercial process. It does not reduce water solubles, but tends to increase them.

We are of opinion that defendant did not infringe, and that plaintiff's patent is invalid. Therefore the decree is affirmed.

---

## Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

508,462, W. A. Baglin, Machine for uniting nap bats to hat bodies, filed Apr. 18, 1910, D. C. Mass., Doc. E 166 (E708 Circuit Crt.), *Matteawan Mfg. Co.* v. *Merrimac Hat Co.* Dismissed without prejudice Mar. 16, 1915.

819,652, W. E. Hassam, Pavement and process of laying same; 861,650, 861,651, W. E. Hassam, Artificial structure and process of making same, filed Aug. 7, 1911, D. C. Mass., Doc. E 276 (E882 Circuit Crt.), *Hassam Paving Co.* v. *City of Lowell, Mass.* Dismissed without prejudice Mar. 16, 1915.

861,650. (See 819,652.)

861,651. (See 819,652.)

873,731, J. H. Cunningham, Boots and shoes, filed May 15, 1911, D. C. Mass., Doc. E 256 (E855 Circuit Crt.), *J. H. Cunningham* v. *Nesmith Shoe Co.* Dismissed without prejudice Jan. 2, 1925.

1,018,502, Just & Hanaman, Incandescent body for electric lamps; 1,180,159, I. Langmuir, Incandescent electric lamp, D. C., S. D. N. Y., Doc. E 39/399, *General Electric Co.* v. *S. Jones et al.* Patents held valid and infringed Sept. 13, 1928. Same, Doc. E 40/152, *General Electric Co.* v. *F. & S. Gas & Electric Supply Co., Inc., et al.* Decree as above Sept. 18, 1928.

1,052,166, 1,052,167, C. Nessler, Apparatus for waving hair, D. C., N. D. Ohio, E. Div., Doc. 2434, *Nestle Patent Holding Co. et al.* v. *The S. Le Mur Co.* Dismissed without prejudice Aug. 22, 1928.

1,052,167. (See 1,052,166.)

1,068,429, A. Helmlich, One-piece brassière and princesa slip, D. C., S. D. N. Y., Doc. E 37/55, *A. Helmlich* v. *Model Brassiere Co.* Dismissed upon merits Sept. 19, 1928.

1,082,331. (See 1,082,463.)

1,082,463, Hopkins & Fellows, Wrapping machine; 1,082,331, same, Automatic feeding and cutting mechanism for plastic material, appeal filed Sept. 12, 1928, C. C. A., 1st Cir., Doc. 2280, *The George Close Co.* v. *Ideal Wrapping Machine Co. et al.*

1,109,950, A. Andrew, Signaling apparatus; 1,160,315, E. R. Newell, Elevator signaling apparatus; 1,322,895, R. H. Gaylord, Elevator signal system, filed Sept. 13, 1928, D. C., S. D. N. Y., Doc. E 46/317, *Elevator Supplies Co., Inc.*, v. *Norton-Blair-Douglass, Inc.*

1,125,476, G. Claude, System of illuminating by luminescent tubes, filed Sept. 6, 1928, D. C., S. D. N. Y., Doc. E 46/301, *Claude Neon Lights, Inc.*, v. *American Neon Light Corp.* Same, filed Sept. 11, 1928, D. C., W. D. Wash., S. Div., Doc. E 364, *Claude Neon Electrical Products, Inc.*, v. *C. Eckstein (Eckstein & Sharpe Co.).* Same, D. C., N. D. Calif. (San Francisco), Doc. 2192–L, *Claude Neon Electrical Products, Inc.*, v. *J. Laib, jr.* Decree for plaintiff, patent held void Sept. 19, 1928. Same, D. C., S. D. Calif. (Los Angeles), Doc. E M–5–M, *Electrical Products Corp.* v. *Recreations & Amusements, Inc.* Dismissed July 17, 1928.

1,129,942, H. D. Arnold, Gaseous repeater in circuits of low impedance; 1,329,283, same, Thermionic amplifier; 1,173,079, E. F. Alexanderson, Selective tuning system; 1,183,875, R. V. Hartley, Electrical circuit; 1,195,632, W. C. White, Circuit connections of electron-discharge apparatus; 1,231,764, F. Lowenstein, Telephone relay; 1,251,377, A. W. Hull, Method of and means for obtaining constant direct-current potentials; 1,273,627, I. Langmuir, Method of and means for controlling electric currents or potentials; 1,282,439, 1,313,094, same, System for amplifying variable currents; 1,334,118, C. W. Rice, System for amplification of small currents, appeal filed Sept. 17, 1928, C. C. A., 2d Cir., *Radio Corp. of America et al.* v. *Lehr Auto Supply Co., Inc.*

1,160,315. (See 1,109,950.)

1,162,479 (*a*), A. H. Harris, Method of manufacturing tires; 1,374,505, E. Hopkinson, Method of making motor-vehicle tires; 1,480,719, J. R. Gammeter, Method and apparatus for making or manipulating tires; 1,507,563, A. O. Abbott, jr., Method and apparatus for manufacturing tire casings; 1,607,266, H. V. Lough, Rubberized fabric and its method of manufacture, filed Sept. 11, 1928, D. C., N. D. Ohio, E. Div., Doc. 2669, *United States Rubber Co.* v. *The Firestone Tire & Rubber Co.*

1,162,479 (*b*), A. H. Harris, Method of manufacturing tires; 1,374,505, E. Hopkinson, Method of making motor-vehicle tires; 1,480,719, J. R. Gammeter, Method and apparatus for making or manipulating tires; 1,507,563, A. O. Abbott, jr., Method and apparatus for manufacturing tire casings, D. C., N. D. Ohio, 7. Div., Doc. 2607, *U. S. Rubber Co. et al.* v. *The Firestone Tire & Rubber Co.* Dismissed without prejudice Sept. 13, 1928.

1,173,079. (See 1,129,942.)

1,177,774, F. H. Houghland, Folding box, filed Sept. 10, 1928, D. C., S. D. N. Y., Doc. E 46/310, *C. A. Fox Box Co., Inc.*, v. *Quick Service Box Co., Inc.*

1,180,159. (See 1,018,502.)

E 40/86, *Franklin Knitting Mills, Inc.*, v. *J. G. Barbieri* (*Belmonte Shirt Shop*). Consent order of discontinuance July 21, 1928, in each of the above cases.

Des. 46,682, A. A. Kraenter, Handle for pliers, etc., filed Sept. 18, 1928, D. C., S. D. N. Y., Doc. E 46/324, *Kraenter & Co., Inc.*, v. *United Hardware & Tool Corp.*

Des. 70,242, M. Simson, Jewelry setting, D. C., S. D. N. Y., Doc. E 41/126, *Simson Bros., Inc.*, v. *Blancard & Co., Inc.* Patent held invalid Sept. 13, 1928. Doc. E 42/315, *Simson Bros., Inc.*, v. *Karlan & Bleicher, Inc.* Decree as above.

Des. 71,166, I. Weisenfreind, Beverage-set urn, D. C., S. D. N. Y., Doc. E 39/59, *I. Weisenfreind* v. *Keystone Silver, Inc.* Consent decree holding patent valid and infringed, Sept. 15, 1928.

## Trade-Marks Canceled.

85,958. Wheat flour. M. Forchheimer & Co., Mobile, Ala. Registered April 2, 1912. Canceled October 12, 1928.

135,087. Talking machines and parts thereof. Supertone Talking Machine Co., Inc., New York, N. Y. Registered September 21, 1920. Canceled October 12, 1928.

211,550. Wire rope. E. H. Edwards Company, San Francisco, Calif. Registered April 13, 1926. Canceled October 12, 1928.

230,458. Dyes. Roubaix Products Company, New York, N. Y., assignor to Roubaix Products Corporation of New York, N. Y. Registered July 26, 1927. Canceled October 12, 1928.

239,820. Cuff buttons. Art Wire and Stamping Company, Arlington, N. J. Registered March 13, 1928. Canceled October 12, 1928.

## Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Oct. 19, 1928.*

*United States Compound Company, its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of United States Compound Company, of 1436 Seneca St., Buffalo, N. Y., No. 89,162, dated November 12, 1912, and the notice of such proceeding sent by registered mail to the said United States Compound Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said United States Compound Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 19, 1928.*

*Murray Wire Co., its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Murray Wire Co., of Newark, N. J., No. 94,658, dated December 23, 1913, and the notice of such proceeding sent by registered mail to the said Murray Wire Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless the said Murray Wire Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 19, 1928.*

*The Cafico Chemical Company Inc., its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of The Cafico Chemical Company Inc., of 154 Pearl Street, Pittsburgh, Pa., No. 158,911, dated September 19, 1922, and the notice of such proceeding sent by registered mail to the said The Cafico Chemical Company Inc. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Cafico Chemical Company Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

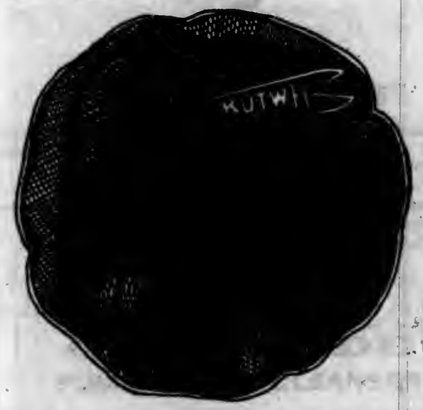
WM. A. KINNAN,
*First Assistant Commissioner.*

# TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 6, 1928.

[VOL. 376. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.



Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

## CLASS 1.

### Raw or Partly-Prepared Materials.

Ser. No. 271,051. EDGAR S. KIEFER TANNING COMPANY, Grand Rapids, Mich. Filed Aug. 15, 1928.

No registration rights are claimed in the expression "Kutwel" except in association with the other features of the mark.

For Pigskin.

Claims use since Aug. 1, 1912.

Ser. No. 271,355. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Aug. 21, 1928.

OLD BEN

PILOT COAL

The use of the word "Coal" is disclaimed.

For Coal.

Claims use since July 28, 1928.

Ser. No. 271,698. JEDDO-HIGHLAND COAL COMPANY, Jeddo, Pa. Filed Aug. 29, 1928.

No claim is made to the word "Anthracite" apart from the mark shown in the drawing. The crosshatching represents a shaded background.

For Coal.

Claims use since Aug. 8, 1928.

## CLASS 2.

### Receptacles.

Ser. No. 263,414. MOLINE PRESSED STEEL CO., East Moline, Ill. Filed Mar. 19, 1928.

The bust forming part of the trade-mark comprises a portrait of Buddy Lundahl, a living individual residing at East Moline, Ill., who consents to the use of his portrait.

For Tool Chests.

Claims use since Sept. 9, 1927.

Ser. No. 270,222. THE ADAMS BAG COMPANY, Chagrin Falls, Ohio. Filed July 27, 1928.

Lilipack

For Paper Shipping Sacks.
Claims use since Oct. 1, 1927.

## CLASS 3.

### Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 263,960. MARK CROSS COMPANY, New York, N. Y. Filed Mar. 29, 1928.

ESTABLISHED 1845 MARK CROSS FACTORIES WALSALL-WESTBURY ENGLAND

The words "Factories Walsall-Westbury England" are disclaimed apart from the mark shown.
For Suitcases, Hand Bags, Wallets, Trunks.
Claims use since Jan. 8, 1928.

Ser. No. 268,247. THE SPRINGFIELD LEATHER PRODUCTS COMPANY, Springfield, Ohio. Filed June 18, 1928.

CAMEO

Applicant is the owner of registration No. 158,751.
For Pocket Letter Cases, Cigarette Cases, Cardcases, Pass Cases, Leather Toilet Cases, Purses, Leather Key Holders, Bill Folds, and Hand Bags.
Claims use since July 1, 1922, on pocket letter cases, cigarette cases, cardcases, purses, bill folds, leather key holders, pass cases, and hand bags, and since Mar. 1, 1923, on leather toilet cases.

Ser. No. 271,169. CROUCH & FITZGERALD CORPORATION, New York, N. Y. Filed Aug. 17, 1928.

ESTABLISHED 1839 FINE LUGGAGE Crouch & Fitzgerald NEW YORK

Applicant disclaims the geographical term "New York" and the descriptive term "Fine Luggage" and "Trade-Mark" apart from the mark as shown in the drawing.
For Suitcases, Traveling Bags, Fitted and Unfitted Suitcases, Portfolios, Wardrobe Trunks, and Steamer Trunks.
Claims use since May 14, 1928.

Ser. No. 272,434. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Sept. 14, 1928.

OL-STAN-BY

For Harness.
Claims use since Jan. 15, 1928.

Ser. No. 272,436. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Sept. 14, 1928.

NAT-URA-TAN

No claim is made to the word "Tan" apart from the mark shown in the drawing.
For Harness.
Claims use since Jan. 15, 1928.

## CLASS 4.

### Abrasive, Detergent, and Polishing Materials.

Ser. No. 261,230. JEAN JORDEAU, INC., South Orange, N. J., and New York, N. Y. Filed Feb. 6, 1928.

ZIP-SHAVE

No exclusive claim to the word "Shave" appearing on the drawing is made apart from the mark shown.
For Cream Used Before Shaving.
Claims use since Jan. 15, 1912.

Ser. No. 261,622. THE GERSON-STEWART CORPORATION COMPANY, Cleveland, Ohio. Filed Feb. 13, 1928.

SUNBURST

For Cleaners for Glass and Such Named Surfaces.
Claims use since June, 1922.

Ser. No. 262,575. QUINN PRODUCTS CO., Brooklyn, N. Y. Filed Mar. 3, 1928.

CLEANADE
PUMICE HAND CLEANSER

No claim is made to the word "Pumice Hand Cleanser" apart from the mark shown in the drawing.
For Soap.
Claims use since June 26, 1926.

Ser. No. 264,593. LYMAN-BEERS COMPANY, Springfield, Mass. Filed Apr. 9, 1928.

Star-creS

For Material for Polishing Metals, Celluloid, and Hard Rubber, Consisting of a Liquid, Paste, or Brick for Buffing or Polishing Purposes for Materials Which Require a Buffing or Polishing Process to Finish.
Claims use since on or about Apr. 10, 1926.

Ser. No. 267,369. GEORGE L. MAX, doing business as Maxine Products Co., Detroit, Mich. Filed June 2, 1928.

BLUE HEAVEN

For Shampoo in the Nature of a Liquid Soap.
Claims use since Mar. 16, 1928.

Ser. No. 270,555. THE NORWICH PHARMACAL COMPANY, Norwich, N. Y. Filed Aug. 3, 1928.

Swav

For Shaving Cream to be Used Before Shaving.
Claims use since July 6, 1928.

Ser. No. 270,687. GUSTAV LAVRENZ, Jr., Campbellsport, Wis. Filed Aug. 6, 1928.

*Magic Kloth*

The word "Kloth" is disclaimed apart from the other features of the mark shown in the drawing.
For Chemically-Treated Cloth to be Employed in the Treatment of Automobile Windshields to Prevent the Accumulation of Snow, Ice, and Condensations.

Ser. No. 270,783. SOCIETE ANONYME: PARFUMERIE VIOLET, Paris, France. Filed Aug. 8, 1928.

ÉTERNELLE CHANSON

For Soaps, Soap Creams, and Bath Soaps.
Claims use since Apr. 20, 1928.

Ser. No. 272,548. EMERGENCY LABORATORIES, New York, N. Y. Filed Sept. 17, 1928.

POSLAM

For Soap.
Claims use since September, 1910.

Ser. No. 272,908. STEELE-LOBELL COMPANY, Baltimore, Md. Filed Sept. 24, 1928.

For Shoe and Leather Finishes, Polishers, Cleaners, Pastes, Dyes, and Dressings.
Claims use since July, 1924.

Ser. No. 273,114. PICOT LABORATORIES, INC., Buffalo, N. Y. Filed Sept. 28, 1928.

For Soap.
Claims use since July 8, 1928.

## CLASS 5.

### Adhesives.

Ser. No. 270,451. WOODFIX PRODUCTS CORPORATION, also doing business as Woodfix Products Company, Boston, Mass. Filed Aug. 1, 1928.

Wood Fix

For Moldable Repairing Composition for Wood Surfaces in the Form of an Adhesive Paste Having as Its Main Ingredient Finely-Comminuted Wood or Sawdust.
Claims use since on or about June 1, 1928.

Ser. No. 272,243. YAVAN LIMITED, London, England. Filed Sept. 11, 1928.

YAVAN

For Adhesives—Namely, Glue.
Claims use since September, 1924.

## CLASS 6.

### Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 254,688. TAKAMINE FERMENT COMPANY, New York, N. Y. Filed Sept. 13, 1927.

TAKA-DIASTASE

Applicant disclaims exclusive use of the word "Diastase" apart from the mark shown in the drawing.
For Koji, Moyashi, Diastase, Ferments, and Converting Agents.
Claims use since 1895.

Ser. No. 255,567. METALS PROTECTION CORPORATION, Indianapolis, Ind. Filed Oct. 3, 1927.

CHROMILITE

For Salts and Buffing Compounds for Use in Chromium Plating.
Claims use since Jan. 2, 1925.

Ser. No. 260,339. THE MEDICO LABORATORIES, Chicago, Ill. Filed Jan. 19, 1928.

EXY-CURA

For Medicinal Preparation Designed to be Used in the Treatment of Eczema.
Claims use since July 28, 1927.

Ser. No. 262,857. ANTON LOEFFLER, doing business as Purity Products Sales Co., St. Louis, Mo. Filed Mar. 9, 1928.

ZI-LO HW

For Mouth Wash.
Claims use since Jan. 1, 1928.

Ser. No. 263,876. CELANESE CORPORATION OF AMERICA, New York, N. Y. Filed Mar. 19, 1928.

SRA

For Dyestuffs.
Claims use since Mar. 10, 1924.

Ser. No. 263,966. NOVADEL PROCESS CORPORATION, Buffalo, N. Y., assignor to Lucidol Corporation, Buffalo, N. Y., a Corporation of Delaware. Filed Mar. 29, 1928.

For Benzoyl Peroxide and Other Peroxides and Chemicals of an Oxidizing Character and Useful for Bleaching.
Claims use since about Feb. 15, 1928.

Ser. No. 264,833. MARION E. MOON, doing business as The Urogen Company, New London, Conn. Filed Apr. 14, 1928.

Urogen
-URIC ACID SOLVENT-

No claim is made to the words "Uric Acid Solvent" apart from the mark as shown.
For Medicine Used in the Treatment of Rheumatism, Gout, Sciatica, and Lumbago.
Claims use since June, 1906.

Ser. No. 265,273. WARREN D. HOWE, D. M., doing business as Crown Products Company, Clarence, Mo. Filed Apr. 28, 1928.

CROWN

For Medicines for Fowl Cholera and Roup, White Diarrhea, a Fowl Worm Expeller, and Sheep Worm Liquid.
Claims use since Jan. 1, 1928.

Ser. No. 267,470. THERMO COMPANY, Portland, Oreg. Filed June 4, 1928.

THERMO PAD (THERMOGENE)

The words "Thermo-Pad" and "Thermogene" are disclaimed apart from the other features of the mark shown in the drawing.
For Pad Impregnated with Medicine for Relief of Various Ailments and Pains of the Human Body.

No claim is made to the words "Rub-Down" and "Porto Rico" apart from the mark as shown in the drawing.
For Rubbing Alcohol.
Claims use since May 18, 1928.

---

Ser. No. 268,914. CHAMBERS-GODFREY MFG. CO., Martin, Tenn. Filed June 30, 1928.

CHAMBERS'
ANTI-SKIPPER
COMPOUND

The word "Compound" is disclaimed apart from the other features of the mark shown in the drawing.
For Antiskipper Compound to Prevent Skippers on Cured Meats.
Claims use since 1911.

---

Ser. No. 269,409. JEFFRIES & YAUGER MEDICINE CO., doing business as J & Y Medicine Co., Mount Vernon, Ohio. Filed July 11, 1928.

A. H. Jeffries

The picture constituting a part of the mark is a facsimile of a portrait of one of the copartners, A. H. Jeffries.
Also the name "A. H. Jeffries" appearing beneath the picture is a facsimile of the signature of said copartner, A. H. Jeffries.
For Medicine Used in the Treatment of Colds, Influenza, Tuberculosis.
Claims use since Apr. 1, 1928.

---

Ser. No. 269,497. ARNOLD LOUIS VAN AMERINGEN, New York, N. Y. Filed July 12, 1928.

PERROL

For Essences of Perfumes, Essences for Perfumery Materials, Aromatic Materials for Perfuming Purposes, Synthetic Perfume Materials, Odoriferous Materials for Perfuming Purposes, and Ethereal Oils.
Claims use since June 14, 1928.

---

Ser. No. 269,987. SAMUEL CABOT, INC., Boston, Mass. Filed July 21, 1928.

Samuel Cabot

The trade-mark is a facsimile signature of Samuel Cabot, the predecessor in business of the present applicant.
For Chemical Compound for Preserving Wood, Chemical Composition for Protecting Wounds and Exposed Surfaces on Trees.
Claims use since April, 1925.

---

Ser. No. 270,322. DR. LYDIA E. EMERY, doing business as The Patricius Company, Pasadena, Calif. Filed July 30, 1928.

PATRICIUS

For Medicinal Ointment for the Treatment of Inflammation, Pus Formation, and Infection.
Claims use since Dec. 15, 1927.

---

Ser. No. 270,553. LENTHERIC, INCORPORATED, New York, N. Y. Filed Aug. 3, 1928.

FORÊT
VIERGE

For Perfumes, Toilet Water, Face Powder, and Talcum Powder.
Claims use since July 20, 1928.

Ser. No. 271,144. NICK G. PAPPAS, Hanna, Wyo. Filed Aug. 16, 1928.

Nick G. Pappas

The signature is an autograph and the picture a portrait of applicant.
For Palliative for Appendicitis, Stomach Disorders, Headaches, Coughs, and Colds.
Claims use since Sept. 20, 1927.

---

Ser. No. 271,182. MARY L. GRAHAM, New York, N. Y. Filed Aug. 17, 1928.

KLING

For Toilet Article Consisting of a Vegetable Compound for the Treatment of Eyebrows.
Claims use since November, 1927.

---

Ser. No. 271,211. VENTROSAN PRODUCTS, INC., New York, N. Y. Filed Aug. 17, 1928.

*Ventrosan*

For Medical Formula of an Antacid Powder.
Claims use since Mar. 1, 1927.

---

Ser. No. 271,290. H. C. BRILL COMPANY, INC., Newark, N. J. Filed Aug. 20, 1928.

BRILL'S
BAKE-LITE

The drawing is lined to denote red.
For Baking Powder.
Claims use since May 26, 1928.

---

Ser. No. 271,291. H. C. BRILL COMPANY, INC., Newark, N. J. Filed Aug. 20, 1928.

BRILL'S
TOPS-ALL

For Baking Powder.
Claims use since May 26, 1928.

---

Ser. No. 271,470. JOHN G. BETHUNE, doing business as The Bethune Laboratories, Cleveland, Ohio. Filed Aug. 24, 1928.

Nae-Ru

For Medicine for Treating Rheumatism.
Claims use since May 1, 1928.

---

Ser. No. 271,572. EUGÈNE SCHUELLER, Paris, France. Filed Aug. 25, 1928.

L'ORÉAL
IMMÉDIA

For Dyes for the Hair and Beard, Hair Lotions, Brilliantine, Perfumes, Face Powders, Face Lotions, Talcum Powders, Rouge, and Dentifrices.
Claims use since July 31, 1928.

---

Ser. No. 271,644. VINCENT FINOCCHIO, Brooklyn, N. Y. Filed Aug. 28, 1928.

BRAVURA

The lining shown in the drawing is used for shading purposes only.
For Hair Tonic.
Claims use since July 2, 1928.

Ser. No. 271,719. THETIS LABORATORIES, Detroit, Mich. Filed Aug. 29, 1928.

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.
Claims use since Apr. 10, 1924.

Ser. No. 272,339. RICHARD MCKAY, doing business as Oikimo Co., Ferndale, Mich. Filed Sept. 13, 1928.

OIKMO

For Medicine in Liquid Form Taken Internally for the Treatment of Asthma, Pneumonia, Bronchitis, Diphtheria, and Coughs.
Claims use since Sept. 1, 1928.

Ser. No. 272,365. DANIEL TARANTINO, New York, N. Y. Filed Sept. 13, 1928.

For Hair Tonics.
Claims use since June 1, 1928.

Ser. No. 272,399. ROBERT GERACE, doing business as Twin Cross Chemical Co., Brooklyn, N. Y. Filed Sept. 14, 1928.

ZED

For Insecticide.
Claims use since May 1, 1927.

Ser. No. 272,410. F. E. LAWRENCE, doing business as Larre' Laboratories, Denver, Colo. Filed Sept. 14, 1928.

ASEPTABS

The silhoutte in the drawing is that of Erna Faye Lawrence.
For Female Suppositories.
Claims use since August, 1927.

Ser. No. 272,537. BOSTWICK BROTHERS, Atlanta, Ga. Filed Sept. 17, 1928.

For Powders for Headache and Neuralgia, Castor Oil, Elixir Cramp Bark Compound, Tincture Valerian; Elixir Iron, Quinine, and Strychnine; Tincture Opium Camphorated Paregoric, Elixir Aletris Compound and Elixir Buchu Juniper and Potassium Acetate.
Claims use since Jan. 1, 1925.

Ser. No. 272,568. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Sept. 17, 1928.

MERTHIOLATE

For Medicine or Pharmaceutical Preparation—viz., Sodium Ethyl Mercurithiosalicylate or Organic Mercury Compound Solution Useful in Antisepsis and Treatment of Nose and Throat Infections.
Claims use since Nov. 26, 1926.

Ser. No. 272,659. HOUBIGANT, INC., New York, N. Y. Filed Sept. 19, 1928.

FRAÎCHEUR

For Perfume, Toilet Water, Face Powder, Talcum Powder, Bath Salts, Brilliantine, Bandoline, Rouge, Lip Sticks, Dusting Powder, Sachet, Cold Creams, Lotion for the Skin and Hair, Powder and Rouge Compacts, and Vegetal.
Claims use since Sept. 12, 1928.

Ser. No. 272,676. E. R. SQUIBB & SONS, New York, N. Y. Filed Sept. 19, 1928.

AMNIOTIN

For Sterile Aqueous Solution Containing the Estrus-Inducing Hormone.
Claims use since Sept. 6, 1928.

Ser. No. 272,681. UNITED DRUG COMPANY, Boston, Mass. Filed Sept. 19, 1928.

Cherrosote

For Medicinal Preparation Containing Creosote and Guaiacol Sulphonates and Used for Coughs, Head Colds, and to Check Gastric Fermentation.
Claims use since Sept. 4, 1928.

Ser. No. 273,117. WILLIAM A. RIGNEY, Newark, N. J. Filed Sept. 28, 1928.

For Medicine for the Stomach, Liver, Kidneys, and Bowels.
Claims use since May 13, 1928.

Ser. No. 273,150. THE MATHIESON ALKALI WORKS, INC., New York, N. Y. Filed Sept. 29, 1928.

For Hypochlorite.
Claims use since Aug. 29, 1928.

Ser. No. 273,165. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Sept. 29, 1928.

Super D

For Cod-Liver Oil.
Claims use since Mar. 6, 1928.

Ser. No. 273,214. FRANK X. TRIMBACH, doing business as the Swish Company, Lexington, Ky. Filed Oct. 1, 1928.

Swish!

For a Preparation in Liquid Form for Treatment of Hair and Scalp.
Claims use since Sept. 20, 1928.

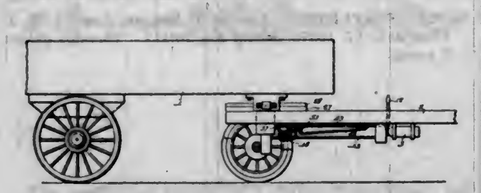
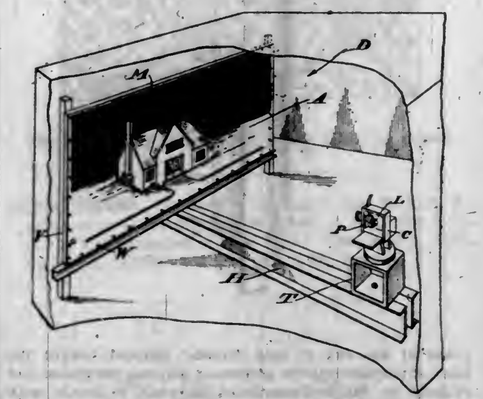
# REISSUES



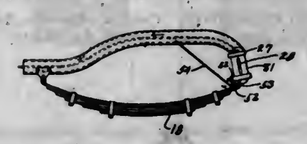
## NOVEMBER 6, 1928.

17,123. STEAM HOT PLATE. WILLIAM H. APPLEBY, Baltimore, Md., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed July 27, 1928. Serial No. 295,833. Original No. 1,490,721, dated Apr. 15, 1924, Serial No. 480,427, filed June 25, 1921. Division of reissue application No. 97,477, filed Mar. 25, 1926. Application for reissue filed Aug. 11, 1927, Serial No. 212,325. Reissue Patent No. 16,953, dated May 1, 1928. 2 Claims. (Cl. 257—256.) Division B.

1. A hot plate for presses comprising a metallic plate having two ducts drilled therein, one end of one of said ducts being enlarged to provide a socket, a cross passageway drilled from the bottom of this socket at an angle to the ducts, to the second duct, and closure means for the mouth of the socket.



17,124. TRAILER HOIST AND COUPLER. WILLIAM MAYER, New York, N. Y. Filed Dec. 4, 1926. Serial No. 152,707. Original No. 1,591,857, dated July 6, 1926, Serial No. 61,102, filed Oct. 7, 1925. 14 Claims. (Cl. 280—33.1.)

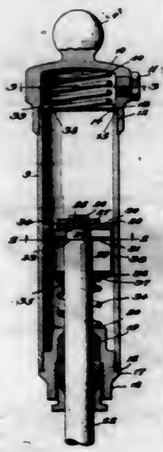


14. A heavy duty hoist and coupler for tractors and trailers, comprising power means for actuating said hoist and coupler for raising and lowering one end of the trailer and its load, a manually actuated member for causing said power means to be thrown into functioning position, automatically actuated means for causing said power means to be moved to a non-functioning position, and a connecting mechanism connecting the power means with the engine of the tractor.

17,125. METHOD OF MAKING MOTION-PICTURE FILMS. JOHN F. SEITZ, Hollywood, Calif. Filed Nov. 28, 1927. Serial No. 236,353. Original No. 1,576,854, dated Mar. 16, 1926, Serial No. 606,400, filed Dec. 12, 1922. 5 Claims. (Cl. 88—16.)

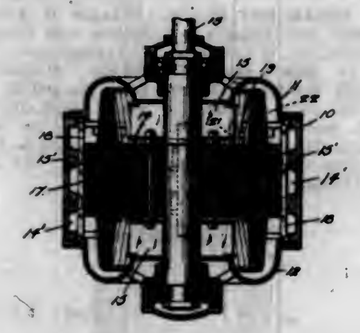
1. In the art of making composite motion pictures the steps of making a picture of a scene having a desired component, and blocking out thereon all but the desired component to produce a blocked picture, projecting the blocked picture upon a screen, outlining a mat thereon complementary to and matching the desired component by the aid of said projected blocked picture so as to optically register with and mask the desired component.

17,126. LUBRICATING SYSTEM. GEORGE R. SIEGRIST, Port Huron, Mich. Filed Mar. 6, 1926. Serial No. 92,956. Original No. 1,545,981, dated July 14, 1925, Serial No. 678,614, filed Dec. 5, 1923. 32 Claims. (Cl. 184—7.)



31. A lubricating system for a road vehicle chassis having, in combination, a part to be lubricated, a lubricant container, reciprocating pumping mechanism in communication with said container and communicating through a discharge conduit with said part to deliver a small quantity of lubricant to said part, said reciprocating pumping mechanism so mounted upon the vehicle as to be operably responsive to the shock of travel of the vehicle over the road.

17,127. SHOCK ABSORBER. CLARENCE W. THOMPSON, Wilmington, Del., assignor, by mesne assignments, to Superior Equipment Corporation, a Corporation of Delaware. Filed July 19, 1928. Serial No. 293,965. Original No. 1,592,912, dated July 20, 1926, Serial No. 706,472, filed Apr. 14, 1924. 11 Claims. (Cl. 267—8.)



5. A shock-absorber, comprising a cylinder adapted to be substantially filled with liquid, a rod reciprocable within said cylinder, a piston mounted upon said rod and fitting within said cylinder and having ports therethrough, valve means associated with said piston and effective dur-

ing relative movement between said piston and cylinder in one direction to permit passage of liquid through said ports and during relative movement between said piston and cylinder in the opposite direction to materially restrict passage of fluid past said piston, and means dis-

posed at one end of said cylinder adapted toward the limit of possible relative movement between the piston and cylinder in the first-mentioned direction to co-act with said piston to substantially entrap a body of liquid between the piston and cylinder end, said means being formed to permit a restricted escape of such entrapped liquid.

17,128. REMOVABLE STATOR FOR ELECTRIC MOTORS. CARL L. DAUN and PAUL E. KELLER, Milwaukee, Wis., assignors, by mesne assignments, to Splitdorf Electric Company of Wisconsin, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 17, 1927. Serial No. 220,200. Original No. 1,626,028, dated Apr. 26, 1927, Serial No. 615,685, filed Jan. 29, 1923. 8 Claims. (Cl. 171—252.)

1. In an electric motor, a frame, a stator and a rotor, mounted therein, the said frame being provided interiorly with a plurality of circumferential rows of grooved projections concentrically and axially aligned with respect to the rotor, and locking keys, each engaging a plurality of the aligned grooved projections and the stator, to position the latter concentrically with relation to the rotor, whereby upon removal of the said keys the stator and its winding as a unit may be withdrawn from the frame.

# DESIGNS

## NOVEMBER 6, 1928.

76,768. SPINNING TOY. CARL V. BENSON, Lake City, Colo. Filed June 6, 1928. Serial No. 27,012. Term of patent 7 years.

The ornamental design for a spinning toy, as shown.

76,769. STATUETTE. SAMUEL I. BERGER, Newark, N. J. Filed Jan. 17, 1927. Serial No. 20,411. Term of patent 7 years.

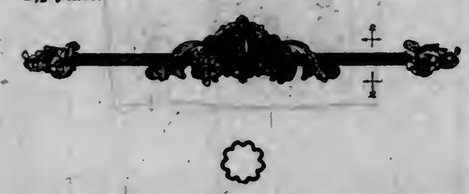
The ornamental design for a statuette as shown.

76,770. MIRROR OR SIMILAR ARTICLE. EDWARD G. BLUMENFELD, Brooklyn, N. Y., assignor to La Salle Brass & Bronze Works, Inc., a Corporation of New York. Filed Aug. 2, 1928. Serial No. 27,672. Term of patent 3½ years.

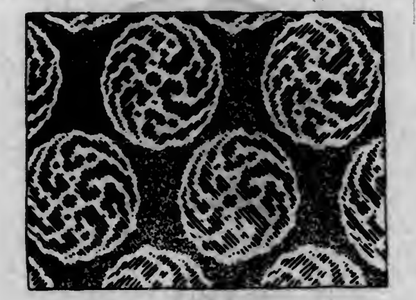
The ornamental design for a mirror or similar article, as shown.

76,771. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1928. Serial No. 27,828. Term of patent 3½ years.

The ornamental design for a curtain and portière rod, as shown.



76,772. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1928. Serial No. 27,829. Term of patent 3½ years.



The ornamental design for a curtain and portière rod, as shown.

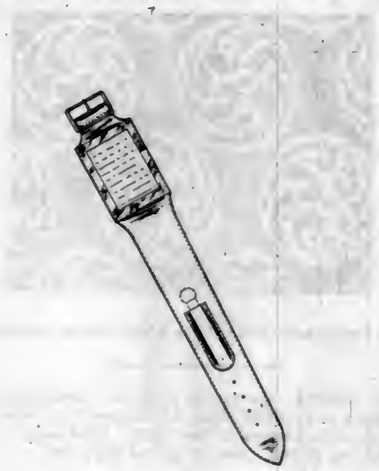
76,773. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1928. Serial No. 27,830. Term of patent 3½ years.

The ornamental design for a curtain and portière rod, as shown.

76,774. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed July 21, 1928. Serial No. 27,551. Term of patent 3½ years.

The ornamental design for a textile fabric as shown.

76,775. DRESS. KATHERINE E. BURNS, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 1, 1928. Serial No. 27,660. Term of patent 3½ years.

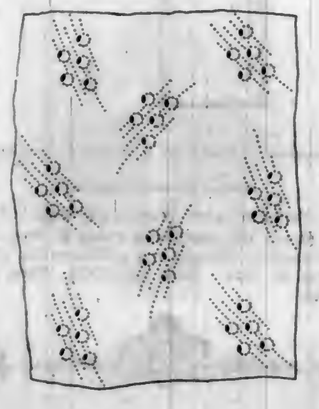


The ornamental design for a dress substantially as shown and described.

76,776. HALLOWEEN CANDY. WILLIS WILLIAM CASSIDY, Salt Lake City, Utah. Filed June 16, 1928. Serial No. 27,167. Term of patent 3½ years.

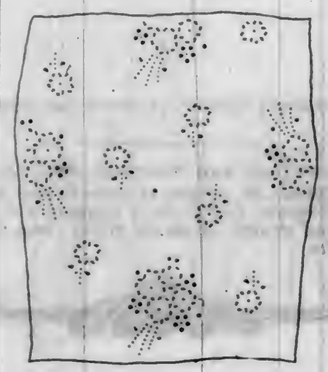
The ornamental design for a halloween candy, as shown.

76,777. COMBINED WRISTLET, NOTE PAD, AND PENCIL HOLDER. ALFRED BLACKMORE CLARK and ARCHIBALD CHARLES KOESTER, London, England. Filed Oct. 29, 1927, Serial No. 23,942, and in France Aug. 13, 1927. Term of patent 7 years.



The ornamental design for a combined wristlet, note pad, and pencil holder as shown.

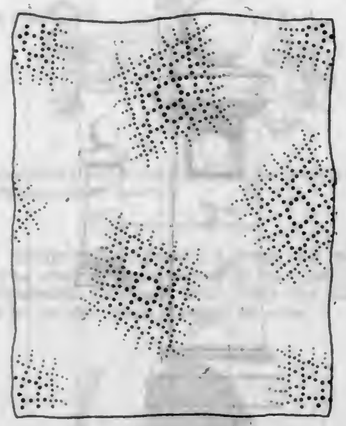
76,778. PLATE OR SIMILAR ARTICLE. JOHN A. CRONIN, Clarksburg, W. Va., assignor to The D. E. McNicol Pottery Co. of W. Va., Clarksburg, W. Va., a Corporation of West Virginia. Filed Aug. 9, 1928. Serial No. 27,756. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

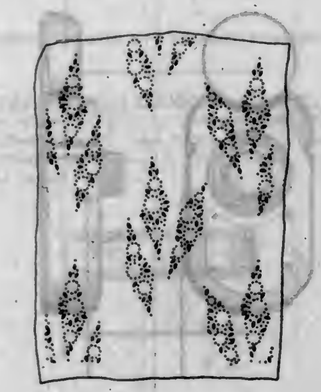
76,779. FLOCKED VOILE FABRIC. KENNETH G. CURRIER, East Orange, N. J., and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 25,345. Term of patent 3½ years.

The ornamental design for flocked voile fabric, as shown.



76,780. FLOCKED VOILE FABRIC. KENNETH G. CURRIER, East Orange, N. J., and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 25,346. Term of patent 3½ years.

The ornamental design for flocked voile fabric, as shown.



76,781. FLOCKED VOILE FABRIC. KENNETH G. CURRIER, East Orange, N. J., and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 25,347. Term of patent 3½ years.

The ornamental design for flocked voile fabric, as shown.

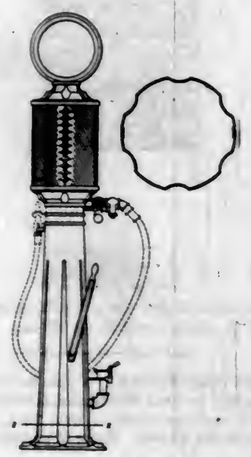
76,782. FLOCKED VOILE FABRIC. KENNETH G. CURRIER, East Orange, N. J., and JULES HEINRICH, New York, N. Y., assignors to Fred Butterfield & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1928. Serial No. 25,348. Term of patent 3½ years.

The ornamental design for flocked voile fabric, as shown.

76,783. COMBINATION BOOKCASE AND DESK CABINET OR SIMILAR ARTICLE. EDWIN C. M. DICKEY, Newark, N. J. Filed Apr. 4, 1928. Serial No. 26,119. Term of patent 14 years.

The ornamental design for a combination bookcase and desk-cabinet or similar article, as shown.

76,784. TEXTILE FABRIC. CARL EDLICH, Delawanna, N. J., assignor to Max Kaufmann & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 13, 1928. Serial No. 27,803. Term of patent 3½ years.

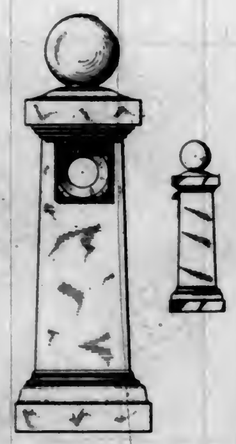


The ornamental design for textile fabric substantially as shown.

76,785. BELT BUCKLE. ROBERT F. EICHNER, Rochester, N. Y., assignor to Hickok Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed July 11, 1928. Serial No. 27,454. Term of patent 3½ years.

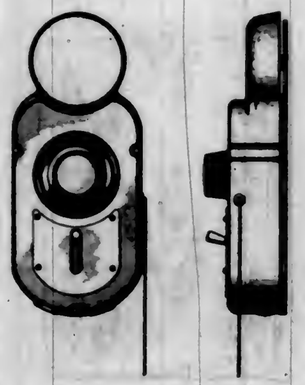
The ornamental design for a belt buckle, as shown.

76,786. PUMP CASING. EARL E. EICKMEYER, Dayton, Ohio, assignor to The Dayton Pump & Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 15, 1928. Serial No. 25,448. Term of patent 7 years.



The ornamental design for a pump casing as shown.

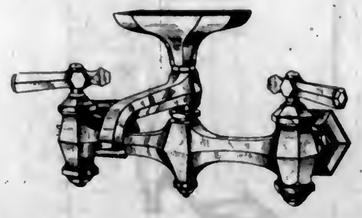
76,787. TEXTILE FABRIC. GUSTAVE F. ERHARD, Scranton, Pa., assignor to The Scranton Lace Company, Scranton, Pa., a Corporation of Pennsylvania. Filed July 19, 1928. Serial No. 27,533. Term of patent 7 years.



The ornamental design for a textile fabric, substantially as shown and described.

76,788. GASOLINE-METER CASING. CHARLES D. FAGAN, Sharon, Pa., assignor to Sharpsville Boiler Works Co., Sharpsville, Pa., a Corporation of Pennsylvania. Filed July 28, 1927. Serial No. 22,904. Term of patent 14 years.

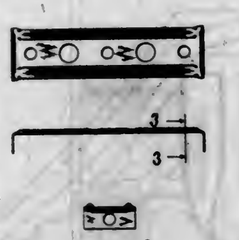
The ornamental design for a gasoline meter casing, as shown.



76,789. TIME-SWITCH CASING. EDWIN S. FLARSHEIM, Cincinnati, Ohio, assignor to The Liebel-Flarsheim Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 19, 1927. Serial No. 22,100. Term of patent 14 years.

The ornamental design for a time switch casing, as shown.

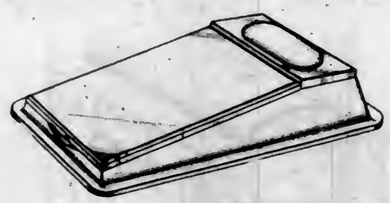
76,790. COMBINATION FAUCET AND SOAP DISH. JAMES FRASER, Hillcrest, Edgemoor, Delaware, assignor to The Speakman Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1928. Serial No. 25,678. Term of patent 7 years.



The ornamental design for a combination faucet and soap dish, substantially as shown.

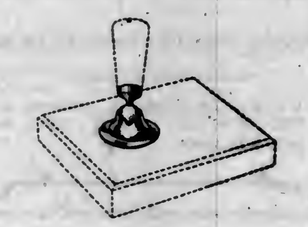
76,791. SHOE SOLE. ARTHUR S. FUNK and EDGAR S. BOTT, La Crosse, Wis., assignors to La Crosse Rubber Mills Company, La Crosse, Wis. Filed Dec. 12, 1927. Serial No. 24,456. Term of patent 14 years.

The ornamental design for a shoe sole, as shown.



76,792. TOY BUILDING ELEMENT. ALFRED C. GILBERT, Hamden, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed Mar. 3, 1928. Serial No. 25,653. Term of patent 14 years.

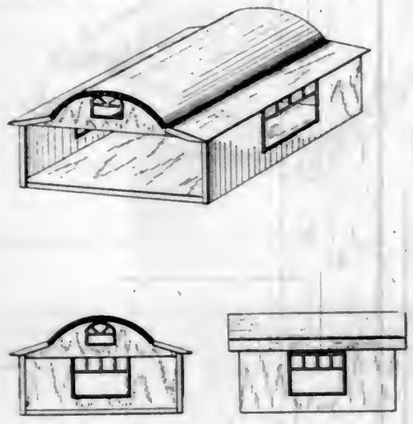
The ornamental design for a toy building element, substantially as shown.



76,793. SCORE-PAD HOLDER. JAMES GORDON, Chicago, Ill. Filed Jan. 25, 1928. Serial No. 25,019. Term of patent 3½ years.

The ornamental design for a score pad holder substantially as shown.

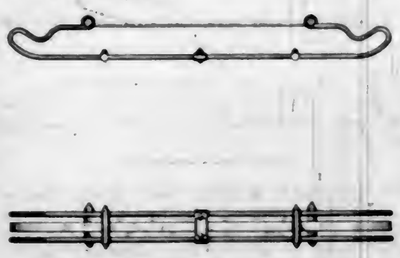
76,794. SUPPORT FOR PENHOLDER. WALTER GUYOT, Janesville, Wis., assignor to The Parker Pen Company, Janesville, Wis., a Corporation of Wisconsin. Filed June 18, 1927. Serial No. 22,488. Term of patent 14 years.



The ornamental design for a support for penholder, as shown.

76,795. DISPLAY STAND. LOUIS HALK, Hackensack, N. J., assignor to Northam Warren Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1928. Serial No. 27,876. Term of patent 3½ years.

The ornamental design for display stand as shown.



76,796. HANGAR FOR TOY AEROPLANES. GEORGE A. HALTER, Lakewood, Ohio, assignor to The Halter Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 23, 1928. Serial No. 25,532. Term of patent 14 years.

The ornamental design for a hangar for toy aeroplanes, as shown.

---

76,797. AUTOMOBILE BUMPER. EDWARD J. HARVEY, Racine, Wis. Filed Dec. 21, 1927. Serial No. 24,573. Term of patent 14 years.

The ornamental design for an automobile bumper, as shown.

---

76,798. CLOCK CASE. FREDERICK C. HERBERMANN, Mount Vernon, N. Y. Filed Jan. 14, 1928. Serial No. 24,877. Term of patent 3½ years.

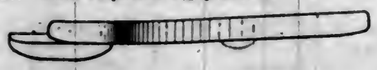
The ornamental design for a clock case, as shown.

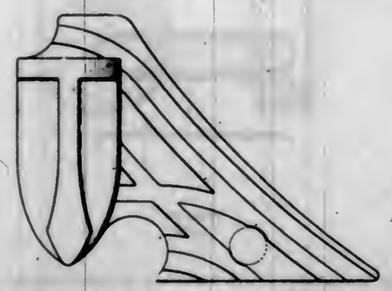
76,799. GALOSH. WIARD B. IHNEN, New York, N. Y. Filed Dec. 15, 1926. Serial No. 20,058. Term of patent 3½ years.

The ornamental design for a galosh, as shown and described.

---

76,800. CLAMP PLATE. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,616. Term of patent 3½ years.

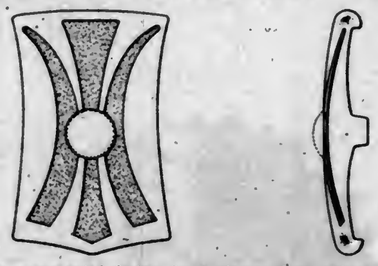




The ornamental design for a clamp plate substantially as shown and described.

---

76,801. CLAMP PLATE. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,617. Term of patent 3½ years.



The ornamental design for a clamp plate substantially as shown and described.

76,802. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich. Filed Feb. 8, 1928. Serial No. 25,294. Term of patent 14 years.

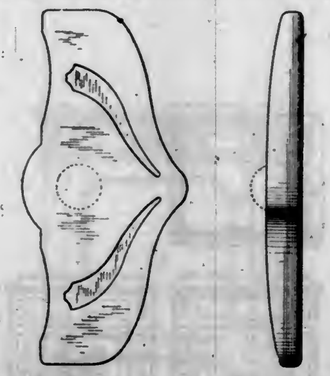
The ornamental design for a clamp plate, substantially as shown and described.

---

76,803. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 25,735. Term of patent 14 years.

The ornamental design for a clamp plate, substantially as shown and described.

---



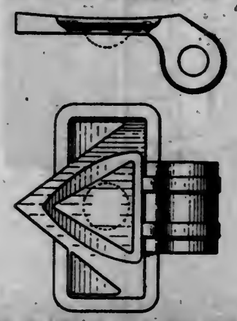
76,804. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 25,740. Term of patent 14 years.

The ornamental design for a clamp plate, substantially as shown and described.

76,805. CLAMP PLATE. HERBERT S. JANDUS and WILLIAM MEYERHUBER, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 25,743. Term of patent 14 years.

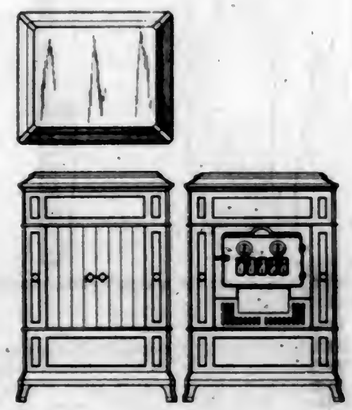
The ornamental design for a clamp plate, substantially as shown and described.

---



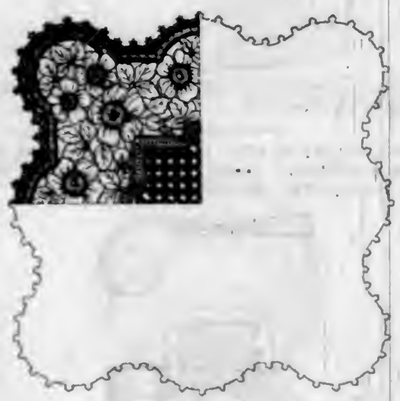
76,806. CLAMP PLATE. HERBERT S. JANDUS and WILLIAM MEYERHUBER, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1928. Serial No. 25,744. Term of patent 14 years.

The ornamental design for a clamp plate, substantially as shown and described.



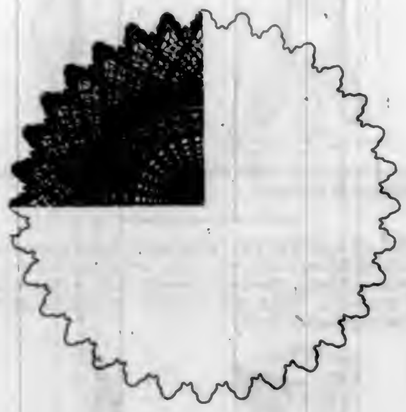
---

76,807. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich. Filed Mar. 7, 1928. Serial No. 25,752. Term of patent 14 years.



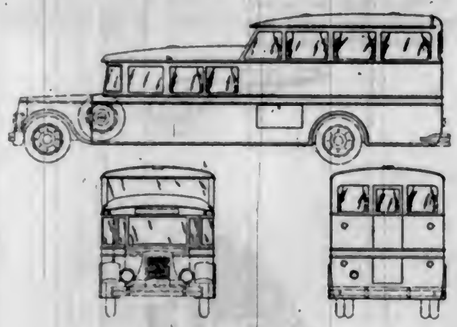
The ornamental design for a clamp plate substantially as shown and described.

76,808. CIRCULATING HEATER. ARTHUR J. JOHNSON and JOSEPH J. MORIARTY. Shakopee, Minn., assignors to American Range Corporation, Shakopee, Minn., a Corporation of Minnesota. Filed July 13, 1028. Serial No. 27,479. Term of patent 3½ years.



The ornamental design for a circulating heater, as shown.

76,809. DOILY. EDWARD KARFIOL, Brooklyn, N. Y. Filed Feb. 25, 1928. Serial No. 25,579. Term of patent 14 years.



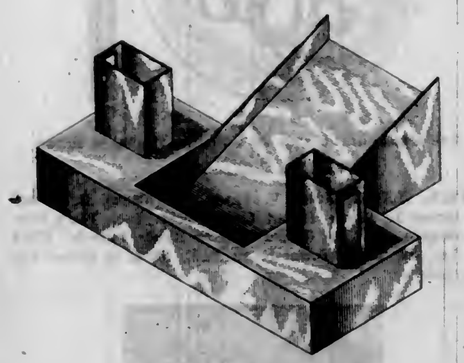
The ornamental design for a doily as shown and described.

76,810. DOILY. EDWARD KARFIOL, Brooklyn, N. Y. Filed Feb. 25, 1928. Serial No. 25,581. Term of patent 14 years.

The ornamental design for a doily as shown and described.

76,811. AUTOMOBILE BODY. MINAS H. KASHIAN, Boston, Mass. Filed Mar. 15, 1928. Serial No. 25,866. Term of patent 3½ years.

The ornamental design for an automobile body, substantially as shown.



76,812. CABINET FOR RADIO RECEIVING APPARATUS. ARTHUR ATWATER KENT. Ardmore, Pa. Filed Nov. 15, 1926. Serial No. 19,736. Term of patent 14 years.

The ornamental design for a cabinet for radio receiving apparatus, as shown.

76,813. DISPLAY STAND. WILLIAM P. KESEL, New York, N. Y., assignor to Cummings Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 24, 1928. Serial No. 25,008. Term of patent 3½ years.

The ornamental design for a display stand, as shown.

76,814. CABINET FOR SOUND PRODUCING AND REPRODUCING INSTRUMENTS. EUGENE T. KIEFFER, Cheyney, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 12, 1927. Serial No. 23,728. Term of patent 14 years.

The ornamental design for a cabinet for sound-producing and reproducing instruments as shown.

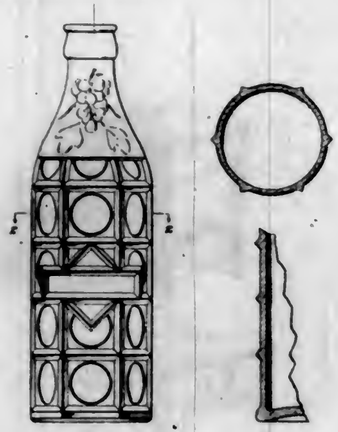
76,815. CABINET FOR SOUND PRODUCING AND REPRODUCING INSTRUMENTS. EUGENE T. KIEFFER, Cheyney, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Oct. 12, 1927. Serial No. 23,729. Term of patent 14 years.

The ornamental design for a cabinet for sound-producing and reproducing instruments as shown.

76,816. SET OF PLAYING CARDS. OTTO KUBATZKY, Tulsa, Okla. Filed June 14, 1928. Serial No. 27,119. Term of patent 7 years.

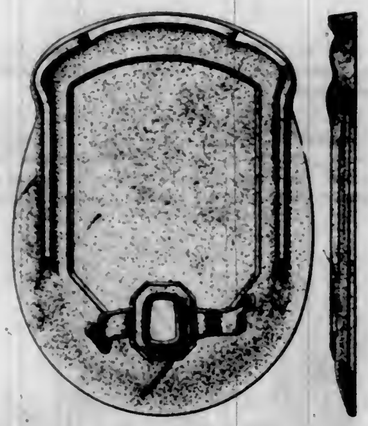
The ornamental design for a set of playing cards as shown.

76,817. GLASS TUMBLER. SYLVESTER A. LANGENBAKER, San Francisco, Calif., assignor to Macbeth-Evans Glass Company, Charleroi, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1928. Serial No. 26,377. Term of patent 3½ years.



The ornamental design for a glass tumbler, as shown.

76,818. MIRROR OR SIMILAR ARTICLE. EDWIN B. LANGSDORF, New York, N. Y. Filed June 11, 1928. Serial No. 27,072. Term of patent 3½ years.



The ornamental design for a mirror or similar article substantially as shown.

76,819. BOTTLE. GEORGE N. MAS, Washington, D. C., assignor to American Ornamental Bottle Corporation, Lynchburg, Va. Filed July 23, 1924. Serial No. 10,234. Term of patent 14 years.

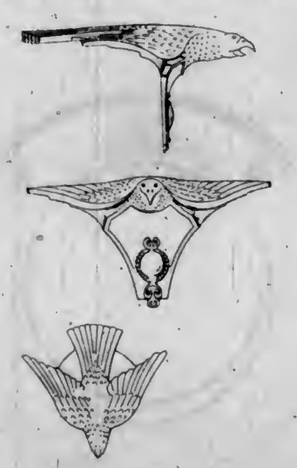
The ornamental design for a bottle, as shown.

76,820. PICTURE FRAME. JOHN PELLETIER and MICHAEL PELLETIER, New York, N. Y. Filed Dec. 12, 1927. Serial No. 24,454. Term of patent 14 years.

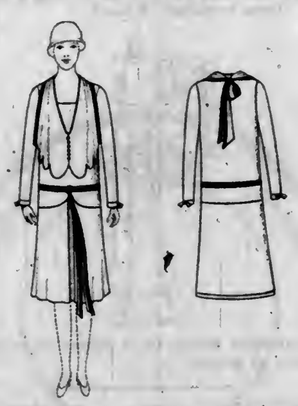
The ornamental design for a picture frame, as shown

76,821. LACE. JOHN V. PRICE, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Aug. 22, 1928. Serial No. 27,912. Term of patent 3½ years.

The ornamental design for lace substantially as shown.



76,822. LACE. JOHN V. PRICE, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Aug. 22, 1928. Serial No. 27,913. Term of patent 3½ years.

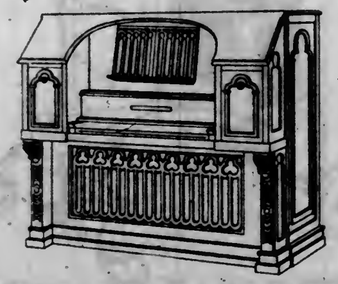


The ornamental design for lace substantially as shown.

76,823. RADIATOR ORNAMENT. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor to W. B. Jarvis Company, Grand Rapids, Mich. Filed Feb. 27, 1928. Serial No. 25,597. Term of patent 3½ years.

The ornamental design for a radiator ornament, as shown.

76,824. DRESS. MILDRED C. SCHMOLZE, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed May 14, 1928. Serial No. 26,660. Term of patent 3½ years.



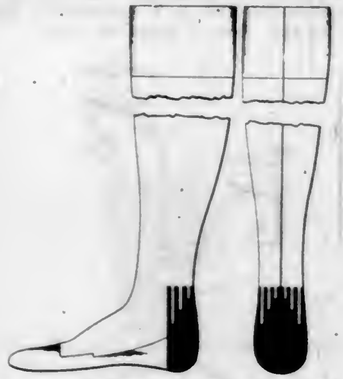
The ornamental design for a dress substantially as shown and described.

76,825. FLOWERPOT HOLDER. IRVING G. SCOTT and MAUD C. FOX, New York, N. Y. Filed July 7, 1928. Serial No. 27,415. Term of patent 3½ years.

The ornamental design for a flowerpot holder as shown.

76,826. ORGAN CABINET. JUSTUS P. SEEBURG, Chicago, Ill. Filed Aug. 1, 1928. Serial No. 27,654. Term of patent 7 years.

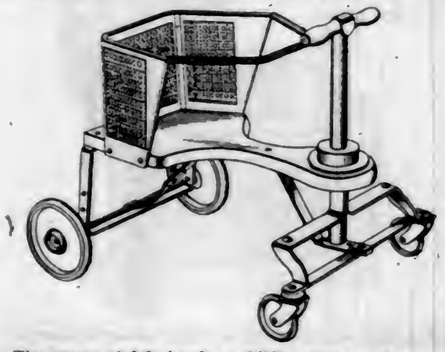
The ornamental design for an organ cabinet as shown.



76,827. FAUCET VALVE OR THE LIKE. SHERMAN SMITH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,506. Term of patent 14 years.

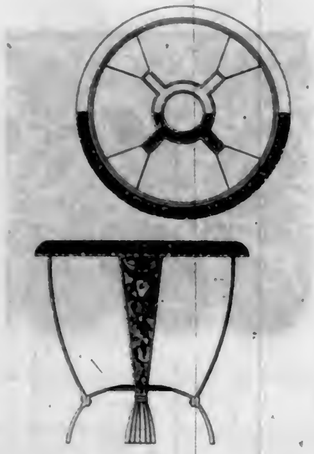
The ornamental design for a faucet valve or the like, substantially as shown.

---



76,828. STOCKING. JAMES A. STRUTHERS, Minneapolis, Minn., assignor to Strutwear Knitting Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 12, 1928. Serial No. 24,836. Term of patent 14 years.

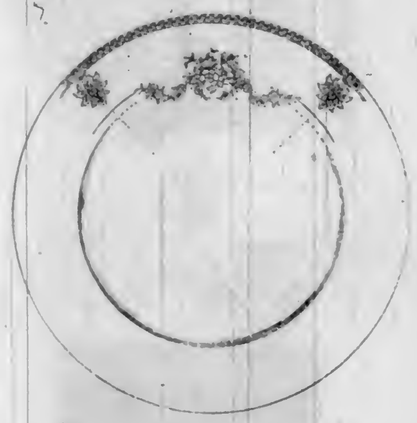
The ornamental design for a stocking substantially as shown.



---

76,829. CHILD'S VEHICLE FRANK F. TAYLOR, Norwood, Ohio, assignor to The Frank F. Taylor Company, Norwood, Ohio, a Corporation of Ohio. Filed July 18, 1927. Serial No. 22,790. Term of patent 14 years.

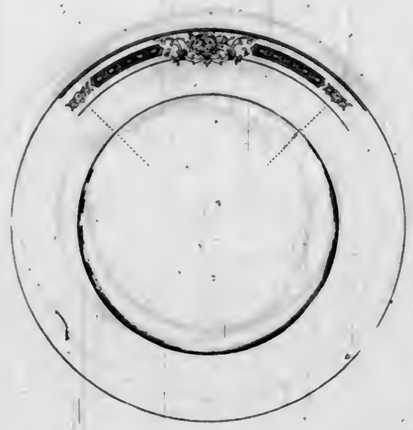
The ornamental design for a child's vehicle as shown.



76,830. COFFEE TABLE. JOSEPH TERR, Cleveland Heights, Ohio, assignor to Seville Studios, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 6, 1928. Serial No. 27,722. Term of patent 7 years.

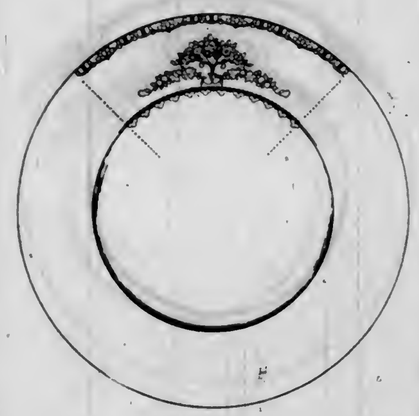
The ornamental design for a coffee table as shown and described.

---



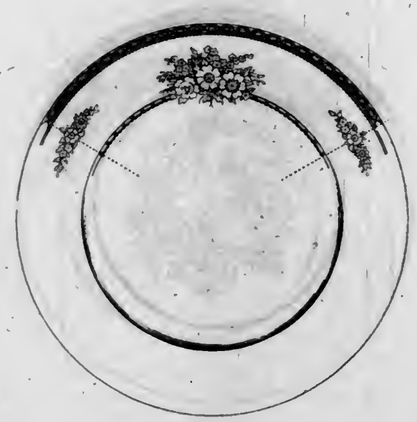
76,831. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,840. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.



76,832. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,841. Term of patent 7 years.

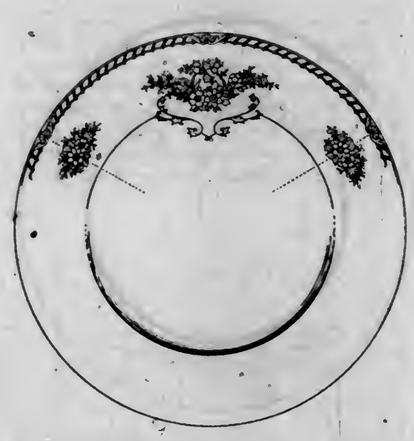
The ornamental design for a plate or similar article, as shown and described.



---

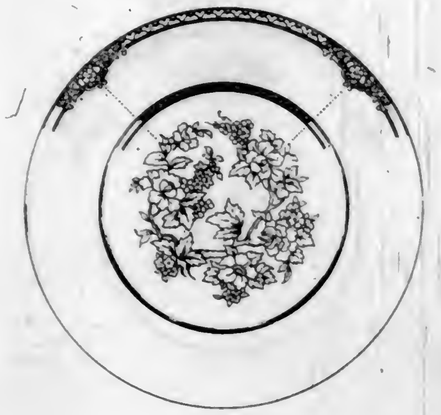
76,833. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,842. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.



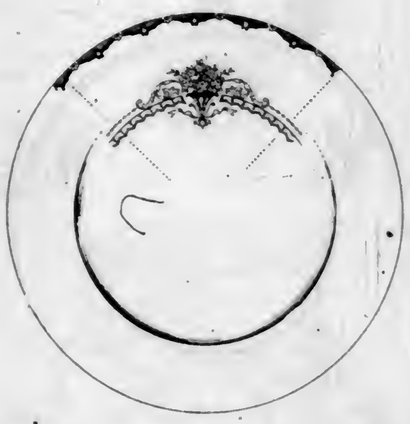
76,834. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,843. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.



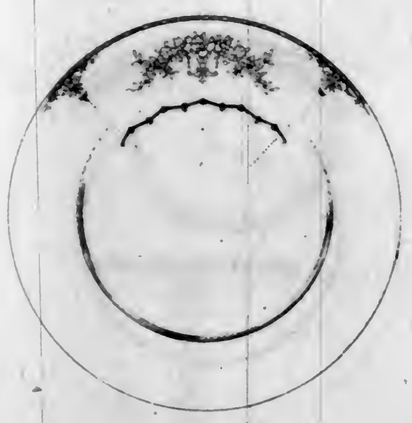
---

76,835. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,844. Term of patent 7 years.



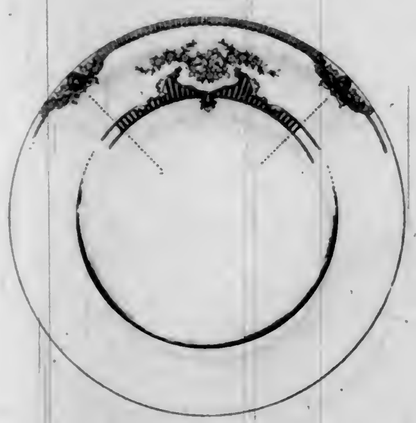
The ornamental design for a plate or similar article, as shown and described.

76,836. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,845. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

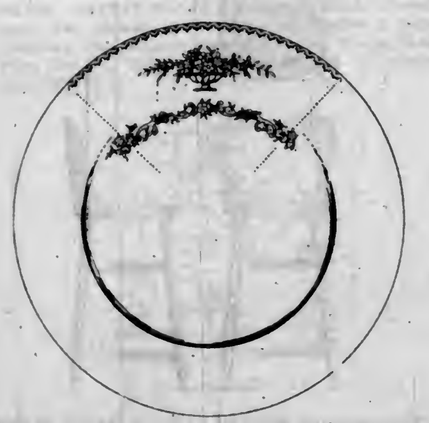
76,837. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,846. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

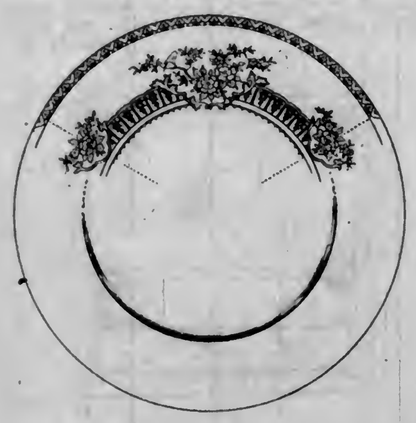
76,838. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,847. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

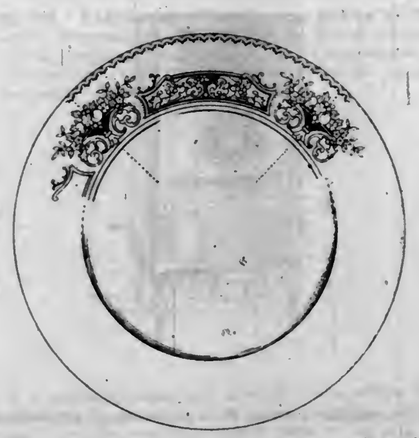


76,839. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,848. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

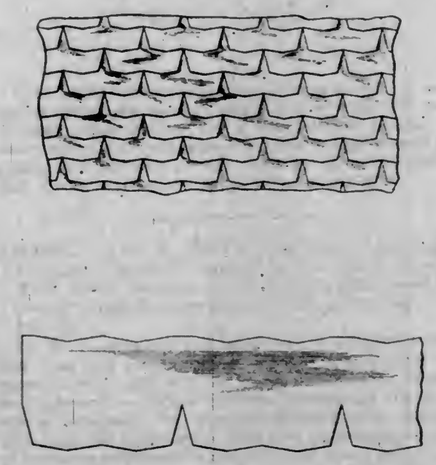


76,840. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,849. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

76,841. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,850. Term of patent 7 years.

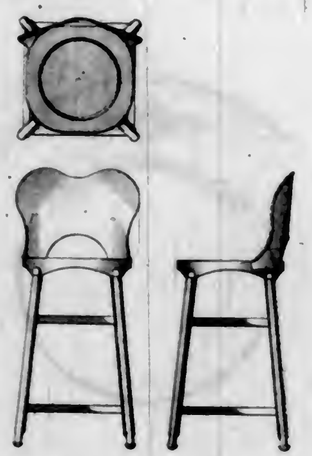


The ornamental design for a plate or similar article, as shown and described.

76,842. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, New York, N. Y., assignor to Morimura Bros., Inc., New York, N. Y., a Corporation of Japan. Filed Aug. 16, 1928. Serial No. 27,851. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

76,843. ROOF. JOHN A. TOPPING, Bronxville, N. Y. Filed Aug. 10, 1927. Serial No. 23,037. Term of patent 14 years.

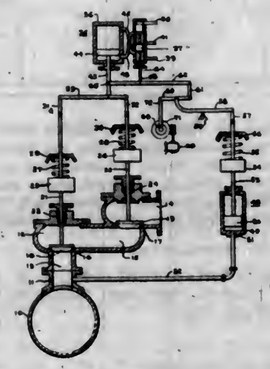


The ornamental design for a roof, as shown.

76,844. RADIOCABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Sept. 16, 1926. Serial No. 19,078. Term of patent 7 years.

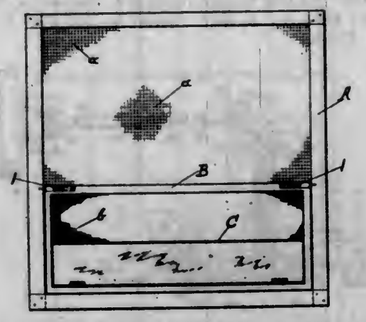
The ornamental design for a radiocabinet, substantially as shown.

76,845. CHAIR OR THE LIKE. CHARLES ROBERT WRIGHT, Macomb, Ill., assignor to Macomb Manufacturing Company, Macomb, Ill., a Corporation of Illinois. Filed July 27, 1928. Serial No. 27,605. Term of patent 7 years.



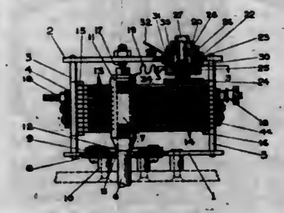
The ornamental design for a chair or the like, as shown.

# PATENTS



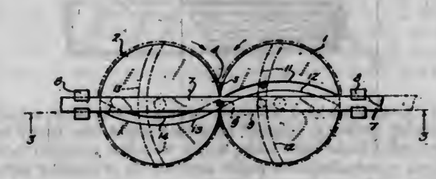
## GRANTED NOVEMBER 6, 1928.

1,690,093. SAFETY VALVE. ROBERT C. ALLEN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 11, 1924. Serial No. 749,288. 15 Claims. (Cl. 137—53.)



1. In a device for relieving the excess pressure of a fluid contained in a vessel, the combination of an outlet conduit, valve means for opening and closing the conduit, a second valve means for regulating the flow of the fluid upon an opening of said first-mentioned valve means, said second valve means being interposed between the vessel and the first-mentioned valve means, and means responsive to the pressure of the fluid in the vessel for operating both of said valve means.

1,690,094. WINDOW SCREEN. LOUIS G. BEERS, Trenton, N. J., assignor to The New Jersey Wire Cloth Company, Trenton, N. J., a Corporation of New Jersey. Filed Apr. 12, 1927. Serial No. 183,040. 3 Claims. (Cl. 98—99.)

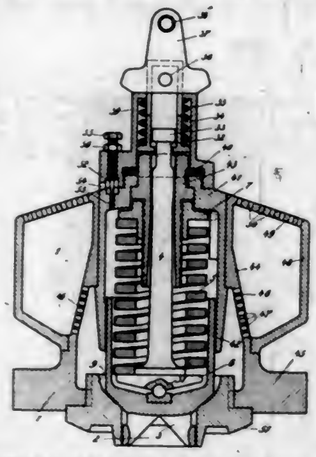


1. The combination with a window screen, of a ventilating screen frame removably mounted in the window screen frame and having screening material of finer mesh than the window screen, said ventilating screen extending vertically over only a portion of the window screen at one end of the window.

1,690,095. VARIABLE CONDENSER. MORRIS H. BENNETT, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 1, 1926. Serial No. 151,864. 4 Claims. (Cl. 175—41.5.)

1. A condenser comprising a set of stator plates, a set of rotor plates, an insulated terminal connection for said rotor plates, an auxiliary element mounted on said connection, means to adjust said element initially with respect to one of said stator plates, and means to hold said element in adjusted position.

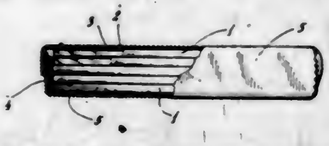
1,690,096. MECHANICAL MOVEMENT. JOSEPH C. CONN, Boonton, N. J. Filed Dec. 8, 1926. Serial No. 153,238. 10 Claims. (Cl. 74—14.)



1. A mechanical movement comprising a pair of cams having their axes parallel, means for rotating said cams in synchronous relation, and a cam follower movable between the axes of said respective cams and operatively engaging cam surfaces of both cams in succession during each movement in one direction between said axes.

1,690,097. SAFETY VALVE. GOTTLIEB ACKERMANN, Esslingen, Germany, assignor to the Firm: Brann & Wolff, Berlin, Germany. Filed Mar. 26, 1921. Serial No. 456,046, and in Germany Feb. 13, 1918. 12 Claims. (Cl. 137—53.)

11. In a safety valve, a valve seat, a valve body movable from said seat by excessive pressure, a cylinder surrounding said valve body in spaced relation and combining therewith to form a pressure chamber at the upper side of said body, said pressure chamber being provided with inlet and outlet ports, said inlet ports being adapted to gradually admit only a portion of the steam under pressure from the seat underneath said valve body into said chamber when the valve body is lifted from its seat, means to permit the escape of the remaining portion of said steam into the atmosphere, said ports establishing immediate and permanent communications with said cham-

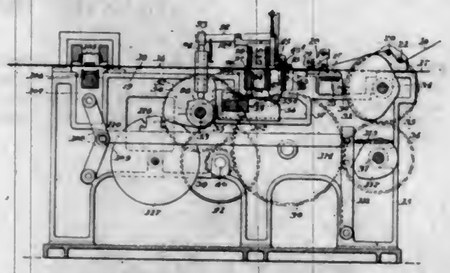


ber during the periods of time when the valve body is lifted from its seat, and being so dimensioned that the steam admitted in the said chamber through said inlet ports is

not immediately reduced in pressure but escapes gradually in such a way that there is produced in said chamber a pressure tending to force back the valve upon its seat.

---

1,690,098. CHEWING-GUM PACKAGE AND METHOD OF MAKING THE SAME. PHILIP L. BECKER, Flushing, N. Y., assignor to The American Chicle Company, Long Island City, N. Y., a Corporation of New York. Filed Feb. 17, 1927. Serial No. 168,879. 2 Claims. (Cl. 229—3.1)



1. A moisture and air tight package comprising a body enclosed within a wrapper of waxed paper, the paper being folded about said body, and a wax-like material completely enveloping said paper and having a melting point relatively less than that of the wax on the paper underlying it.

---

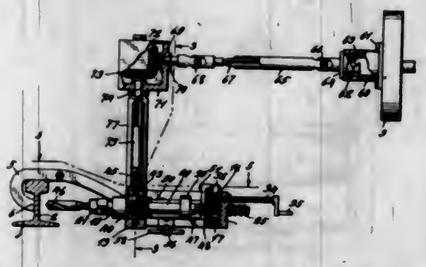
1,690,099. LITHOPONE. FRANK G. BREYER, Palmerton, and CLAYTON W. FARBER, Bowmanstown, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 29, 1926. Serial No. 157,864. 26 Claims. (Cl. 134—78.)

26. The improvement in the manufacture of lithopone which comprises separately preparing and purifying solutions of zinc sulfate and zinc chloride, precipitating the crude lithopone by mixing said purified solutions of zinc sulfate and zinc chloride with barium sulfide solution, establishing in the crude pulp at the endpoint of the precipitating step a predetermined sulfhydrate excess, diluting the resulting crude lithopone pulp with water promptly after the completion of the precipitating step, washing the crude lithopone until the chlorine content of the liquor in which the crude lithopone is suspended does not exceed 0.5 grams per liter, establishing in the liquor in which the crude lithopone is finally suspended after the washing operation a predetermined hydrate content equivalent to 2.5 to 7.0 cc. of 0.25N hydrochloric acid per 250 cc. of filtrate determined by titration of the filtrate from a sample of the pulp, charging the dried crude lithopone to a calcining apparatus with an average moisture content of from about 5 to 8%, and calcining the lithopone at a temperature of about 650 to 725° C.

1,690,100. MACHINE FOR FORMING FABRIC STRUCTURES. GEORGE E. BULL, Belle Vernon, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 25, 1927. Serial No. 194,112. 10 Claims. (Cl. 140—3.)

2. Apparatus for attaching a backing sheet to a mesh sheet, comprising means for slitting the backing sheet at a plurality of points, means for deflecting portions intermediate said slits through the mesh sheet, and means for inserting a retaining member between such deflected portions and the adjacent side of the mesh structure.

---

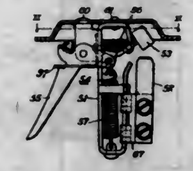


1,690,101. SOLDERING TOOL. FRANK B. BURNS, Chicago, Ill. Filed Oct. 28, 1926. Serial No. 144,082. 1 Claim. (Cl. 219—26.)

A tool of the character described, consisting of a long metal tube which is exteriorly threaded and slotted at one end, an electric cord connected with the other end of the tube, a handle of insulating material sleeved over the tube and the cord and covering the connection therebetween, a carbon point seated within and projecting from the threaded and slotted end of the tube, and a nut screwed over the tube about the carbon point and constructed in such a way as to cam the slotted portions of the tube radially inward into clamped engagement with the point, said threaded and slotted end of the tube being counterbored for a short distance to provide an abutting shoulder for the inner end of the point and render the slotted clamping portions of the tube about the point thin and flexible.

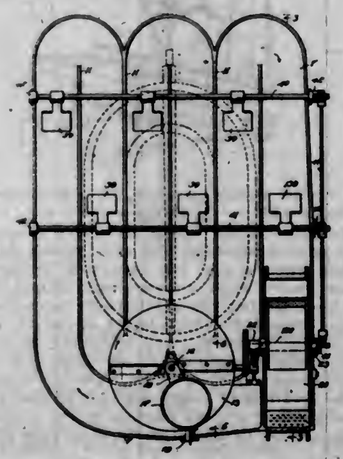
---

1,690,102. TRACK DRILL. JAMES L. CHRISTIAN, Denver, Colo. Filed Oct. 9, 1926. Serial No. 140,480. 1 Claim. (Cl. 77—8.)



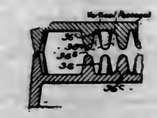
A power operated track drill comprising, in combination, a substantially rectangular framework having a closed compartment at one end, a two-part shaft extending through said framework, a worm wheel within the compartment, said gear being slidably but nonrotatably connected with the shaft, a cover member removably secured to the framework and forming one side of said compartment, a worm journaled in a bearing in the cover and operatively associated with the worm wheel, one part of said shaft having a chuck for holding a drill and the other being provided with threads, means for keeping the threaded end from rotating, a nut secured to the threaded end and means for rotating said nut when the worm wheel rotates the shaft, said means comprising a step by step mechanism.

---



1,690,103. ELECTRIC SWITCH. EMERSON L. CLARK, Pittsburgh, Pa., assignor to Syntron Company, a Corporation of Delaware. Filed June 3, 1924. Serial No. 717,468. 12 Claims. (Cl. 200—67.)

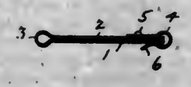
1. A snap switch adapted to be enclosed in the hollow handle of a portable tool, comprising a pivoted toggle link having a manually engageable operating arm angularly related with respect to said handle, a free link pivoted at or adjacent the end of said toggle link, a movable contact member carried by said free link, stationary contact members adapted to be bridged by said contact member, over-center spring mechanism connected to said links for moving said movable contact member into engagement with said stationary contact members upon actuation of said operating arm, and means for biasing said movable contact member from said stationary contact members and for moving said operating arm with respect to said handle.



---

1,690,104. FRYING MACHINE. EMIL A. DENZ, JAMES T. KELLEY, and JOHN E. TITUS, Chicago, Ill.; said James T. Kelley and John E. Titus assignors to said Emil A. Denz. Filed Mar. 2, 1927. Serial No. 172,051. 3 Claims. (Cl. 53—7.)

1. A cooking machine comprising a vessel having a non-endless meandering channel having the ends adjacently disposed, means for depositing loose particles of food into one end of the channel, and dipping means for dipping cooking-fluid out of the other end and pouring the fluid in surges into the one end to start the food to move through the channel and to regulate the flow of the fluid.



1,690,105. GAS BOILER. EDWARD R. DOWNE, Larchmont, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1925. Serial No. 59,442. 10 Claims. (Cl. 122—225.)

1. A boiler of the character described comprising a plurality of water containing sections forming flues therebetween, and a plurality of relatively small tapering projections distributed over the opposing walls of said flues and extending into the path of the hot gases and products of combustion passing therethrough, and serving to divide each flue into a series of uninterrupted vertical passages, each of whose area in cross-section is relatively wide at its intermediate portion and tapering towards the opposite ends thereof; and in which the ratio of a rectangular area of said flue wall whose sides are tangent to the outermost rows of projections, together with the area of its said projections, is about 1.33 times the area of the corresponding rectangular area of inner wall surface, substantially as specified.

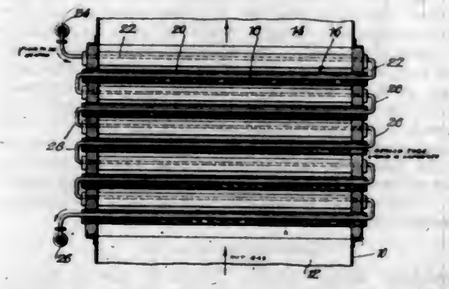
---

1,690,106. HAIR CLAMP. HELEN E. DOWNS, Los Angeles, Calif. Filed Jan. 23, 1928. Serial No. 248,691. 1 Claim. (Cl. 132—41.)

A hair clamp comprising a cylinder at one end and two integral resilient jaws projecting from said cylindrical end and having their free ends normally apart, a retainer pivoted to one of said jaws and having an outwardly projecting curved lip at one end adapted to project over the jaws and draw them into the closed position.

---

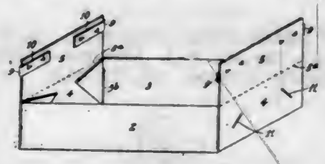
1,690,107. ELEVATING APPARATUS. HENRY S. GERMOND, Jr., Bayonne, N. J. Filed Oct. 6, 1927. Serial No. 224,378. 6 Claims. (Cl. 187—11.)



5. Elevating apparatus comprising a frame, a load-carrying platform mounted to move thereon, power-driven means for moving said platform, power-controlling means for regulating the application of power to said power-driven means, a shaft, a drum fast mounted on said shaft,

a cable movable on said frame and wound around said drum so that movement of said cable rotates said drum, cooperating means on said platform and said cable so that the cable will be moved by said platform at certain points in the movement of said platform in opposite directions, and operative connection between said shaft and said power controlling means, whereby said drum may be rotated by said cable to actuate said power-controlling means to regulate the power supplied to said power-driven means.

---

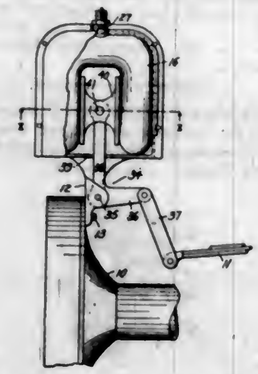


1,690,108. HEAT EXCHANGER. CHARLES B. GRADY, West Orange, N. J. Filed Oct. 30, 1924. Serial No. 746,736. 9 Claims. (Cl. 257—247.)

1. A heat exchanger comprising a plurality of containers each carrying a liquid in its lower portion which is exposed to the hot medium to be cooled and adapted to carry a vapor generated from said liquid in an upper portion which is exposed to the cool medium to be heated, and pipes arranged to carry the cool medium and in contact with said vapor in the successive containers.

---

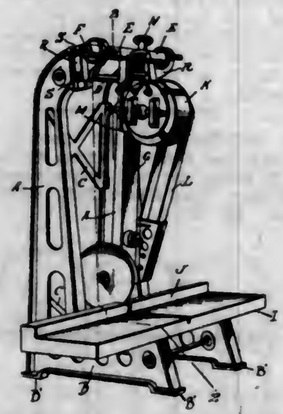
1,690,109. COLLAPSIBLE BOX. RALPH A. GROSS, Lititz, Pa., assignor to Simplex Paper Box Co., Lititz, Pa., a Corporation of Pennsylvania. Filed Nov. 4, 1926. Serial No. 146,079. 11 Claims. (Cl. 229—34.)



1. A knockdown box comprising a blank, having a body portion, side flaps, end flaps, locking flaps connected to the outer edges of the end flaps and adapted to fold upon the same, and connection between the side flaps and end flaps for raising the side flaps into and holding them in operative position when the end flaps are raised, the inner faces of the side flaps and the opposite ends of the locking flaps being provided with portions adapted to interlock automatically by the folding of the locking flaps upon the end flaps when the latter are in raised position to hold the box in operative position.

---

1,690,110. PNEUMATIC SHOCK ABSORBER. JOHN ALLEN HEANY, New Haven, Conn., assignor to Heany Laboratories, Inc., New Haven, Conn., a Corporation of Connecticut. Filed May 25, 1922. Serial No. 563,650. Renewed Sept. 20, 1926. 11 Claims. (Cl. 267—35.)



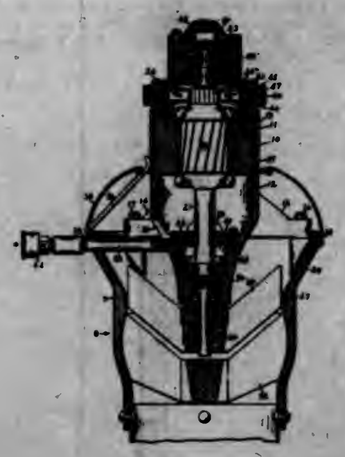
1. In a shock absorber for vehicle spring suspensions, an inner U-shaped flexible air container, an outer flexible casing therefor, a member pivotally mounted on one of two relatively movable parts in said vehicle spring suspension, said member having a plurality of arms, one of which is connected with the other of said relatively movable parts and the other of which is located between opposite parts of said outer U-shaped container casing, and

a rectilinearly moving compressing element connected with said last mentioned arm and operated thereby for engagement with said air container.

---

1,690,111. SAWING MACHINE. LORENZO R. HESTON and ARNER L. ANDERSON, Fairfield, Iowa. Filed Apr. 2, 1925. Serial No. 20,164. 2 Claims. (Cl. 143—46.)

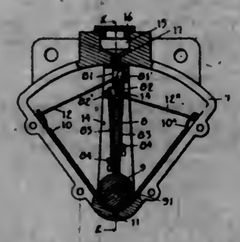
2. In portable sawing machines, the combination of a pair of frame members spaced apart and held in approximately parallel relation to each other, said members being of integral construction, and each member having a horizontally disposed base and an upward vertically extended portion, the upper and lower edges of said horizontal base being substantially parallel with each other, and their outer lower ends being adapted to come in contact with a suitable support to assist in holding the machine in position; means connected to the upper ends of the vertically extended portions of the frame to support and permit the operation of a swinging circular saw, and the horizontally extended lower portions of the frame members being adapted to support the material to be sawed.



---

1,690,112. UNDERGRATE DRAFT BLOWER. HENRY C. HOOK, Bridgeport, Conn., assignor to International Fuel Service Corporation, Bridgeport, Conn. Filed June 13, 1927. Serial No. 198,518. 7 Claims. (Cl. 230—117.)

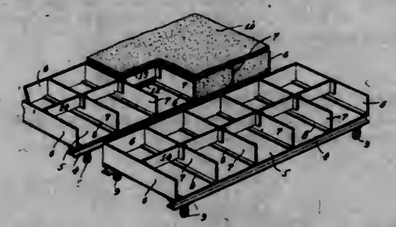
1. In a draft blower, a vertical fan casing, a vertical motor mounted on said casing, and having a rotary shaft



extending downwardly into said fan casing, a fan on said shaft and within said casing, a screen between said motor and said casing, said motor being partly carried within but spaced from said casing to provide an intake

for said fan, the motor casing above said screen being dust-tight, and said motor casing being provided with openings therein below said screen and within said fan casing.

---



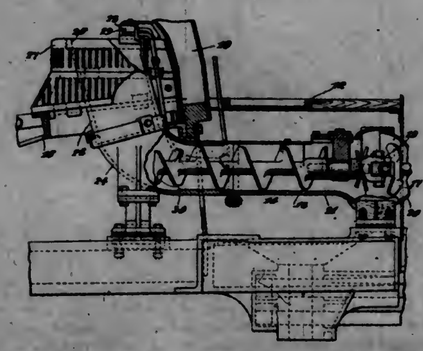
1,690,113. SPRING SNUBBER FOR AUTOMOBILES. GORDON B. HOOTON, Grand Rapids, Mich. Filed Mar. 17, 1927. Serial No. 176,101. 4 Claims. (Cl. 188—89.)

1. In a spring snubber for vehicles, the combination with the frame or chassis of the vehicle, of a cylinder casing secured thereto, with a triangular recess therein, an oscillating piston with a bearing shaft disposed in the angle of said recess, with double ports with oppositely opening valves, springs on opposite sides of said vane to hold said valves yieldingly in place, locating means for supporting said springs in operative relation on opposite sides of said vane, the said springs being positioned to be compressed by the oscillation of said vane from side to side whereby the pressure is increased on said springs and the valve resistance and hydraulic pressure on the vane consequently increased for control of the vehicle spring, and a rocker arm secured to the said shaft and extended to the axle or running gear whereby the action of the vehicle spring is snubbed, regulated and controlled.

1,690,114. METHOD OF COLLECTING SPRAY DRIED LATICES. RUSSELL HOPKINSON, New York, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 9, 1926. Serial No. 140,514. 4 Claims. (Cl. 18—50.)

1. The method of recovering solids from fluid materials which form a coherent dried deposit, which comprises atomizing the material in the presence of a drying medium, collecting the dried deposit as substantially separate units of predetermined area, and compacting said units.

---

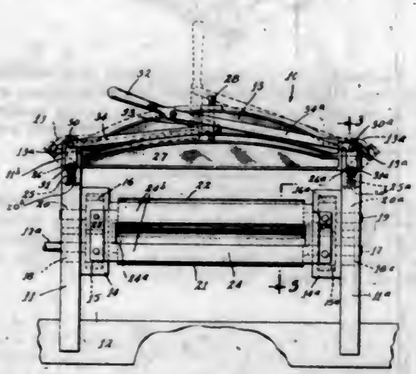


1,690,115. METHOD OF MAKING SHOE SOLES. THOMAS B. HURSTIS, Bristol, R. I., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed July 8, 1927. Serial No. 204,245. 6 Claims. (Cl. 12—146.)

1. The method of forming shoe soles which comprises forming in sheet material an opening of at least the outside width of a shoe sole shank, assembling the sheet material and a foundation of sheet material to form a plied unit, and forming from the unit a shoe sole by cutting through the said opening.

---

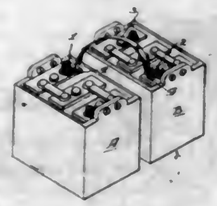
1,690,116. STOKER CONSTRUCTION. ANDREW M. HUNT, New York, N. Y., assignor to Standard Stoker Company, Incorporated, a Corporation of Delaware. Filed Jan. 27, 1925. Serial No. 5,025. 5 Claims. (Cl. 110—101.)



1. In a locomotive stoker, a forwardly extending conduit which terminates in an elbow, a conveyor screw in said conduit and an upwardly extending unobstructed conduit

adapted to receive coal from said first named conduit and deliver the same to the fire box, the conveyor screw being formed at its delivering end with a plurality of threads delivering the material in a generally axial direction at their ends so as to cooperate with said elbow to give a substantially continuous upward pressure on the material and cause a continuous advance of coal through said upwardly extending conduit.

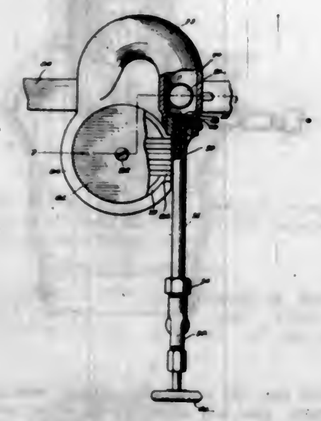
---



1,690,117. CLOTHES WRINGER. LOUIS JUDELSON, New York, N. Y. Filed Apr. 22, 1925. Serial No. 24,931. 4 Claims. (Cl. 68—32.)

1. A wringer comprising a frame, wringer rolls carried in said frame, means for retaining said rolls in contact with each other, and means to actuate said retaining means into operative or inoperative condition, said actuating means including linkage connected to said retaining means and to said frame, and a handle forming part of the linkage to actuate the linkage.

---



1,690,118. BATTERY CONNECTER. FRED G. JULYAN, Euclid, Ohio, assignor to Auto Mechanical Products Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1926. Serial No. 110,645. 2 Claims. (Cl. 173—324.)

1. The combination of a battery connecter comprising a flat resilient metal strip having notched ends with the notches opening oppositely and outwardly, and a pair of approximately parallel up-standing battery terminals engaged by said notches respectively, the resilient middle portion being bent out of the line connecting said terminals for exerting a yielding pressure through the notched ends against the terminals, and the end portions of the strip being initially bent away from the plane of the middle portion both at the same side of said plane, whereby they are substantially aligned in a common plane when the middle portion is bent.

---

1,690,119. PROCESS AND APPARATUS FOR BURNING LIQUID FUEL. JOHN M. KELLEY, Rochester, N. Y., assignor, by mesne assignments, to The Protane Corporation (1926). Filed June 18, 1923. Serial No. 645,945. 7 Claims. (Cl. 158—61.)

1. The process which consists in expanding into a chamber a liquid hydrocarbon fuel having a dry end point not in excess of 150° F. and an initial boiling point of approximately 45° F. or lower and which will not develop a pressure in excess of 50 pounds at 100° F., discharging the expanded fluid from the chamber and permitting it to further expand, applying sufficient heat at the point of escape from the chamber to prevent congealing of the moisture of the atmosphere at the orifice, mixing the expanded fluid with air, and conducting a portion of the mixture to the heated area for ignition.

---

1,690,120. STEAM-GENERATING SYSTEM. CLEMENS KIESSELBACH, Bonn, Germany. Filed Mar. 8, 1923, Serial No. 623,682, and in Germany Mar. 11, 1922. 16 Claims. (Cl. 122—35.)

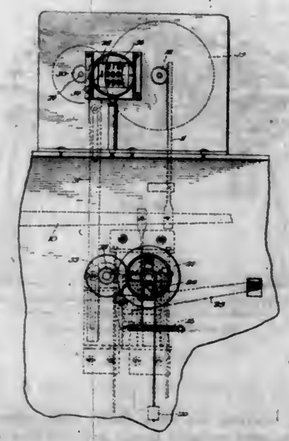
1. The combination, with a steam boiler, of an accumulator receptacle in communication with the steam space of the boiler and having feed and return connections with the boiler and forming therewith a closed circuit in which the accumulator is under boiler pressure, the return connection from the boiler to the accumulator communicating with the boiler at a point between the high and low water levels, means to circulate water from said accumulator through said feed connection to the boiler and through said return connection from the boiler back to the accumulator, said return connection having a damming action and coacting with said water circulating means to maintain a water level at least equal to low water level in the boiler, and means for supplying water from a source of supply to the accumulator without interrupting the flow of water between the accumulator and the boiler.

---

1,690,121. BRAKE METER. AUGUST KLIMEK, Chicago, Ill. Filed Dec. 3, 1926. Serial No. 152,382. 9 Claims. (Cl. 116—114.)

3. A brake meter connectible with an arcuate brake band having a friction surface, a piston operated by the contraction and expansion of the band, a cylinder cooperating with the piston and connected to the band, indicating means, and means actuated by the relative movement of the piston and cylinder for operating the indicating means.

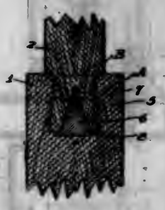
---



1,690,122. GRAMOPHONE. HEINRICH J. KOCHENMEISTER. Berlin, Germany. Filed July 18, 1925. Serial No. 44,462, and in Germany July 23, 1924. 4 Claims. (Cl. 274—23.)

4. In a sound reproducing machine for operation by a plurality of sound boxes having their styli simultaneously engaged in the same record groove, a plurality of sound boxes movable about separate pivots, brackets attached to said sound boxes, a movable guide arm, a slide adjustable along said arm, a rocker arm connected to said slide, and links pivotally connecting the ends of said rocker arm with said brackets.

---

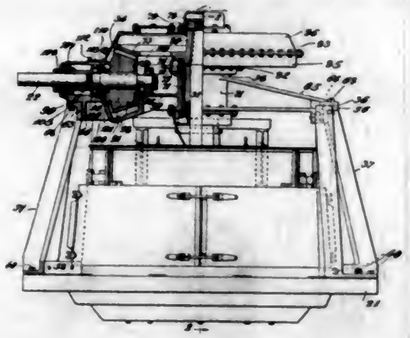


1,690,123. WEIGHING SCALE. OTTO MALCHER, Chicago, Ill. Filed Feb. 2, 1924. Serial No. 690,134. 28 Claims. (Cl. 265—48.)

1. A weighing scale comprising a rotary disc having numerals on a flat face thereof for indicating weights, a second rotary disc arranged adjacent said first disc and having numerals on a flat face thereof to be read in conjunction with the numerals on said first dics and weight controlled means for rotating said first mentioned disk.

---

1,690,124. JOINT FOR FURNITURE AND THE LIKE. CHARLES D. MCARTHUR, Berkeley, Calif. Filed Mar. 19, 1928. Serial No. 262,874. 1 Claim. (Cl. 20—92.)

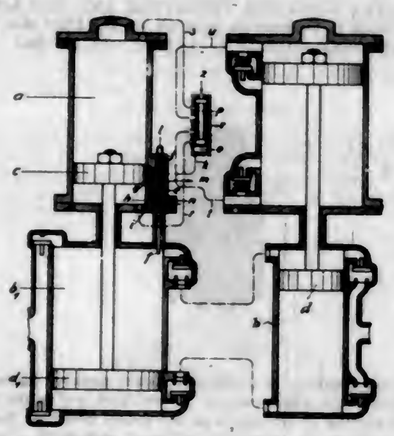


In combination in a joint, a socket member having a socket therein which extends inward with a straight wall for a portion of the depth of the socket and then tapers outwardly for the remaining portion of such depth, a tenon member fitting the socket, and a solid wedge member of metal of general conical shape having its base engaging the bottom of the socket and penetrating the tenon so that it is spread out and fills the tapering portion of the socket, said wedge having a nail point and a base larger in diameter than the base of its conical portion.

---

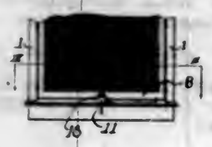
1,690,125. GRINDING MILL. CHARLES E. NEEDHAM, Allentown, Pa., assignor to Bethlehem Foundry & Machine Company, a Corporation of Pennsylvania. Filed Feb. 2, 1925. Serial No. 6,520. 27 Claims. (Cl. 83—45.)

4. In a centrifugal grinding mill having a grinding chamber, grinding rolls movable in said chamber, a vertical



shaft for moving said rolls, a base casting, interchangeable uprights secured to said base on opposite sides of said grinding chamber, and an overhead structure forming a

supporting bearing for said shaft, said structure being supported on said uprights in one position and being adapted to be supported on said uprights in a reverse position.



---

1,690,126. RECIPROCATING ENGINE. WALTER NIELEBOCK, Nowawes, near Berlin, Germany. Filed Feb. 9, 1924, Serial No. 691,814, and in Germany Feb. 23, 1923. 3 Claims. (Cl. 121—108.)

1. In a fluid-controlled system for double-acting reciprocating piston compound engines, the combination of a source of motive fluid, high and low pressure cylinders, a high pressure piston in the high pressure cylinder, a low pressure piston in the other cylinder, an auxiliary slide valve having an extension projecting into said low pressure cylinder, said auxiliary slide valve being moved in one direction only by contact of said low pressure piston with said extension and in the other direction by motive fluid from said source, and a main valve controlled by the said auxiliary slide valve and distributing the fluid to the cylinders.

1,690,127. DEVICE FOR ADJUSTING CASEMENT WINDOWS. WINSLOW R. PARSONS, San Diego, Calif. Filed Feb. 3, 1926. Serial No. 85,614. 1 Claim. (Cl. 268—117.)

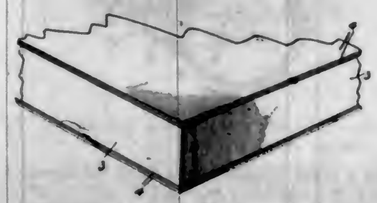
The combination with a window frame, of a sash hingedly mounted thereto, a sectional rod pivotally secured to said sash, a bracket stamped from sheet metal to define upstanding sides, secured to said window frame, there being aligned tapered slots in said upstanding sides to slidably receive said rod, and an adjustable screw associated with said bracket to selectively wedge said rod in said slot.

---

1,690,128. PROCESS FOR PREPARING CINCHOPHEN. RICHARD PASTERNACK, Brooklyn, N. Y., assignor to Charles Pfizer & Company, Brooklyn, N. Y., a Corporation of New Jersey. Filed Apr. 21, 1927. Serial No. 185,069. 1 Claim. (Cl. 260—39.)

Process of preparing cinchophen consisting in simultaneously adding substantially molecular proportions of anilin, 30% aqueous solution of pyruvic acid, and benzaldehyde to boiling alcohol at about 100° C.

---



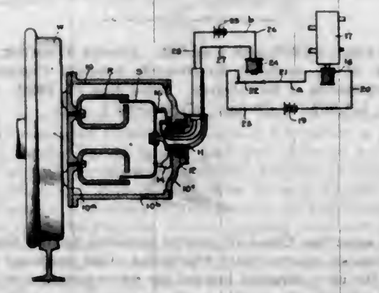
1,690,129. SEPARABLE BUTTON. LOUIS W. PRENTISS, Fort Myer, Va. Filed May 7, 1928. Serial No. 275,952. 6 Claims. (Cl. 24—90.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. A separable button comprising a head in the nature of an insignia, a pair of shanks projecting from the head, a base, coacting means in connection with said base and shanks to detachably engage the base with said shanks, a background removably positioned upon the shanks between the base and head and means carried by the shanks and cooperating with the background to prevent relative movement of the latter with respect to said head.

---

1,690,130. DESK TOP. BAYARD E. RICHARDSON, Grand Rapids, Mich. Filed Dec. 13, 1926. Serial No. 154,560. 4 Claims. (Cl. 20—91.)

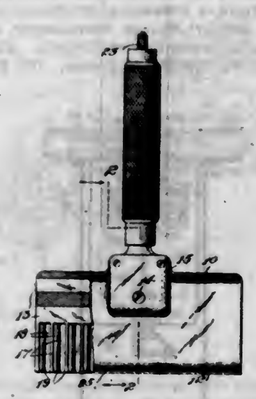
2. A top of the class described comprising, a core of uniform thickness of magnesium oxychloride, wood bands glued to the edges of the core, and wood veneers glued to the upper and lower sides of said core and to the upper and lower sides of the bands.



1,690,131. FOOD PRODUCT IN FORM OF DRY POWDER AND METHOD OF MAKING THE SAME. FLOYD W. ROBISON, Detroit, Mich. Filed Mar. 23, 1927. Serial No. 177,839. 7 Claims. (Cl. 99—11.)

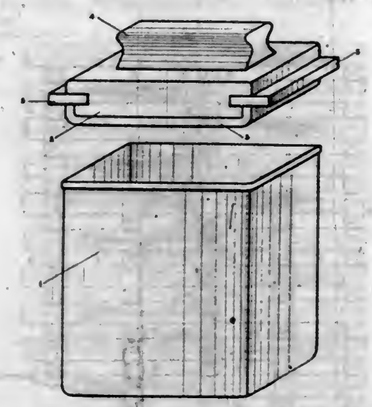
6. The new product, a substantially dry powder in crystalline form secured by drying the following ingredients—namely, a quantity of natural fruit juice, sugar in quantity sufficient to secure self-preservation of the mass, concentrated acids and pectin of the fruit, and additional natural fruit flavor in quantity proportional to the excess sugar content, and coloring matter providing a mass capable of reconstitution with water to provide a palatably sweet liquid with the fruit flavor, acid and pectin normal to the volume as reconstituted.

---



1,690,132. SPEED-CONTROL MECHANISM. FRED M. ROSENZWEIG, Niagara Falls, N. Y., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1924. Serial No. 719,948. 17 Claims. (Cl. 246—182.)

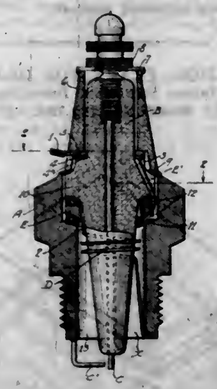
1. In a vehicle control mechanism, the combination with a wheel of the vehicle, of a speed controller comprising a relatively movable section connected to said wheel and carried thereby and a relatively stationary section inductively related to the relatively movable section.



---

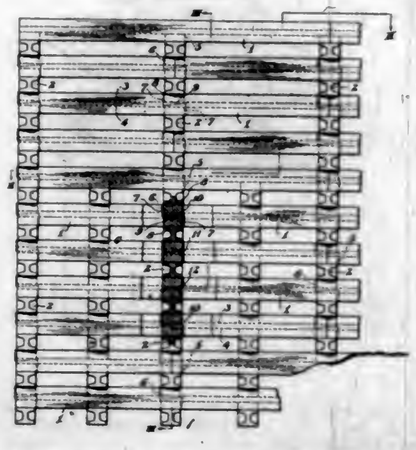
1,690,133. SHAVING IMPLEMENT. JACOB SCHICK, Stamford, Conn. Filed Mar. 24, 1927. Serial No. 177,885. 7 Claims. (Cl. 30—12.)

1. A shaving implement comprising a set of opposed fingers, a support for said fingers and disposed so as to permit movement of at least one set so that they will co-operate with the other set to form nippers operating in the same plane, and means for causing said movement.



1,690,134. ERASING DEVICE. MARTIN ADOLF SCHMIDT, Lyndhurst, N. J., and CURT ERNST WUNDERLICH, Brooklyn, N. Y. Filed Mar. 28, 1927. Serial No. 177,735. 4 Claims. (Cl. 120—40.)

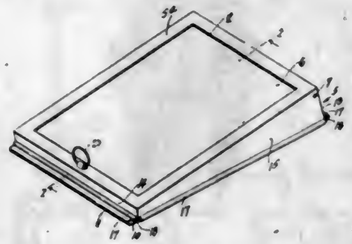
1. An erasing device for removing dirt and pencil marks, comprising a quantity of "rubber-flakes" of the character described.



---

1,690,135. ELECTRICALLY-HEATED SPARK PLUG. HERMAN D. SEEKAMP, St. Louis, Mo. Filed Nov. 14, 1924. Serial No. 749,900. 3 Claims. (Cl. 123—169.)

1. An electrically heated spark plug, comprising a metallic body part provided with a center bore that is enlarged at its upper end to form a shoulder, an insulator in said body part provided with a laterally-projecting portion that overhangs said shoulder, an electrode projecting downwardly through said insulator, an electrically-operated heating element composed of a few coils of wire surrounding said insulator and arranged in the center bore of the body part at a point far enough away from the end of said electrode to prevent said heating element from becoming excessively heated by the spark produced by the plug, a gasket arranged between the shoulder on the body part and the laterally-projecting portion of the insulator, an annular conducting member formed from a metal that has a higher co-efficient of expansion than the body part of the plug connected to said heating element and arranged in engagement with said gasket, and an electrical conductor leading upwardly from said conducting member through a groove on the exterior of the insulator and connected at its upper end to a contact or terminal mounted on the insulator above the metallic body part of the plug.



1,690,136. RETAINING-WALL STRUCTURE. JOHN W. SHIMEK, Lakewood, Ohio, assignor to The R. C. Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 13, 1926. Serial No. 154,320. 5 Claims. (Cl. 61—47.)

1. A crib retaining wall structure comprising a plurality of horizontal series of interlocked stretchers and headers in which the distances between the opposed faces of the respective pairs of adjacent vertically-aligned headers vary, and cooperating reversely arranged wedge blocks interposed between adjacent headers.

---

1,690,137. HOLDING FRAME FOR DRAWINGS AND THE LIKE. ISIDOR SHULMAN, Brooklyn, N. Y. Filed Oct. 29, 1927. Serial No. 229,785. 2 Claims. (Cl. 45—131.)

1. In a drawing frame adapted to hold a plurality of sheets superimposed upon one another, a table, a hinge pin portion integral with the table at one end thereof, a wall depending from the opposite end of the table and integral therewith, a base portion integral with and bent at an angle to the wall, a frame hingedly mounted on the table and provided with an opening in the top wall thereof, depending front, rear and side walls on the frame integral with the top wall, a bead on each of the depending walls, a reinforcing wire frame in the beads, and a bead on the table base coacting with the bead on the front wall of the frame to form locking means between the table and frame.

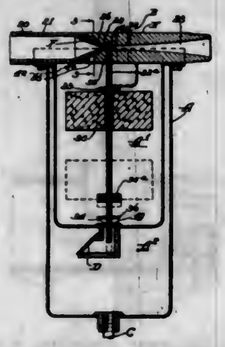
---

1,690,138. APRON. VICTOR R. SLADEK, Chicago, Ill. Filed May 16, 1927. Serial No. 191,614. 1 Claim. (Cl. 2—51.)

An electric worker's apron comprising a sheet of pliable heat resisting material constituting the body portion adapted to extend from the wearer's neck to below the waist with an outer smooth uninterrupted surface, sleeves of similar material, an upstanding neck-band portion, thongs secured to the upper portion of the body portion adapted to pass oppositely around the wearer's neck, loops,

secured to the upper end of the body portion, through which the thongs are adapted to pass, and thongs secured to body portions adjacent to the wearer's waist-line.

---

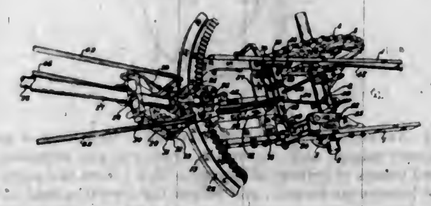


1,690,139. EYEGLASS FRAME. JOSEPH J. SMITH, Newark, N. J., assignor to Newark Novelaid Company, a Corporation of New Jersey. Filed May 27, 1926. Serial No. 111,955. 1 Claim. (Cl. 88—47.)

An eye-glass frame of plastic material having lens rim portions of substantially triangular cross sectional shape with the apex directed toward the outer peripheries thereof, the rearward angular portions coincident to the rearward lateral peripheries of said rim portions and including said outwardly directed apex portions consisting of transparent material, and the front angular portion coincident to the forward lateral peripheries of said rim portions consisting in a translucent demi-amber section, all whereby light traversing said rim portions toward the eyes of the wearer is diffused and softened while a definite conventional appearance of the frame is retained.

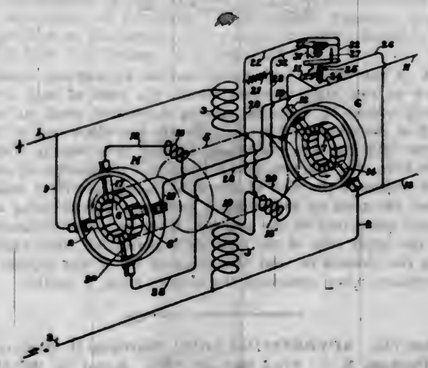
---

1,690,140. VACUUM-OPERATED LIQUID-LIFTING DEVICE. THOMAS FREDERICK SPACKMAN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 16, 1927. Serial No. 206,289. 8 Claims. (Cl. 103—236.)



1. In combination with a receptacle for liquid, a fitting mounted on the receptacle having extending through it a Venturi-shaped passage adapted for connection at one end with means for inducing air flow through the passage, and having between the entrance end and the Venturi constriction a lateral communication with the liquid chamber of the receptacle, a valve positioned for closing the Venturi passage without closing its communication with the liquid chamber, and means controlled by the liquid content of the chamber for opening and closing said valve.

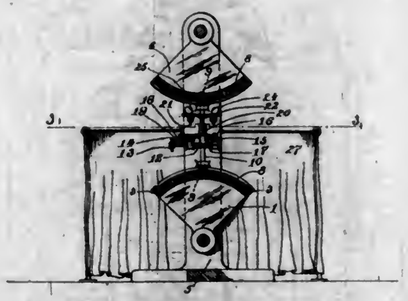
---



1,690,141. TRACTOR. CHARLES C. STEDMAN, Cleveland, Ohio, assignor to The Central Tractor Company, Greenwich, Ohio, a Corporation of Ohio. Filed Feb. 3, 1927. Serial No. 165,616. 4 Claims. (Cl. 180—12.)

1. In combination with a tractor and an implement pivotally connected thereto by means of a drawbar, a gear segment carried by the tractor and located in an arc described around the pivotal center and adapted to support the drawbar and permit oscillation thereof around the pivotal center, a steering column carried by the drawbar, a pinion upon the steering column meshing with said gear segment, a plurality of links pivotally mounted upon the tractor is swung in horizontal paths, a rod operatively connecting each link with one of the controls of the tractor and a second rod pivoted normally in vertical alignment with the pivotal connection between the tractor and draw bar to each link and leading to the steering column.

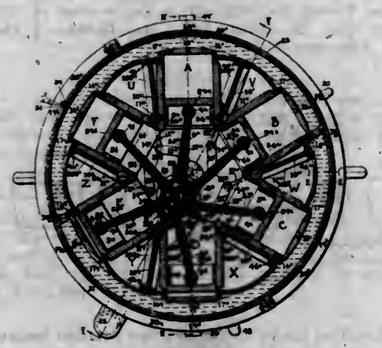
---



1,690,142. REGULATING DYNAMOTOR. HARRY L. TANNER, Brooklyn, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed July 26, 1927. Serial No. 208,467. 12 Claims. (Cl. 171—223.)

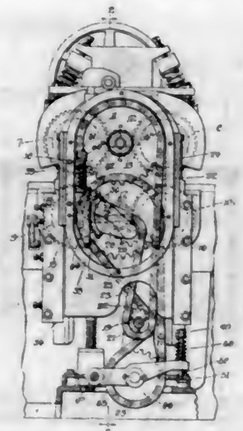
1. In combination, an electrical circuit, a generator connected thereacross and having commutator brushes, a motor in unitary combination with the generator, and regulating means controlled by the potential of said circuit to shift the magnetic field with respect to said brushes thereby altering the action of the motor in response to potential variations of said circuit thereby changing the operation of the generator.

---



1,690,143. METHOD OF AND APPARATUS FOR REGISTERING CYLINDRICAL FORMS. ARTHUR K. TAYLOR, Baltimore, Md., assignor to The United States Printing and Lithograph Company, a Corporation of Ohio. Filed May 26, 1924. Serial No. 715,933. 12 Claims. (Cl. 88—24.)

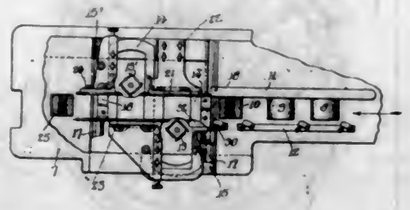
1. The method of registering a cylindrical form having a movable member, which consists in providing suitable registering detail in such relation to the cylindrical form that by rotating the form, the portion to be registered will be in suitable relation to the registering detail for the detail to be displayed on the cylindrical form, rotating the form so that the portion to be registered is in suitable relation to the registering detail for the detail to be displayed on the cylindrical form, and displaying on the form an image of such portion of said registering detail as will define the proper location on said form for said movable member.



---

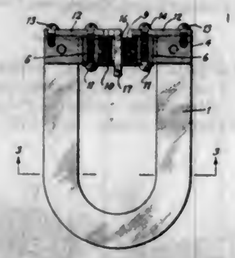
1,690,144. INTERNAL-COMBUSTION ENGINE. JOHN WARREN TEASDALE, St. Louis, Mo. Filed Aug. 26, 1926. Serial No. 131,571. 15 Claims. (Cl. 123—55.)

4. An internal combustion engine comprising a plurality of cylinders arranged in a circular series, a crankshaft disposed centrally of said cylinders, a plurality of compression chambers adapted to compress combustible gases and a wheel secured to said crankshaft, said wheel being provided with passageways adapted at intervals to connect openings in said compression chambers with the source of supply of combustible gases to permit the admission of said gases into said compression chambers.



1,690,145. MOLDING MACHINE. WILLIAM O. VIVARTTAS, Rockford, Ill., assignor to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Mar. 24, 1924. Serial No. 701,277. 7 Claims. (Cl. 64—5.)

1. In a molding machine, the combination of a feed roll, a support therefor, a drive shaft, said support being mounted for up and down movement relative to said shaft, means including a chain and sprocket mechanism for driving said roll, a rocker arm mounted to turn on a stationary axis and disposed between said roll and the drive shaft, a pair of idlers mounted on said arm and adapted to engage with said chain, and spring means tending to hold said idlers in engagement with the chain to maintain a predetermined tension thereon, said spring means being interposed between the rocker arm on the one hand and the movable support for the feed roll on the other hand.



---

1,690,146. MOLDER. WILLIAM O. VIVARTTAS and LOUIS T. MEDHOLDT, Rockford, Ill., assignors to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Mar. 26, 1925. Serial No. 18,361. 2 Claims. (Cl. 144—90.)

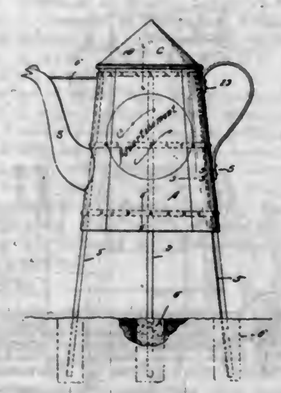
1. A molder having a base with two adjacent transversely disposed recesses of substantial depth opening at opposite sides of the base and extending substantially beyond the longitudinal center line of the base, supports bridging the respective recesses and movable transversely upon the base from one side thereof to the other, and a pair of side cutter heads mounted one in each of said supports and having individual driving units depending into said recesses and movable therein as the supports are moved from one side of the base to the other to change the positions of the cutter heads from one side of the work to the other, the arrangement being such that the cutters when on one side of the work perform a surfacing cut thereon and when on the other side perform a paralleling cut thereon.

1,690,147. ELECTROMAGNET FOR SOUND-REPRODUCING INSTRUMENTS. BENSON F. WADDELL, New York, N. Y. Filed Aug. 30, 1926. Serial No. 132,384. 14 Claims. (Cl. 175—339.)

1. An electro-magnetic speaker unit comprising a permanent magnet and cooperating armature, and including a fixed means of leakage of magnetic flux across the poles of the permanent magnet, and means for diverting said leakage through the armature, air-gap and pole-shoes under the influence of the telephonic currents.

---

1,690,148. CAP CLOSURE FOR THE MOUTHS OF BOTTLES OR OTHER CONTAINERS. HARRY CLIFFORD WALLIS and KEITH ALEXANDER ROBINSON, London, England. Filed Aug. 11, 1926, Serial No. 128,611, and in Great Britain Apr. 30, 1926. 2 Claims. (Cl. 215—95.)



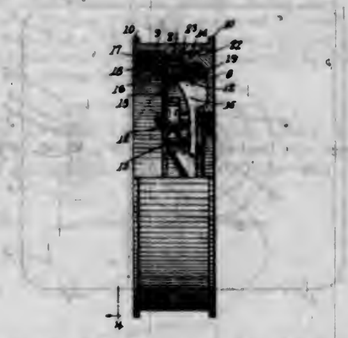
1. A cap closure embodying therein an annulus formed of a narrow strip of sheet metal, the ends of said strip being united by a tongue having a reduced neck, at one end of the strip, and a slot adjacent the other end of the strip, said slot being in length greater than, and in width less than, the width of said tongue, and the portion of said slot adjacent the end of the strip being relatively wider than the neck of said tongue, and said tongue being exposed outwardly of the annulus, whereby slight expansion of the lower edge of the annulus is permitted when applying the closure to, and the breaking off of the tongue is necessary when removing the closure from, a bottle.

---

1,690,149. ADVERTISING SIGN. ROTCHER H. WATKINS, Durham, N. C. Filed Mar. 28, 1928. Serial No. 265,502. 1 Claim. (Cl. 40—126.)

A sign of the class described comprising a plurality of uprights, a frusto-conical body mounted on the upper portions of the uprights, said uprights being secured to the interior thereof, a conical cover for the upper end of the body, said body comprising a plurality of transversely curved sections having the side edges thereof converging upwardly toward each other, one side edge of each section having a channel flange and the other side edge having a flange, said flanges being inwardly directed, the second flanges being receivable in the first named flanges, means for securing the flanges together, a plurality of band segments in the body associated with each section transversely thereof and fitting against the inner surface thereof, mem-

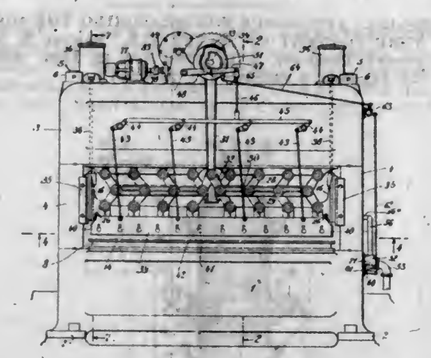
bers of V-shaped sectional formation disposed against the inner surfaces of the segment, means securing the members, segments and sections together, bolts extending through the sections, segments, members and uprights to anchor them together.



---

1,690,150. METHOD OF USING LATEX AND PRODUCT THEREOF. WILLIAM B. WESCOTT, Boston, Mass., assignor to Rubber Latex Research Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 23, 1927. Serial No. 235,754. 8 Claims. (Cl. 18—50.)

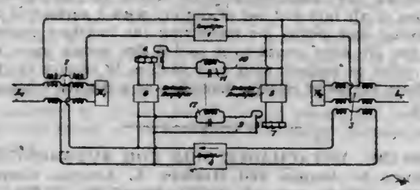
1. In the thickening of binders for plastic materials the process which comprises producing a reaction between hemoglobin in solution and zinc oxid.



---

1,690,151. HOISTING DRUM. ROBERT W. WOODBURY, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation of Tennessee, Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 17, 1926. Serial No. 129,685. 18 Claims. (Cl. 188—218.)

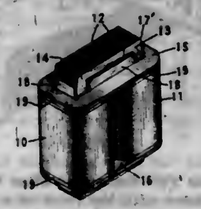
1. A hoisting drum having removable end flanges and annular circumferentially continuous brake rims removably connected with said removable end flanges, said continuous brake rims being expansible and contractible radially and circumferentially independently of said end flanges.



1,690,152. PRESS. ADAM ZISKA, Jr., Milwaukee, Wis., assignor, by mesne assignments, to Wood Conversion Company, Cloquet, Minn., a Corporation of Delaware. Filed Dec. 3, 1921, Serial No. 519,603. Renewed Apr. 4, 1928. 13 Claims. (Cl. 92—61.)

1. In a press for compressing wall board the combination of a bed over which the board moves, a platen movable toward and away from the bed, and a frame mounted on the platen and movable relatively thereto, this frame cooperating with the platen to enclose a portion of the web to be compressed.

---

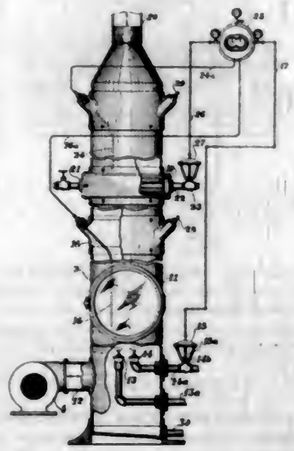


1,690,153. SELECTIVE ECHO SUPPRESSOR. LEONARD G. ABRAHAM, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 26, 1926. Serial No. 111,847. 3 Claims. (Cl. 178—44.)

1. A circuit including an echo suppressor, and means in said echo suppressor providing for selective operation thereof with respect to different frequencies transmitted over said circuit.

---

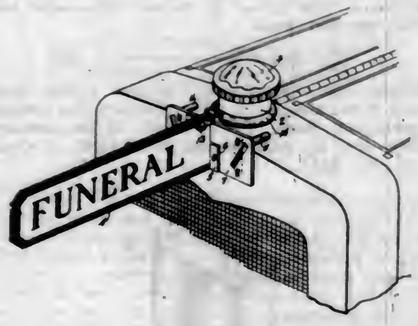
1,690,154. TRANSFORMER. MILTON ALDEN, Springfield, Mass., assignor to Alden Manufacturing Company, Springfield, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1926. Serial No. 154,688. 7 Claims. (Cl. 175—356.)



1. An electro-magnetic device having no moving parts and consisting of a laminated core and an electrical coil positioned around a portion of said core, said core consist-

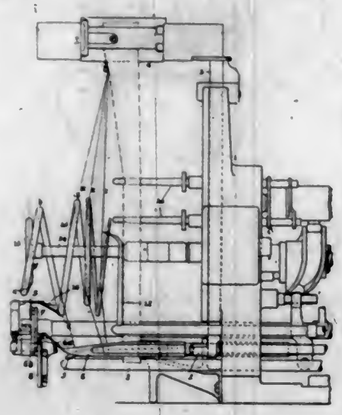
ing of two right-angular sections and two continuous metallic bands, said bands positioned around said core at either end of said electrical coil and rigidly binding said right angular sections together.

---



1,690,155. APPARATUS FOR MEASURING THE MOISTURE CONTENT OF MATERIALS. SAMUEL S. AMDURSKY, Rochester, N. Y. Filed Nov. 19, 1926. Serial No. 149,483. 3 Claims. (Cl. 73—24.)

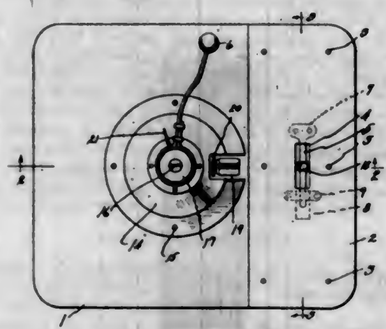
1. In apparatus for determining the humidity of a material, the combination with means for maintaining a flow of air into and out of contact with a surface of the material and means for measuring the moisture content of the air after contact, of means for acting upon the air prior to contact with said surface to impart to it a definite degree of relative humidity at a definite temperature.



---

1,690,156. DETACHABLE SIGN FOR AUTOMOBILES. JOHN L. ARNOLD and HERMAN A. ARNOLD, Canton, Ohio. Filed Apr. 13, 1925. Serial No. 22,629. 4 Claims. (Cl. 40—129.)

1. A detachable sign for automobiles including a back plate for engagement with the front of a radiator, fingers upon said back plate for engagment with the top of the radiator, flexible means for engagement with the radiator cap or spout and a sign panel located at right angles to the back plate and extending forwardly therefrom.



1,690,157. THREAD FEEDER FOR WARP TWISTING-IN MACHINES. JOHN HENRY BECKER, Richmond Hill, N. Y., assignor to Warp Twisting Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 24, 1928. Serial No. 249,037. 4 Claims. (Cl. 28—43.)

1. In a warp twisting-in machine, the combination of a frame, a pair of horizontal guides projecting from the frame and between which the two warps extend and having upwardly inclined terminals, means above the guides to hold the two ends of the warp, and a rotating spiral device, journaled with its axis horizontal and relatively between said means and guide, for advancing the threads along the guides to the terminals successively in pairs each comprising a thread from each warp, the spiral of said device having that volute portion thereof which advances the threads along the parts of the guides immediately adjoining their terminals of greater pitch than that volute portion thereof which advances the threads to said parts and having the first-named portion thereof formed to pass closer to the guides than its second-named portion.

---

1,690,158. PRACTICE GOLF GAME. OTIS C. CURRIE, St. Clair, Mich., assignor of forty-nine one-hundredths to Frank V. Carney, St. Clair, Mich. Filed Mar. 12, 1927. Serial No. 174,754. 3 Claims. (Cl. 273—35.)

1. In a device of the character described, a base, a standard secured to the upper side of the base, a collar rotatably secured to the standard, a thong secured at one end to the collar, a ball secured to the opposite end of the thong, an arm extending outwardly from the collar, a counting device mounted on the base, and a star wheel

through revolution of which the counting device is actuated, said star wheel lying in the path of movement of the said arm whereby the wheel is caused to turn by revolution of the collar.

---

1,690,159. METHOD OF PRODUCING SOUND-RECORD TABLETS. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J., assignor to Thomas A. Edison Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Oct. 5, 1926. Serial No. 139,754. 6 Claims. (Cl. 18—48.3)

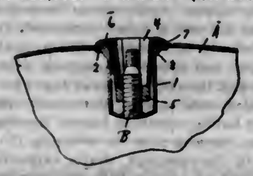
1. The method of producing a tablet adapted to be impressed with a sound record groove, which consists in applying to a suitably shaped blank a priming or sizing coating of varnish containing a fusible condensation material, and then a plurality of additional coatings of such varnish, drying the coated blank between the applications of successive coatings of varnish, the duration of successive drying periods progressively increasing, and then curing the coated blank by the application of heat, substantially as described.

---

1,690,160. RESINOUS COMPOSITION CONTAINING SULPHUR AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Dec. 19, 1922. Serial No. 607,909. 8 Claims. (Cl. 260—20.)

1. A deodorized fusible resin free from hydrogen sulphide and free from other soluble sulphides, formed by heating a phenolic body with at least 1.6 times its weight of sulphur in the presence of an alkaline catalyst.

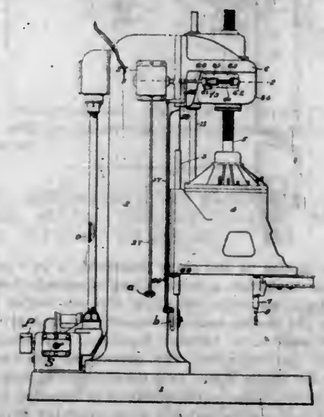
---



1,690,161. PACKING. WALTER W. EVANS, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 3, 1923. Serial No. 622,566. 5 Claims. (Cl. 154—45.5.)

1. Packing material adapted for bottle-seals and comprising a relatively-thick, resilient backing layer, and a relatively thin, impervious, plastic, facing layer adherent to said backing layer and composed of unvulcanized rubber, wax, and a reenforcing pigment, the backing layer being substantially free from impregnation by the material of the facing layer.

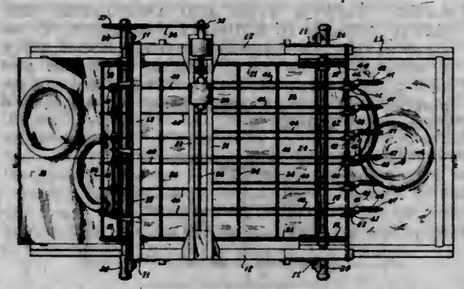
---



1,690,162. VALVE CONSTRUCTION. JOHN L. FITZPATRICK, Bowling Green, Ky. Filed Nov. 25, 1927. Serial No. 235,588. 1 Claim. (Cl. 278—63.)

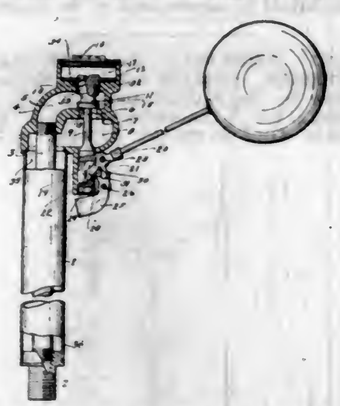
In a valve securing means for inflatable bladders wherein it employs a conventional threaded valve body, a cup having a flange at its open end adapted to bear against the inner side of the plate about the usual valve receiving opening therein, said cup adapted to have the conventional threaded valve body extending therethru, a tube having a flange at its outer end engageable with the outer side of the bladder, the inner end of the tube being in threaded relation with the threaded valve body, whereby the flanges may be clamped to opposite sides of the bladder.

---



1,690,163. SCREW-FEED AND RAPID-TRAVERSE MECHANISM. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Jan. 26, 1924. Serial No. 688,753. 2 Claims. (Cl. 77—32.)

1. A machine tool combining a frame; a member adapted to be fed and retracted on said frame; a slow feeding mechanism for said member, said mechanism comprising a threaded shaft translatable in said frame and supporting said member; a nut having a threaded connection with said shaft; a worm-wheel coaxial and rotatable with said nut; a worm to drive said worm wheel, said worm and worm-wheel comprising a non-reversible drive; means to rotate said worm; a rapid traverse for said member comprising a non-translatable worm-wheel splined to said shaft; a worm to drive said worm-wheel; means independent of the slow feed transmission to rotate said last named worm; and means to render either of said member translating mechanisms effective.

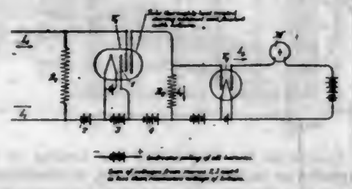


---

1,690,164. INNER-TUBE-INSPECTION APPARATUS. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 20, 1924. Serial No. 714,669. 15 Claims. (Cl. 73—51.)

1. In apparatus for facilitating the testing of hollow rubber articles as to air impermeability, in combination, a tank adapted to contain a liquid, means for directing the articles beneath the surface of the liquid, and means for causing said articles to traverse in generally horizontal paths beneath the surface of the liquid including means contacting only the uppermost surfaces of the said articles.

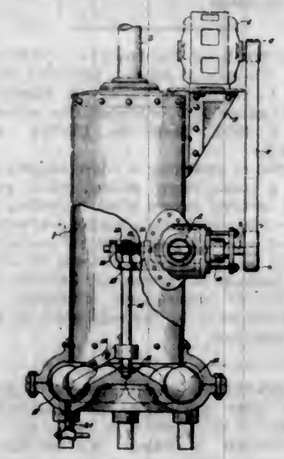
1,690,165. AUTOMATIC HYDRAULIC VALVE. WILLIAM L. GILCHRIST, Albany, Oreg., assignor to Standard Securities Co., a Corporation of Oregon. Filed Aug. 28, 1926. Serial No. 132,222. 4 Claims. (Cl. 137—104.)



1. In a device of the class described, a pair of concentric tubular members, a valve casing mounted on said tubular members, an inlet chamber and an outlet chamber formed in the casing and communicating respectively with the inner and outer tubular members, a passageway between the two chambers, the portion of the casing surrounding the upper end of said passageway forming a valve seat; a valve, above said passageway adapted to engage said seat; said valve having a stem provided with a longitudinally disposed slot; a lever fulcrumed to said casing, engageable with the upper and lower walls of said slot for the purpose of raising and lowering said stem; a pawl rockably carried by said casing; said pawl adapted to engage said stem when in a raised position; and a finger carried by said lever adapted to engage said pawl to release said stem therefrom when the lever is moved to a position for lowering the valve.

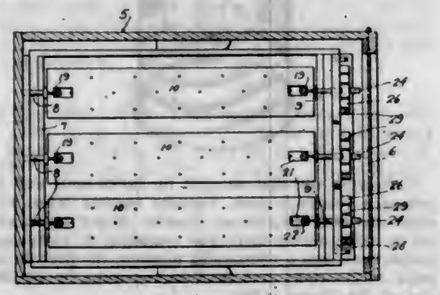
1,690,166. LIQUID SOLUTION OF THIOCARBANILIDE. HAROLD GRAY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1927. Serial No. 187,416. 20 Claims. (Cl. 252—9.)

1. A composition of matter comprising a liquid solution of thiocarbanilide and a plurality of different amines.



15. A composition of matter comprising thiocarbanilide and a plurality of amines including aniline, xylidine and dimethyl paraphenylene diamine.

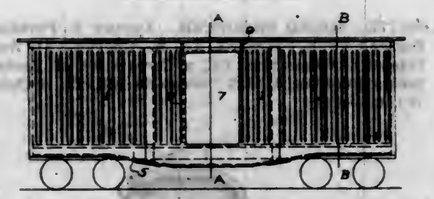
1,690,167. VACUUM TUBE AND ASSOCIATED ELEMENT. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed June 1, 1926, Serial No. 113,020. Divided and this application filed Apr. 26, 1927. Serial No. 186,784. 6 Claims. (Cl. 250—27.)



1. In a system for amplifying electric currents, a vacuum tube and sources of anode and grid potentials therefor, said tube being flushed with a gas of a high resonance voltage, and the sum of the voltages from said sources being less than the resonance voltage of said gas.

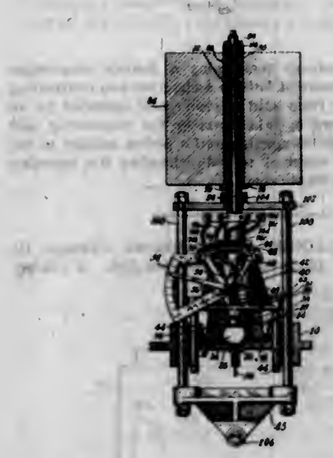
1,690,168. OIL MILL. ROBERT C. HOPKINS, Alliance, Ohio. Filed Apr. 3, 1926. Serial No. 99,586. 9 Claims. (Cl. 83—45.)

1. An oil mill including an upright chamber, means for admitting oil tangentially to the chamber and for producing centrifugal action of the oil to separate the oil into light and heavy portions and to allow the heavy portions of the oil to settle downward to the bottom of the chamber, grinding means in the peripheral portion of the bottom of the chamber for grinding heavy portions of the oil, and an oil outlet at the axial center of the top of the chamber.



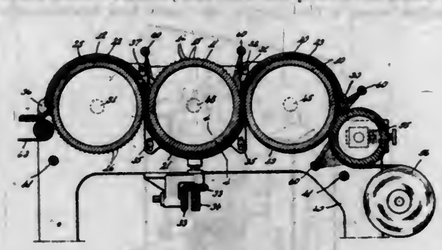
1,690,169. EGG TURNER FOR INCUBATORS. JAMES JACKSON, Bakersfield, Calif. Filed Dec. 2, 1927. Serial No. 237,207. 1 Claim. (Cl. 119—44.)

An egg tray for incubators comprising a plurality of tray sections, including a pair of oppositely arranged sections having egg racks formed thereon cooperating with each other and with the remaining sections to retain the eggs in position therein against independent movement therebetween, end plates for said sections engageable therewith for retaining the same in assembled position, said end plates forming a tongue and groove connection with certain of said side sections of the tray, a pair of lugs extending laterally from opposite ends of said plate, said other side sections of the tray having openings formed therein adapted to receive said lugs, locking pins for securing the lugs in engaged position in the openings, shafts extending from the outer faces of said plates, an indicator carried by one of said shafts and adapted for simultaneous rotation therewith, a dial arranged adjacent the indicator, notches formed about the periphery of the indicator and a key engageable with said notches adapted to retain the indicator and tray against rotation.

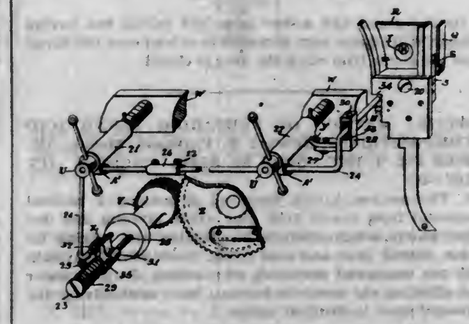


1,690,170. RAILWAY BOX FREIGHT CAR. GEORGE R. JOUGHINS, Elizabeth, N. J. Filed Jan. 8, 1927. Serial No. 159,062. 5 Claims. (Cl. 105—409.)

1. A railway box freight car having its sides constructed of self-supporting metal sheets longitudinally disposed substantially as described.



1,690,171. AUTOMATIC CLASSIFYING DEVICE. WALDEMAR D. KMENTT, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 18, 1926. Serial No. 149,116. 8 Claims. (Cl. 265—12.)

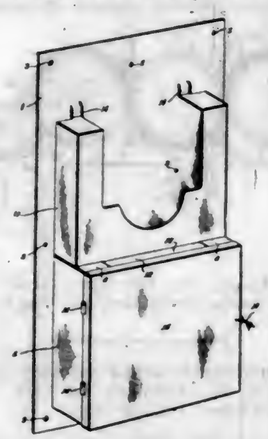


1. Apparatus of the character described comprising a rest for an article, means for compressing the article against said rest with a relatively small determinate force, means for further compressing the article against said rest with a greater determinate force, means for registering the increase of deformation of the article resulting from the application of the second mentioned force, and means for actuating the two force-applying means in timed relation in cyclic operation.

1,690,172. MACHINE FOR MAKING ELASTIC PAPER. WILLIAM A. LORENZ, West Hartford, Conn.; Phoebe Bunker Lorenz executrix of said William A. Lorenz, deceased. Filed Apr. 9, 1927. Serial No. 182,304. 12 Claims. (Cl. 92—69.)

1. In a machine of the character described, a pair of cooperating cylinders one delivering to the other, each of said cylinders being provided with circumferential corrugations and the receiving cylinder being revolved at a slower speed than the delivering one, and plates curved about said cylinders and having corrugations matching with those of the cylinders.

1,690,173. AUTOMATIC LINER SAFETY. B. A. MILLS, Keystone, W. Va. Filed Oct. 18, 1927. Serial No. 226,935. 2 Claims. (Cl. 199—52.)



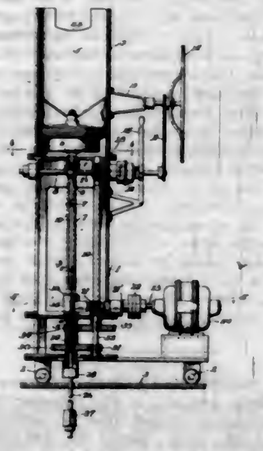
1. In an automatic liner safety device, adapted to be attached to the lower side of the intermediate channel, the vise locking screws, the mold turning pinion and the dial lever, supporting brackets for end and front adapted to support a section of the device attachable to the intermediate channel, a channel latch located at the entrance of the intermediate channel and movable into and out of the path of the leading delivery slide finger, an interchangeable dial lever key adapted to engage a lug on an interchangeable transfer blade, an interchangeable transfer blade adapted to withdraw a channel latch, a neutralizer link operatively connected with a carriage frame and the justification lever adapted to hold the said locking arrangements in neutral when desired, a justification lever movable into and out of the path of the trimming knife sector cover or block adapted to withdraw an outside transfer blade, an outside transfer blade operatively connected with the justification lever and also adapted to move the channel latch to obstructing position when the vise is opened and to move out of engagement with the channel latch when the justification lever is engaged by the sector cover or trimming knife block in normal locked position of the vise frame, a hood operatively connected with the justification lever and the outside transfer blade also adapted to hold the channel latch in perpendicular position.

1,690,174. METER MOUNTING. THOMAS J. NEWMAN, Canton, Ohio, assignor to The Superior Switchboard & Devices Company, Canton, Ohio, a Corporation of Ohio. Filed July 26, 1924. Serial No. 728,505. 8 Claims. (Cl. 247—2.)

1. A meter mounting including a base plate having a pair of spaced sockets in its upper portion, a switch box upon

its lower portion, a meter trim having ears at its upper end for engagement in said sockets and provided with a flange

at its lower end and a door upon the switch box having a flange at its upper edge arranged to extend over the flange upon the meter trim when the door is closed.

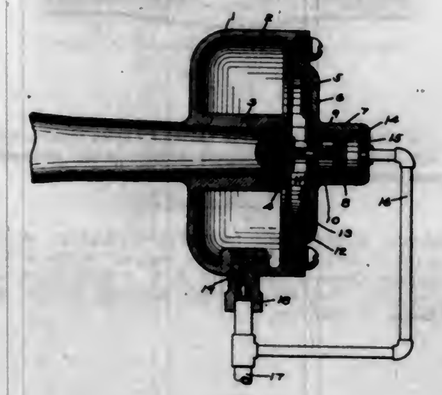


---

1,690,175. METHOD OF PREPARING TANNIC-ACID COMPOSITIONS. RUSSELL S. PATERSON, Mobile, Ala. Filed Feb. 4, 1926. Serial No. 86,061. 2 Claims. (Cl. 167—9.)

1. The method herein described of making a medical compound from tannic acid, zinc oxide, glycerin and distilled water, which consists in grinding and mixing together tannic acid and zinc oxide, then mixing glycerin with the compound produced, then adding distilled water and allowing the mass to harden, then re-dissolving the hardened mass in distilled water.

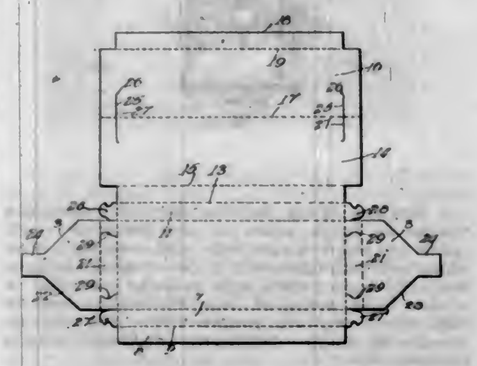
---



1,690,176. MACHINE FOR MIXING GYPSUM STUCCO. CALEB PAYNE, Chicago, Ill., assignor to Gypsum Engineering and Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1927. Serial No. 214,576. 10 Claims. (Cl. 83—73.)

1. In a machine for mixing gypsum stucco, the combination of a mixing chamber, an upper paddle and a lower paddle in said chamber, means for revolving said paddles in opposite directions and at different rates of speed, and means for moving said paddles bodily in said chamber and at the same time automatically discontinuing the revolving movement of the paddles.

---



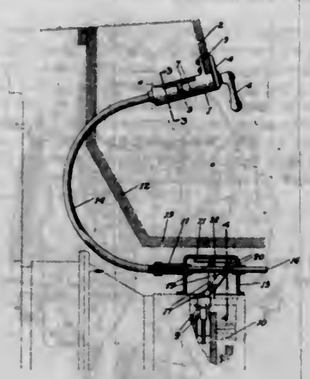
1,690,177. SOUND PRODUCER. ANDREW F. PETERSON, Oakland, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1927. Serial No. 223,922. 4 Claims. (Cl. 116—142.)

1. A sound producer comprising a flexible diaphragm subject to the pressure of fluid in a chamber and controlling an outlet opening from said chamber and operated by an increase in pressure in said chamber for connecting said chamber to said outlet opening and a piston subject to the pressure of fluid supplied to said chamber for opposing movement of said diaphragm.

---

1,690,178. CONTAINER. PERCY REEVES, Chicago, Ill. Filed June 19, 1922. Serial No. 569,330. 3 Claims. (Cl. 46—37.)

3. In a device of the kind described, a cardboard box having a shallow rectangular body portion and having attached sections adapted to be arranged to make the sides higher, and on one longitudinal edge of the body portion, having a large section attached provided with a score line, adapting it to be bent to form a peaked roof continuous from one side to the other.

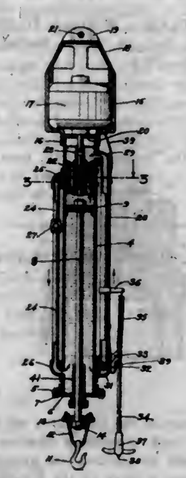


1,690,179. DECORATION FOR ORNAMENTING FIBROUS AND SIMILAR SURFACES AND METHOD OF MAKING AND APPLYING THE SAME. HELENA S. SADTLER, Erdenheim, Pa. Filed July 9, 1926. Serial No. 121,302. 4 Claims. (Cl. 41—33.)

1. A transfer for use in decorating surfaces which are uneven, rough or fibrous, which consists of a sheet of apper so thin and water-absorbent that if the sheet were dampened with paste applied directly thereto it would be so limp and tender that it would tear of its own weight, and having imprinted on one surface thereof any suitable decorative design and having its back or opposite surface temporarily secured to a backing of tougher sheet material by an adhesive which permits the thin sheet to be readily manually stripped from said backing for the application of said thin sheet to the surface to be decorated.

---

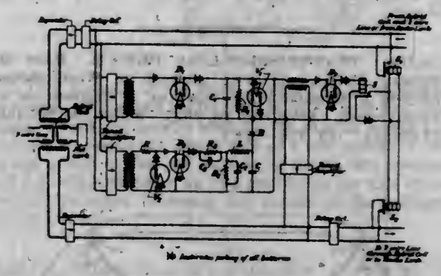
1,690,180. HAND-OPERATED GEAR-SHIFT MECHANISM. BENJAMIN F. SCHMIDT, Los Angeles, Calif., assignor to Gillette Schmidt Corporation, Los Angeles, Calif., a Corporation of Delaware. Filed June 19, 1926. Serial No. 117,137. 7 Claims. (Cl. 74—39.)



1. In a motor vehicle having a transmission structure which includes a pair of transversely spaced gear shifting forks, a flexible element of a nature to enable the same to be both rotated in either direction for gear selection and moved longitudinally for gear shifting, handle means connected to one end of the element, means between the other end of the element and the forks for enabling selective operating engagement of said forks with the element to be had with the rotation of said element, said element being longitudinally curved between its ends, and a fixed housing in which said element is enclosed from end to end.

---

1,690,181. HYDRAULIC HOIST. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Co., St. Paul, Minn., a Partnership composed of F. J. Johnson and W. O. Washburn. Filed May 12, 1924. Serial No. 712,587. 4 Claims. (Cl. 60—52.)

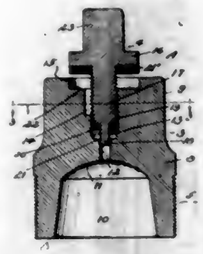


1. A vertically operable hoist including a cylinder, a piston, a rod for the piston operating through the bottom of the cylinder, a gear pump and means for circulating fluid above and below the piston, the pump being wholly within the cylinder and above the piston, and a motor mounted

upon the upper end of the cylinder immediately adjacent the pump and having a direct and detchable driving connection with one of the gears of the pump.

---

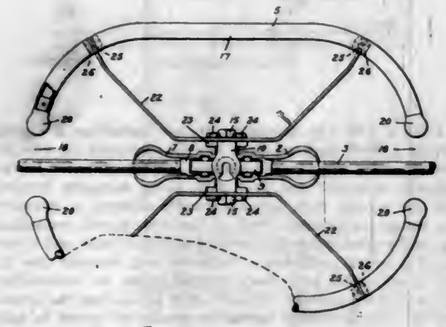
1,690,182. SUPPRESSION OF ECHOES AND SINGING IN FOUR-WIRE CIRCUITS. HAROLD C. SILENT, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1927. Serial No. 218,258. 6 Claims. (Cl. 178—44.)



1. In a two-way telephone system including a circuit having a first path adapted for transmission in one direction and a second path adapted for transmission in the opposite direction, the first path being normally blocked and the second path being normally cleared, a two-wire line connected to said circuit at one end thereof, switching means for simultaneously clearing said first path and blocking said second path, and a three-electrode vacuum tube detector associated with both of said paths for controlling said switching means; the method of preventing the operation of said switching means by echoes of waves in said second path which are reflected from the two-wire line over said first path, which consists in impressing on the grid of the detector in response to waves in the second path a negative voltage sufficient to prevent operation of the detector by the echoes, simultaneously storing a quantity of energy to maintain said voltage on said grid, abruptly discharging

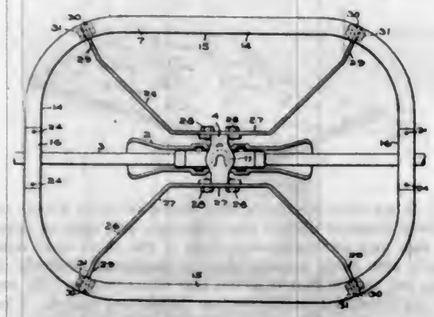
said maintaining energy at the termination of a certain period of time, and causing the length of said period to be determined independently of the amplitude of the waves in the second path.

---



1,690,183. TEST PLUG. WILLIAM D. STOUGHTON, Newark, Ohio. Filed Dec. 30, 1926. Serial No. 158,023. 2 Claims. (Cl. 137—77.)

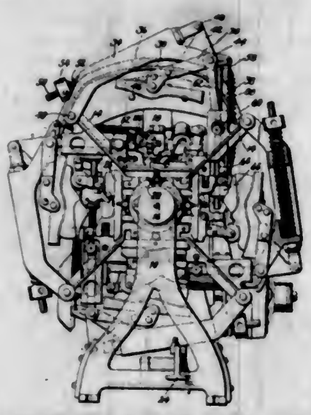
1. A plug structure of the character set forth comprising separable primary and secondary sections, said primary section being formed to include an axially disposed bore threaded for at least a part of its length and having its inner end terminated in a reduced port, and the upper end terminating in an enlarged pocket formed in the top of said primary section, there being a vent passage extending between a point intermediate of the length of said bore and said pocket, said secondary section comprising an enlarged head adapted to be received within said pocket and terminating in an inwardly extending threaded shank arranged to be removably positioned within said bore, the inner end of said shank terminating in a reduced stem arranged to occupy said port when the sections of the plug are assembled, a gasket surrounding said stem sealing the joint between said port and said bore, and a gasket surrounding the shank and located below the head of the secondary section for sealing the upper part of said bore and said vent.



---

1,690,184. TRANSMISSION-LINE DEVICE. ROSS M. STUMM, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 20, 1927. Serial No. 227,451. 12 Claims. (Cl. 173—318.)

1. In a transmission-line device, the combination with an insulator, of an electrostatic-field-control structure comprising spaced portions at opposite sides of the line conductor between which the conductor may freely pass.



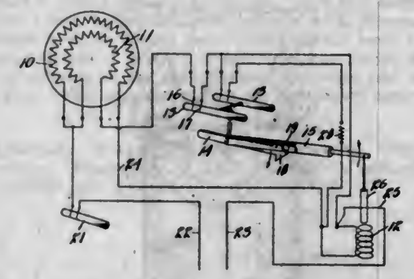
1,690,185. TRANSMISSION-LINE DEVICE. NILS J. A. WAHLBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1927. Serial No. 209,439. 11 Claims. (Cl. 173—318.)

6. A transmission-line device comprising an electrostatic-field-control element including spaced sections, a section between said sections and means for normally positioning said intermediate section and permitting movement thereof relative to said spaced sections in response to movement of the line conductor.

---

1,690,186. SOLE-PRESSING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 13, 1926. Serial No. 135,008. 9 Claims. (Cl. 12—37.)

4. In a sole laying machine, a carrier having a jack and an opposed sole pressing pad and arranged to carry the jack and pad past a loading station, a cam having a surface thereon constructed and arranged to establish sole laying pressure on a shoe on the jack in response to relative movement between the carrier and the cam, the said cam surface being limited substantially to the extent required to establish the said pressure, and a latch for maintaining the pressure, when established, independently of the cam.



---

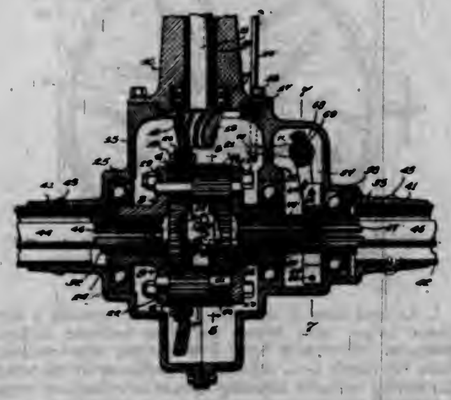
1,690,187. AUTOMATIC STARTER. FRANK R. ZUMBRO and FRANCIS SHENTON, Waynesboro, Pa., assignors to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed May 18, 1920. Serial No. 109,941. 6 Claims. (Cl. 172—279.)

1. The combination of a motor having a pair of windings, means for controlling the operation of said motor, a switch in circuit with each of said motor windings, a solenoid in

circuit with one winding of the motor arranged upon the operation of the first mentioned means to close said switches, one of said switches serving to short circuit the

solenoid whereby the same will release the said switches after a time delay and open circuit one winding to permit the motor to operate on the other winding, substantially as set forth.

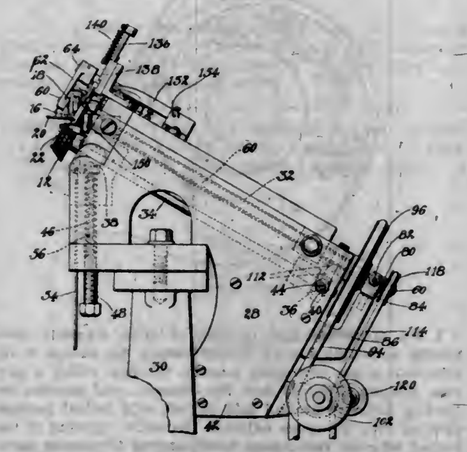
---



1,690,188. SHOE HAVING CONCEALED EYELETING. WILLIAM B. BARKLEY, Newton Center, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 27, 1927. Serial No. 164,007. 7 Claims. (Cl. 36—45.)

6. A lace shoe having the portion of its upper adjacent to its lacing slit made up of an outer layer and an inner or lining layer with a stay between said layers adjacent to the lacing slit and held in position by stitching passing through the stay and one or both of the other layers of the shoe upper, a plurality of aligning lacing holes in the outer layer, the stay, and the inner or lining layer, and an eyelet set in each of the holes in the stay and clenched upon one surface thereof, the eyelets being concealed by the outer layer and the inner or lining layer.

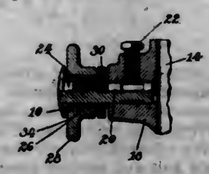
---



1690,189. DIFFERENTIAL GEARING. ROBERT L. DENNISON, Kansas City, Mo. Filed June 2, 1927. Serial No. 196,090. 5 Claims. (Cl. 74—100.)

1. A device of the character described comprising a drive shaft, a pinion carried thereby, a ring gear meshing with said pinion, a pair of sets of pinions carried by said ring gear and rotatable in circular orbits about the axis thereof, each pinion of one set meshing with one of the pinions of the other set, a pair of gears each meshing with the pinions of one set, a pair of axle sections secured respectively to the gears of said pair, a locking device secured against rotation with respect to one gear of said pair, a second locking device secured against rotation but longitudinally slidable with respect to the other gear of said pair, a thrust member extending through and rotatable with respect to said locking devices, the ends of said thrust member contacting with the inner ends of said axle sections, and means for sliding said last named locking device longitudinally with respect to said last named gear to bring it into engagement with said first named locking device, said locking devices cooperating with but forming no part of the drive means comprising said pair of gears.

---

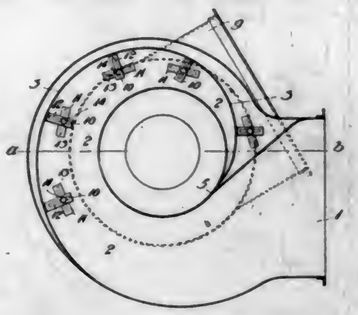


1,690,190. LIP-TURNING MACHINE. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 2, 1925. Serial No. 27,515. 30 Claims. (Cl. 12—30.)

1. In a machine of the class described, in combination, lip turning means, and means for feeding a lipped sole comprising a feed roll coaxial with the lip turning means and arranged to engage the lipped face of a sole outside of the lip and to bear against the shoulder of the lip, and a second feed roll rotatable about an axis parallel to the axis of the first roll arranged to engage the margin of the unlipped face of the sole.

---

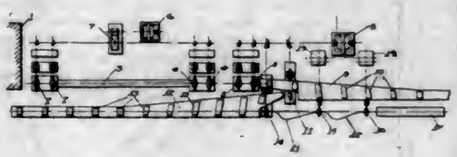
1,690,191. HEEL-BEADING MACHINE. EDWARD ERICKSON, deceased, Beverly, Mass., by Mary E. Erickson, executrix, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 31, 1924, Serial No. 759,039. Divided and this application filed Apr. 11, 1927. Serial No. 182,853. 5 Claims. (Cl. 12—49.)



1. A heel-beading machine including a standard having a plane surface, a headed supporting stud projecting from said plane surface, a beading tool member comprising a

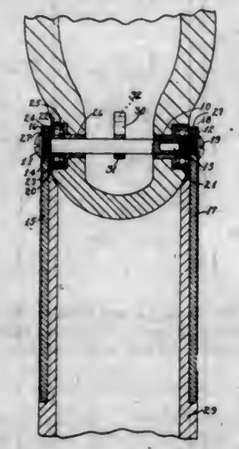
disk-shaped indenting tool and a disk-shaped gage member for said tool mounted concentrically on said supporting stud and arranged to coact respectively with adjacent intersecting surfaces of a heel, one of said members being freely rotatable on said stud, the distance of the beading line from the adjacent edge of work operatively presented to the tool being determined by the distance between the beading tool and the flat face of the disk, and means for adjustably holding said stud in said standard to allow free rotation of the member rotatably mounted thereon while restricting axial movement of said rotatable member by the cooperation of the head of the stud and the plane surface of the standard with opposite ends of said member.

---



1,690,192. METHOD OF CHARGING CELLULOSE DIGESTERS AND THE LIKE AND MEANS THEREFOR. PER ALBERT FRESK, Robertsfors, Sweden. Filed Apr. 4, 1927, Serial No. 180,987, and in Sweden Dec. 21, 1926. 6 Claims. (Cl. 214—17.)

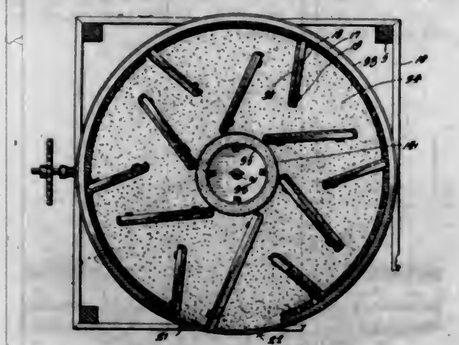
1. An apparatus for charging cellulose digesters comprising a feeding funnel through which the charge is introduced, a gas conveying passage through which a gaseous medium is forced into the digester, said passage extending helically around said funnel, said helical passage opening into the space adjacent the outlet opening of the funnel whereby the charge when leaving the outlet opening of the funnel is caught by the gaseous medium and is entrained in the movement thereof.



---

1,690,193. ROLLING MILL. JEROME R. GEORGE, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 9, 1923. Serial No. 650,381. 10 Claims. (Cl. 80—35.)

1. In a rolling mill, a plurality of alined stands of rolls arranged in juxtaposition for continuous operation with less spacing between said stands than the length of the stock passing therethrough, one group of said alined continuous stands being actuated from the same source as preceding rolls of said mill and another group of said alined continuous stands being actuated from the same source as succeeding non-continuous or open roll stands of said mill.

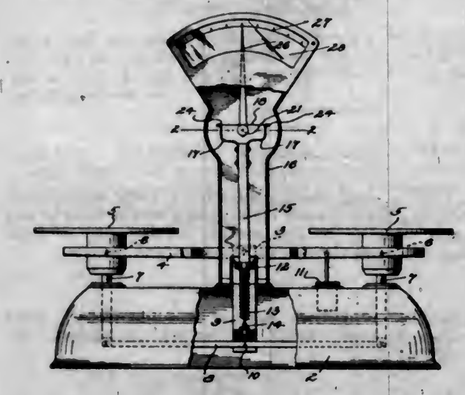


1,690,194. KNEE JOINT FOR ARTIFICIAL LIMBS. CHARLES E. GIRTON, Cincinnati, Ohio. Filed Jan. 30, 1926. Serial No. 85,048. 1 Claim. (Cl. 3—2.)

In a device of the class described the combination of an artificial femur having a pair of bores therein, the ends of the bores being enlarged to provide recesses in the sides of the femur, a pair of perforated cup-shaped bushings having sleeves thereon received in the recesses in the sides of the femur, the sleeves on the bushings extending through the bores, a perforated ball bearing comprising an inner and outer race received in each of the bushings, a revoluble shaft having an enlarged threaded portion at one end extending through the aligned perforations in the ball bearings, a strap threadedly received by the enlarged threaded end of the shaft, a second strap mounted on the other end of the shaft and means for securing the second strap to the shaft and for clamping the inner bearing race to the shaft.

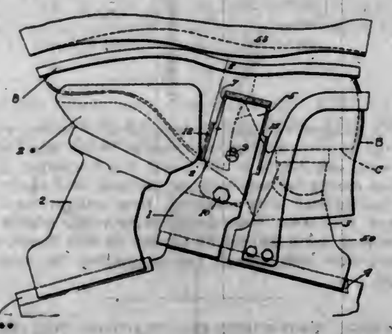
---

1,690,195. CITRUS-FRUIT BRUSHING AND POLISHING APPARATUS. LEWELLYN N. HALEY, Clearwater, Fla. Filed Nov. 1, 1924. Serial No. 747,220. 4 Claims. (Cl. 146—202.)



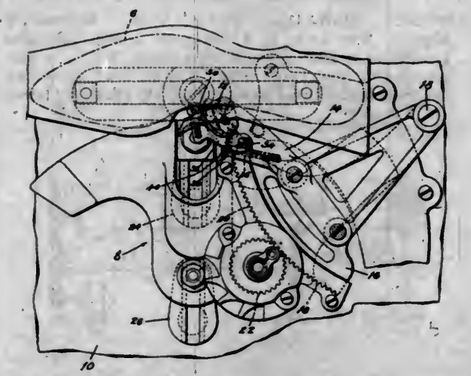
1. An apparatus of the class described, including a horizontal rotary table having an upper brushing surface, means to rotate said table, a stationary ring mounted above the rotary table adjacent the periphery of the latter and having an inner brushing surface of cylindrical form, a circular wall disposed concentrically within and spaced from said ring, a series of baffles extending from points spaced inwardly from the ring obliquely inward towards the circular wall, said baffles extending inward in a direction inclined from the radius passing through the outer end in the direction of rotation of said table and having polishing surfaces on the faces toward the radius, a second series of baffles extending from the wall obliquely outward to points spaced from the ring above said table, said last named baffles extending outward in a direction inclined from the radius passing through the inner end in the direction of rotation of said table and having polishing surfaces on the faces toward the radius, said second named baffles alternating with the first named baffles.

---



1,690,196. SCALE. NATHAN A. HALLWOOD, Columbus, Ohio. Filed June 7, 1927. Serial No. 197,140. 2 Claims. (Cl. 265—58.)

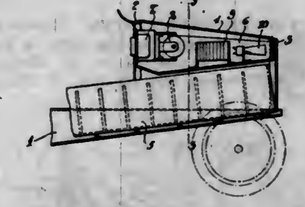
1. In a scale, in combination, a movable even balanced beam, an arm arising from said beam and fixed to oscillate in unison therewith, a resilient yoke carried by the upper end of said arm, an indicator movably mounted independently of said beam, said indicator being provided with a hub, and a thin metallic strap having its intermediate portion wrapped about said hub and having the opposite ends thereof connected with said resilient yoke.



---

1,690,197. SHOE-PRESSING MACHINE. ARTHUR EDWARD HEADLEY, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 14, 1925, Serial No. 23,040, and in Great Britain Apr. 22, 1924. 27 Claims. (Cl. 12—33.)

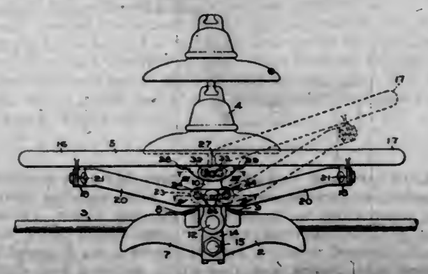
1. In a shoe pressing machine, a pressing member, means for supporting a last and shoe at its forepart and at its heel end, and means for engaging the shoe between its heel and fore parts to support it under the pressure of the pressing member, said last-named means comprising shoe-engaging members movable relatively to each other to fit the contour of the engaged portion of the shoe.



1,690,198. TRIMMING MACHINE. GIDEON J. JULIAN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 31, 1925. Serial No. 53,642. 19 Claims. (Cl. 12—25.)

1. In a sole trimming machine, means for trimming material from a sole, and means adapted for guidance by the sole and compensative therefor for deflecting said material from said trimming means.

---

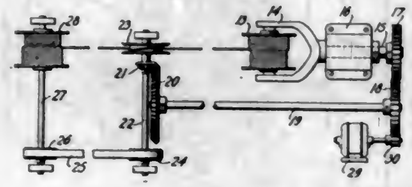


1,690,199. ELECTRIC AUTOMOBILE. KARL HILDING OSSIAN LÜBECK, Tslinge, Sweden. Filed Aug. 22, 1924, Serial No. 733,625, and in Sweden June 21, 1924. 9 Claims. (Cl. 180—65.)

1. In electric automobiles, the combination of a battery located in the fore part of the vehicle, a housing adapted to enclose controlling apparatus of the vehicle disposed in said fore part of the vehicle, in front of the driver's compartment and above said battery, said housing having such a shape that the top of the battery will be easily accessible.

---

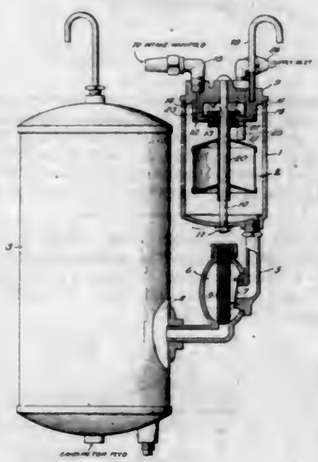
1,690,200. TRANSMISSION-LINE DEVICE. FREDERIC H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 20, 1927. Serial No. 227,435. 12 Claims. (Cl. 173—318.)



12. An electrostatic-field-control device comprising an annular field-control element including half portions pivotally relatively movable about a point on the field-control

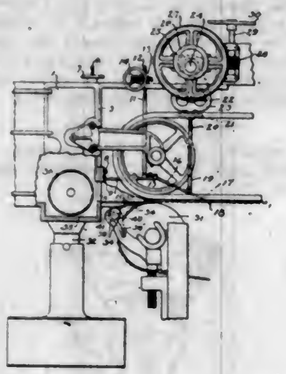
surface thereof, lost-motion means for connecting said portions and supporting means for said portions having lost-motion connection thereto for permitting said relative movement.

---



1,690,201. SIGNALING CONDUCTOR. WILBUR E. MOUGEY, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1927, Serial No. 164,795, and in Great Britain June 15, 1926. 6 Claims. (Cl. 178-45.)

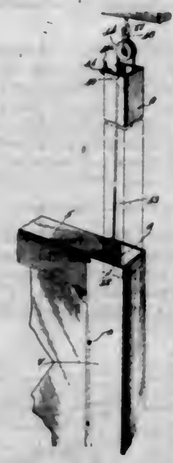
1. The method of producing a signaling conductor having an inner portion and a metallic covering fitting said inner portion loosely, which comprises applying a strand having edges to a cylindrical strand so that only the edges of the strand are in contact with the cylindrical strand to form the inner portion, applying a metallic covering over said inner portion, and forcing said applied strand into substantially complete contact with said cylindrical strand, to space said metallic covering therefrom.



---

1,690,202. VACUUM FEED SYSTEM. GUSTAVE C. NELSON, Moline, Ill., assignor to The Borg & Beck Company, Moline, Ill., a Corporation of Illinois. Filed May 13, 1921. Serial No. 469,360. 6 Claims. (Cl. 103—236.)

1. In a vacuum feed system, a tank having a receiving chamber, a vacuum connection to said receiving chamber terminating in a vertically directed nozzle, an air vent for the receiving chamber terminating in a vertically directed nozzle, a pair of cut-off disks disposed to control said nozzles, and a revolubly mounted float rigidly secured to the disks and adapted to operate the disks to open and close the vacuum connection and the air vent alternately.



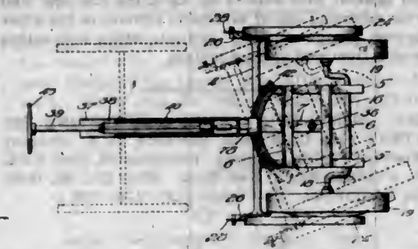
1,690,203. PAPER-MAKING MACHINE. NICKOLAS J. NIKS, Chillicothe, Ohio. Filed May 18, 1927. Serial No. 192,221. 19 Claims. (Cl. 92—44.)

1. In a paper making machine, a stock box, a stock retaining board pivoted thereto and a slice pivoted to said board, whereby an area for the accumulation of stock may be formed between the stock box and the slice.

---

1,690,204. WINDOW. PEARL R. NYE, Chicago, Ill. Filed June 8, 1927. Serial No. 197,428. 4 Claims. (Cl. 20—52.)

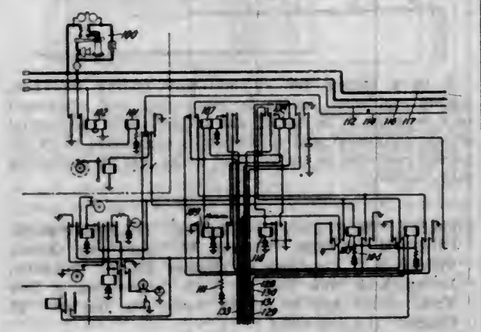
1. A window installation comprising a frame, a sash movable therein, casings incorporated in the side edges of the sash, and shafts in the frame and telescoped by the casings during the movement of the sash, said shafts having longitudinal slots extending their entire length and toward the sash, counterweights movable within said telescoping parts, pulleys at the top of said frame, cords trained over said pulleys and connecting the sash and weight.



---

1,690,205. TWO-WHEELED TRACTOR FOR CULTIVATORS AND OTHER MACHINES AND METHOD OF CONSTRUCTING SAME. DENT PARRETT, Chicago Heights, Ill. Filed Dec. 11, 1924. Serial No. 755,131. 10 Claims. (Cl. 180—12.)

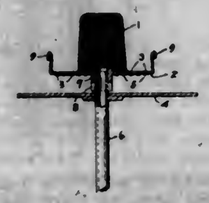
1. In a machine of the character described, a frame, a power plant mounted on said frame, a transverse driving shaft casing immovably secured to said frame, an



inverted U-shaped wheel axle pivotally mounted on said frame having wheel journals, said axle being pivoted to said frame in a manner to permit its journals to swing

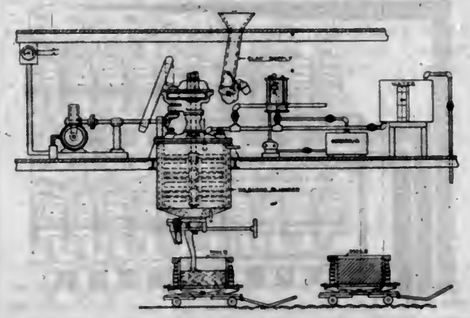
to or from said casing, and adjustable rigid connections between the ends of said casing and said axle to adjust the position of said journals and hold the same against swinging movement.

---



1,690,206. TELEPHONE SYSTEM. ARTHUR RAYNSFORD, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 4, 1927. Serial No. 196,449. 10 Claims. (Cl. 179—18.)

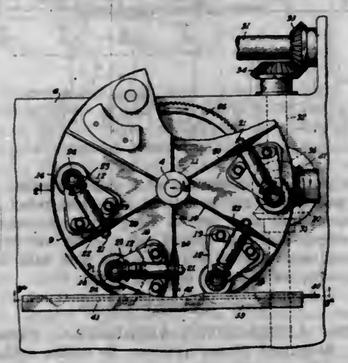
1. In a telephone system, an automatic switch, a series of elements to which said switch has access, means to characterize said elements as busy or idle, means to cause said switch to test said elements in succession and to connect itself with the next idle one, means to disconnect said switch from said element, and means thereupon effective only if said element lies within a particular group of said elements to return said switch to a position to test the first element of the series.



---

1,690,207. GASOLINE STRAINER AND LINT CATCHER. FRANK C. REED, Nehalem, Oreg. Filed May 9, 1927. Serial No. 190,008. 4 Claims. (Cl. 210—170.)

1. A device of the type described comprising a disc having jagged portions for catching and retaining foreign substance floating in a gasoline tank and a strainer carried by said disc.

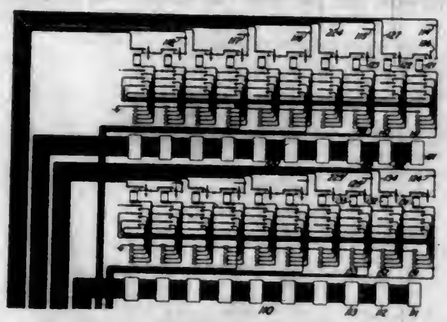


1,690,208. METHOD OF MAKING CERAMIC ARTICLES. DONALD W. ROSS and JAMES M. LAMMIE, Washington, Pa. Filed Mar. 31, 1925, Serial No. 19,737. Renewed Mar. 29, 1928. 25 Claims. (Cl. 25—156.)

1. The method of making ceramic articles, which comprises providing grog grains of assorted sizes, providing deflocculatable raw clay in quantity sufficient to bond the grog particles, providing a deflocculating agent, mixing water or other liquid with the above named materials, in quantity sufficient to form a paste, mixing the paste in a vacuum, and molding the paste so formed.

---

1,690,209. TUBE-SEVERING MACHINE. CHARLES F. SMITH, Brooklyn, N. Y., assignor to Public Service Cup Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 1, 1926. Serial No. 138,817. 6 Claims. (Cl. 164—61.)

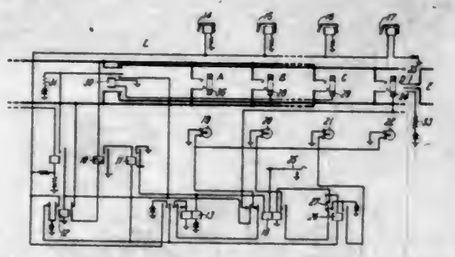


1. In a machine of the character described the combination of a rotatable cutter carrier, a cutter head on said carrier, a cutter mounted for rotation on an axis in a plane normal to the axis of rotation of said carrier, said cutter being disposed approximately radially on said carrier, means for rotating said carrier, means for rotating said cutter and a cutter head mounted for adjustment about a fixed vertical axis, a cutter fixed to a horizontal shaft in said cutter head, means for adjusting said head for moving said cutter toward and from the axis of rotation of said carrier.

---

1,690,210. TELEPHONE SYSTEM. RAY L. STOKELY, Floral Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1927. Serial No. 188,918. 7 Claims. (Cl. 179—18.)

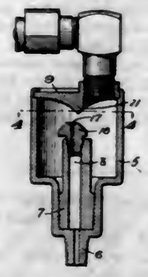
1. In combination, two groups of lines, each divided in sub-gronps, two finder switches, each serving one of said groups as first choice, means for operating one of said



finders to simultaneously select a plurality of sub-groups, means for further operating the finder to select a line in one of the selected sub-groups, a third finder serving all

of the lines in both said groups, and means for operating said last finder to select a sub-group of lines and a line therein when the first choice finder is busy.

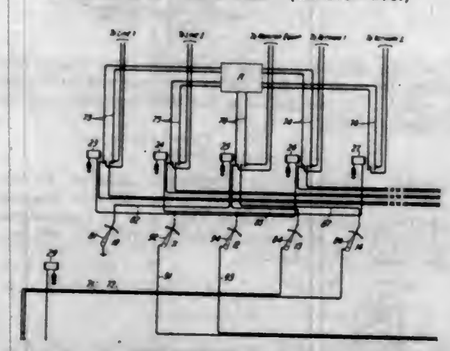
---



1,690,211. TELEPHONE SYSTEM. JOHN F. TOOMEY, New York, N. Y., and GEORGE H. DUHNKRACK, Jersey City, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1927. Serial No. 243,059. 9 Claims. (Cl. 179—41.)

9. In a signal transfer circuit, a signal, a relay, a second relay, and means for actuating said first relay to cause said signal and said second relay to be connected in a series circuit and said second relay to be operated whereupon said second relay locks in series with said first relay in a circuit independent of said signal.

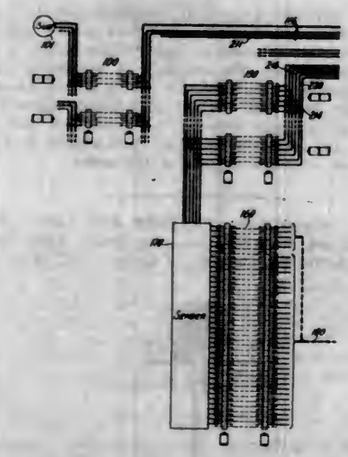
---



1,690,212. LUBRICATING APPARATUS. PRESTON UPHAM, Brookline, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 1, 1923. Serial No. 616,279. 3 Claims. (Cl. 184—105.)

1. An oil cup presenting a reservoir adapted to be filled from a source of supply under pressure, a part extending upwardly in said reservoir considerably above the bottom of the reservoir, said part presenting a discharge orifice, a top part presenting a surface sloping toward said discharge orifice to guide the lubricant into said orifice when splashed against said surface by agitating the cup, and means for adjusting one of said parts relative to the other part to vary the quantity of lubricant which said orifice may receive from said sloping surface.

---

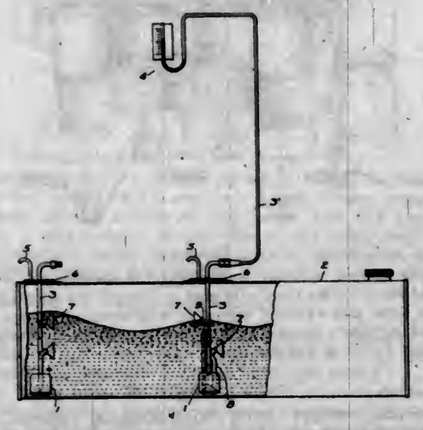


1,690,213. AUTOMATIC SYSTEM FOR TESTING REPEATERS. IRA G. WILSON, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1926. Serial No. 157,902. 24 Claims. (Cl. 179—175.)

1. In a system for automatically testing repeaters, testing equipment, means for connecting said equipment to a repeater to be tested, and means under the control of said equipment and automatically responsive to an abnormal condition in the repeater under test for indicating said condition.

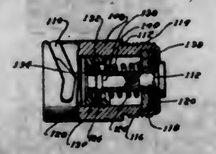
---

1,690,214. RESTRICTED-SERVICE TELEPHONE-EXCHANGE SYSTEM. WARREN W. CARPENTER, Queens Village, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 186,904. 15 Claims. (Cl. 179—27.)



1. In a telephone system, subscribers' lines of a plurality of classes, a control device for controlling the establishment of connections from all classes of said lines, means for associating said control device with a calling line, selective means in said device under the control of said calling line, means for identifying the class to which said calling line belongs, and means under the joint control of said selective means and said identifying means to determine the manner in which said connection shall be completed.

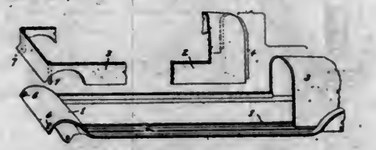
---



1,690,215. LIQUID-LEVEL GAUGE. MOSES E. CHENEY, La Crosse, Wis., assignor to National Gauge & Equipment Company, La Crosse, Wis., a Corporation of Delaware. Filed Oct. 25, 1927. Serial No. 228,578. 2 Claims. (Cl. 73—54.)

1. In a tank fitting for liquid level indicators, the combination of an air chamber placed near the bottom of the tank, a conduit extending vertically from and communicating with said chamber, a receiving member at the free end of said conduit, having walls diverging from the center thereof to present an enlarged opening at one end to receive the liquid and a reduced opening at its other end communicating with said conduit the latter having a substantially horizontal passage way for the liquid, and being curved to form an extension of said horizontal passage way and to merge in the vertical portion of said conduit, whereby surges of liquid will be deflected towards the reduced opening causing aerated liquid to enter the extension of the passage and pass downwardly through the conduit to the air chamber.

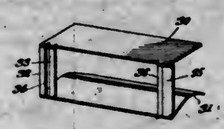
---



1,690,216. COUPLING. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 12, 1927. Serial No. 190,695. 4 Claims. (Cl. 284—19.)

1. A female coupling member of the class described comprising, in combination, a sleeve having bayonet slots at its outlet end and a reduced threaded portion at its inlet end, a valve seat at said inlet end, a valve for said seat, a spring for normally maintaining said valve in closed position, spacing means extending from said valve outwardly through said valve seat, said means presenting a shoulder and a portion of reduced cross-section adjacent said shoulder, a metal washer and a cup leather mounted on said reduced portion and clamped against said shoulder by the turned-over end of said reduced portion, said cup leather serving to effect a lubricant tight seal with a male coupling element having a passage therethrough, said spring serving to press said cup leather against a male coupling element, and axial and lateral passages in said means for connecting the passage in a male coupling element with the interior of said sleeve.

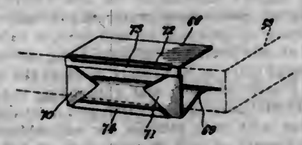
---



1,690,217. CHILD'S WHEEL TOY AND PROCESS OF MAKING THE SAME. THEODORE S. DOWST, Chicago, Ill. Filed Feb. 3, 1927. Serial No. 165,523. 2 Claims. (Cl. 46—48.)

1. A method of making a multicolor, cast metal, toy vehicle in quantity which comprises dividing the design of the completed toy along the lines of color change into separate body and chassis parts, constructing parts corresponding to the design parts by a die casting process, making the chassis and the body parts to coact upon assembly to form a unit and be readily separable, coloring the separate parts a uniform color by quantity coloring process and assembling the colored parts to form a completed toy vehicle.

---

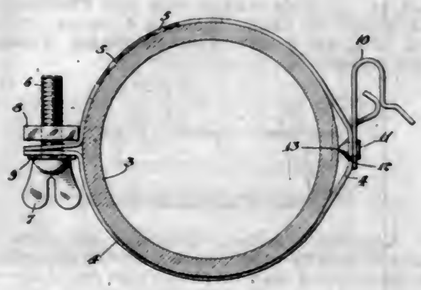


1,690,218. DISPLAY DEVICE. GEORGE F. EGAN, Jersey City, N. J. Original application filed Aug. 3, 1925, Serial No. 47,865. Divided and this application filed Nov. 28, 1927. Serial No. 236,295. 2 Claims. (Cl. 40—16.)

1. A display device comprising upper and lower clamping members, a pair of end straps extending between said members, a pair of inner straps also extending between said members in spaced relation to the end straps and offset inwardly from the end straps to receive a card between the end and inner straps, one of said end straps having a stop member extending rearwardly and inwardly from the outer edge thereof.

---

1,690,219. DISPLAY DEVICE. GEORGE F. EGAN, Jersey City, N. J. Original application filed Aug. 3, 1925, Serial No. 47,865. Divided and this application filed Nov. 28, 1927. Serial No. 236,299. 2 Claims. (Cl. 40—16.)

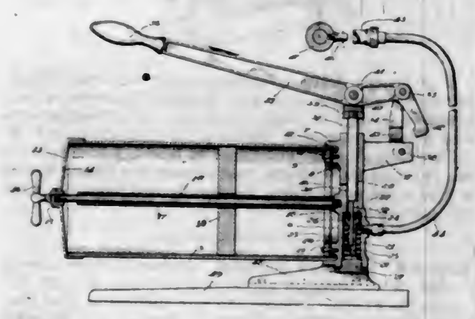


1. A display device comprising upper and lower members, end straps of substantially V-form connecting the end portions of said members, a strap extending longitudinally between the first mentioned straps and having a slot for receiving a card, and a ledge outwardly of the first mentioned straps and in alinement with said slot.

---

1,690,220. GROUND CONNECTER. ASCHER P. FAHNESTOCK, Plandome, N. Y. Filed May 13, 1926. Serial No. 108,718. 1 Claim. (Cl. 173—273.)

In a ground wire attachment, a pipe gripping band having a flat central portion and confronting arcuate portions on each side terminating in opposed outwardly projecting

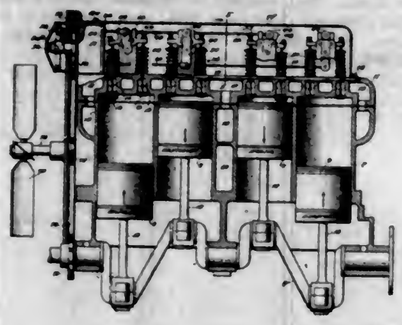


ends having registering bolt receiving openings, said flat portion being disposed diametrically opposite said ends and adapted to lie in spaced relation to the pipe on which the clamp is positioned, a rivet having a pointed head resting on the inside of the flat portion of the band and

adapted to have the point engage the material of the pipe, a ground wire clamp resting on said flattened portion, a second head on said rivet securing the ground wire clamp to the flattened portion, and a bolt passing through the bolt openings to draw the ends together and force the point of the rivet into the material of the pipe.

---

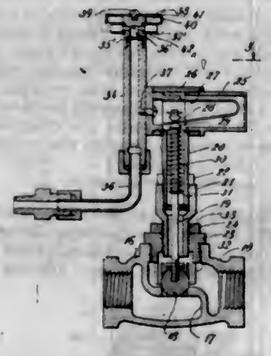
1,690,221. LUBRICANT COMPRESSOR. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 27, 1923, Serial No. 634,936. Renewed Oct. 21, 1926. 14 Claims. (Cl. 221—47.1.)



10. A lubricant compressor comprising a body having a bore, a plunger reciprocable in said bore, a valve overlying the end of said bore, said plunger being movable into contact with said valve to completely displace the contents of said bore, a valve chamber and a discharge conduit receiving the material passing said valve, and means operated in synchronism with said plunger for automatically decreasing the capacity of said chamber and conduit during the discharge stroke and increasing said capacity during return stroke, said means comprising an extension on said plunger and a central cylinder carried by said valve and slidably receiving said extension.

---

1,690,222. VALVE GEAR FOR INTERNAL-COMBUSTION ENGINES. CHARLES W. FOERTSCH, Brooklyn, N. Y., assignor of one-half to Clarence P. Browning, New York, N. Y. Filed May 3, 1922. Serial No. 558,249. 12 Claims. (Cl. 123—90.)



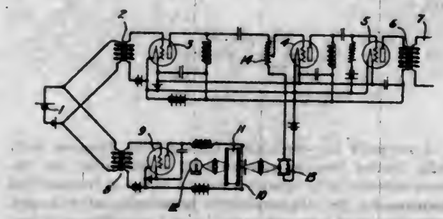
6. A multi-cylinder internal combustion engine embodying an overhead valve gear including a cam, having its operating face disposed substantially in a plane perpendicular to the axis of rotation of the engine crank shaft, a commutator mounted to operate in synchronism with said cam, means for driving said cam and said commutator from the crank shaft of the engine, a rocker arm for each

valve of each cylinder, and means for operating each of said rocker arms from said cam to control the opening of the inlet and exhaust valves of a predetermined one of said cylinders in synchronism with the intake and exhaust cycles of the engine.

---

1,690,223. PILOT-LIGHT CONTROLLER. EDWARD L. FONSECA, Newark, N. J., assignor to The Wilcolator Company, Newark, N. J., a Corporation of Delaware. Filed Aug. 20, 1926. Serial No. 130,430. 9 Claims. (Cl. 158—115.)

1. A pilot burner comprising a tube, a plurality of tubular members mounted in the wall of a tube in communication with the interior thereof and projecting outwardly beyond the wall to constitute flame tips, and a shield mounted on the tube in proximity to the tips, this shield having a portion lying partially in the path of the flame issuing from said tips.



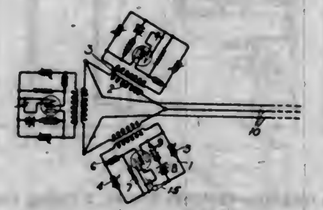
---

1,690,224. WAVE-TRANSMISSION SYSTEM. EDGAR W. GENT, Morristown, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1926. Serial No. 112,851. 3 Claims. (Cl. 178—44.)

1. A wave transmission system comprising a source of electrical waves of varying amplitude, a transmission

medium, a space discharge amplifying device having an input circuit connected to said source and supplied with said electrical waves, and having an output circuit connected to said medium, an element in said input circuit the impedance of which to electrical currents varies in

accordance with the quantity of radiant energy impressed thereon, and means for supplying to said element radiant energy varying directly in accordance with the amplitude of said electrical waves, whereby the energy level of the electrical waves impressed on said medium by said amplifying device is controlled.



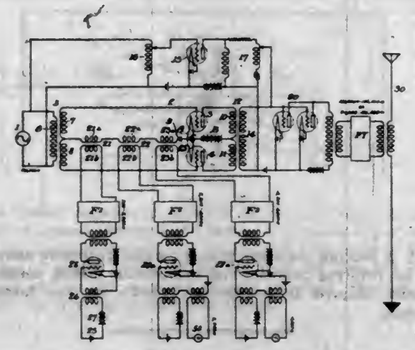
---

1,690,225. OIL-FLOTATION PROCESS. ALBERT W. HAHN, Salt Lake City, Utah. Filed Oct. 5, 1926. Serial No. 139,755. 2 Claims. (Cl. 209—166.)

1. The process of recovering metals from their ores, which comprises treating the pulp containing the ore to the oxidizing action of bleaching powder in the presence of an alkaline substance and thereby precipitating oxides associated with the values to be recovered by changing them into higher oxides, and then adding a flotation agent and subjecting the pulp to a froth flotation process.

---

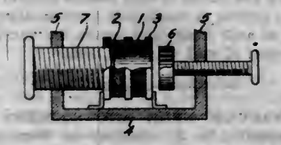
1,690,226. PLURAL-PHASE GENERATION OR OTHER SYSTEM. RAYMOND A. HEISING, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1920. Serial No. 401,889. 17 Claims. (Cl. 250—36.)



17. A system for the generation of plural phase current comprising electric discharge generators equal in number to the desired number of phases, and means for associating said generators to maintain them in synchronism and in the desired plural phase relation.

---

1,690,227. TRANSMISSION BY MODULATED WAVES. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 621,710. 6 Claims. (Cl. 250—9.)



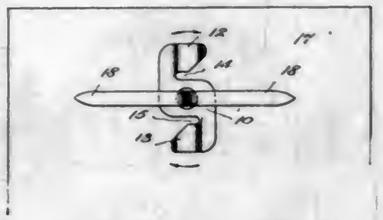
1. In a signaling system two modulator devices for modulating a carrier wave in accordance with a plurality of separate signaling waves, means for impressing in the same phase the plurality of separate signaling waves on the modulators, means for impressing the carrier wave upon the modulating devices in opposite phase whereby all of the signals are transmitted with a minimum of

cross modulation, and additional means for neutralizing the unmodulated component of the carrier wave frequency in the output circuit of said devices.

---

1,690,228. HIGH-FREQUENCY TRANSFORMER. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Dec. 31, 1923, Serial No. 683,629. Divided and this application filed Aug. 20, 1925. Serial No. 51,305. 11 Claims. (Cl. 171—119.)

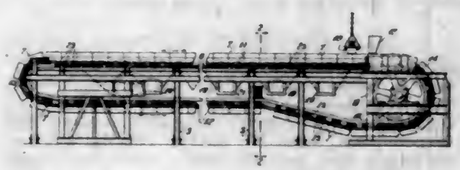
1. A coupling means for high frequency apparatus which comprises inductively associated coils, a resistance control element and an inductance control element respectively included in the magnetic fields of said coils.



---

1,690,229. WALL BOARD. WILLIAM M. JENKINS, Chicago, Ill. Filed Sept. 15, 1922. Serial No. 588,462. 4 Claims. (Cl. 154—45.9.)

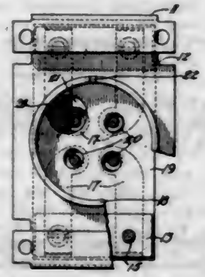
1. A wall board, comprising a composition body provided with a reenforced margin comprising a channel-shaped reenforcing element straddling the edge of said composition, and enclosing a laminated reenforcement disposed between the edge of the composition and the connecting portion of the element.



1,690,230. LOCK FOR PAPER FASTENERS. FRED J. KLINE, Long Island City, N. Y. Filed June 17, 1926. Serial No. 116,540. 7 Claims. (Cl. 24—153.)

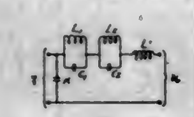
2. A locking plate for pronged paper fasteners adapted to be revolved thereon and comprising dished confining means adapted to be flattened down on the fastener prongs.

---



1,690,231. SINTERING MACHINE. BETHUNE G. KLUGH, Chicago, Ill., assignor to American Ore Reclamation Company, New York, N. Y., a Corporation of New York. Filed June 30, 1926. Serial No. 119,518. 15 Claims. (Cl. 266—21.)

15. In a sintering machine, an endless track, a plurality of pallets travelling about said track, magnetic means for controlling the travel of said pallets around said track to retain said pallets in contacting relation along a particular portion of said track, and means for varying the intensity of action of said magnetic means.

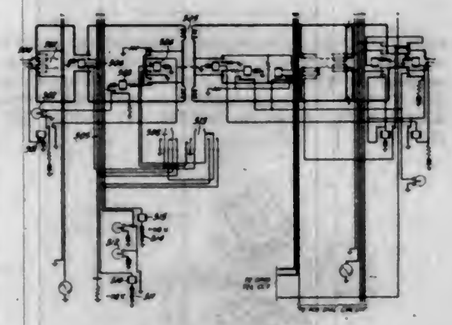


---

1,690,232. VACUUM TUBE AND SOCKET. JOHN J. KUHN, Elizabeth, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 1, 1922. Serial No. 572,259. 1 Claim. (Cl. 250—27.5.)

In combination, a vacuum tube socket and a vacuum tube having terminal pins, means associated with said socket and tube for definitely positioning the tube relative to the socket consisting of a selector pin on the tube adjacent one of the tube terminal pins and an insulating plate on the socket having a large aperture for receiving both said selector pin and the adjacent terminal pin and a number of smaller apertures for receiving only the other terminal pins,

1,690,233. IMPEDANCE-CORRECTING NETWORK. KARL KÜPFMÜLLER, Berlin-Friedenau, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Aug. 23, 1921, Serial No. 494,519, and in Germany Sept. 10, 1919. 2 Claims. (Cl. 178—45.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A network for combining with a long distance periodically loaded line to give to said combination an impedance substantially equal within the range of transmitted frequencies to the characteristic impedance of a homogeneous line, said network comprising a capacity of value, K, of the order of 0.3 to 0.325 $C_0$ in shunt to said line, an inductance of value

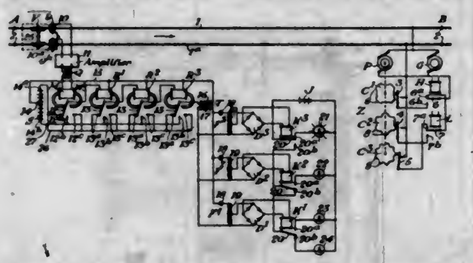
$$\frac{R_0\sqrt{L_0C_0}}{8}$$

and a parallel resonant circuit, said inductance and said parallel resonant circuit being connected in series with each other and with the line, $L_0$, $C_0$ and $R_0$ being the total values of inductance, capacity, and resistance, respectively, per loading section of said line.

---

1,690,234. TRUNKING CIRCUIT TO CENTRALIZED OPERATOR'S POSITION. FREDERICK R. LAMBERTY, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1927. Serial No. 238,007. 8 Claims. (Cl. 179—27.)

1. In a telephone exchange system, a calling line, a coin box thereon, an operator's position, a trunk circuit terminating thereat, means for extending said calling line to said trunk circuit, a cord circuit at said position for connection with said trunk circuit, coin box control keys associated with said cord circuit, a bridge across said trunk circuit comprising a plurality of relays, said relays being controlled by said keys, and means under the control of said relays for applying coin box operating current to said calling line.



---

1,690,235. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 3, 1927. Serial No. 188,473. 12 Claims. (Cl. 246—63.)

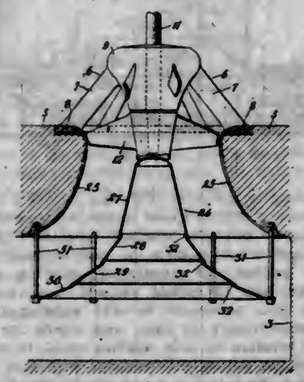
1. Railway traffic controlling apparatus comprising a stretch of railway track, means for supplying periodically varying currents to said stretch, a main train carried relay

responsive to such variations but not to the current itself, a second relay controlled by said main relay and operating at a frequency higher than, but proportional to the frequency

of operation of the main relay, and governing means selectively responsive to the frequency of operation of said second relay.

---

1,690,236. ANTHRAQUINONE VAT DYESTUFF. WALTER MIEG, Vohwinkel, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 20, 1926, Serial No. 82,588, and in Germany Jan. 21, 1925. 8 Claims. (Cl. 260—46.)



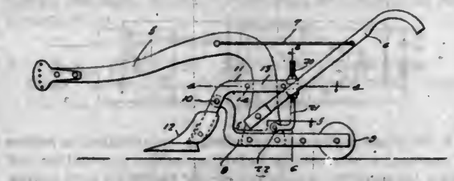
1. Process of producing vat dyestuffs of the anthraquinone series which consists in reacting with anhydrous aluminum chloride upon an anthraquinone derivative corresponding to the general formula

$$\begin{matrix} R \\ R_1 \end{matrix}\!\!>\!\!NH,$$

in which R stands for an anthraquinonyl residue and $R_1$ for hydrogen or an anthraquinonyl residue, in the presence of substantial amounts of a cyclic compound containing a tertiary nitrogen atom different from the anthraquinone derivative reacted upon.

---

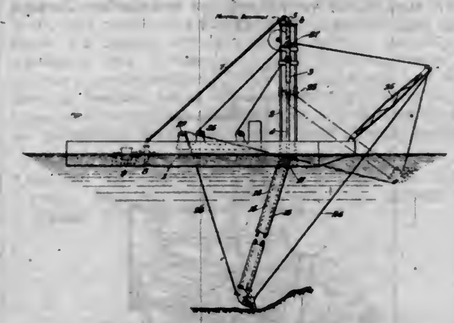
1,690,237. HYDRAULIC TURBINE. LEWIS FERRY MOODY, Philadelphia, Pa. Filed Oct. 31, 1923. Serial No. 671,828. 17 Claims. (Cl. 253—117.)



1. In a vertical shaft turbine a draft tube comprising an outer member flaring outwardly to discharge the flow in a direction transverse to the axis, an inner core member displacing the flow from the central portion of the draft tube and axially extending means for entirely supporting said core member from the flared outlet end of said outer member.

---

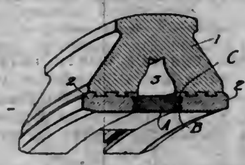
1,690,238. ADJUSTABLE PLOW. JOSEPH MORGAN, Franklin, Tex. Filed Sept. 7, 1927. Serial No. 218,079. 3 Claims. (Cl. 97—109.)



1. In combination, a plow beam, handle members carried thereby, a slide attached to the lower end of the beam, said slide having its forward ends extending upwardly in an S-shaped formation, a standard pivotally mounted on the upper end of said slide, said standard having one end extending forwardly and downwardly and adapted to support a plow sweep thereon, the opposite end of said standard extending rearwardly in bifurcated formation with the sec-

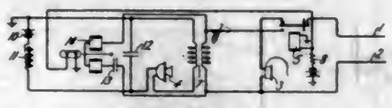
tions thereof disposed at opposite sides of the beam, a vertically disposed adjusting rod having a threaded upper end and its lower end angularly formed for attaching to the beam, and means for adjustably securing the threaded end of said rod to the rear end of said standard whereby to enable the vertical adjustment thereof.

---



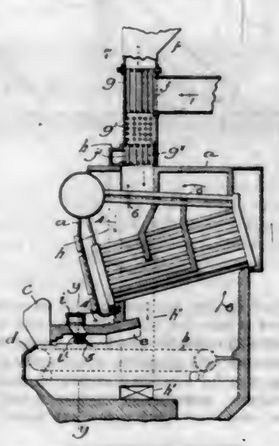
1,690,239. PLOW AND JET-ELEVATOR DREDGE. JOHN MALCOLM NICOL, Mill Valley, Calif. Filed Apr. 12, 1926. Serial No. 101,228. 3 Claims. (Cl. 57—61.)

1. In a pontoon dredge, the combination of a digging arm whose upper end is mounted on a trunnion that is suspended from a vertically movable platform, power means, for raising and lowering said platform, a hydraulic jet elevator in said digging arm for elevating excavated material, and telescoping conduits, respectively supplying said jet with pressure water, and conveying away excavated material.



---

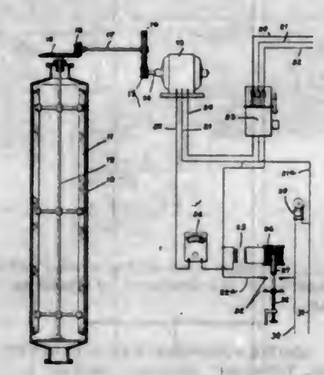
1,690,240. METHOD OF MANUFACTURING TIRES. THOMAS NORCROSS, Erdington, England, assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Original application filed Aug. 26, 1925, Serial No. 52,499, and in Great Britain Aug. 27, 1924. Divided and this application filed Apr. 28, 1926. Serial No. 105,045. 3 Claims. (Cl. 29—152.)



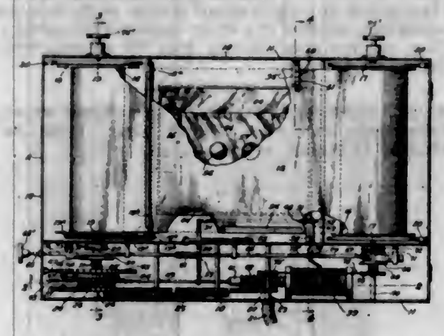
3. In the manufacture of cushion tires, the method which consists in providing a rubber body with base bands secured thereto, inserting a spacer ring between said base bands, and interlocking the base bands with the spacer ring by the application of pressure against the peripheral edge of at least one of said base bands.

1,690,241. TELEPHONE SYSTEM. HENRY W. O'NEILL, Elmhurst, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1926. Serial No. 98,666. 2 Claims. (Cl. 179—81.)

2. In a telephone set including a transmitter, a source of current, a receiver, an induction coil, a retardation coil and a transmitter, a primary circuit including said source, retardation coil, transmitter and one winding of said induction coil, a condenser connected in bridge of the series formed of said transmitter and said winding of the induction coil, a service lead normally connected to said receiver, and relay means connected in parallel with said condenser and responsive to current impulses generated by said transmitter for transferring said lead from said receiver to the other winding of said induction coil.



1,690,242. AIR PREHEATER FOR FURNACES. WILLIAM HENRY OWEN, Wimbledon, England. Filed Aug. 16, 1924, Serial No. 732,512, and in Great Britain Sept. 3, 1923. 1 Claim. (Cl. 122—1.)

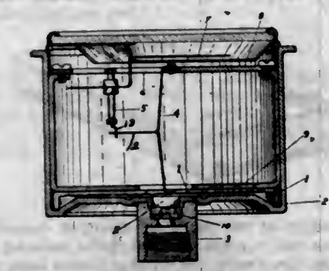


In a steam boiler provided with a flue for waste gases and a furnace having a grate, the combination with said flue of a final air heater, an economizer and a preliminary air heater disposed therein and arranged to be traversed by the gases in the order named, means for conducting part of the air heated in the preliminary heater therefrom to a point below said grate, and means for conducting the rest of the heated air from said preliminary heater through said final heater to a point above said grate.

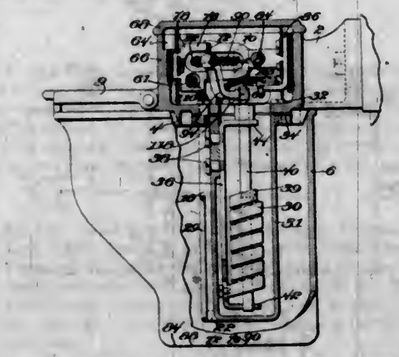
1,690,243. APPARATUS FOR CONTROLLING CRACKING STILLS. WILLIAM C. PARRISH, Port Arthur, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 16, 1924. Serial No. 706,707. 2 Claims. (Cl. 196—68.)

1. In the conversion of higher boiling hydrocarbons into lower boiling ones, the process that comprises maintaining a body of oil at a cracking temperature to cause the formation of lighter hydrocarbons and carbon, agitating said body of oil by means of a power operated agitating means, measuring the power employed in operating said agitating means, and continuing the operation with resultant accumulation of carbon and consequent increased resistance to the movement of the agitating means and stopping the run when the increased resistance, as measured by the amount of power employed in operating the agitating means, reaches a predetermined amount indicating the excessive production of carbon.

1,690,244. AUTOMATIC INDICATOR. JOHN A. PERIALE, Astoria, N. Y., assignor to The Periometer Co., Inc., Astoria, Long Island, N. Y., a Corporation of Delaware. Filed Dec. 30, 1925, Serial No. 78,436. Renewed Feb. 9, 1928. 9 Claims. (Cl. 40—42.)

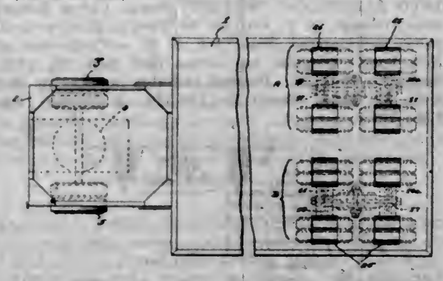


1. An automatic indicator including a casing having a window therein, a pair of spools journalled therein, one of said spools constituting a winding spool and the other the paying out spool, a strip of tape normally wound about said paying out spool for winding on said winding spool, sets of indicia on said tape, means for imparting a slow movement to said winding spool for a predetermined length of time, and means for imparting a rapid rotation to said winding spool to bring the respective sets of indicia into register with said window, said last means including a driven shaft operatively connected with said winding spool, a gear loosely mounted on said driven shaft, an electrically controlled rack engaging said gear, and ratchet means between said gear and said driven shaft for imparting a clockwise rotation thereto.

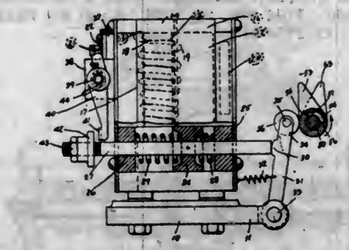


1,690,245. PRESSURE GAUGE. EDWARD REED POWELL, St. Louis, Mo., assignor, by mesne assignments, to Harvery G. Craig, St. Louis, Mo. Filed Oct. 29, 1920. Serial No. 420,473. 6 Claims. (Cl. 73—110.)

1. In a pressure gauge, a pressure-sensitive member, a pressure-indicating member, a bowed spring fixed at one end and having its other end contacting with said pressure-sensitive member, said bowed spring being adapted to be flexed intermediate its ends by movement of said pressure-sensitive member, and means connecting said pressure-indicating member to said bowed spring intermediate its ends for transmitting the flexing movement of said bowed spring to said pressure-indicating member.

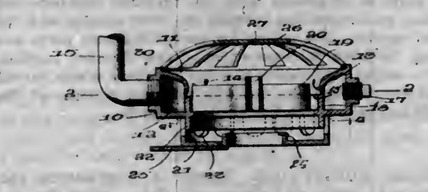


1,690,246. THREAD-WAXING DEVICE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 7, 1922. Serial No. 605,542. 11 Claims. (Cl. 219—19.)



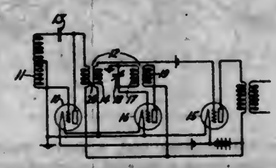
1. A thread waxing device having, in combination a wax receptacle, a heating device extending downwardly into the receptacle, a support for the heating device above the level of the wax and separate from the wax receptacle, means for guiding the thread through the receptacle in proximity to the heating device, and a thermostat mounted on the support and extending into the wax for controlling the temperature of the heating device.

1,690,247. HEAVY-DUTY VEHICLE. FREDERICK MALCOLM REID, Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed June 23, 1926. Serial No. 117,944. 9 Claims. (Cl. 280—81.)



1. In a heavy duty vehicle, a truck comprising two pairs of wheels for supporting the vehicle, this truck consisting of a compact unit which is secured to the vehicle by a transverse pivotal connection and each pair of wheels being secured to the truck by a longitudinal pivotal connection, whereby the entire truck unit can move relative to the vehicle in a vertical plane only and the pairs of wheels can move relative to the truck in response to road irregularities.

1,690,248. ELECTRIC GENERATOR. BENJAMIN P. REMY, Indianapolis, Ind. Filed May 29, 1926. Serial No. 112,494. 8 Claims. (Cl. 123—149.)

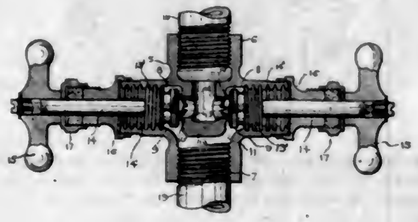


1. In a magneto, the combination of a magnetic path forming member having to and fro movement, a spring normally moving said member in one direction, a rotating shaft, cam means operable thereby for moving the member in the opposite direction and including a plurality of angularly offset portions for timing variation, means for causing a predetermined cam portion to actuate said path forming member, and a slip relief driving connection interposed between said rotating shaft and the cam means for permitting quick return of the path forming member.

1,690,249. OIL BURNER. ERNEST L. REYNOLDS, Tulsa, Okla. Filed Oct. 24, 1927. Serial No. 228,392. 5 Claims. (Cl. 158—63.)

1. In an oil burner of the character described, a closed oil heating chamber having an inner passage to produce a combustion chamber which is surrounded by the closed oil heating chamber, said heating chamber having apertures in its inner wall, leading into the combustion chamber, means to supply oil to the oil heating chamber, means whereby air is supplied to the bottom of the combustion chamber, and a mixing device, arranged within the combustion chamber.

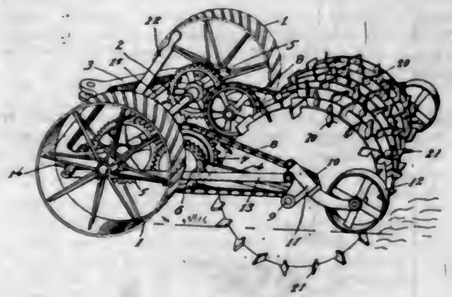
1,690,250. RADIO SIGNALING SYSTEM. ALFRED W. SAUNDERS, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1925. Serial No. 44,989. 5 Claims. (Cl. 250—20.)



1. In combination, an antenna, a high frequency amplifier, a detector and an oscillator, each having an input

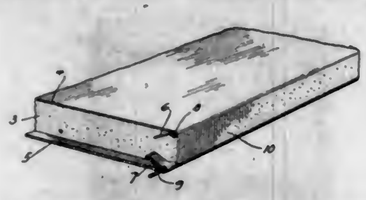
circuit and an output circuit, means for connecting the input circuit of the amplifier to the antenna, and a transformer having windings inductively associated for coupling the output circuit of said amplifier to the input circuit of said detector, for coupling the input and output circuits of said oscillator and also for coupling said oscillator to said detector.

---



1,690,251. VALVE. LOUIS SCHLESINGER and HERMAN E. HEINE, Milwaukee, Wis., assignors to Bradley Washfountain Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1925. Serial No. 70,556. 1 Claim. (Cl. 277—57.)

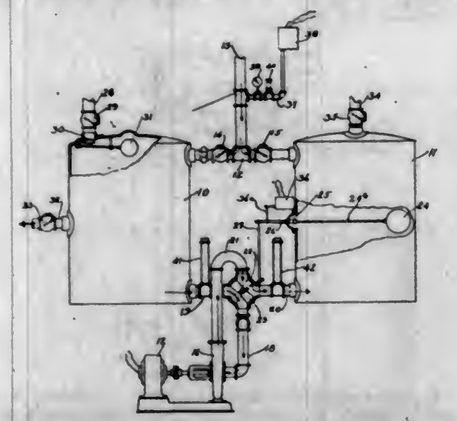
A valve, comprising a casing having an upper inlet opening and an alined lower outlet opening and opposite side threaded openings in alinement with each other, all of said openings being alined in a vertical plane, said casing also having a depending central partition of less diameter than the bore of the casing to form a space between the two parts, said partition provided with opposite ports in alinement with the threaded openings and opening communication between the inlet opening and the outlet opening, and valves for controlling said ports and having threaded portions engaging the threaded portions of the casing, said valves also having stems which extend outwardly through the opposite threaded portions of the casing and have handles on their outer ends.



---

1,690,252. CULTIVATOR. ERNEST A. SCHUMACHER and HARRY E. WESSLING, Cincinnati, Ohio. Filed Oct. 11, 1923. Serial No. 668,009. 1 Claim. (Cl. 97—215.)

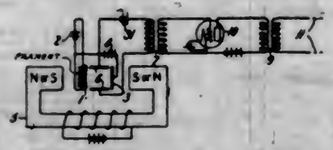
In a rotary soil treating tool, a shaft, discs mounted thereon, said discs having interspaced spading blades arranged in alternate angular position with relation to the axes of said discs, said blades extending from the outer peripheries of said discs for the purposes described.



1,690,253. REENFORCED-EDGE PLASTER BOARD. JOHN SCHUMACHER, Los Angeles, Calif. Filed Oct. 12, 1925. Serial No. 61,981. 7 Claims. (Cl. 154—45.9.)

1. A product of the character described comprising a cementitious core, a cover sheet of pliable material underfolded at the edge corner, the creased portion being beaded to form an edge corner and corner guard, and the cementitious core being exposed at the edge.

---

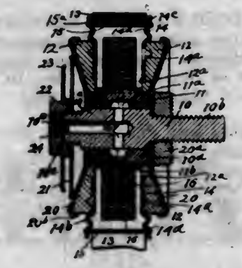


1,690,254. FLUID-HANDLING, SUCTION AND PRESSURE CREATING APPARATUS. BENJAMIN SKIDMORE, Jr., Chicago, Ill. Filed Apr. 23, 1925. Serial No. 25,455. 10 Claims. (Cl. 103—3.)

1. An apparatus for withdrawing fluids from a source of supply, separating the air and liquid therefrom and then discharging the liquid from the apparatus, said apparatus embodying two receivers, a centrifugal pump, and means for automatically controlling the suction and discharge of the pump for causing liquid to be alternately pumped from one of said receivers to the other whereby alternate suction and pressure will be created within each of said receivers.

---

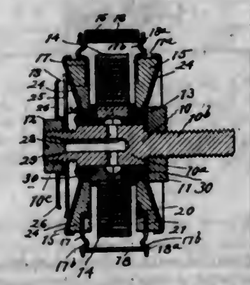
1,690,255. SYSTEM FOR CONVERTING SOUND WAVES INTO ELECTRICAL WAVES. HOMER CLYDE SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporated of New York. Original application filed Sept. 22, 1922, Serial No. 589,813. Divided and this application filed Sept. 23, 1924. Serial No. 739,330. 5 Claims. (Cl. 179—121.)



1. An arrangement for converting sound into electrical changes which comprises means for establishing an ionized

field in a body of gas exposed to variations in pressure due to sound, means for superimposing thereon a stead electromagnetic field and means for producing an electrostatic field in said body of gas.

---

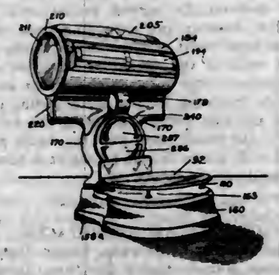


1,690,256. SHOCK ABSORBER. JACOB R. SNYDER, Cleveland, Ohio, assignor to The Star Rebound Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 9, 1924. Serial No. 731,014. 10 Claims. (Cl. 267—10.)

1. In a shock absorber, a rotatable drum, a spring adapted to rotate the drum in one direction, a strap adapted to be wound onto and unwound from the drum said drum being composed of a pair of non-metallic side members by which the drum is supported and a metallic outer portion with side portions engaging the non-metallic side members.

---

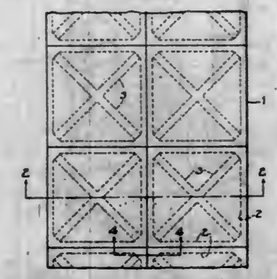
1,690,257. SHOCK ABSORBER. JACOB R. SNYDER, Cleveland, Ohio, assignor to The Star Rebound Controller Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Aug. 9, 1924, Serial No. 731,014. Divided and this application filed Aug. 9, 1924. Serial No. 731,015. Renewed Mar. 31, 1928. 6 Claims. (Cl. 267—10.)



1. A shock absorber comprising a drum, a strap engaging the same, the drum having a portion which is rotatable in opposite directions and whose movement is frictionally resisted and with respect to which the strap engaged portion of the drum is capable of a limited free movement.

---

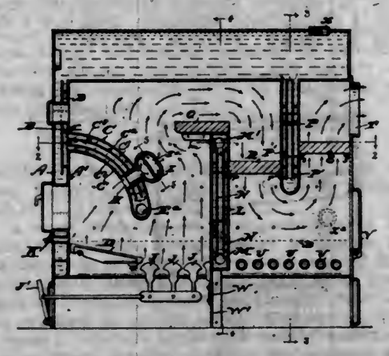
1,690,258. WEIGHING SCALE. THOMAS H. STRACHAN, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Aug. 1, 1925. Serial No. 47,472. 31 Claims. (Cl. 265—39.)



1. A weighing scale construction, including the combination with a weighing scale assembly complete in itself and built up in completely assembled and sealed condition as an operative weighing device, of cover devices therefor comprising base casing elements, column casing elements

and drum casing elements, said elements being constructed to be assembled and secured to the weighing scale assembly after the latter has been sealed.

---

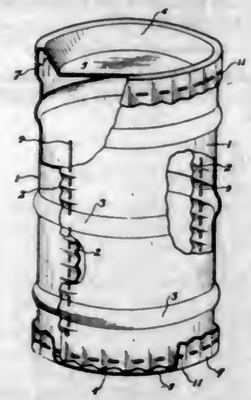


1,690,259. PAVEMENT. JOSEPH B. STRAUSS, Chicago, Ill. Filed Dec. 30, 1922. Serial No. 609,833. 5 Claims. (Cl. 94—12.)

2. A paving system comprising a series of corner posts having recesses at the top, cushion material in said recesses, caps in said recesses and projecting above the posts, and a series of slabs carried by said caps.

---

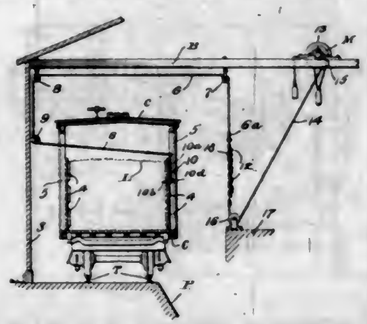
1,690,260. BOILER FURNACE AND GARBAGE INCINERATOR. HENRY E. WALLIS, Detroit, Mich. Filed Apr. 15, 1926. Serial No. 102,115. 12 Claims. (Cl. 122—2.)



1. A boiler-furnace including an inner and an outer shell, spaced apart to form a water chamber surrounding the combustion chamber formed by the inner shell; baffle plates dividing the water chamber between the inner and

outer shells, whereby the water between the outer wall and the baffle plates may flow downwardly and thence upwardly between the baffle plates and the inner shell to the space above the combustion chamber; a hollow rearwardly and downwardly curved smoke arch located in the combustion chamber and extending from side wall to side wall and from front wall rearwardly, the inner shell of the front wall of the furnace having an opening to establish communication between the water chamber and the smoke arch, the latter having ports leading through the inner shell of the side walls, connecting the arch with the space between the inner shell and the baffle plates; and a plurality of baffle plates in said smoke arch running parallel with the walls of the latter.

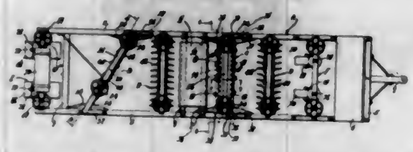
---



1,690,261. SHEET-METAL RECEPTACLE. VIRGIL P. WENDLE and MARTIN L. HUNKER, Dover, Ohio, assignors to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Mar. 15, 1926. Serial No. 94,772. 6 Claims. (Cl. 220—5.)

1. A receptacle formed of a plurality of sheet metal members having overlapping, uniformly corrugated edge portions provided with spaced apertures, the apertures in the respective overlapping portions being so aligned that a wire may be inserted through the apertures without distortion of the wire, and straight wires located through said apertures for attaching said members together.

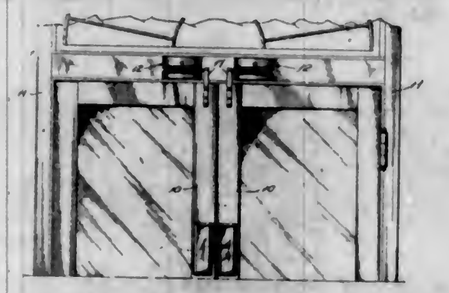
---



1,690,262. APPARATUS FOR REMOVING GRAIN DOORS. ANDREW WESTLING, Minneapolis, Minn., assignor to Concrete Elevator Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 6, 1928. Serial No. 244,905. 5 Claims. (Cl. 294—1.)

1. Apparatus for removing grain doors from freight cars having in combination, a relatively stationary support, a guide member mounted on said support in position to be disposed at one side of a freight car opposite a doorway thereof and at a height somewhat above the upper edge of the top grain door at said side, a flexible member passing through said guide member and adapted to be extended through the car transversely thereof and to the opposite side, an extricating hook connected to the end of said flexible member and adapted to be disposed below the lower edge of the top grain door at said opposite side of the car, and means for transmitting pull upon said flexible member to withdraw said top grain door and cause the same to move inwardly and upwardly over the grain within the car.

---

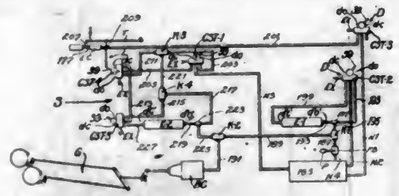


1,690,263. ROAD-WORKING MACHINE. EARL A. WHEELER, Los Angeles, Calif., assignor to Standard Road Maintenance Company, Los Angeles, Calif., a Corporation of Nevada. Filed Dec. 10, 1925. Serial No. 74,450. 7 Claims. (Cl. 37—145.)

1. The combination with a road working tool of a scarifying unit comprising a rectangular block, top and bottom plates being secured to and projecting at their sides over the side of the said block and having recesses formed therein, the recesses of the lower plate being vertically aligned with the recesses in the upper plate, bar scarifier members mounted in the said recesses, and means for holding the bar scarifier members within the said recesses.

---

1,690,264. AUTOMATIC DOOR CLOSING AND LOCKING DEVICE. CLINTON L. WOLFE, Brooklyn, and JOSEPH A. FAUROT, New York, N. Y. Filed July 18, 1923. Serial No. 652,434. 5 Claims. (Cl. 70—50.)



1. The combination with a door of a door closing and locking arrangement comprising a spring influenced pulley member, flexible means connecting said door to said pulley member, means for locking said pulley to prevent the opening of said door, means for holding said door open, and electrically controlled means for simultaneously releasing said door holding means, and actuating said pulley locking means from a distant point.

---

1,690,265. DOOR CONTROL FOR AUTOMOTIVE BUSSES. RUFUS W. BAILEY, Kansas City, Mo. Filed Dec. 15, 1924. Serial No. 755,901. 10 Claims. (Cl. 303—6.1.)

6. A pneumatically controlled door opening system for motor coaches, operable to open the rear door by an operator outside the coach when the door is shut irrespective of the positioning of passengers within the coach, and operable to open said door by one of two operators within the coach only upon a predetermined specific positioning

of passengers within the coach and operable by the other of said two operators independently of said specific positioning.

---

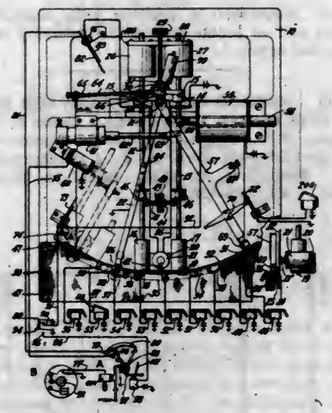
1,690,266. SHAFT FOR GOLF CLUBS AND THE LIKE. HAROLD G. BARRETT, Wilmette, Ill., assignor to Barbarite Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1925. Serial No. 67,531. 10 Claims. (Cl. 273—80.)

1. A shaft for golf clubs embodying a tubular nonmetallic casing, a core telescoped into and fitting within the casing, and means securing the ends of the core and casing together, the portions of the core and casing intermediate the said securing means being free for slight relative movement.

---

1,690,267. PHONOGRAPH. ROBERT Y. BARROWS, Rutherford, N. J., and HAROLD P. CURTIS, New York, N. Y., assignors to Robert Y. Barrows, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 27, 1921. Serial No. 440,384. 9 Claims. (Cl. 192—41.)

1. In a phonograph, a motor driven spindle, a record supporting table having a circumferential weight attached thereto adjacent the periphery thereof, and means for clutching said table to said spindle for a one-way movement only, said means including a two-part hub attached to and removable with said table.

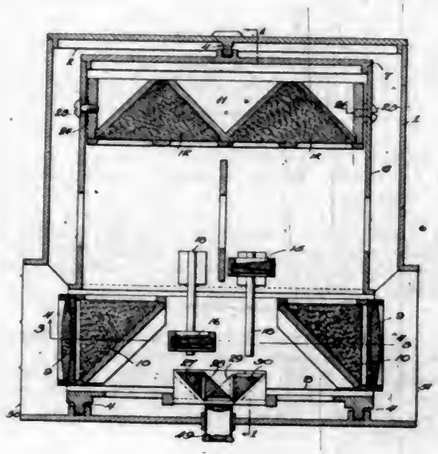


1,690,268. REVERSE-PLATING DEVICE FOR CIRCULAR-KNITTING MACHINES. HANS BARTH, Dresden, Germany. Filed Apr. 8, 1927, Serial No. 182,121, and in Germany Apr. 10, 1926. 3 Claims. (Cl. 66—108.)

1. In a circular knitting machine, a reverse-plating device comprising reversing sinkers having serrated shoulders wherewith to support the yarn, and means for imparting to said sinkers a movement in opposite direction to the sinking movement so as to reverse the relative positions of the yarns in the needle head before the loop is formed.

---

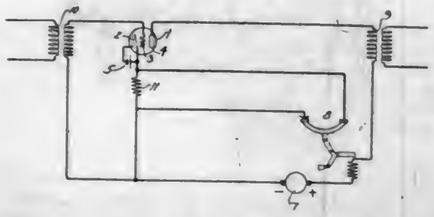
1,690,269. TESTING DEVICE. WILLIAM T. BOOTH, Flushing, and ARTHUR C. MAGRATH, New Dorp, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 21, 1924. Serial No. 745,030. 5 Claims. (Cl. 177—380.)



1. A dial tester consisting of a gravity pendulum, a magnet for holding the pendulum off-center, a pointer, a magnet for holding the pointer to the pendulum, an impulse sender, and circuits controlled by said impulse sender for successively deenergizing said magnets at the beginning and termination of a set of impulses transmitted by the sender.

---

1,690,270. OPTICAL INSTRUMENT. FELIX H. CARSOW, Vallejo, Calif. Filed Aug. 16, 1926. Serial No. 129,421. 15 Claims. (Cl. 88—2.7.)

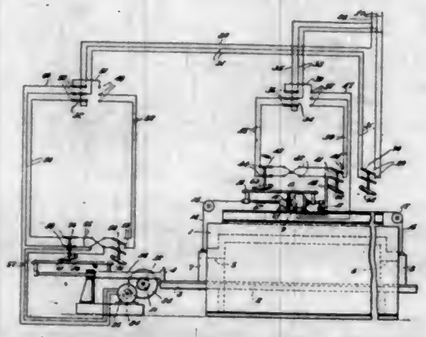


1. A range finder comprising in combination a casing having light passage tubes extending in opposite directions therefrom, a central inner casing mounted in said first mentioned casing, said central inner casing mounted in said first mentioned casing, said central inner casing being arranged to receive a removable carrier at each end thereof, reflectors mounted in each of said carriers, objective lenses mounted adjacent the reflectors in the end of said carrier adjacent said light passage tubes, optical means for receiving light rays and directing said rays through said objectlve lenses onto the reflectors adjacent thereto where they are directed toward said

reflectors at the opposite end of said carrier, measuring and halving prisms interposed in the path of light reflected by said last mentioned reflectors and each independently adjustable in position with respect to said reflectors and an ocular system for observing the images of a distant object.

---

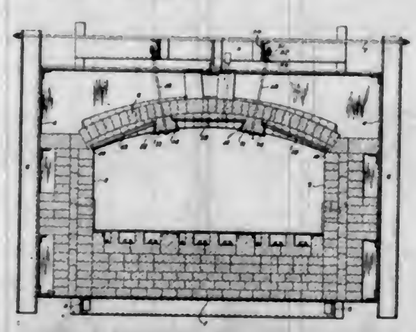
1,690,271. METHOD OF AND MEANS FOR PROTECTING ELECTRICAL APPARATUS. LEWIS M. CLEMENT, Yonkers, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1923. Serial No. 674,199. 18 Claims. (Cl. 250—27.)



1. The method of protecting electrical apparatus from abnormal current in a circuit including an electric discharge device and its associated input and output circuits having a common portion, which comprises utilizing an effect produced by the flow of abnormal current in one of said circuits to initiate the supply of current to said common portion, whereby the relative potentials impressed upon the electrodes of the device are regulated and the current supplied to the apparatus is limited to a safe value.

---

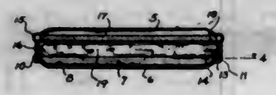
1,690,272. FURNACE DOOR AND PUSHER INTERLOCK. FRANK T. COPE, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Filed Mar. 5, 1925. Serial No. 13,133. 2 Claims. (Cl. 214—23.)



1. In combination with a furnace, a door and a pusher for moving material into the furnace when the door is in the opened position, a motor for operating the door, a switch controlling the door motor, a motor for operating the pusher, a switch controlling the pusher motor, an interlock switch in parallel with the pusher motor switch, a sliding bar operated by the door motor, switches engaged by the sliding bar to stop the door motor when the door is

in the fully opened or fully closed position, said sliding bar engaging the interlock switch to close it only when the door is in the fully opened position.

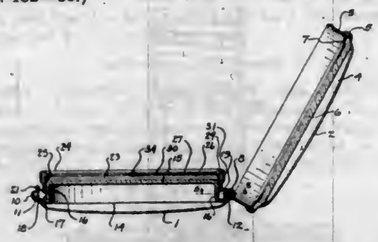
---



1,690,273. ELECTRIC FURNACE. FRANK T. COPE, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Original application filed Nov. 9, 1925, Serial No. 67,810. Divided and this application filed Jan. 12, 1927. Serial No. 160,634. 7 Claims. (Cl. 266—1.5.)

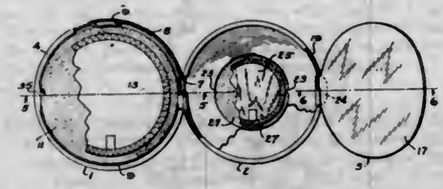
1. An electric furnace including a refractory roof, spaced independently detachable blocks having ledges upon the under side of the roof supported independently of the roof and rigid resistor grids supported at their end portions only upon said ledges.

---



1,690,274. VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 27, 1925. Serial No. 33,111. 5 Claims. (Cl. 132—83.)

1. A toilet case having bottom and top comprising a convexed portion and a flat central portion whereby its thickness at the perimeter is less than at the center, and a cylindrical side wall in combination with a toilet compact having a convex bottom and substantially flat exposed face securely held in the concave shaped interior of the box.



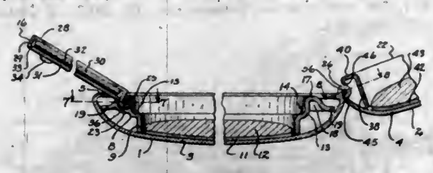
1,690,275. VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 26, 1925. Serial No. 39,643. 13 Claims. (Cl. 132—83.)

1. A vanity box comprising a cup and a cooperating member forming a chamber therebetween, said cup having a dispensing perforation therein, means whereby said member is movable relative to said cup to change the size of said chamber and thereby dispense the contents thru said perforation, and a valve plate pivoted to said cup for effectively closing said perforation to prevent escape of the contents of said chamber when filling said cup with said contents, said cup and member being detachable for filling.

---

1,690,276. VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 7, 1926. Serial No. 127,722. 14 Claims. (Cl. 132—83.)

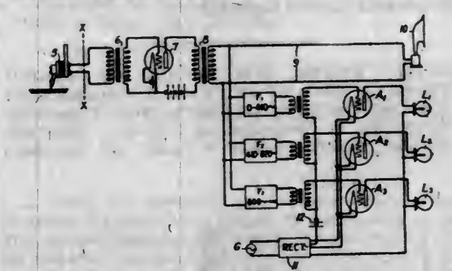
1. A vanity case comprising a curved dished cover member made of sheet material and having a bottom and an annular inturned curled edge forming a projecting flange and a recess in said edge, an annular pintle wire sprung under said flange, said wire having offset portions extending inwardly along said bottom, a cooperating section having a knuckle in said recess and traversed by said wire, a curved dished compact holder sprung under said offset portions and thereby spaced from said knuckle.



---

1,690,277. SECTIONAL-WALL VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 8, 1926. Serial No. 134,176. 12 Claims. (Cl. 132—83.)

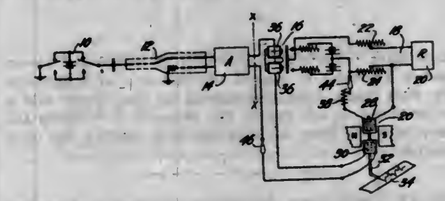
1. In a box, a cover comprising a ring member and a central member, said members each forming a portion of the wall of said cover, a co-operating section, means for separably connecting said ring member and section including an independent element, and means for detachably securing said central member to said ring member including said independent element.



1,690,278. VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 17, 1926. Serial No. 136,005. 15 Claims. (Cl. 132—83.)

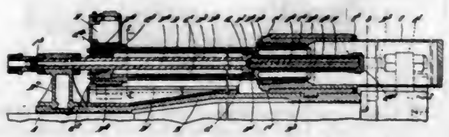
1. A vanity case comprising a base section, a removable base bezel ring in said section and having an upstanding annular ridge with an inner seat, a cooperating section adapted to seat in said seat, said ridge having a recess, hinge means located in said recess pivotally connecting said cooperating section to said ridge, said ridge being spaced radially from the edge of said base section to form an annular clearance space within said base section below said edge, and a third section having a part adapted to enter said space.

---



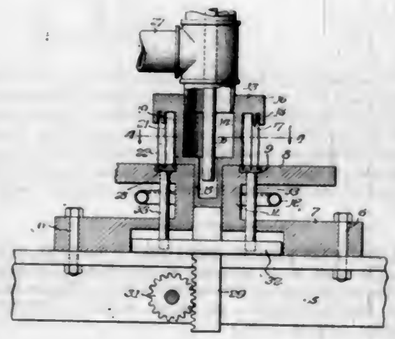
1,690,279. APPARATUS FOR THE VISUAL INTERPRETATION OF SPEECH AND MUSIC. EDWARD B. CRAFT, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 6, 1925. Serial No. 60,715. 2 Claims. (Cl. 84—464.)

2. In a system for associating light and sound, a circuit including a source of electric waves, means for converting said waves into audible effects, a plurality of channels connected in parallel with said circuit, a wave filter in each of said channels for transmitting a predetermined range of frequencies, a space discharge device in each of said channels, and an electric lamp in the output of each of said devices.



---

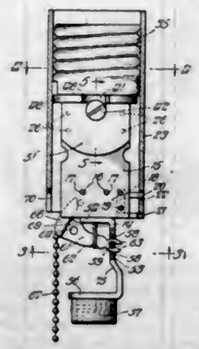
1,690,280. ELECTRICAL TESTING. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 27, 1926. Serial No. 91,232. 7 Claims. (Cl. 178—69.)



1. Means for relaying electrical impulses, indicating means for receiving the relayed impulses, and means for recording only changes in the characteristics of said impulses that occur during their transmission through said relaying means.

1,690,281. RECOIL AND RUN-OUT APPARATUS FOR ORDNANCE. ARTHUR TREVOR DAWSON, GEORGE THOMAS BUCKHAM, and JAMES FLEMING WHITE, Westminster, England, assignors to Vickers Limited, London, England, a British Company. Filed Aug. 9, 1927, Serial No. 211,736, and in Great Britain Jan. 13, 1927. 8 Claims. (Cl. 89—43.)

1. In ordnance recoil and run-out apparatus, the combination with the recoil or brake cylinder and the recoil or brake piston forming the elements of the recoil apparatus, one of these elements being connected to the gun and the other to the gun cradle, of a pneumatic recuperator cylinder which is arranged in line with the recoil or brake cylinder and the interior of which does not communicate with the interior of the latter cylinder, and a ram on the recoil apparatus element that moves relatively to said recuperator cylinder, said ram effecting the compression of the air within said recuperator cylinder during the recoil movement of the gun and effecting the run-out movement of the gun under the influence of the compressed air after the recoil movement has been completed.



1,690,282. FILTER AND METHOD OF MAKING. FRENCH E. DENNISON and WARD S. IRELAND, Beloit, Wis., assignors to National Refrigeration Corporation, Beloit, Wis., a Corporation of Delaware. Filed Jan. 29, 1926. Serial No. 84,574. 6 Claims. (Cl. 210—154.)

1. A filter comprising a plurality of cylindrical screen elements arranged in spaced relation and of a decreasingly finer mesh from the outside to the inside, and a member fused to one end of the elements for sealing the spaces between them at said end and uniting the said elements.

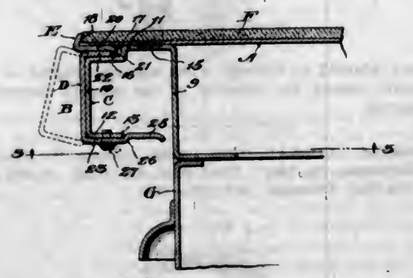
1,690,283. BRACKET SOCKET. VICTOR R. DESPARD, Valparaiso, Ind., assignor to McGill Manufacturing Company, a Corporation of Indiana. Filed Oct. 30, 1925. Serial No. 65,778. 20 Claims. (Cl. 173—354.)

1. In a device of the character described, a screw shell having an inturned flange and an apertured ear extending from said flange, insulating supporting means for said screw shell, a holding member engaging said flange within said screw shell and provided with an apertured ear

projecting therefrom to the exterior of said shell and securing means passing through said apertures and said insulating means.

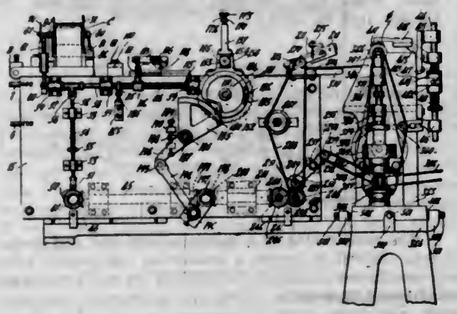
1,690,284. DISPLAY-ADVERTISEMENT ATTACHMENT FOR CIGAR LIGHTERS. EDWARD L. DOTY, Fordham, N. Y. Filed Sept. 15, 1927. Serial No. 219,719. 2 Claims. (Cl. 40—146.)

1. In an advertising attachment for a cigar lighter for public use, and including a holder in which advertising cards may be displayed, the combination therewith of an extension arm therefrom formed at its end with an arcuate surface; a shoe formed with an arcuate groove conforming with the arcuate surface and width of the arm and slidable relatively thereto; means for adjustably securing the arcuate surfaces together; and means clamping the shoe to the supply pipe of the cigar lighter.



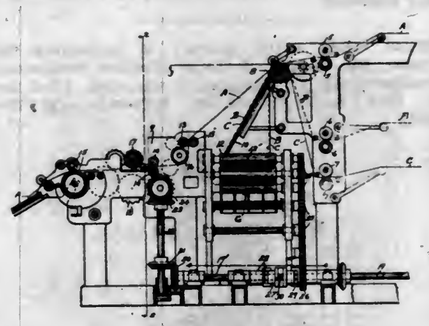
1,690,285. WEATHER HOOD OF BOATS. IVAN RUPERT FLEMING, Ainsdale, Lancaster, England. Filed Apr. 10, 1922, Serial No. 551,393, and in Great Britain Sept. 9, 1921. Renewed Feb. 27, 1926. 2 Claims. (Cl. 135—6.)

1. A protective hood for boats, including a series of arched bows mounted for sliding movement relative to the gunwale of the boat, a hood connected to and movable with the bows and adapted to have its free edge, when the hood is in operative position, overlie the edge of the gunwale of the boat, a flap permanently secured to the gunwale of the boat and adapted, when the hood is extended, to project materially above the juncture of the gunwale of the boat and the free edge of the hood, and means for securing the flap to the bows.



1,690,286. EDGE CONSTRUCTION FOR FURNITURE TOPS. JASON A. FITCH and GEORGE C. BRAINARD, Youngstown, Ohio, assignors to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,185. 16 Claims. Cl. 45—31.)

14. An edge construction for furniture tops including in combination, a top member, a covering supported by said top member, a bead strip extending along and embracing the edges of the top member and the covering, a supporting member carried by the underside of the top member and spaced from the outer edge thereof, a facing strip separate from said bead strip but adapted to engage the same to hold it in position, and means on said facing strip for connecting it with the supporting member.

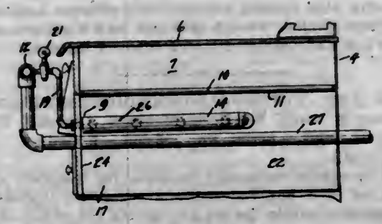


1,690,287. METHOD AND MACHINE FOR MAKING PAPER TUBES. JOSEPH N. FRANCIS, Woburn, Mass., assignor to Standard Coin Wrappers, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1925. Serial No. 23,497. 17 Claims. (Cl. 93—81.)

3. In a tube forming machine, means for winding a strip into tube form, and a hook movable against one end of the tube to turn said end inwardly to form a circumferential bead, and then movable toward the axis of the tube so that it may be withdrawn without hindrance from said bead.

1,690,288. DELIVERY MECHANISM FOR PRINTING PRESSES. HARRY GEARING, Los Angeles, Calif., assignor to Nebraska Printing Company, Lincoln, Nebr. Filed June 23, 1927. Serial No. 200,784. 6 Claims. (Cl. 270—41.)

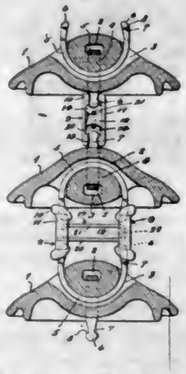
1. In combination with a printing press for delivering printed sheets continuously therefrom, of a folding horn to receive the paper and guide it to folding rollers, folding rollers to receive and fold said paper, a guide roller for guiding said paper to said folding horn, other rollers parallel with said guide roller to receive said sheet therefrom, moving above said folding horn, said latter rollers being positioned at substantially right angles to said folding rollers and all of said rollers being fixedly supported, for the purpose described.



1,690,289. STEERING-GEAR CONTROL. WILLIAM CHARLES GEE, Rock Ferry, England. Filed Nov. 29, 1926, Serial No. 151,538, and in Great Britain Aug. 26, 1926. 2 Claims. (Cl. 280—89.)

1. Means for preventing the steering wheels of self-propelled vehicles from wobbling, in combination an axle tree, pivoted stub axles on the ends of same, steering arms on said stub axle parts, a flexible connecting medium connected with said steering arms, a rotative barrel over which the said flexible medium is passed, a case in which the said barrel is disposed connected with and supported from the axle tree, a spring above the barrel and case, adapted to act on the barrel to serve as a frictional resistance to its rotation, and a screw adjusting device on the upper end of the spring to vary the friction braking action on the barrel.

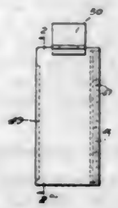
1,690,290. GAS-KINDLING-BURNER INSTALLATION. FREDERICK A. GERCICH, Oakland, Calif., assignor to Hammer-Bray Company, Oakland, Calif., a Corporation of California. Filed July 26, 1926. Serial No. 125,071. 7 Claims. (Cl. 126—36.)



1. In a stove provided with a cooking top, a fire box and a top gas burner chamber underlying said top, gas burners in said chamber, a kindler burner arranged to deliver

gaseous fuel within said fire box, a gas supply manifold at the front of said stove, and supply cocks for all said burners operatively disposed between said manifold and burners and having corresponding parts thereof in rectilinear alignment.

---

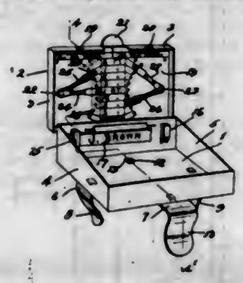


1,690,291. INSULATOR. MINOR F. H. GOUVERNEUR, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Nov. 11, 1924. Serial No. 749,145. 4 Claims. (Cl. 173—366.)

1. Means for connecting insulators having curved insulating passages comprising a pair of similar curved yoke members adapted for insertion through the interlinking passages of successive insulators and terminating in heads adjacent constricted neck portions, and connecting members apertured for the reception of said neck portions and having retaining surfaces co-acting with said heads, said connecting members including intermediate transverse portions spaced from the ends thereof to provide apertures for securing means.

---

1,690,292. CAMERA. PATRICK P. GROSSO, Chicago, Ill. Filed June 11, 1926. Serial No. 115,266. 8 Claims. (Cl. 95—34.)



1. In a device of the type described, a casing having an opening in one end thereof and a slot in the upper edge thereof, an adjustable lens disposed in said casing in alignment with said opening and provided with an indicating arm which extends through said slot, and a plate carried by said arm and slidably disposed adjacent the slot.

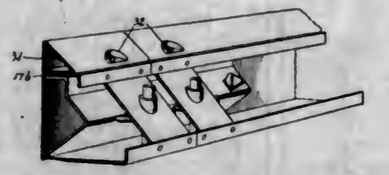
---

1,690,293. HOUSEHOLD COMMODITY INDICATOR. GEORGE B. HALL, Winnipeg, Manitoba, Canada. Filed May 23, 1927. Serial No. 193,000. 2 Claims. (Cl. 116—133.)

2. A household commodity indicator for insertion within the lid of a box embodying a commodity indicating card mounted within the lid and having the names of selected commodities printed on the top thereof, and information relative to specially required commodities appearing thereon underneath the former names, a central vertical column having indiciæ indicating the quantity of selected commodities required and a pair of concentrically mounted pointers pivotally attached to each end of the card, the pointers of a pair being differently coloured, said pointers

being adapted to indicate when set with regard to the central column the quantity of the selected commodity required.

---



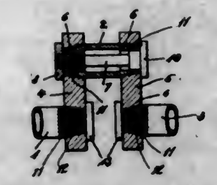
1,690,294. COLLAPSIBLE CASE. OSCAR B. HANSON, Dickinson, N. Dak. Filed Mar. 10, 1927. Serial No. 174,362. 5 Claims. (Cl. 217—12.)

4. A knock down box of the character described, comprising top, bottom, side and end wall members, shiftable plate members carried by and having limited movement over a face of certain of said walls, and an engaging member carried by each plate for engagement over an adjacent wall to maintain the same in position.

---

1,690,295. ROAD FORM. JOHN N. HELTZEL, Warren, Ohio. Filed Sept. 24, 1927. Serial No. 221,809. 20 Claims. (Cl. 25—118.)

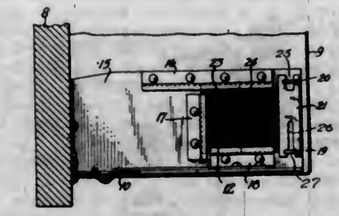
6. The combination of a concrete form rail, and means therein adapted to receive a transverse compression force and constructed to expand vertically in the rail when under transverse compression.



---

1,690,296. CRANK SHAFT. ALBERT HIRTH, Cannstatt-Stuttgart, Germany. Original application filed Dec. 22, 1920, Serial No. 432,445, and in Germany Jan. 16, 1920. Divided and this application filed Oct. 11, 1924. Serial No. 743,090. 1 Claim. (Cl. 74—38.)

A built up crank shaft structure comprising two crank arms provided with pairs of conical seats, the seats in each crank arm facing in opposite directions and having V-shaped grooves and projections, two journals provided with conical ends fitting respectively in the seats of one pair and extending in opposite directions outwardly therefrom to constitute the axis of the crank shaft structure, said conical ends having V shaped grooves and projections



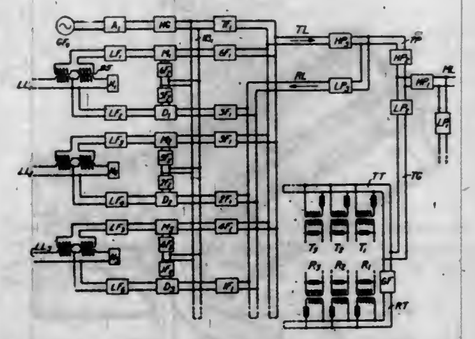
in intimate contact with the entire surface of the grooves and projections in the seats, and said conical ends having terminal threaded pins, nuts screwed on said pins and bearing against the sides of the crank arms and acting to maintain the intimate contact of the grooves and projections, a hollow crank pin extending between said crank arms and formed with conical ends fitting in the conical seats of the other pair and having V-shaped grooves and projections in intimate contact with the entire surface of the grooves and projections in the associated seats, a bolt

extending through said crank pin and having on one end a head bearing against one crank arm and having on its other end a nut bearing against the other crank arm and acting to maintain the intimate contact of the grooves and projections; whereby in a crank shaft structure involving a plurality of pairs of crank arms and a plurality of crank pins, the parts of the structure may be assembled in a great number of different relative angular positions and be filmly held with the journals in the same axis and in parallel relation to the crank pins.

---

1,690,297. CABLE SUPPORT. JOSEPH F. D. HOGE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1923. Serial No. 665,498. 1 Claim. (Cl. 247—25.)

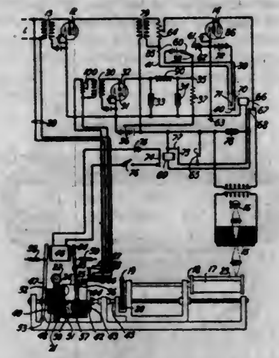
A cable support comprising a plate having a slot in one end, members secured near the edges of the slot to form grooves, a pair of clamping members fitted in said grooves and arranged to form an opening of a diameter substantially the same as the cable to be supported, lugs on the outer end of said plate, and a clip in the plane of said clamping members, when the clip and clamping members are in operative position, said clip having a slot in each end engaging said lugs to hold the outer clamping member firmly against the cable.



---

1,690,298. WINDOW VALANCE. FRANK E. HOOD, JANET E. HOOD, and ALEXANDER G. MORRISON, San Francisco, Calif. Filed Sept. 24, 1924. Serial No. 739,608. 4 Claims. (Cl. 156—13.)

1. A suspended valance having a shaped bottom edge and having shaped sections of the said edge weighted uniformly.

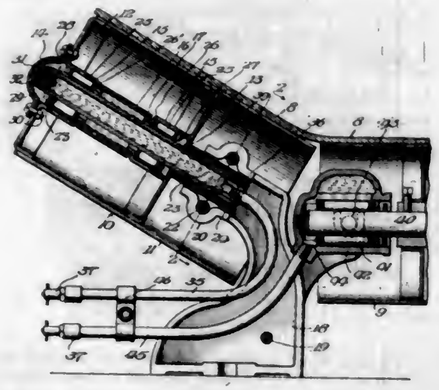


1,690,299. GENERATION AND CONTROL OF ELECTRIC WAVES. JOSEPH W. HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 21, 1922. Serial No. 545,562. 28 Claims. (Cl. 179—15.)

1. The method of generating a wave of required frequency from a single sinusoidal wave of a given different frequency comprising maintaining a sustained cycle of wave-modifying operations including modulation of the wave of given frequency by a wave, driving the last mentioned wave as a product of such modulation, and deriving the wave of required frequency solely as a product of such modulation.

---

1,690,300. TRANSMISSION OF PICTURES BY ELECTRICITY. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 3, 1925. Serial No. 20,321. 13 Claims. (Cl. 178—7.)

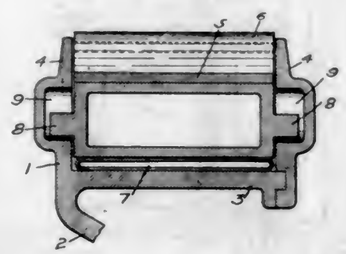


1. In a signaling system comprising a gain control circuit, the method of obtaining a desired current level at a receiving station which comprises automatically adjusting a potential of the gain control circuit from the transmitting station during regularly recurring periods.

---

1,690,301. BELT CONVEYER. HERMON E. HOWARD, Chicago, Ill., assignor to Weller Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 24, 1925. Serial No. 39,192. 5 Claims. (Cl. 308—113.)

1. In a support for a conveyer belt, the combination of a bracket, an inclined hollow shaft having its inner end fixedly secured in the bracket, a troughing roll comprising a rim, a head at the outer end of the rim having

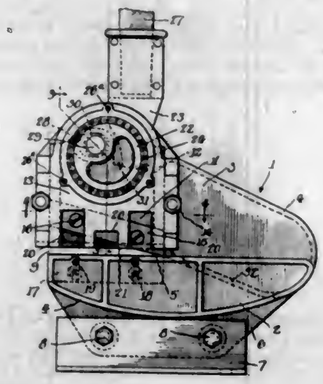


an opening therein through which the shaft may pass, a head adjacent the inner end of the rim and a hub between the heads, a cap removably secured to the outer head and forming a closure for said opening, the outer end of the shaft and the cap being provided with abutting

surfaces to limit the inward movement of the roll, means adjacent the outer end of the shaft for holding the roll against outward movement, and means for delivering lubricant to the inner end of the shaft and from the shaft to the bearing surfaces between the hub and the shaft.

---

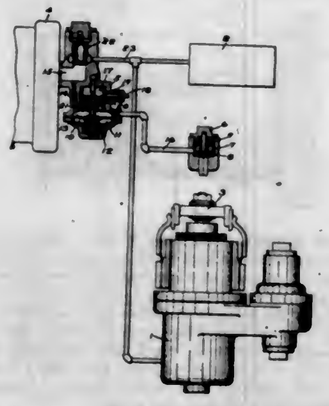
1,690,302. BRAKE-SHOE CONSTRUCTION. HENRY D. HUKILL, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 2, 1927. Serial No. 171,923. 5 Claims. (Cl. 188—206.)



1. In a brake for automotive vehicles, the combination with a support therefor, of brake shoes mounted on said support and movable radially relative thereto, and projections on both sides of each end of each of said shoes adapted to interlock with said support to prevent rotary movement of said shoes.

---

1,690,303. METAL SHEARS. JOHN JENSEN, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 17, 1927. Serial No. 220,079. 2 Claims. (Cl. 164—57.)



1. In metal shears, the combination of a stationary blade, a movable blade, and a plate positioned in substantially parallel spaced relation to said stationary blade to limit the dimension of material to be interposed between said blades for cutting, said plate having a recess adapted to admit one portion of a bent piece of material in order

to position another portion of said piece of material between said blades for cutting closely proximate to said portion admitted to said recess.

---

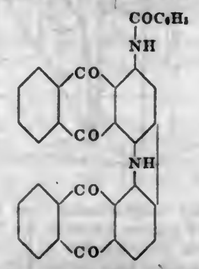
1,690,304. COMPRESSOR UNLOADER. FREMONT P. LIVINGSTON, Denver, Colo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1927. Serial No. 182,002. 4 Claims. (Cl. 230—4.)

1. In a pressure control apparatus, the combination with a fluid compressor, of means for venting fluid from the fluid discharge side of the compressor and operated upon a predetermined increase in the pressure of fluid discharged for cutting off the venting of fluid from said discharge side.

---

1,690,305. MOLDED ARTICLE AND METHOD OF PREPARING THE SAME. HARVEY ELMER MANNING, Little Rock, Ark. Filed Apr. 12, 1927. Serial No. 183,244. 3 Claims. (Cl. 18—47.5.)

1. In the preparation of molded articles the herein described process which comprises mixing kaolin clay, magnesium oxide and hot dilute nitro-hydrochloric acid, in such proportions as to form a thin pasty mass which will set slowly, upon standing in a vacuum forming a product

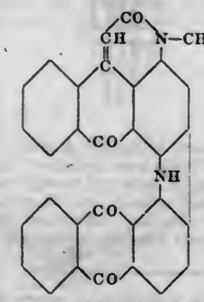


of low gravity, and allowing the mass to set at substantially below atmospheric pressure, thereafter removing soluble components by a washing operation.

---

1,690,306. ANTHRAQUINONE VAT DYESTUFF. WALTER MIEG, Vohwinkel, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 20, 1926, Serial No. 82,588, and in Germany Jan. 21, 1925. Divided and this application filed May 24, 1927. Serial No. 193,948. 1 Claim. (Cl. 260—46.)

As a new product the vat dyestuff which is obtainable by treating 4-benzoylamino-1-1'-dianthraquinonylamine with anhydrous aluminum chloride in presence of pyridine, which is chemically most likely a carbazol derivative, corresponding probably to the formula:

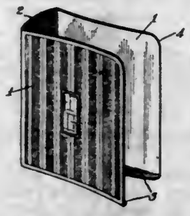


which is soluble in concentrated sulfuric acid with a brown color and dyes vegetable fibres from cold or hot vats very fast brown shades.

---

1,690,307. ANTHRAQUINONE VAT DYESTUFF. WALTER MIEG, Vohwinkel, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Jan. 20, 1926, Serial No. 82,588, and in Germany Jan. 21, 1925. Divided and this application filed May 24, 1927. Serial No. 193,949. 1 Claim. (Cl. 260—46.)

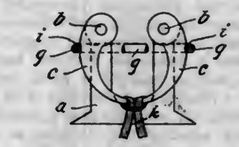
As a new product the vat dyestuff obtainable by treating the dianthraquinonylamine derivative obtained by condensing 4-bromo-1-9-anthraquinonemethylpyridone with 1-aminoanthraquinone, with anhydrous aluminum chloride in presence of pyridine, which is chemically most likely a carbazol derivative, corresponding probably to the formula:



which crystallizes in orange needles, soluble in concentrated sulfuric acid with a deep red color, and producing brownish-orange dyeings on cotton from both cold and hot vats.

---

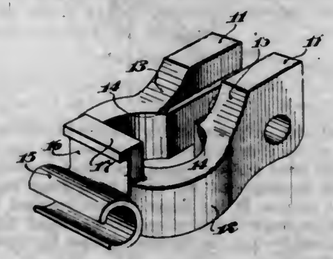
1,690,308. CASE FOR CIGARETTE PACKAGES. VICTOR NIVOIS, New York, N. Y. Filed June 2, 1926. Serial No. 113,157. 2 Claims. (Cl. 206—41.)



1. A holder of the character specified, of resilient sheet material, including side plates arched inwardly from side to side and connected at one edge by a resilient wall acting normally to press said sides towards each other, thereby to firmly grip a package of cigarettes, or the like, when inserted between them, said plates having inturned

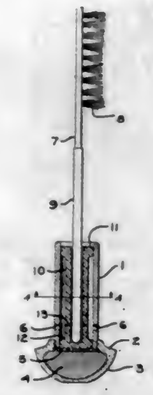
flanges at one end to limit movement of the package in that direction while leaving the major portion of the said end exposed to facilitate removal of cigarettes through the other end of the package.

---



1,690,309. LACING FASTENING. JAKOB PFEIFFER-BRAUN, Laupen, near Bern, Switzerland. Filed Aug. 25, 1927, Serial No. 215,497, and in Germany June 30, 1927. 1 Claim. (Cl. 24—117.)

A lacing fastening comprising a support, two parallel distanced shafts mounted in said support, corniform lever arms secured to the ends of said shafts so that the arms can be closed in pairs point to point, a spring tending to open the arms, and a shackle adapted to embrace a pair of arms and to snap into notches in the same for retaining the arms in closed position, the shackle being pivoted to the support so as to allow of being turned into and out of operative position.



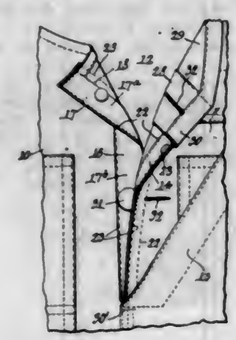
---

1,690,310. BATTERY TERMINAL. HENRY E. PIEH, Williston, N. Dak., assignor of one-half to Harold Sylvester Paige, Williston, N. Dak. Filed Apr. 13, 1927. Serial No. 183,827. 8 Claims. (Cl. 173—259.)

1. A split ring battery terminal having cooperating lugs on the upper surface of the outer end portions thereof, said lugs projecting upward an appreciable distance from said upper surface, the inner surfaces of said lugs being offset from the inner surfaces of the ends of the ring so as to provide a space between the lugs which in all positions of the terminal, is capable of receiving a spreading tool.

1,690,311. TOOTHBRUSH HOLDER. FREDERICK REICH, Elizabeth, N. J. Filed Feb. 9, 1925. Serial No. 7,741. 2 Claims. (Cl. 248—63.)

1. A tooth brush holder having a base portion weighted to stand on end and having an open-ended cylindrical bracing and supporting portion screw-threaded thereon, a waterproof gasket therebetween and compressed by said screw threads, and a removable resilient bushing closed at one end, adapted to encircle a tooth brush handle, and at each end in frictional engagement with the interior wall of said cylindrical portion, said cylindrical portion and bushing being, substantially, at least as long as the bristle portion of a tooth brush providing an extended tooth brush gripping portion.



1,690,312. GOLF-CLUB GRIP. STERLING D. ROSAN, Boston, Mass. Filed Feb. 18, 1928. Serial No. 255,258. 5 Claims. (Cl. 273—81.)

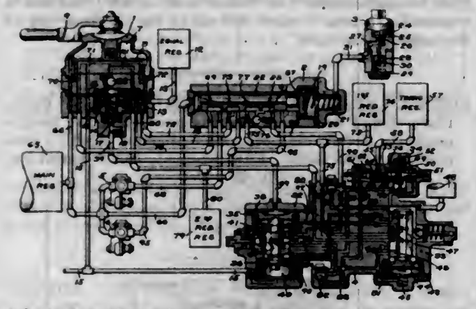
1. A golf club grip comprising means projecting from the shaft of the club to provide a surface for the thumb of the right hand and an oppositely directed surface for holding the forefinger of the right hand away from the shaft, that portion of the finger surface engaged by the end of the forefinger being spaced farther away from the axis of the shaft than the surface engaged by the middle of the forefinger.

1,690,313. OVERALLS. LOUIS A. ROSENTHAL, Louisville, Ky. Filed May 3, 1926. Serial No. 106,406. 1 Claim. (Cl. 2—235.)

The combination with the front and rear body portions of a pair of overalls or work garment providing a side vent therebetween, of an integral strip embodying a straight front section and a tapered rear section, the rear section having a greater width than the front section and increasing in width away frome the same, there being a notch and shoulder at the union of the front and rear sections, the rear section being folded longitudinally about the edge of the rear body portion providing inner and outer faces, the inner face being folded longitudinally adjacent to its longitudinal edge, providing an inner fold which is stitched to the rear body portion beneath the inner face, the outer

face being folded longitudinally upon itself and stitched to the rear body portion adjacent the fold, the front section being folded longitudinally at points adjacent to its longitudinal edges and applied to the rear face of the front body portion and stitched thereto through the folded edges of the front section, the folded edges of the front section constituting continuations of the folded edges of that portion of the rear section which is arranged upon the outer face of the rear body portion.

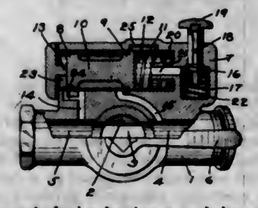
1,690,314. REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich. Filed Feb. 21, 1927. Serial No. 169,758. 2 Claims. (Cl. 62—95.)



1. In a mechanical refrigerating system, a cooling unit including a liquid refrigerant container, a plurality of fins formed of sheet metal, said fins having apertures through which said container extends, and flanges on said fins removed from said container, said flanges surrounding apertures in said fins and forming therewith a tray support.

1,690,315. SPLIT REDUCTION DEVICE. THOMAS H. THOMAS, Edgewood, and CLAUDE A. NELSON, Wilmerding, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 11, 1927. Serial No. 204,876. 33 Claims. (Cl. 303—18.)

14. In a fluid pressure brake, the combination with a brake pipe, of means for effecting a first reduction in brake pipe pressure, a timing reservoir adapted to be charged with fluid under pressure at a fast rate for a period of time governed by the degree of brake pipe leakage, and at a slower rate for a period of time governed by the pressure



of the fluid discharged from said brake pipe, and means for discharging the fluid under pressure from said reser-

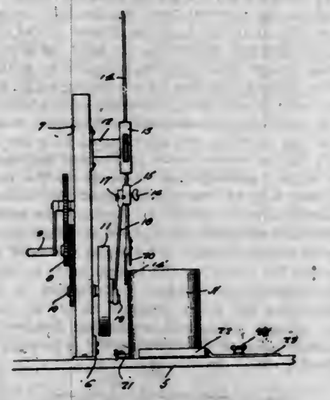
voir at a predetermined rate to effect a second reduction in brake pipe pressure at a fixed time regardless of said leakage.

1,690,316. ANGLE-COCK DEVICE. THOMAS H. THOMAS, Edgewood, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Oct. 27, 1927. Serial No. 229,091. 6 Claims. (Cl. 303—86.)

6. An angle cock device having a cock key and provided with a by-pass for establishing communication from one side of the key to the other, a double headed piston device for controlling communication through said by-pass and subject on one side to fluid pressure urging said piston device to its closed position, a spring urging said piston device to its closed position, and a manually operable valve for venting fluid from the spring side of said piston device.

1,690,317. LOOSE-LEAF BINDER. CHESTER G. VAN BUREN, Chicago, Ill. Filed Nov. 4, 1926. Serial No. 146,111. 4 Claims. (Cl. 129—35.)

1. A binder comprising two cover members bound together in book form, each cover member being provided at its bound edge with a strip projecting therefrom toward the other cover member, the ends of one of said strips being bent back to form guide guards; a spring latch member on one end of said last mentioned strip cooperating with the corresponding guard, there being means on the other strip to detachably engage said latch; a detachable engagement between the other ends of said strips; and a leaf spring on one cover member and arranged to rest upon and bind leaves between said cover members, substantially as described.



1,690,318. PROCESS OF DYEING LEATHER WITH ACID AZO DYESTUFFS. BARTHOLOMÄUS VOSSEN, Hochst-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 23, 1926, Serial No. 83,389, and in Germany Feb. 3, 1925. 4 Claims. (Cl. 8—5.)

1. The process of dyeing leather in full brown shades of even depth with acid azo dyestuffs, which comprises using for the dyeing process dyestuffs formed according to the scheme:

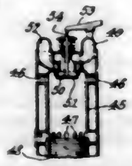
I II III IV
amine → non-sulfonated resorcinol ← aminonaphthol sulfonic acid ← amine

where I and IV each stand for a diazotizable aromatic amine, aminohydroxy- or amino-azo compound or a substitution product thereof, II stands for a non-sulfonated resorcinol or a substitution product thereof, and III stands for an aminonaphthol mono- or disulfonic acid.

1,690,319. CAN OPENER. IRVING ANDERSON, Bird City, Kans. Filed Aug. 26, 1927. Serial No. 215,709. 4 Claims. (Cl. 30—3.)

1. In a can opening device of the character described, a rigidly mounted vertically extending post, a train of high speed gearing associated with the post, means whereby the gearing may be rotated, a fly wheel associated with one gear of the train, a vertically extending guide sleeve associated with the post adjacent its upper end and at the same side of the post as said fly wheel, a bar mounted for vertical reciprocatory movement through said sleeve, a cutting knife arranged upon the lower end of the bar and adapted to be engaged through the lid of a can arranged beneath said bar and a driving connection between the fly wheel and said reciprocatory bar.

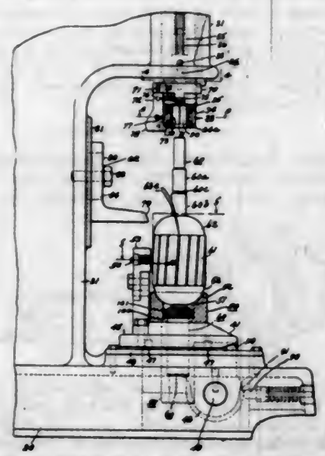
1,690,320. PILE WIRE. JAMES BAGLEY, Bedford, Mass., assignor to Alice L. Pfeiffer, Bedford, Mass. Filed Mar. 31, 1927. Serial No. 179,892. 8 Claims. (Cl. 139—44.)



1. A pile wire including a body portion, a flat-sided blade, a blade-holder fixed to the body portion and comprising opposed jaws connected by a neck to form a channel and yieldingly grasping the sides of the blade, the channel containing a longitudinal back abutment supporting the blade back and operatively locating the cutting edge above the holder, the jaws and blade being provided with

orifices arranged to register with each other when the blade back is in its operative position on the back abutment, and a plug inserted in said orifices, and secured therein, so that its ends are flush with the outer sides of the jaws.

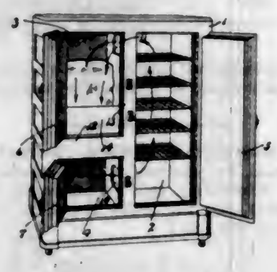
---



1,690,321. GAS ENGINE. ROY STURM BAKER, Pomona, Calif. Filed June 27, 1925. Serial No. 40,019. 2 Claims. (Cl. 123—65.)

2. In an internal combustion engine, a cylinder having a head, the cylinder being provided intermediate its ends with an exhaust port, a piston slidable in the cylinder and controlling the exhaust port, an air inlet member on the head of the cylinder, a spring seated sleeve valve in the head and through which the air inlet member discharges, a spring seated second valve cooperating with the sleeve valve to control the flow of air through the sleeve valve, both of said valves being arranged concentrically with respect to each other in the head, a fuel inlet member on the head of the cylinder and discharging into the cylinder externally of the sleeve valve and under the control of the sleeve valve, interengaging elements on the valves whereby motion may be transmitted from the second valve to the sleeve valve, to open the sleeve valve and admit fuel after the second valve has opened to admit air, said interengaging elements being external to the head and accessible, means for operating the second valve to open it, mechanism independent of piston compression in the cylinder for delivering air under pressure to the air inlet member on the cylinder head, and mechanism independent of piston compression in the cylinder for delivering fuel to the fuel inlet member on the head.

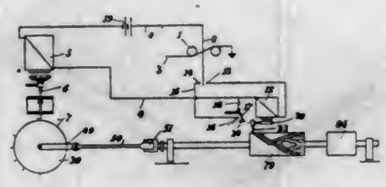
---



1,690,322. ARMATURE-ASSEMBLY APPARATUS. RUSSELL W. BAKER, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 12, 1927. Serial No. 183,079. 12 Claims. (Cl. 29—84.)

1. Apparatus for assembling an armature comprising a support for an assembly of armature shaft and an armature core carrying windings; a support for a commutator in alignment with the armature shaft; means for producing movement of one support relatively to the other in order to force the commutator over the armature shaft; and means responsive to said relative movement for marking one of the commutator bars.

---



1,690,323. COLD-AIR DEFLECTOR. JOHN W. BARNHART, Grand Rapids, Mich., assignor, by mesne assignments, to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1925. Serial No. 57,539. 5 Claims. (Cl. 62—51.)

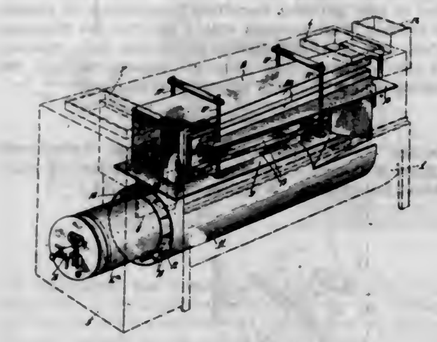
1. In a refrigerator having an upper ice chamber and a lower provision compartment directly below the ice chamber with a partition having a flue opening through the same disposed horizontally between the ice chamber and said provision compartment, said ice chamber having an opening at the front adapted to be closed by a door, of an unattached plate vertically positioned in the front lower portion of the ice chamber and supported at its lower edge against the upper side of said partition, said plate being of greater width than the door opening and extending upwardly a portion of the height of the door opening and being freely removable from and replaceable in the ice chamber through the door opening.

---

1,690,324. SELECTING MECHANISM FOR TYPE-PRINTING TELEGRAPHY AND OTHER PURPOSES. THOMAS JAMES BERRYMAN, Armagh, Northern Ireland. Filed Feb. 23, 1927, Serial No. 170,334, and in Great Britain Feb. 26, 1926. 19 Claims. (Cl. 178—34.)

1. Selecting mechanism for type printing telegraphy and other purposes, comprising, a translating device adapted to partake of two movements, an impelling device for producing one movement, means on said translating device for determining the other movement, control means co-operating with said means on the translating device adapted quantitatively to vary the said other movement, and electro-magnetic means actuating said impelling device and said control means and arranged to act differently for different kinds of impulses received.

1,690,325. PROCESS OF PRODUCING ALKYLATED ALIPHATIC NITRILES. MAX BOCKMÜHL and GUSTAV EHRHART, Hoechst-on-the-Main, Germany, assignors, by mesne assignments, to Winthrop Chemical Company, New York, N. Y., a Corporation of New York. Filed June 17, 1926, Serial No. 116,727, and in Germany June 22, 1925. 8 Claims. (Cl. 260—112.)

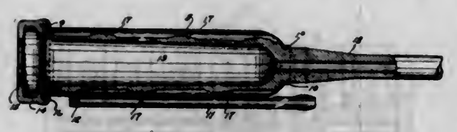


1. The process of producing tertiary nitriles which consists in treating a secondary nitrile of the general formula:

$$\begin{matrix} R \\ R \end{matrix}\!\!>\!CH-CN$$

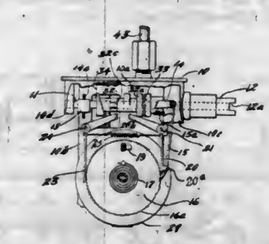
wherein R stands for an alkyl residue, with an alkali metal and then causing an alkylating agent to act upon the alkali metal compound of the secondary nitrile thus obtained.

---



1,690,326. AIR HEATER. JOHN E. BOLLING, Chicago, and ERNEST SZEKELY, Evanston, Ill., assignors of three-fourths to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois, and one-fourth to Ernest Szekely. Filed July 26, 1926. Serial No. 124,957. 8 Claims. (Cl. 263—20.)

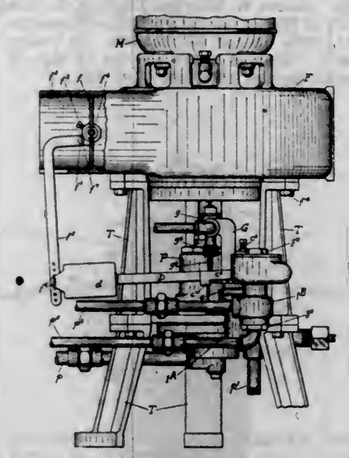
1. In an air heater, a combustion tube for burning fuel, said tube comprising a plurality of longitudinal segmental strips having marginal flanges projecting outwardly, said strips joined at the edges.



---

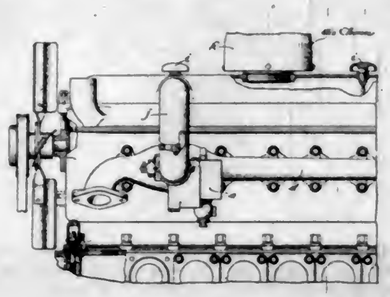
1,690,327. TEAT CUP. LAURITS DINESEN, Minneapolis, Minn. Filed Nov. 27, 1925. Serial No. 71,631. 4 Claims. (Cl. 31—85.)

1. A teat cup for milking apparatus comprising a rigid tubular outer shell and a flexible resilient teat-receiving inner tube, said shell and tube being connected with air-tight joints at the ends of said shell, and the wall of said tube being spirally enlarged between its ends, whereby said shell limits the expansion of the spirally enlarged surface of said tube and the air-tight joints at the ends thereof serve to hold said spiral surface against endwise contraction under radial expansion.



1,690,328. FUEL-CONSUMPTION INDICATOR FOR AUTOMOBILES. CARL J. GARDEEN, St. Paul, Minn. Filed Jan. 31, 1925. Serial No. 6,122. 7 Claims. (Cl. 235—1.)

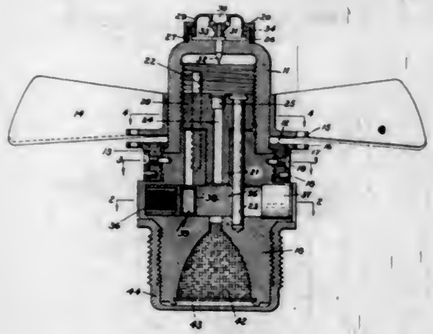
1. An indicating device for showing the relation between the distance traveled by a vehicle and the fuel used for driving said vehicle having in combination, means including pawl and ratchet mechanism moved an amount proportional to the distance the vehicle travels, resilient means for retracting said means, indicating means co-operating therewith, and means including a clutch and cam-operated tripping means operated by a fuel measuring device for controlling the operation of said first mentioned means.



---

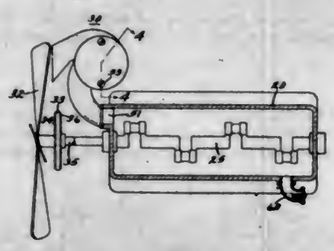
1,690,329. MEANS FOR CONTROLLING THE FLOW OF ALL FLUIDS IN AN OIL-BURNER APPARATUS. WILLIAM M. BAXTER, Fort Wayne, Ind., assignor, by mesne assignments, to The Wayne Home Equipment Company, Fort Wayne, Ind., a Corporation of Maryland. Filed Aug. 16, 1926. Serial No. 129,439. 3 Claims. (Cl. 158—28.)

1. In combination with an oil burning system comprising a burner, a fuel oil reservoir, a pump for forcing oil under pressure from said reservoir to said burner, fuel oil connections including a valve to contol the flow of oil from said pump to said burner, gas connections including a valve to control the flush flow of gas to said burner, a fan and connections to supply air to said burner, and a damper in said connections to control the flow of air therethrough; inter-related means operable by the pressure of the fuel oil flowing through the system for synchronously actuating the said fuel oil valve, said gas valve and said damper.



1,690,330. CHARGING AND DISTRIBUTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. JAMES SCRIPPS BOOTH, Detroit, Mich. Original application filed Nov. 6, 1924. Serial No. 748,119. Divided and this application filed Nov. 30, 1925. Serial No. 72,105. 2 Claims. (Cl. 123—122.)

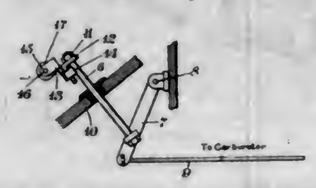
1. In an internal combustion engine, the combination of a plurality of cylinders, a spark plug for each cylinder, and electrical wiring connections for the spark plugs, a carburetor for furnishing the fuel supply to said cylinders, and a cover plate in the form of a cap bridging over both the entire plugs and the wiring connections, means for removably securing the cover plate onto the top of the engine, a conduit leading from the carburetor to the interior of the cover plate, and an air cleaner supported on the cover plate and arranged to filter the air drawn over the plugs and then into the carburetor.



---

1,690,331. SUPERSENSITIVE FUSE FOR DROP BOMBS. HAROLD M. BRATTON, Dover, N. J., assignor to Secretary of War of the United States of America. Filed Aug. 11, 1924. Serial No. 731,469. 14 Claims. (Cl. 102—39.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

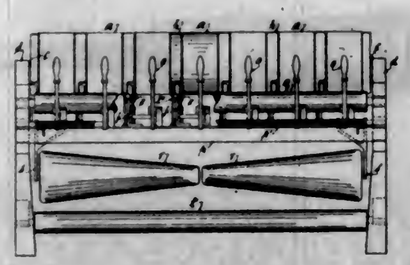
1. A nose fuse for bombs including a body, a cap rotatably secured thereto, a propeller for rotating the cap, a carrier constrained to be translated to the head of the cap through rotation of said cap, a primer disposed in the carrier, an air balanceable striker head including a firing pin mounted on the cap, a cylindrical bolt mounted transversely in the body, a detonator in said bolt, means secured to the carrier for releasably holding the bolt in unarmed position, and means for guiding the bolt in lateral movement and for locking it in armed position.



1,690,332. CRANK-CASE VENTILATION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. FRANK O. CLEMENTS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 11, 1923. Serial No. 638,364. 4 Claims. (Cl. 123—171.)

1. The combination of an internal combustion engine having a crankcase provided with an air inlet and an air outlet, means for introducing air into said crankcase air inlet under pressure comprising a conduit facing an air stream, means in said conduit for effecting a sharp change in direction in the air current to produce a separation of dust particles therefrom by operation of inertia, said conduit being provided with a port for the discharge of dust thus separated thereby preventing their entrance into the crankcase, the clean air passing through the crankcase and discharging through said air outlet.

---



1,690,333. ACCELERATOR FOR MOTOR VEHICLES. HENRY B. COOPER, Columbus, Ohio. Filed Jan. 17, 1927. Serial No. 161,558. 5 Claims. (Cl. 74—81.)

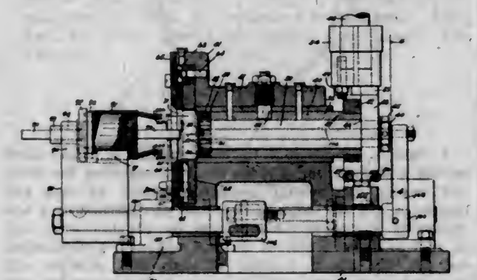
1. An accelerator for motor vehicles including an actuator rod and a frame, a rotatable pedal member journaled in said frame, and means pivotally connecting said frame with the actuator rod.

---

1,690,334. APPARATUS FOR STRAIGHTENING WEFT IN FABRICS. GEORGE DURRANT, Gorton, England. Filed Mar. 16, 1928, Serial No. 262,266, and in Great Britain Apr. 19, 1927. 5 Claims. (Cl. 26—51.)

1. Apparatus for straightening weft in fabrics, characterized by a relatively long cylinder made up of a plurality of short cylinders arranged end to end and all of

which are normally free to be driven or rotated by the fabric, by braking means for varying the peripheral speed of any of the short cylinders according to the required correction of the weft, and by guide cones axially and pivotally mounted in the path of the fabric on the inlet side of the machine, and springs for holding the cones yieldingly against the fabric to tension same, as set forth.

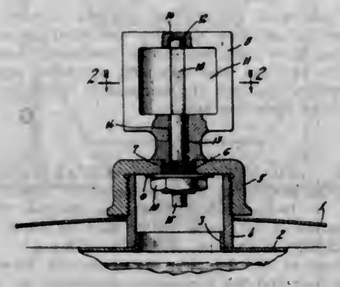


---

1,690,335. SULPHUR PRODUCT AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Apr. 7, 1925. Serial No. 21,425. 7 Claims. (Cl. 106—22.)

1. A product comprising sulphur and sulphurized xylenol resin.

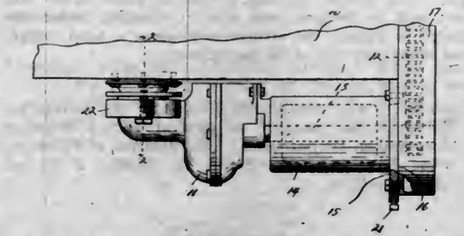
---



1,690,336. MACHINE FOR BENDING ARMATURE CONDUCTORS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 22, 1925. Serial No. 76,974. 40 Claims. (Cl. 153—6.)

1. Apparatus for bending armature conductor leads, comprising in combination, a work carrier for receiving an assembly of an armature core and conductors, the ends of which extend beyond one end of the core to provide leads, bending mechanism for receiving the leads and displacing them angularly relative to the core, and means for advancing the carrier toward the bending mechanism, and for automatically retracting the work carrier from the bending mechanism after the bending operation, and means for operating the bending mechanism.

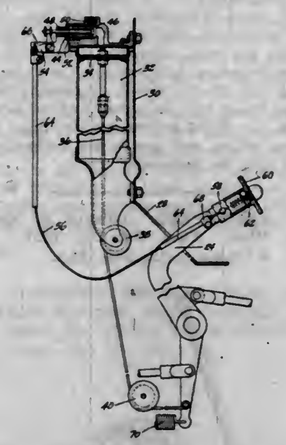
---



1,690,337. HEAT INDICATOR. JESSE EVERETT ESHBAUGH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 31, 1927. Serial No. 164,848. 7 Claims. (Cl. 116—114.)

1. A heat indicator for internal combustion engines of motor vehicles, a radiator cap, a metal rod extending through an opening in said cap, an upper plate portion having a concave surface associated with said rod to act as a reflector, an extension on said plate secured in said cap, a heat insulating bushing in a bore in said extension and surrounding said rod, a coating of heat sensitive paint at the upper end of said rod, and a groove in said plate, said coated surface extending parallel to said groove.

---



1,690,338. PUMP CONNECTION. EDWIN R. EVANS, Detroit, Mich. Filed Sept. 8, 1925. Serial No. 55,200. 6 Claims. (Cl. 123—175.)

1. The combination with a motor vehicle engine provided with a pump, a generator, and a cylinder water jacket, the said pump and generator being adjustable as a unit with respect to the cylinder water jacket, of a yieldable connection between said pump and jacket, the said connection including a collapsible conduit.

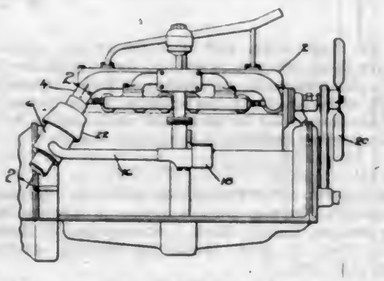
---

1,690,339. CONTROLLING DEVICE. FRANCIS D. HARDESTY, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 19, 1924. Serial No. 700,303. 12 Claims. (Cl. 188—152.)

7. A vehicle comprising, in combination, brakes, an engine having an intake manifold, a cylinder and piston operated by suction from the manifold to return the brakes to idle position, and manually operable means for interrupting the action of said cylinder and piston and for applying the brakes.

---

1,690,340. MUSICAL INSTRUMENT. REUBIN HOWARD, Parkdale, Oreg. Filed Aug. 1, 1924. Serial No. 729,545. 1 Claim. (Cl. 84—308.)



In a stringed musical instrument, a head, strings stretched over the head, a bridge including end portions having inturned extremities resting on the head, a support for the bridge, said support having downwardly extended end portions formed with inturned extremities

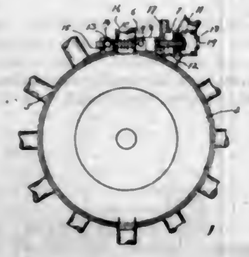
resting on the head, one of the downwardly extended end portions of the support being shorter than the opposite end portion thereof, so that the upper part of the support will be inclined, said support engaging under the bridge to tighten the strings and insure a solid bridge, and change the tone of the instrument.

---

1,690,341. AIR CLEANER. CHARLES F. KETTERING, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 25, 1925. Serial No. 71,367. 2 Claims. (Cl. 123—122.)

1. The combination of an internal combustion engine having the usual carburetor, cooling fan, and exhaust conduit, a portion of said conduit being exposed to the blast of the fan and extending rearwardly therefrom, a casing surrounding said conduit, said casing having the end adjacent the fan closed, an opening in the casing adjacent the closed end, an annular shield extending over the opening, the shield preventing the direct entrance of air into the casing, and means for conducting air from said casing into the carburetor.

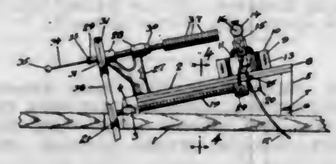
---



1,690,342. VELOCIPEDE. GUSTAV N. MADSEN, Minneapolis, Minn. Filed Dec. 12, 1927. Serial No. 239,562. 2 Claims. (Cl. 208—34.)

1. A velocipede comprising a frame having a platform, a steering unit at the front of the frame, an axle journaled in the rear of the frame and having ground wheels at its ends, a crank shaft journaled in the frame parallel with the axle and having drive connection therewith, substantially L-shaped treadle levers fulcrumed in the frame rearwardly of the axle and having link connections with the crank shaft, said treadle levers having horizontal portions disposed below the platform and upright portions operating through apertures in the platform.

---

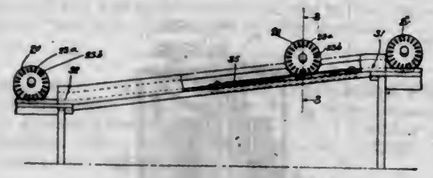


1,690,343. MOTOR-VEHICLE-BRAKE MECHANISM. WILLIAM LINCOLN MARTIN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,581. 1 Claim. (Cl. 188—152.)

A vehicle comprising, in combination, a road wheel having a brake drum, a brake band surrounding the drum and having a pivotally mounted member at each end thereof, a cylinder connected to one of said members and extending tangentially away from the pivotal connection of said member, a piston in said cylinder, a connecting rod for the piston passing through said member and mounted in the other member, and a spring surrounding the connecting rod between the members for urging the band to idle position.

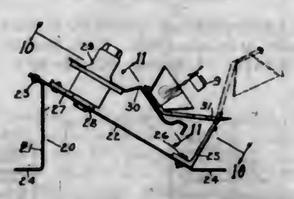
---

1,690,344. COATING MACHINE. HENRY O. POHRT, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 16, 1926. Serial No. 81,688. 2 Claims. (Cl. 91—45.)



1. An apparatus for coating rotating articles including a moving carriage carrying the spraying gun, the gun having valve operating means, mechanical means for moving the carriage, and manually operating means for simultaneously applying the mechanical means and moving the valve operating means.

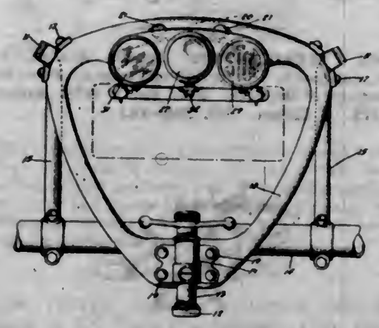
---



1,690,345. ARMATURE-TESTING APPARATUS. LORA E. POOLE, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 28, 1926. Serial No. 112,255. 5 Claims. (Cl. 175—183.)

1. Apparatus for detecting short-circuits between an armature core and bar conductors supported by the core comprising, in combination, an inclined chute, a metal plate provided by the chute for engagement by the armature core which rolls over the plate in rolling down the chute, a conductor supported by the chute for engagement by the ends of the armature conductors which roll into and out of engagement with said conductor while the core rolls over the plate, and electrical signalling apparatus in circuit with the plate and conductor and rendered operative in case one of the armature conductors is grounded upon the core.

---

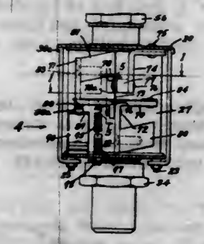


1,690,346. TEMPLATE FOR STRIPING BODIES. CLYDE ROSS, Tarrytown, N. Y., and JOHN MACQUAID, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1926. Serial No. 84,904. 3 Claims. (Cl. 91—65.)

2. A frame, means secured to said frame for rotatably mounting a piece of work, a bracket on said frame, mechanism carrying a template pivoted to said bracket to swing over the work, means carried by said mechanism to guide said work in its rotation.

---

1,690,347. COMBINED TIRE CARRIER AND LAMP DEVICE FOR AUTOMOBILES. ERNEST W. SEAHOLM, Highland Park, and GUY E. PARKER and EWALD K. SCHADT, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 11, 1924. Serial No. 685,690. 8 Claims. (Cl. 177—329.)

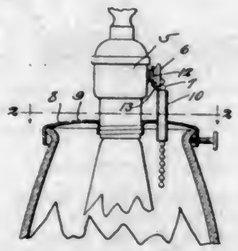


3. In a device of the class described and in combination with a substantially triangular supporting member adapted to lie within a rim and tire to be supported, and having a horizontally arranged upper portion; a hollow lamp supporting bracket carried by said upper portion and depending therefrom, and having a substantially horizontal tubular socket at its lower end; a lamp structure having a substantially horizontal tubular neck adapted to fit within said socket; a plurality of lamps carried by said lamp structure; a plurality of supply conductors extending through said hollow bracket and through said socket and neck and adapted to supply current to said several lamps; and means located within said socket and neck for providing detachable connections between the portions of the supply conductors in said hollow bracket and the portions of said conductors within said lamp structure.

---

1,690,348. ELECTROMAGNETIC MOTOR. HUGH WALLACE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 25, 1925. Serial No. 32,737. 5 Claims. (Cl. 172—126.)

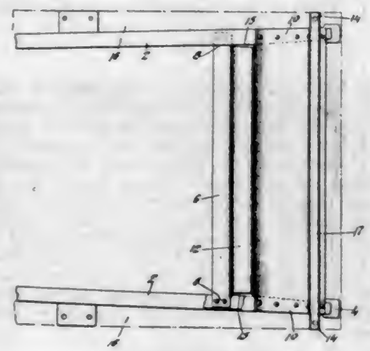
1. An electro-magnetic motor comprising, in combination, a non-magnetizable cylindrical guide, a magnetizable stationary core extending within the guide, a magnetizable cylindrical armature slidable within the guide, a magnet coil surrounding the guide, means for intermittently connecting the coil with a current source, and a non-magnetic tubular member located between the armature and core to limit movement of the armature toward the core and having a portion telescopically engaged by the armature thereby providing a dashpot comprising a fluid filled chamber formed by the ends of the core and piston and the cylinder and tubular member for retarding the movement of the armature into engagement with the member.



---

1,690,349. TOOTHED GEARING FOR BUILDING TOYS. FRANZ WALTHER, Berlin, Germany. Filed May 16, 1927, Serial No. 191,892, and in Germany Oct. 29, 1926. 1 Claim. (Cl. 74—41.)

A toothed gearing for building-toys, comprising two sheet-metal members of practically equal design, each having a rim extending at an angle with respect to the body portion of the member, and having a set of lugs extending forth from the rim, each lug being twice bent angularly and the two members being so connected with each other that their bent lugs abut against one another and form teeth, substantially as set forth.



1,690,350. LAMP-SOCKET PULL-CHAIN GUIDE. CHARLES MILLER WEEKS, Chevy Chase, Md. Filed Feb. 10, 1928. Serial No. 253,491. 6 Claims. (Cl. 240—123.)

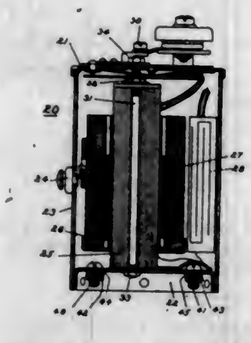
1. In combination with the pull chain and pull chain guard of a lamp socket, an elongated body portion, a clamping member at one end of the body portion and adapted to clamp around the pull chain guard to removably connect the body portion to the lamp socket.

---

1,690,351. FRAME CONSTRUCTION. FRANK A. WHITTEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 15, 1925. Serial No. 50,435. 5 Claims. (Cl. 280—106.)

1. The combination of a pair of channel iron side frame members having the channels thereof opening inwardly, a plate-like member having opposite extending portions secured to the opposite flanges of said channels, said member having the portions between said flanges cut away to clear one of the flanges and extending at an angle thereto.

---

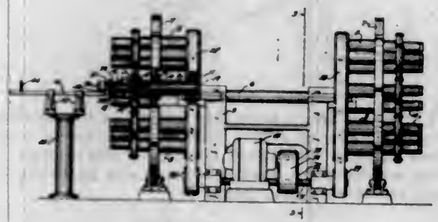


1,690,352. HEAT-RESISTING ALLOY. HARRY M. WILLIAMS, Dayton, Ohio. Filed June 11, 1927. Serial No. 198,302. 2 Claims. (Cl. 75—1.)

1. A heat resistant alloy composed of iron, 2.50 to 3.00% carbon, 3.00 to 3.50% silicon and 1.90 to 2.25% phosphorus.

---

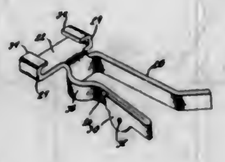
1,690,353. IGNITION-COIL MOUNTING. CHARLES E. WILSON and AUGUST TOELLE, Anderson, Ind., assignors, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 18, 1922. Serial No. 530,150. 6 Claims. (Cl. 175—360.)



1. In an ignition coil mounting, the combination with a coil having a tubular housing and a housing end cover member including a cylindrical portion; a mounting member having a complementary cylindrical portion, said portions being adapted to fit within each other, said mounting member being one of several different mounting members

which may be assembled interchangeably with the coil housing end cover member; and means for securing said members together.

---

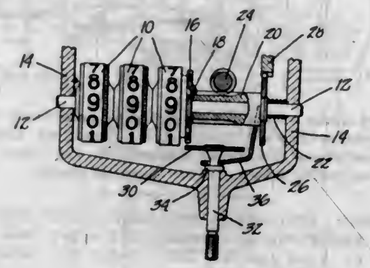


1,690,354. CENTRIFUGAL CASTING MACHINE. JOHN O. WISHART, Milwaukee, Wis. Filed Aug. 12, 1927. Serial No. 212,477. 14 Claims. (Cl. 22—65.)

1. In a centrifugal casting machine, the combination with a vertically disposed rotatable carrier, of a plurality of substantially horizontally disposed molds mounted on said carrier, said carrier having a charging position in which said molds are successively charged and a discharging position, means for rotating said molds during their advance from charging to discharging position, and means movable relative to the carrier for charging each mold.

---

1,690,355. SPEEDOMETER. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Feb. 1, 1928. Serial No. 251,172. 6 Claims. (Cl. 264—13.)



2. Indicating mechanism comprising a frame, a support on said frame having a pair of slots therein, a stamped member provided with a pair of extensions adapted to fit into said slots and to be bent around said support to secure said member to said support, a rotatable indicating member, and a spring to return said indicating member to zero position, said stamped member serving as an abutment for one end of said spring and also as stop to limit the rotation of said indicating member in either direction.

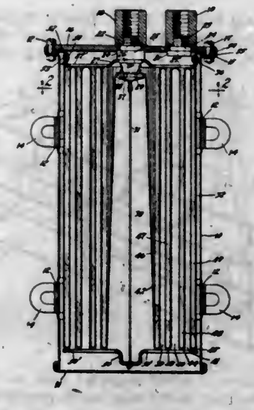
---

1,690,356. CLUTCH-SHIFTING MECHANISM FOR ODOMETERS. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Nov. 28, 1924. Serial No. 752,664. 2 Claims. (Cl. 192—99.)

1. In combination, a sliding clutch member, a reciprocating manually operable member movable angularly relative to said clutch member, means operably connecting the manually operable member and the sliding clutch member, including a floating angular plate pivotally engaging the manually operable member at one side of the angle and engaging the sliding member on the opposite side of the angle.

---

1,690,357. DISCONNECTING SWITCH FOR TRANSMISSION LINES. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,508. 25 Claims. (Cl. 200—48.)



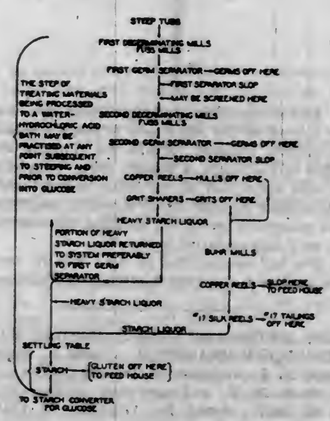
1. The combination with a transmission line of a switch therefor comprising an insulator one end of said line being carried by said insulator, a contact member carried by said insulator and means for moving said insulator bodily in a direction transverse to the direction of said line for opening and closing said switch.

---

1,690,358. FILTER. ABRAHAM M. BABITCH, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed June 3, 1926. Serial No. 113,491. 4 Claims. (Cl. 210—165.)

1. A filter comprising a container, a cover therefor, inlet and outlet connections carried by said cover, a ring in said container, a tapered filter bag in said container having its smaller end secured to said inlet connection and its larger end to said ring, said bag folded back and forth to form a plurality of annular pockets opening alternately on

the inlet and outlet sides of said filter, tubular spacers positioned in the pockets on the outlet side, and means for holding said bag and spacers in assembled relation.

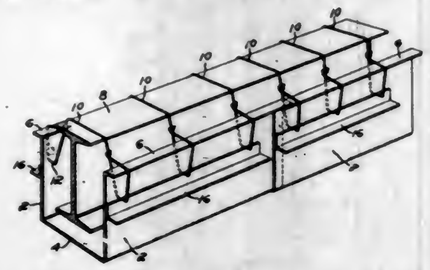


---

1,690,359. PROCESS OF MANUFACTURING CORN SUGAR. CHARLES R. BROWN, Kansas City, Mo., and HUBERT E. NELSON, Keokuk, Iowa. Filed Oct. 31, 1925. Serial No. 65,948. 15 Claims. (Cl. 127—39.)

1. In the manufacturing of glucose and corn sugar from corn grits that have been prepared by cracking, degerminating and dehulling of corn kernels, that step which comprises treating said corn grits with a dilute mineral acid of a concentration just sufficient to solubilize basic salts contained in said corn grits and washing said grits prior to further treatment.

---



1,690,360. PROCESS OF MANUFACTURING STARCH AND GLUCOSE. CHARLES R. BROWN, Kansas City, Mo., and HUBERT E. NELSON, Keokuk, Iowa. Filed Oct. 31, 1925. Serial No. 65,949. 7 Claims. (Cl. 127—39.)

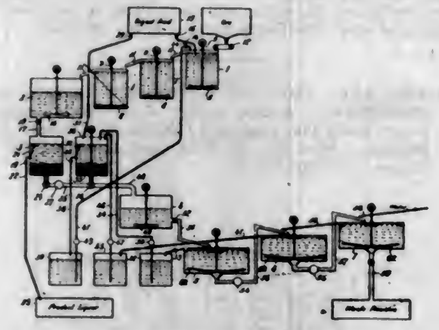
1. The process for removing substantially insoluble iron salts from starchy materials which comprises treating them with a dilute acid solution of low concentration but

having an avidity comparable to hydrochloric acid whereby the insoluble iron salts are converted into soluble iron salts, and then washing the starchy materials to remove therefrom the solubilized iron salts and the residual acid.

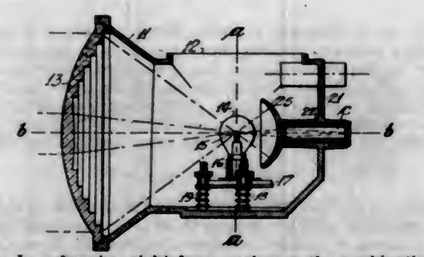
1,690,361. BEAM FORM. LEO I. BRUCE, Holliston, Mass., assignor to Josephine B. Bruce, Gardner, Mass. Filed Oct. 24, 1924. Serial No. 745,615. 14 Claims. (Cl. 25—131.5.)

1. A beam form of sheet material open at the top and comprising a bottom wall; side walls provided with perforations; and supporting means engaging said perforations to suspend said form in operative position.

1,690,362. FOLDING KITE. CLARENCE NEIL DE WITT, Los Angeles, Calif. Filed Apr. 27, 1927. Serial No. 186,869. 6 Claims. (Cl. 244—22.)



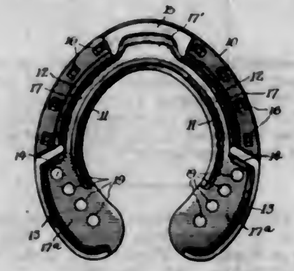
1. A kite comprising a longitudinal rib, an element slidably related to the rib, a pair of stays pivotally carried by the slidable element; means for limiting the pivotal movement of the stays, a flexible cover secured at its one end to said stays and at its other end to said rib with its intermediate portion freely movable lengthwise of the rib; and releasable means for securing the slidable element against movement relative to the rib.



4. A kite tail constructed of light weight, flexible sheet material and as a lengthwise attenuated tubiform.

1,690,363. METHOD OF TREATING SOLID MATERIALS WITH LIQUID REAGENTS. JAMES E. EGLESON, East Orange, N. J., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 173,429. 11 Claims. (Cl. 23—268.)

1. The method of treating solid materials with liquid reagents, which comprises digesting the solid material with the liquid reagent, separating the digested solid material from the liquor produced by settling while at a state of rest, withdrawing the supernatant product liquor upon completion of the settling period, and washing the deposited sludge with a flowing stream of wash water traveling counter-current thereto, under conditions providing for continuous settling of sludge from the wash water and continuous withdrawal of the settled sludge.

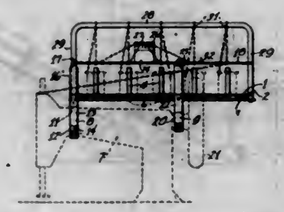


1,690,364. MEANS FOR FOCUSING LIGHT SOURCES IN PROJECTORS. EDWARD A. EVERETT, New York, N. Y. Filed June 18, 1926. Serial No. 116,959. 3 Claims. (Cl. 240—44.)

1. In a focusing sight for a projector, the combination, a housing having a projecting lens, a lamp bulb having a filament and a sighting tube centered on the axial line of said projecting lens, said sighting tube comprising a screen with cross-hairs for locating said axial line and a sighting lens at one end located in fixed relation to the focal point of said projecting lens and a sight at the opposite end of said tube, the position of said filament relative to said focal point being determined by the definition of the filament on said screen when sighted through said tube

1,690,365. CUSHION-TREAD HORSESHOE. ROBERT E. FRUIN, Chicago, Ill. Filed Sept. 3, 1927. Serial No. 217,318. 3 Claims. (Cl. 168—14.)

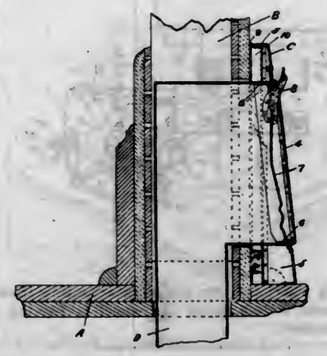
1. In a cushion-pad horseshoe of the type described, the combination of a metal shoe frame formed with a channel on its under side, said channel having widened



heel and toe portions, a wide heel pad seated at its ends in said widened heel portions of the channel and bridging the rear ends of said frame, said heel pad having a flat wearing surface, and a narrow semi-oval side and toe pad seated in the side and toe portions of said channel, said side and toe pad formed with a transversely convex ground-engaging portion projecting below said channel with its wearing surface continuous and flush with the wearing surface of said heel pad.

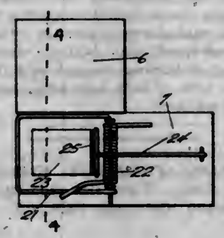
1,690,366. PULL SWITCH. DAVID D. GORDON, Chicago, Ill., assignor to Economy Fuse and Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed Feb. 15, 1926. Serial No. 88,174. 5 Claims. (Cl. 173—354.)

1. A pull switch comprising, in combination, a supporting member, a pair of swinging members supported thereby, a spring biasing the outer extremities of said swinging members toward each other, one of said swinging members comprising an electrical conductor, stops for limiting the swinging movement of said swinging members, one of said swinging members having an operating member pivotally supported thereby, said operating member having spaced portions adapted to abut against its corresponding swinging member to change the relative positions of said swinging members.



1,690,367. THREAD RACK FOR SEWING MACHINES. FRANCES B. GOTCHETTE, Oakland, Calif. Filed Sept. 7, 1926. Serial No. 133,940. 3 Claims. (Cl. 242—139.)

1. A sewing machine attachment of the character described, comprising a member having a plurality of spool supporting elements thereon, means for supporting the member relative to the arm of a sewing machine, a cross-member supported above the first member and above said spool supporting element, and being formed with thread guiding perforations, a bar supported in front of the cross-member having thread guiding perforations formed therein, and a rest provided on the bar allowing the ends of the threads to be placed thereon in spaced relation.

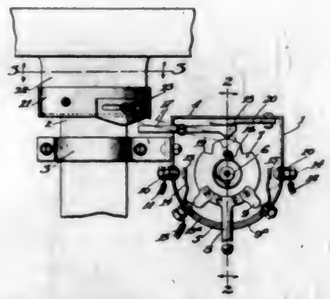


1,690,368. REGISTER CONSTRUCTION FOR HEATING PLANTS. EDWARD A. GRAPP, Minneapolis, Minn. Filed Apr. 1, 1927. Serial No. 180,262. 1 Claim. (Cl. 98—106.)

A warm air register comprising a shell having a grilled face portion, through which the warm air may pass from a stack, and having a marginal flange spaced from the stack, a yieldable element extending about the edge of said flange, and means for securing the element to the inner

face of the flange, said means comprising a strap secured to the inner face of the flange and forming a channel therewith for holding the element.

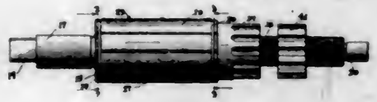
1,690,369. ANIMAL TRAP. HENRY G. HARTE, Omaha, Nebr. Filed Nov. 3, 1927. Serial No. 230,803. 4 Claims. (Cl. 43—81.)



1. In an animal trap, a box having an entrance aperture in its front wall and a platform projecting forwardly from its bottom below said aperture, a foraminous partition providing a compartment communicating with said entrance aperture and providing a second compartment for containing bait, and impaling devices mounted on the platform, one of the walls of said box having an opening communicating with the second compartment, and a closure-member for said opening.

1,690,370. AUTOMOBILE SIGNAL SWITCH. OTTO A. HOELLER, Cincinnati, Ohio. Filed July 16, 1925. Serial No. 44,119. 2 Claims. (Cl. 200—59.)

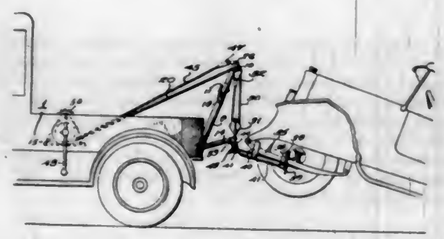
1. In combination with the steering mechanism of an automobile, a switch mechanism comprising a switch casing secured in proximity to the steering wheel, a switch mounted in said casing and manually oscillated for selective control of the circuits of a plurality of direction indicating signal lights, said switch having grooves therein, a latch member pivotally mounted between said switch and the steering wheel, said latch member having a detent portion at one end for engaging a respective groove in said switch



for maintaining the switch in circuit closing position, and the other end of said latch member extending beneath

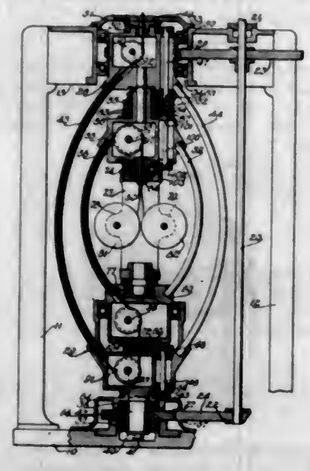
said steering wheel hub for receiving actuation therefrom to release said switch when the wheel is rotated a determined distance.

---



1,690,371. REAMER AND BURNISHING TOOL. WERNER A. KOCH, Los Angeles, Calif. Filed July 19, 1924. Serial No. 726,993. 2 Claims. (Cl. 29—90.)

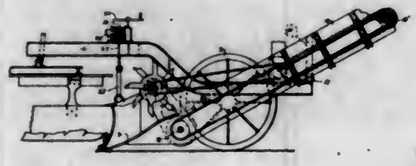
1. A reaming and burnishing tool comprising a mandrel, an expansible sleeve slidable upon the mandrel, a nut adapted to cause said sleeve to slide in either direction, a cutter slidably mounted upon said mandrel and adapted to be advanced or withdrawn through said sleeve by means of a second nut, both of said nuts being located upon the same end of the mandrel.



---

1,690,372. TOWING APPARATUS. EVERETT GREY LIVESAY, Dayton, Ohio. Filed Oct. 10, 1925. Serial No. 61,763. Renewed Oct. 11, 1926. 7 Claims. (Cl. 214—86.)

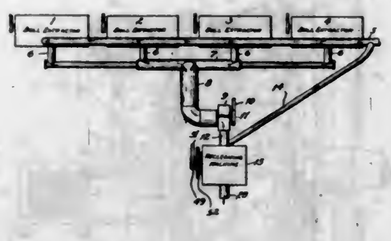
1. In a vehicle towing apparatus, a supporting device comprising a pair of longitudinally extending members adapted to be arranged beneath the front springs of the towed vehicle, said members being provided with side plates adapted to engage the sides of the spring to prevent displacement, and being further provided with reduced forward ends, a transverse member having openings adjacent each end for the reception of the reduced ends of said longitudinally extending members, and means for supporting the load substantially centrally of said transverse member.



1,690,373. METHOD OF AND APPARATUS FOR TWISTING STRANDS. ALFRED MARCHEV, Cicero, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1924. Serial No. 749,833. 13 Claims. (Cl. 117—46.)

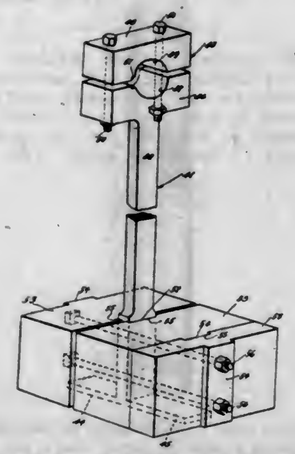
1. A method of twisting strands which consists in passing said strands successively through a plurality of fliers in such a manner as to form of said strands a plurality of arcuated sections, and positively revolving both ends of said plurality of fliers to cause a twisting of the strands.

---



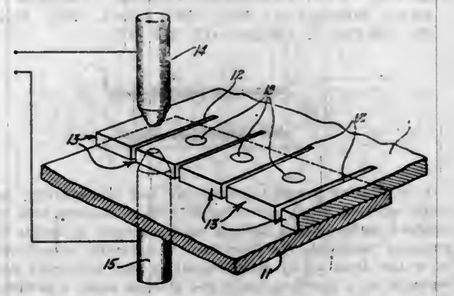
1,690,374. ROAD-GRADING MACHINE. EDGAR S. MCCANDLISS, Topeka, Kans. Filed Mar. 3, 1926. Serial No. 91,980. Renewed Apr. 2, 1928. 2 Claims. (Cl. 37—108.)

1. In improvements in road grading machines, in combination with a road grading machine, a block attached to one end of the machine grading blade, an elevator having a shovel with means to adjustably connect it to said block so that the dirt sliding longitudinally along the blade will enter said shovel, an elevator angling upward and rearward and having the front or lower end engaging under the rear of the shovel and carried thereby, the opposite end being carried by a beam laterally extending from the road grading machine frame, a plurality of toothed members rotatably mounted and carried by the shovel as pulverizing and rearwardly moving means for the dirt to the elevator, a housing having a train of gears journaled therein as power transmitting means from the shaft of the toothed members to the drive shaft of the elevator so that the said members co-act in the transmission of the dirt rearward, power actuating means for the rotation of the toothed members and the travel of the elevator simultaneously.



1,690,375. COTTON-RECLEANING MACHINE. JOHN E. MITCHELL and DENNIS PARKS, St. Louis, Mo. Filed Sept. 15, 1925. Serial No. 56,437. 23 Claims. (Cl. 19—41.)

1. In apparatus of the class described, in combination with a cotton cleaning machine, a cotton reclaiming machine having a continuous passage therethrough, pneumatic means for withdrawing hulls and escaped cotton particles from the discharge of the cotton cleaning machine and continuously propelling them through the passage of said reclaiming machine, a rotatable saw cylinder mounted in said reclaiming machine and projecting through a wall of said passage into the path of the propelled hulls and cotton the saws arresting the movement of cotton while permitting the separation and free passage of hulls past said saws, and means outside of said passage for recovering cotton withdrawn by said saw cylinder.



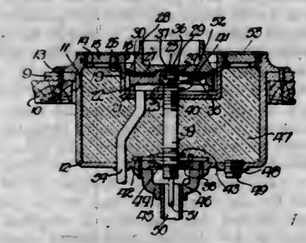
---

1,690,376. POWER-TRANSMITTING UNIT FOR WELL RIGS. EDWARD PRATT, Taft, Calif. Filed June 22, 1926. Serial No. 117,664. 5 Claims. (Cl. 74—71.)

4. A counterbalance for the purpose described, embodying an arm, shaft attachment means at one end of the arm, a transverse extension near the other end of the arm, and a detachable weight fixed to the arm and in end engagement with the extension.

1,690,377. METHOD OF WELDING PARTS. EMERSON PUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1926. Serial No. 135,503. 2 Claims. (Cl. 219—4.)

1. The method of welding parts having substantially the same electrical resistance characteristics, which consists in forming a recess in one of the parts to prevent the introduction of inter-weld stresses, placing the parts in proper juxtaposition, and welding the parts together by the application of heat and pressure to produce welds at positions spaced and oppositely disposed from the recess.



---

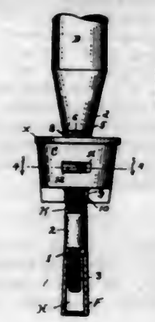
1,690,378. TREATMENT OF FERROUS METALS TO PRODUCE A PROTECTIVE COATING THEREON. FRANKLIN BLISS RINCK, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,291. 14 Claims. (Cl. 148—7.)

1. The treatment of a ferrous metal to produce a protective oxide coating thereon, which consists in subjecting said metal to an oxidizing atmosphere at a temperature which is not appreciably lowered during the process, and simultaneously therewith increasing the oxidizing character of said atmosphere.

---

1,690,379. HEATER. CLAUDE THEODORE SIEBS, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 14, 1924. Serial No. 749,829. 10 Claims. (Cl. 219—19.)

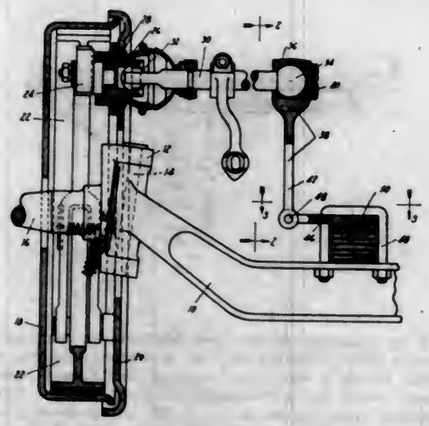
7. In a heating device, a receptacle, a supporting member positioned therein, a heating element supported thereby, a container resting partially on the heating element and partially on the supporting member, means for securing the container to the supporting member in such a manner that the container, the heating element and the supporting member can be readily removed from the receptacle as a unit, the said supporting member being equipped with an opening in which terminals of the heat-



ing element protrude, and means for leading electrical conductors for the heating element to the terminals thereof to which they are connected, said connections being above the bottom of the receptacle.

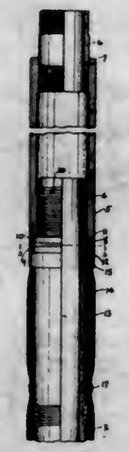
1,690,380. SAND-DREDGING VESSEL. LEATHEM D. SMITH, Sturgeon Bay, Wis. Filed June 1, 1926. Serial No. 112,773. 7 Claims. (Cl. 214—15.)

1. A floating vessel for dredging and transporting material such as sand, constructed with a storage hold for dredged material and having mounted upon it means for pumping material, together with a vehicular constituent of water, from an overboard position and delivering such material to a position above the storage hold, a dewatering hopper also located above the storage hold in position to receive the material so delivered and discharge its contained water overboard, means for delaying escape of the material from the hopper until dewatering has proceeded to a desired degree, and means for delivering dewatered material from said hopper to the hold of the vessel.



1,690,381. MICROTUNER FOR PIPE ORGANS. HENRY C. TEETOR, Hagerstown, and HERBERT S. MIKESELL, Richmond, Ind. Filed Feb. 1, 1927. Serial No. 165,093. 4 Claims. (Cl. 84—350.)

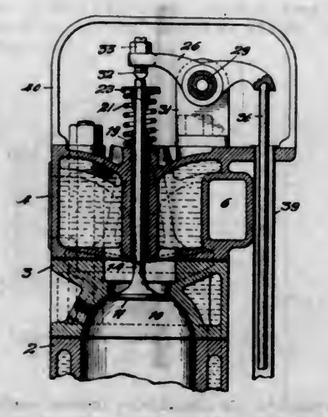
1. In combination with a pipe organ having an air pipe connected at its lower end with air pressure, a base closing the upper end of said pipe, a chalice having a slot in the side thereof with said chalice extending down from said base, and a reed adapted to close said slot; a microtuner comprising a screw, with its head at all times resting on the top of said base, and having its upper portion rotatably mounted in said body with its threaded portion extending down in front of said slot and parallel therewith but spaced therefrom, means for preventing endwise movement of said screw, a head adapted to be carried up and down by the rotation of said screw, and a flat spring damper having one end thereof attached to said head and with its free portion in resilient contact with said reed, all substantially as set forth.



1,690,382. BRAKE-APPLYING MECHANISM. GEORGE J. THOMAS, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1926. Serial No. 135,527. 4 Claims. (Cl. 188—194.)

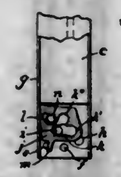
1. A vehicle having, in combination, an axle having a front wheel knuckle swivelled at its end, a brake carried by the knuckle, a mounting part on the axle, a support pivoted to said part at its lower end and extending upwardly opposite the upper part of the brake and adapted to swing about its pivot toward and away from said brake,

and a brake-applying shaft universally supported at one end by the upper end of the support and universally supported at its other end by the brake in the swiveling axis of the knuckle.

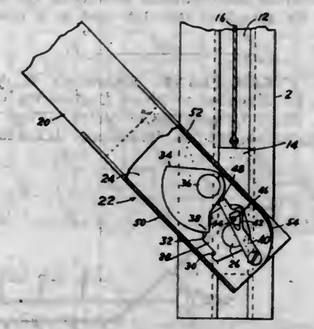


1,690,383. SCREW-TYPE WELL PACKER. HARRY THOMSON, Houston, Tex., assignor to Stancliffe Well Screen & Manufacturing Company, Houston, Tex., a Corporation of Texas. Filed June 29, 1925. Serial No. 40,425. 1 Claim. (Cl. 166—10.)

In a packer for wells, a tubular mandrel, a collar connecting with said mandrel, said mandrel being coarsely threaded at its upper end, a nipple having threaded engagement with the upper end of said mandrel, a downwardly tapered slip suspended on and having rotative engagement with the lower end of said nipple outside said mandrel, a canvas packer on said slip and mandrel and secured at its lower end to said collar, and means to connect said nipple to a tubular drill stem.

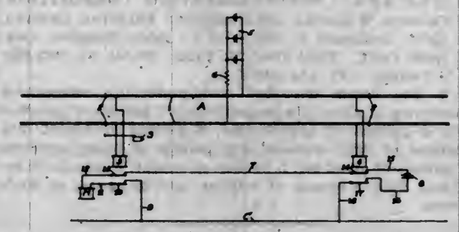


1,690,384. INTERNAL-COMBUSTION ENGINE. FRANK H. TREGO, New York, N. Y., assignor to Trego Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 21, 1923. Serial No. 626,449. 3 Claims. (Cl. 123—79.)



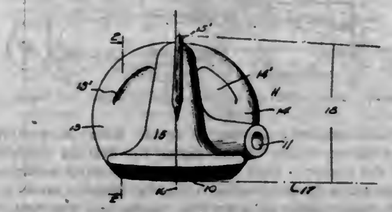
1. In an internal combustion engine, a plurality of cylinders arranged adjacent one another with their axes in the same plane, a valve in the upper end of each cylinder controlling communication between the inside of the cylinder and an outside chamber, each of said valves being provided with a stem lying in said plane, and an inlet and an exhaust valve opening into said chamber above each cylinder and located on opposite sides of the aforesaid plane, said inlet and exhaust valves having stems which are inclined so that their upper ends will lie in the aforesaid plane, a spring cooperating with each valve stem for holding its valve in its closed position, and means cooperating with said valve stems for moving said valves to their open positions in opposition to the forces exerted by such springs.

1,690,385. MEANS FOR MOUNTING WINDOWS. AMABLE S. TUÑEZ, Easton, Pa., assignor of one-fourth to Morris Levin, Philadelphia, Pa.; one-fourth to Harry Gordon, Beverly, N. J.; one-fourth to Charles Riser, Philadelphia, Pa.; and one-fourth to himself. Filed May 19, 1927. Serial No. 192,503. 6 Claims. (Cl. 20—49.)



1. In a window, in combination, a stile provided with an arcuate slot, a sash, means affording a pivotal connection between the stile and sash, a displaceable latching member carried by the stile and a pin, carried by the sash and extending through the arcuate slot in the stile, said pin being adapted to be engaged by the latching member to retain the sash in fully opened position and said latching member being adapted to be displaced in an opening followed by a closing movement of said sash to permit said pin to be engaged by the latching member to retain the sash in a partially opened position.

1,690,386. WINDOW. AMABLE S. TUÑEZ, Easton, Pa., assignor of one-fourth to Morris Levin, Philadelphia, Pa.; one-fourth to Harry Gordon, Beverly, N. J.; one-fourth to Charles Riser, Philadelphia, Pa.; and one-fourth to himself. Filed Nov. 25, 1927. Serial No. 235,424. 2 Claims. (Cl. 20—49.)

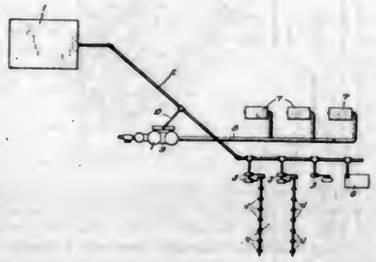


1. A window structure comprising a frame having upwardly extending guideways, blocks slidable in said guideways, a sash pivoted to said blocks, the sash and one block forming relatively movable members arranged to be releasably held in a plurality of predetermined relative positions and means for so holding said members, including a pawl on one member and a plurality of stops on the other member selectively engageable with said pawl.

1,690,387. BLOCK SIGNAL SYSTEM FOR RAILROADS. ARMAND J. VALLÉE, Albany, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Oct. 22, 1927. Serial No. 228,022. 2 Claims. (Cl. 246—41.)

1. In a block signal system, a combination of a block having two track relays; a common wire for the system; a line relay; and a line circuit for said line relay including a line wire and said common wire, two front contacts of each track relay, and a source of energy.

1,690,388. HEAD FOR GOLF CLUBS. FREDERICK A. WALDRON, Westfield, N. J. Filed May 16, 1927. Serial No. 191,561. 8 Claims. (Cl. 273—77.)



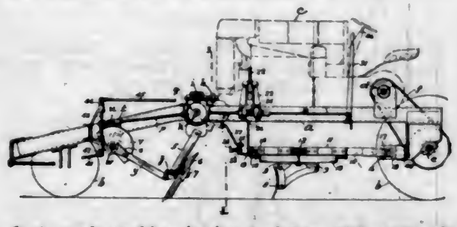
1. A golf club head for drivers, brassies, and the like, comprising a solid unitary member having a solid mass of material concentrated directly back of the center of

the critical area or "sweet spot" of the face of the club head, the face extending a substantial distance to each side of the critical area, a bottom flange extending rearwardly from the face and directly united at its center with the concentrated mass of metal back of the "sweet spot", the bottom flange being wider than the striking face to facilitate longitudinally stabilizing the club, and provisions for attaching the club head to a club handle or shaft.

---

1,690,389. STEAM PLANT. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed May 17, 1924. Serial No. 713,968. 3 Claims. (Cl. 122—35.)

1. In a steam plant, a main steam generator, a steam line connected thereto, waste heat emitting devices, and an accumulator for storing up in the form of hot water the heat emitted by said waste heat emitting devices, said accumulator being connected to said steam line, said accumulator having a relatively large water storage space compared to an ordinary waste heat boiler of the size requisite for utilizing the waste heat from said waste heat emitting devices.



---

1,690,390. WOOD-PRESERVING COMPOSITION. CHARLES WILLIAMS and FERDINAND FRANCOIS, Oakland, Calif., assignors of one-third to Eddy Bozonier, Oakland, Calif. Filed Dec. 26, 1923. Serial No. 682,820. 4 Claims. (Cl. 134—40.)

1. The herein described wood-preserving composition consisting of about the proportions of 2 gallons of paraffine oil, 2 gallons of naphthalene, 3 gallons of benzol, 2½ gallons of light creosote, 2½ gallons of heavy creosote, 5 gallons of oil of tar, 5 pounds of cement, 5 pounds of hydrated lime, 5 pounds of sulphur, and 20 ounces of Paris green.

---

1,690,391. POWER LIFT FOR ROAD MACHINES. ROY C. WILLIAMSON, Kennett Square, Pa., assignor to American Road Machinery Company, Inc., Kennett Square, Pa., a Corporation of Delaware. Filed Sept. 18, 1925. Serial No. 57,061. 10 Claims. (Cl. 37—145.)

1. A road machine having a frame with supporting wheels, a motor on the frame, means for driving the machine by the motor, a road working tool pivotally mounted on the frame, a transverse shaft on the frame, cranks on the shaft, connections between the cranks and the tool, a worm and worm wheel connection for rotating the shaft, and clutch means for connecting the said shaft to the motor for raising or lowering the tool.

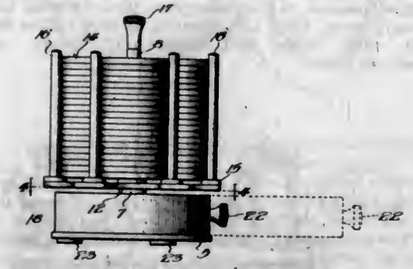
1,690,392. INSULATOR PIN. ARTHUR O. AUSTIN, Barberton, Ohio, assignor to American Narrow Fabric Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed May 12, 1920, Serial No. 380,826. Divided and this application filed Mar. 25, 1926. Serial No. 97,187. 11 Claims. (Cl. 173—321.)

1. An insulator pin comprising a tubular member having a body portion tapered towards its upper end, an oppositely tapered base portion and a support for said tubular member having a tapered socket therein for receiving said tapered base portion and having a flange extending radially from said base portion, the opening in said body portion being also tapered toward the upper end of said pin.

4. An insulator pin comprising a tubular member having an elongated upper body portion tapered inwardly toward the top thereof, a base portion tapered inwardly toward the bottom thereof, and a reinforcement disposed within said base portion and tightly held in place therein by the walls of said base portion, said walls being spaced away from said reinforcement between the ends of said pin.

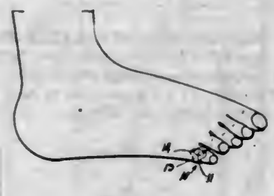
---

1,690,393. DEEP-WELL PUMP. HARRY BELOIT, San Pedro, Calif., assignor to Economy Pump and Oil Tool Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 14, 1925. Serial No. 75,379. 5 Claims. (Cl. 103—179.)



1. A deep well pump including a barrel having an inlet valve therein and a head closing the end thereof opposite said valve, a cylinder stationarily held in and of substantially smaller diameter than said barrel, and a sectional piston having a valve in one end thereof and reciprocably mounted internally of said barrel and externally of said cylinder, certain sections of said piston being spaced apart for providing a lubricant recess around said cylinder.

---

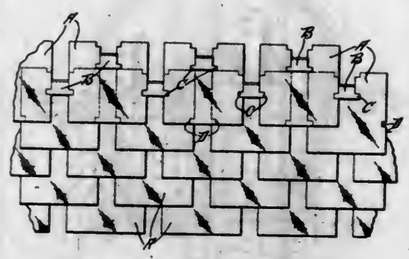


1,690,394. POKER-CHIP SET. FRED R. BELT, Chicago, Ill. Filed Apr. 16, 1928. Serial No. 270,169. 7 Claims. (Cl. 273—148.)

1. An individual poker chip set comprising a base, a post embedded in said base, a plate spaced from said base and revolubly mounted relative to said post, posts spaced about the periphery of said plate and forming compartments to receive chips, and an ash drawer arranged between said base and plate.

---

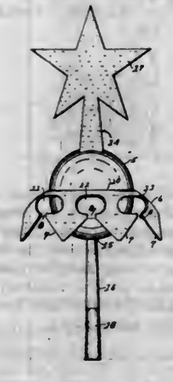
1,690,395. CORN AND BUNION PROTECTOR. SIMON BIREN, Brooklyn, N. Y. Filed Jan. 30, 1928. Serial No. 250,433. 1 Claim. (Cl. 128—153.)



A corn protecting device, comprising a resilient split ring adapted to fit on a toe and having an opening in the top thereof, a dome shaped corn protecting member projecting through the opening, and enlarged top wall portion on the ring and a flange on the dome shaped member in contact with the enlarged portion of the ring to maintain the said member in desired position on the toe.

---

1,690,396. SHINGLE. LESLIE W. BLOCK, Webster Groves, Mo. Filed July 14, 1927. Serial No. 205,632. 2 Claims. (Cl. 108—7.)

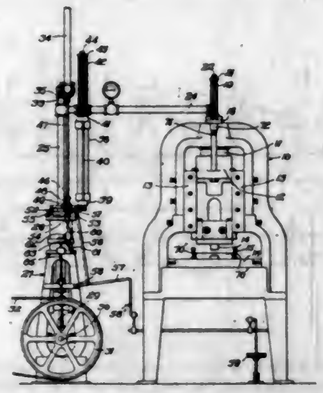


1. A shingle consisting of a section of weatherproof material of substantially uniform thickness throughout its area, said shingle having attached to its weather face and substantially centrally transversely thereof a flat portion extending upwardly a distance substantially equal to the thickness of said shingle, said portion being of a uniform width equal to the distance it is desired to position the shingles of the next upper course, and said portion having a lug extending transversely outwardly from each side thereof and said shingle having a notch in each of its side

edges of a size and shape to conform to the size and shape of said lugs, whereby the said notches may receive the lugs on the attached portions of the next lower course.

---

1,690,397. CHRISTMAS-TREE ORNAMENT. PAUL BOEHLAND, Milwaukee, Wis. Filed Feb. 11, 1928. Serial No. 253,571. 6 Claims. (Cl. 240—10.)

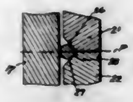


6. An ornament comprising a shaft, a hollow body mounted on the shaft, a light socket and bulb mounted in the hollow body, a spire mounted upon the light bulb, and an outwardly extending flange for the hollow body slotted and apertured to receive light sockets and bulbs.

---

1,690,398. APPARATUS FOR PERFORMING PRESSING OPERATIONS. CHARLES BOLLINGER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 10, 1923. Serial No. 637,971. 19 Claims. (Cl. 138—10.)

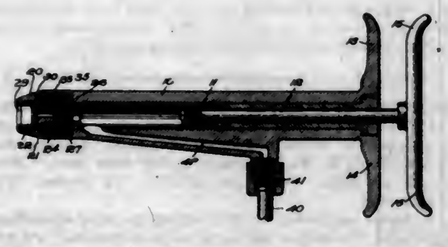
1. In an apparatus for performing pressing operations, a pressing mechanism having a movable element, a valveless pressure mechanism, a body of fluid connecting said movable element and said pressure mechanism, said pressure mechanism operable throughout its effective compress-



ing stroke to produce a working pressure upon the movable element and capable of supplying a pressure in excess of that required to complete the pressing operation of the

movable element, and means associated with said fluid and operable independently thereof to counteract the development of pressure by said pressure mechanism.

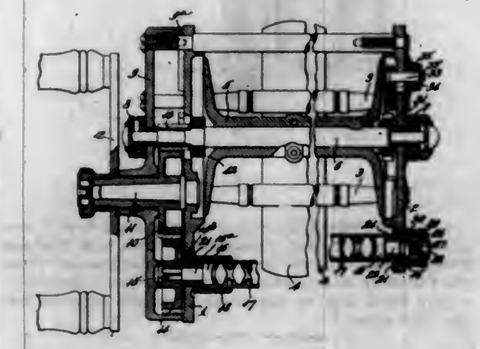
---



1,690,399. METHOD OF AND MEANS FOR ALIGNING PUMP LINERS WITHIN PUMP SHELLS. LYSLE P. BURGESS, Los Angeles, Calif., assignor, by mesne assignments, to L. P. Burgess, D. Daniels, and J. O. Clutter, as trustees. Filed Oct. 2, 1926. Serial No. 139,198. 6 Claims. (Cl. 74—108.)

1. In combination with an outer pipe and a plurality of inner pipe-sections adapted to be arranged end to end within the outer pipe and to be annularly spaced therefrom, the opposed ends of adjacent sections being cut angularly and oppositely to provid an annular groove of V-cross-section between the ends of said adjacent sections, and an aligning bushing seated within said groove and engaging the inner wall of the outer pipe.

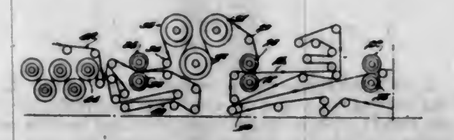
---



1,690,400. LUBRICATING APPARATUS. MOSES F. CARR, Brookline, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,644. 1 Claim. (Cl. 221—47.4.)

A lubricating device comprising a body having a longitudinal bore, a transverse handle integral with and at one end of said body, a quick detachable coupling device secured at the other end of said body, said device being adapted to be coupled with a lubricant receiving fitting by rotation relative thereto, a high pressure plunger in the bore of of said body, a secand handle adjacent the handle on said body and operatively connected to said plunger, and a low pressure lubricant supply connection secured to said body intermediate said handles and said coupling, said connection being in communication with the bore in said body at a point adjacent said coupling device.

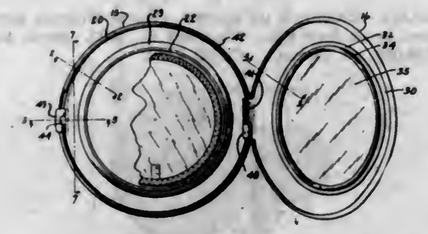
---



1,690,401. FISHING REEL. FRANCIS M. CASE, Cleveland, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 31, 1923. Serial No. 629,040. 17 Claims. (Cl. 242—84.5.)

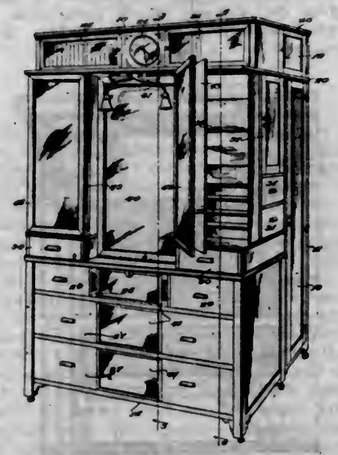
1. A fishing reel, comprising a frame, a spool rotatable therein, a braking unit including a radially movable braking member effective upon said spool, and an operating unit for said braking unit, said units being separated but individually remaining intact when the reel is disassembled.

---



1,690,402. PROCESS AND APPARATUS FOR MAKING PAPER. JOHN C. CONCORAN, Worcester, Mass., assignor, by mesne assignments, to Argy Pre-Heating Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Oct. 14, 1927. Serial No. 226,711. 10 Claims. (Cl. 92—38.)

1. In a paper making machine, in combination, means for forming the web from the paper stock, means for mechanically extracting moisture from the web including two sets of presser rolls spaced apart and each set provided with a felt running between the cooperating presser rolls, means for causing the web to pass between the first set of presser rolls while supported upon said felt, and a plurality of heating drums around which the web is led in passing from one set of presser rolls to the other, to cause simultaneous engagement of opposite sides of the web with a heating drum, and means for conducting the web thereafter through the second set of presser rolls while operatively supported upon the felt.

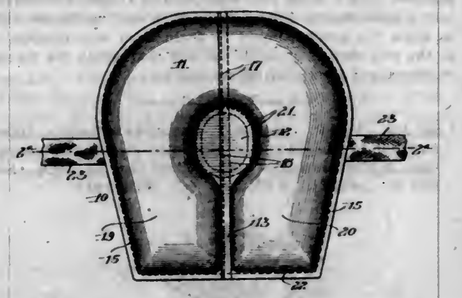


1,690,403. SECTIONAL WALL VANITY CASE. CHARLES N. CORYELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 8, 1926. Serial No. 134,177. 13 Claims. (Cl. 132—83.)

1. A vanity box comprising a pair of cover sections separably connected together, one of said cover sections comprising a frame member and a central compact container, and means including a removable retaining ring surrounding said compact container to removably secure the container to the frame member, said frame member and said compact container each forming a portion of the outer surface of the cover.

---

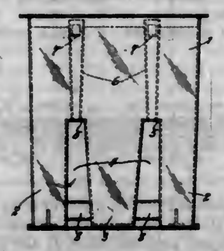
1,690,404. COMBINED DRESSER, WARDROBE, BOOKCASE, AND RACK. FRANK C. DIECKMANN, Cincinnati, Ohio. Filed Mar. 1, 1926. Serial No. 91,612. 2 Claims. (Cl. 45—5.)



1. In an article of furniture of the type having drawers in the front and drawers and compartments in the side thereof, the combination of a centrally arranged mirror hinged at its top and two mirrors hinged at the sides of said central mirror to swing toward each other, the said central mirror being inset in said article of furniture, and means providing a plurality of open compartments and a secret compartment behind said mirrors.

---

1,690,405. KNEE PAD. JOHN H. DU ROCHER, Rochester, N. Y. Filed June 29, 1926. Serial No. 119,421. 2 Claims. (Cl. 2—24.)



1. A knee pad having relatively soft, opposite surfaces for contact respectively with the knee and a floor or the like comprising a pad curved to enclose a generally circular recessed portion and a narrowed extension thereof conforming substantially in size and shape to the knee and shin bone to receive and support the same and a

limb-supporting web connecting the inner sides of said pad across said recessed portion and extension and between and spaced from said opposite surfaces of the pad.

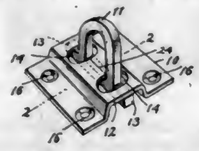
---

1,690,406. REFRIGERANT CONTAINER. GUSTAV J. GRUENDLER, Clayton, Mo. Original application filed Aug. 2, 1926, Serial No. 126,655. Divided and this application filed Nov. 4, 1927. Serial No. 231,035. 6 Claims. (Cl. 62—69.)

1. A refrigerant container for refrigerators having an air passage extending therethrough, an air duct extending downwardly through said container from above said refrigerant into said air passage.

---

1,690,407. REFRIGERATOR. GUSTAV J. GRUENDLER and WILLIAM A. MELETIO, St. Louis County, Mo. Filed Nov. 9, 1925. Serial No. 67,877. 3 Claims. (Cl. 62—37.)



1. A refrigerator having a primary compartment having an ice container therein and a secondary compartment having a receptacle consisting of a coil pipe positioned

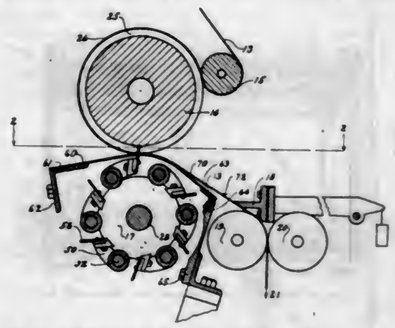
along the top thereof and adapted and arranged to receive and hold liquid resulting from the melting of ice in said ice container, a drip pipe arranged to carry said liquid from said ice container and discharge it into one end of said coil pipe, and a drain pipe adapted and arranged to maintain a predetermined level of liquid in said receptacle and to allow the surplus liquid to drain from said receptacle at the end thereof opposite the end into which the liquid is discharged from said ice container.

---

1,690,408. HASP. NELSON T. HASENFLUE, Geneva, Ohio, assignor to The Champion Hardware Company, Geneva, Ohio, a Corporation of Ohio. Filed Oct. 25, 1926. Serial No. 143,881. 3 Claims. (Cl. 292—340.)

1. A keeper for a hasp comprising a keeper plate having a pair of spaced openings, an eye having its legs extending through the openings and having a continuous base portion integral with said legs on the underside of the plate, and extending laterally beyond the openings whereby separation of the keeper and eye by movement in any direction is prevented.

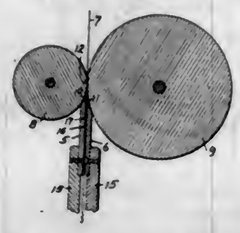
---



1,690,409. MECHANICAL TOY. NICHOLAS HEYMAN, Newark, N. J., assignor to Henry Katz & Co., New York, N. Y., a Corporation of New York. Filed June 13, 1928. Serial No. 284,960. 3 Claims. (Cl. 104—173.)

1. In an amusement device, a platform having a plurality of continuous slots forming paths which run parallel to each other adjacent opposite sides of the platform, a continuous cable to travel beneath each slot, cable grips clamped to the cables and projecting uprightly through the slots to carry objects along the slots, and means for operating one cable from the movement of the other.

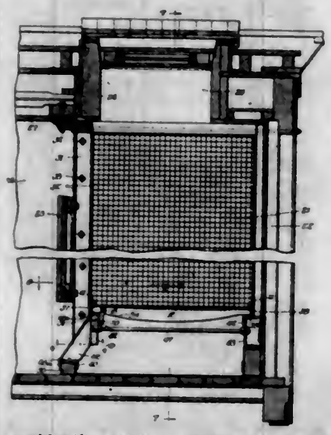
---



1,690,410. PAPER-PERFORATING MECHANISM. DAVID WILLIAM HUDSON, Green Bay, Wis. Filed Jan. 21, 1927. Serial No. 162,453. 2 Claims. (Cl. 164—99.)

1. In a perforating machine, the combination with a roll carrying outwardly movable perforating teeth, of a die roll having grooves complementary to said teeth and an intermediate comb between said rolls having slots extending in the direction of travel of said teeth during the rotation of the roll upon which they are mounted, and intermediate unslotted portions adapted to support a web upon which said teeth have acted.

---



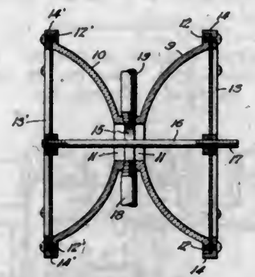
1,690,411. CREPING OF PAPER. DAVID WILLIAM HUDSON, Green Bay, Wis. Filed May 21, 1927. Serial No. 193,086. 6 Claims. (Cl. 92—69.)

1. A device of the character described including a pair of feed rolls and a set of creping blades associated with the feed rolls at the delivery side thereof and spaced to receive a web fed between said rolls, the edges of said blades being offset in the direction of web advance and the space between said blades being intersected by the common tangent of said rolls at the point at which such a web enters said space.

---

1,690,412. GRATE CONSTRUCTION FOR THE ICE COMPARTMENTS OF REFRIGERATOR CARS. GEORGE A. HULL, Chicago, Ill., assignor to Equipment Specialties Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1926. Serial No. 86,714. 19 Claims. (Cl. 62—19.)

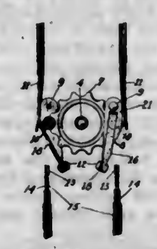
1. The combination with a refrigerator car having an ice compartment and supporting members along the sides thereof, of a grate surface comprising a plurality of grate bars each constructed of a sheet metal stamping having end portions of relatively wide channel section affording substantially parallel flanges for resting on said supports, and having an intermediate portion of inverted V-shaped section of relatively narrow transverse dimension.



---

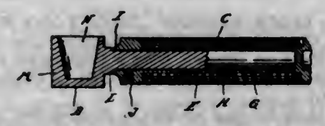
1,690,413. OSCILLATOR. JOHN C. KANE, Detroit, Mich. Filed Apr. 5, 1923. Serial No. 630,092. 5 Claims. (Cl. 138—23.)

1. A device of the class described, comprising a tubular liquid container; a delivery pipe communicating with said container for delivering liquid thereinto; an outer



pipe for conducting liquid from said container; a liquid container at opposite sides of said first-mentioned liquid container and communicating therewith; a vibratory closure for each of said oppositely disposed liquid containers; and means for connecting each of said vibratory closures.

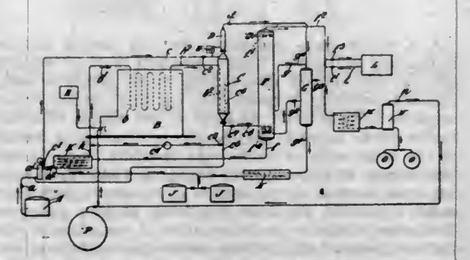
---



1,690,414. CONTACTOR. THOMAS S. KEMBLE, Cleveland, Ohio, assignor, by mesne assignments, to Universal Gas Electric Company, Lawrence, Kans., a Corporation of Delaware. Filed July 18, 1924. Serial No. 726,681. 13 Claims. (Cl. 200—5.)

13. In combination, a controller, a contact part on said controller, a second contact part on said controller, a third contact part on said controller, said first mentioned contact part being adapted to make successive contact with said second contact part and said third contact part, a make-and-break switch, electrical connections placing said make-and-break switch in series between said second contact part and said third contact part, mechanism adapted to operate said controller and said switch whereby said make-and-break switch is held open while said first mentioned contact part makes contact with said second contact part and whereby said make-and-break switch is closed while said first mentioned contact part is in contact with said second contact part and whereby said make-and-break switch is held closed while said first mentioned contact part makes contact with said third contact part and whereby said make-and-break switch is opened while said first mentioned contact part is in contact with said third contact part.

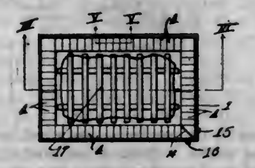
---



1,690,415. ELECTRIC MELTING POT. FRANK KUHN and LAURENCE H. THOMAS, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 30, 1928. Serial No. 250,498. 4 Claims. (Cl. 219—26.)

4. An electrically heated tool comprising a tubular member, a heating element surrounding said tubular member, a cylindrical metallic shank insertable within said tubular member, an enlarged head integrally united to said stem at the outer end thereof and an annular shoulder on said head for engaging the end of said tubular member, said enlarged head having a recess therein with the axis transverse to the axis of said shank.

---

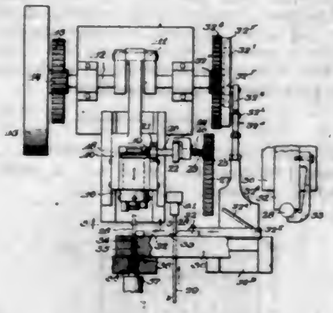


1,690,416. CRACKING OF LIQUID HYDROCARBONS. OWEN DAVID LUCAS and ERNEST LAWSON LOMAX, Westminster, London, England, assignors to V. L. Oil Processes Limited, Westminster, England, a British Company. Filed July 23, 1925, Serial No. 45,525, and in Great Britain Dec. 9, 1924. 3 Claims. (Cl. 196—48.)

1. A process for the production of light from heavy oils which consists in heating the oils rapidly to the cracking temperature in a tube still, passing the heated oils into a conversion chamber in which they are maintained in bulk at the cracking temperature and at a pressure of from 600 to 1,000 lbs. per square inch, drawing off the lighter oils in vapour form into a vapour pressure or refluxing chamber open directly to and forming an extension of the conversion chamber and consequently at the same pressure of 600 to 1,000 lbs. per square inch, maintaining the said refluxing chamber at a temperature substantially below that of the conversion chamber, but sufficiently high to prevent, under the said pressure common to the conversion and refluxing chambers, the condensation of any oils below a predetermined density, condensing the heavier oils in the aforesaid refluxing chamber and then passing the condensed oils without reheating and below the cracking temperature through a branch passage directly back into the conversion chamber for further treatment, simultaneously drawing off liquid oils from the conversion chamber, releasing the said liquid oils through a pressure reducing valve into a lower pressure chamber, and removing the vapour of the lighter oils from the said lower pressure chamber.

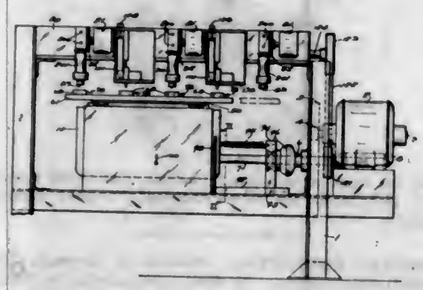
---

1,690,417. AIR COOLER AND HUMIDIFIER. JOHN A. LUNDMARK, Chicago, Ill. Filed Apr. 5, 1926. Serial No. 99,705. 4 Claims. (Cl. 62—133.)



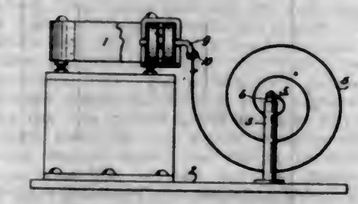
1. In a portable air cooler, a casing, interconnected air cooling compartments extending around the interior wall of said casing, said compartments forming a tortuous path, means for cooling said compartments, means for causing a circulation of air through said compartments and means for closing the path through certain compartments allowing the air to pass in contact with said cooling means.

1,690,418. BOTTLE CRATE. LYNN W. MACOMBER, Battle Creek, Mich., assignor to United States Steel and Wire Co., Battle Creek, Mich. Filed Dec. 27, 1927. Serial No. 242,586. 7 Claims. (Cl. 220—19.)



1. A bottle crate comprising top and bottom and intermediate continuous frame members having rounded corners, one of said intermediate frame members being disposed centrally between the top and bottom frame members and the other adjacent to but spaced from the bottom frame member, upright side and end slats welded to the inner sides of said frame members, corner members formed of loops of wire having downwardly diverging arms disposed at the corners of the crates with their bights projecting above the top frame member and with their arms welded to the inner sides of the adjacent side and end portions of the frame members, longitudinal and transverse partition members disposed horizontally in vertically alined spaced crossed relation and welded to each other and to said intermediate frame members providing a series of compartments, transverse bottom members welded at their ends to the upper side of said bottom frame member, and longitudinal bottom members disposed in spaced pairs below said compartments and welded to said transverse bottom members, said longitudinal bottom members having downwardly offset ends welded to the end portions of said bottom frame member.

1,690,419. MACHINE FOR HEADING BLANKS. PAUL H. MCCAIN, Chicago, Ill., assignor to Economy Screw Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 17, 1924. Serial No. 699,770. 3 Claims. (Cl. 10—12.)

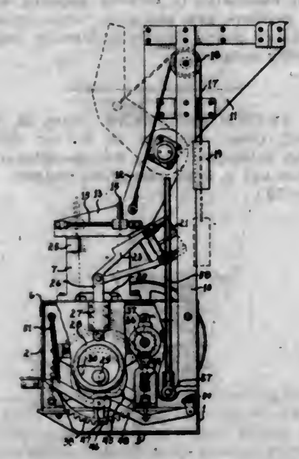


1. A machine of the character described having a forming recess into which a blank is adapted to be inserted, means operating in timed relation with the plunger for positioning the end of the blank over the recess, a reciprocable plunger, a punch carrying support mounted upon the plunger for movement therewith and for rotatable movement with respect thereto and in a direction transverse to the direction of reciprocation of the plunger, a plurality of punches carried by said support, and means for intermittently rotating said punch carrying support to successively position the punches to act upon the blank, the last recited means embodying a gear connected with the punch carrying support, an actuating gear meshing with the first said gear and means for intermittently rotating the actuating gear.

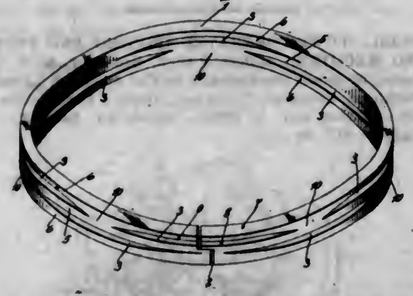
1,690,420. BRUSH-MAKING MACHINE. JOSEPH W. MICHAELIS, Toledo, Ohio. Filed Dec. 22, 1922. Serial No. 608,429. 10 Claims. (Cl. 300—3.)

1. In a brush machine, three or more seat producing and material inserting tools in a straight line, the material inserting tools being mounted alternately in relation to the seat producing tools, a movable indexing slide extending parallel to the line of said tools, clamps for brush blanks located on the indexing slide to the number of one less than the combined number of the seat producing and material inserting tools, said indexing slide being adapted to be shifted manually to move said clamps alternately under the seat producing and material inserting tools, and positioning mechanism for moving the indexing slide step-by-step in transverse directions in a plane at right angles to the said tools, and driving means for reciprocatorily moving the indexing slide toward and away from said tools.

1,690,421. SOUND RADIATOR. CHARLES R. MOORE, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 15, 1923. Serial No. 645,616. 7 Claims. (Cl. 181—31.)

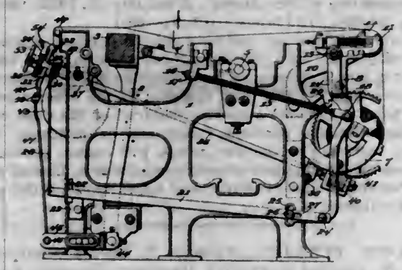


1. In combination, a sound radiator comprising a sheet of paper coiled in substantially spiral form, said spiral having an axial dimension greater than its diameter, means for holding the inner edge of the spiral stationary, and means for imparting vibrations representing sound to said sheet near the outer end of the spiral.

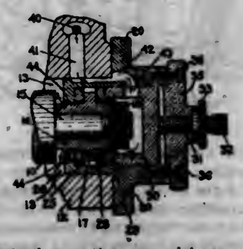


1,690,422. BLOCK MACHINE. FRANK XAVIER MUENZER, Elmore, Ohio, assignor to The Multiplex Concrete Machinery Company, Elmore, Ohio, a Corporation of Ohio. Filed Aug. 5, 1927. Serial No. 210,756. 9 Claims. (Cl. 25—41.1.)

1. In a block forming machine, a forming box, a tamping head movable into the box from the upper end thereof, a pallet rest for the bottom of the box, means forcing said tamping head into the box, and means to force the pallet rest toward said tamping head during the latter portion of movement of the head and to continue such movement after the movement of the head has been discontinued and reversed, thereby partially to eject the block from the forming box.



1,690,423. PISTON RING. ARDEN JOHN MUMMERT, University City, Mo., assignor to McQuay-Norris Manufacturing Company, St. Louis, Mo., a Corporation of Delaware. Filed Oct. 9, 1926. Serial No. 140,625. 4 Claims. (Cl. 74—109.)



1. An axially compressible piston ring comprising a resilient split band having two circumferentially disposed rows of slots with the slots in one row staggered in relation to the slots in the other row, and said slots having the outer walls thereof substantially arcuate in shape and having the inner walls of the slots in one row substantially parallel to the inner walls of the slots in the other row.

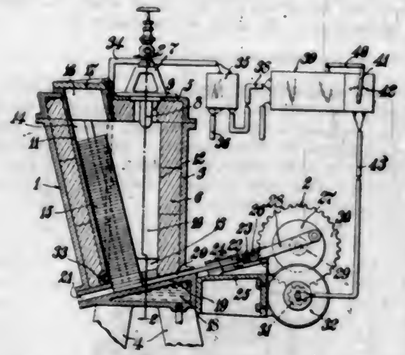
1,690,424. LET-OFF MECHANISM. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 11, 1927. Serial No. 167,504. 6 Claims. (Cl. 139—110.)

1. A let-off mechanism for looms having, in combination, a loom frame, warp supporting means, gearing connected therewith, a shaft connecting with the gearing extending from the lower back part of the loom to the upper front part of the loom and adapted to be rotated manually from the front of the loom, a ratchet and pawl mechanism for actuating the shaft and including a pawl carrier mounted for rocking movement, a spring for moving the pawl carrier in one direction, a connection between the pawl carrier and lay for moving the pawl carrier in the opposite direction, a whip roll supported for movement in response to variations in the tension of the warp, and means controlled by the movement of said whip roll to vary the stroke of said pawl carrier to thereby vary the feeding of the warp by the warp beam.

1,690,425. END-THRUST BEARING FOR GRINDING-WHEEL SPINDLES. CHARLES H. NORTON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed July 3, 1920, Serial No. 393,913. Divided and this application filed Aug. 1, 1922. Serial No. 579,031. 1 Claim. (Cl. 308—166.)

A grinding wheel mounting comprising a casing, a radial bearing mounted therein, a wheel spindle mounted in and extending beyond the end of the radial bearing, a flange on the extension of the spindle spaced from the end of said radial bearing, an annular thrust receiving flange rigidly mounted on the casing and depending between the flange on the spindle and the radial bearing and spaced from the latter, an adjustably positioned outer thrust receiving cup engaging the opposite side of the spindle flange and readily accessible means to adjust the position of said cup during rotation of the spindle.

1,690,426. PROCESS FOR THE COATING OF PERVIOUS MATERIAL. NORMAN E. OLIVER, New York, N. Y., assignor to Hermetite Corporation, New York, N. Y., a Corporation of New Jersey. Filed May 29, 1925. Serial No. 33,635. 12 Claims. (Cl. 91—68.)

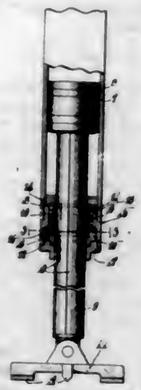


1. In a process for coating a pervious material, first subjecting said material to mechanical treatment whereby the openings or interstices therein are reduced in size and the fibres are flattened to enhance smoothness of the surface, then applying to the surface of the material a coating compound of the class comprising cellulose, celluloid compounds or mixtures, lacquers, varnishes or the like, and having a high degree of pliability when dried and forming upon the outer face of the treated material only one layer which does not permeate and embed the fibres, whereby the formation of embedded immovable fibres within the layer coating is precluded, and then drying said single-layer surface coating to produce the completely finished product.

1,690,427. PROCESS FOR THE COATING OF PERVIOUS MATERIAL. NORMAN E. OLIVER, New York, N. Y., assignor to Hermetite Corporation, New York, N. Y., a Corporation of New Jersey. Filed May 29, 1925. Serial No. 33,636. 12 Claims. (Cl. 91—68.)

1. In a process for coating a pliable pervious material, first subjecting only one side of said material to a treating step which closes or reduces the size of the interstices or pores thereof, and then applying to the other side of said treated material a coating material of the class comprising cellulose, celluloid compounds or mixtures, lacquers, varnishes or the like, which will remain pliable in the coating and produce at said coated side a finished surface retaining the pliability and appearance of the pervious material.

---



1,690,428. FURNACE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 11, 1925. Serial No. 14,770. 20 Claims. (Cl. 263—6.)

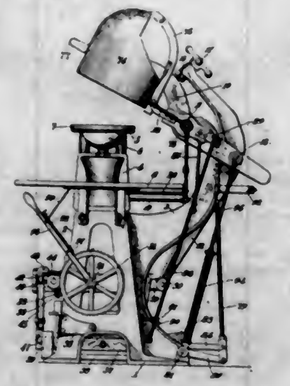
1. In a blank heating furnace, a vertically elongated combustion chamber having provision at its lower end for the discharge of the products of combustion therefrom, a blank guide extending toward the bottom thereof, and a burner carried by the top of said furnace and discharging downwardly toward the bottom of said chamber, the blanks in said guide moving in the direction of the burner discharge and directly in the path of the flame.

---

1,690,429. FEEDING MECHANISM. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 21, 1922. Serial No. 608,303. 31 Claims. (Cl. 121—5.)

3. In a drilling mechanism, the combination with means for rotating the drill steel and means for feeding the steel comprising a pair of telescoping feeding members having relative longitudinal movement during feeding, of feed control means responsive to the resistance to drill steel rotation for automatically variably applying friction between said members, said automatic means including frictional resistance means directly frictionally engaging one of said feeding members.

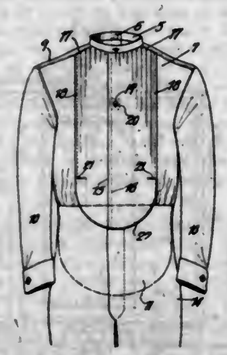
---



1,690,430. SWITCH MOVEMENT. CARL M. PETERSEN, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 9, 1926. Serial No. 100,860. 8 Claims. (Cl. 200—70.)

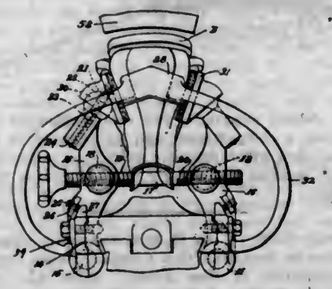
1. In a switch mechanism an oscillating element, a locking plate mounted for reciprocatory movement, coacting locking means carried by the plate and element, said plate having an opening therein and inwardly extending tapered lugs on opposite sides of said opening, a cam mounted for turning movements and located in said opening, said cam having surfaces coacting with the said lugs to shift the plate and unlock the oscillating element, a spring for oscillating said element, and an operating means connected to the cam and arranged to wind said spring.

---



1,690,431. POWER-OPERATED IRONING AND PRESSING MACHINE. HARRY PIERCE, Brooklyn, N. Y., assignor, by mesne assignments, to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 5, 1922. Serial No. 549,814. 15 Claims. (Cl. 68—9.)

1. In an ironing and pressing machine, the combination with a stationary pressing member, and a pivotally mounted pressing member, of motor actuated operating means for moving the pivoted pressing member into and out of pressing position, means for locking the pivoted pressing member in both open and closed positions, and operator operated control mechanism for controlling the motor actuated operating means and directly connected to said locking means for releasing the same.



1,690,432. SHIRT. EDWARD J. QUIGLEY, Newark, N. J. Filed Nov. 1, 1926. Serial No. 145,435. 1 Claim. (Cl. 2—118.)

A shirt comprising a body piece extending continuously across the front of the shirt, a bosom section superimposed upon the body piece, the bosom section having its vertical edges secured to the body piece by rows of stitching which terminate a considerable distance above the lower end of the bosom and near the edges of the bosom, leaving the lower part of the bosom extending downwardly in the form of a free tongue and the middle portion of the bosom between the lower ends of the rows of stitching being unattached to the shirt.

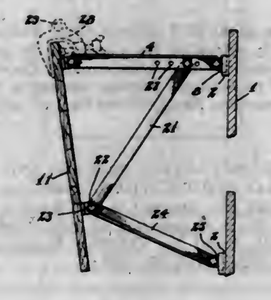
---

1,690,433. SHOE-PRESSING MACHINE. FRED RICKS and REGINALD BOYD WOODCOCK, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 16, 1925, Serial No. 23,670, and in Great Britain Aug. 16, 1924. 21 Claims. (Cl. 12—33.)

1. A shoe leveling machine having a power-operated mechanism comprising a leveling member and a last supporting means comprising a last heel support, a last forepart support and means for additionally supporting against leveling pressure on the shoe bottom a jointed last carried by the two first-named supports in the neighborhood of the joint, the additional supporting means having freedom of movement laterally of the last to accommodate itself to the contour thereof.

---

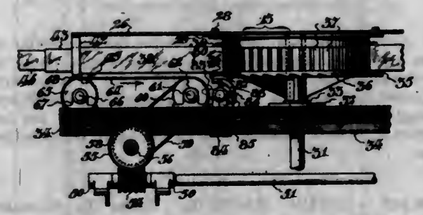
1,690,434. BOILER-PIPE CLEANER. LOUIS ROCKELMAN, Salt Lake City, Utah. Filed Dec. 21, 1926. Serial No. 156,209. 2 Claims. (Cl. 15—104.10.)



1. In an apparatus of the class described the combination of an externally threaded collar; set screws through one end of said collar; an internally threaded member to fit within said collar, and having a flange on one end and the portion of the member near said flange slightly spherical in form to allow for tilting movement of the member within said collar; a threaded rod to operate in the threads in

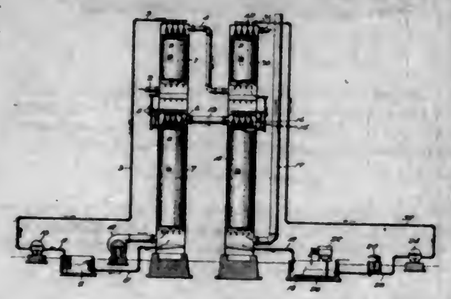
said flanged member; a cutting blade adjustably secured near the end of said rod; a set screw to hold said cutting blade; a hole through the other end of said rod; and a handle passed through said hole to turn said rod.

---



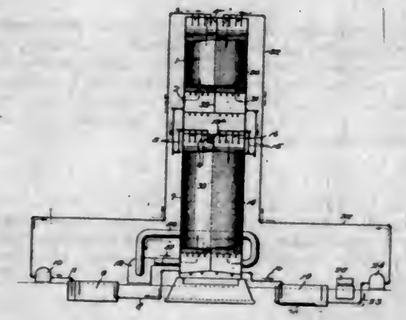
1,690,435. OUTBOARD-ENGINE BRACKET. LLEWELLYN T. SAVAGE, Boston, Mass., assignor to John M. Keyes and Laura H. Keyes, Concord, Mass. Filed Apr. 13, 1927. Serial No. 183,495. 2 Claims. (Cl. 115—17.)

1. The combination with the hull of a boat, of a bracket attached thereto and extending outwardly therefrom, an outboard engine support pivotally attached to the bracket, and a strut pivotally attached to the outboard engine support and adjustably attached to the bracket, whereby the angle of the outboard engine support with respect to the hull may be varied at will.



---

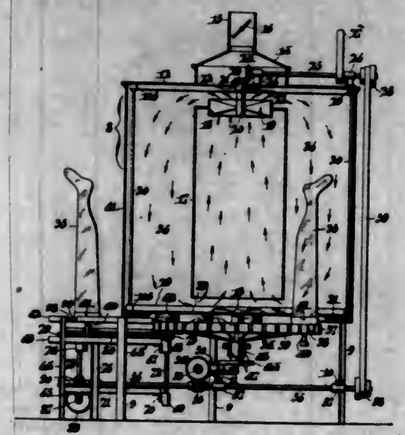
1,690,436. DRYING MACHINE. WALTER W. SIBSON and HARRY H. WIGGLESWORTH, Philadelphia, Pa., assignors to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 5, 1924. Serial No. 717,941. 19 Claims. (Cl. 198—19.)



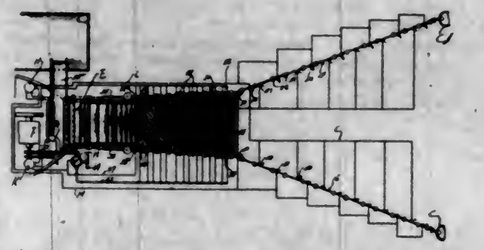
1. A drying machine comprising an annular enclosure, means operative to intermittently progress a series of form carriers therethrough, and co-ordinated means for telescopically ejecting and entering the form carriers by direct alternate motion for stripping and after reclothing, respectively.

1,690,437. GAS-PURIFICATION PROCESS AND APPARATUS. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 6, 1924, Serial No. 718,254. Renewed Jan. 23, 1928. 9 Claims. (Cl. 23—225.)

1. A process of the kind referred to for purifying gases, characterized by subjecting the gas, after the greater portion of the impurities have been removed therefrom by a first washing, to a second washing employing freshly regenerated air washing liquid, for the purpose described.



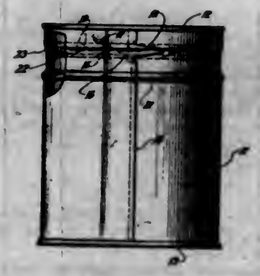
1,690,438. RECIRCULATING PROCESS AND APPARATUS FOR GAS PURIFICATION. FREDERICK W. SPERR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 6, 1924, Serial No. 718,255. Renewed Jan. 23, 1928. 11 Claims. (Cl. 23—225.)



1. A process of the kind referred to for the purification of gases involving the steps of washing gas with a liquor to absorb impurities, aerating such wash liquor to regenerate the same and washing the air to remove the impurities, characterized by recirculating the air from which the impurities have been removed back to the liquid regeneration stage.

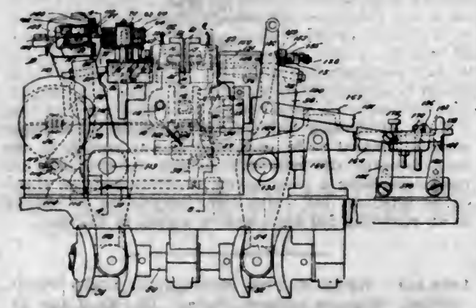
1,690,439. DRYING MACHINE. HARRY H. WIGGLESWORTH, Philadelphia, Pa., assignor to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 29, 1924. Serial No. 709,751. 22 Claims. (Cl. 198—19.)

1. In a drying machine having a cylindrical drying chamber; a rotatable closure therefor adapted to progress detached form carriers, the form portions whereof traverse said chamber and are held against relative positional displacement by said closure; means functional to radially withdraw and return successive carriers for form stripping and clothing; and means to impart a half-turn to each successive carrier intermediate the periods of radial movement so that it re-enters the machine with non-reversed directional displacement.



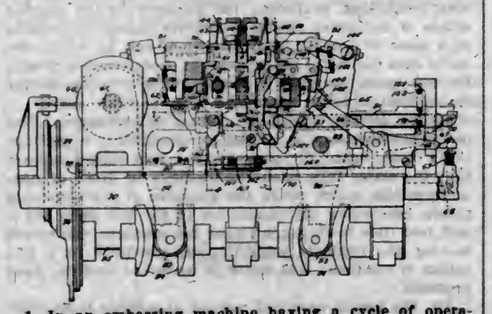
1,690,440. FISHING APPARATUS. LIN E. BAKER, Chicago, Ill. Filed Feb. 7, 1927. Serial No. 166,539. 15 Claims. (Cl. 43—9.)

1. In fishing apparatus the combination of a fishing net having a compartment and an opening to the compartment thru which fish may enter, and means for intermittently passing an electric current across said compartment.

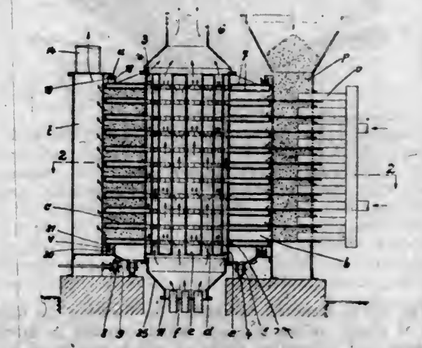


1,690,441. CAN. KARL S. BRECKENRIDGE, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 16, 1925. Serial No. 23,474. 1 Claim. (Cl. 220—54.)

A reclosure cylindrical tearing strip can having in combination a body the top and bottom of which are of equal diameter, a top and bottom united with said body, said body being necked in at a distance below the top so as to be formed with a part of smaller diameter than the upper part of the body and also of smaller diameter than the lower part of the body, and a tearing strip set off around said body, the upper line of said tearing strip being formed on the upper part of the body which is of larger diameter, and the lower line of said tearing strip being formed on the necked in portion of the body, whereby, after the tearing strip has been removed, the part of the body above the tearing strip will fit outside of and around said necked in portion, and the upper part of the can will be in line with the bottom part of the can.

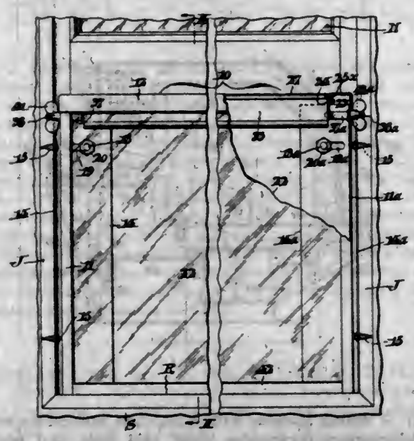


1,690,442. EMBOSSING AND PRINTING MACHINE. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 27, 1924. Serial No. 745,968. 30 Claims. (Cl. 197—6.2.)



1. The combination with embossing mechanism, of means for guiding and feeding a ribbon of material to be embossed, means for holding a strip of paper, mechanism for printing successive characters thereon in the direction of the length of the strip including means for feeding the strip lengthwise, a keyboard and mechanism actuated thereby for operating both the embossing mechanism and the printing mechanism, mechanism for severing the embossed portion of the ribbon, a group of words printed on the paper strip corresponding to a single cut-off embossed strip, and each group of words corresponding to successive embossed strips aligning with the preceding printed group.

1,690,443. CONTROLLING DEVICE FOR THE KEYS OF KEYBOARD MACHINES. PETER M. COLQUHOUN, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1925. Serial No. 14,118. 28 Claims. (Cl. 197—6.2.)

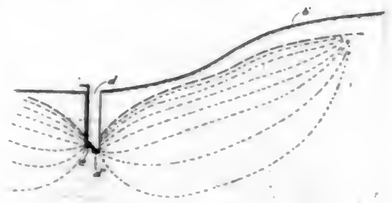


1. In an embossing machine having a cycle of operations initiated by the actuation of a key, the combination of a keyboard, a set of dies, means for holding material to be embossed thereby, there being a neutral position of the dies relative to said material, means for changing and restoring the juxtaposition of the dies and material, the keyboard having finger keys adapted to actuate the last mentioned means, means for restoring an actuating key before the cycle of operation is complete and and means for preventing the actuation of a subsequent key, until the neutral position of the dies relative to the material is restored.

1,690,444. APPARATUS FOR DRYING OR SMOLDERING LOOSE MATERIAL. OTTO DOBBELSTEIN, deceased, Essen-on-the-Ruhr, Germany, by Karoline Dobbelstein, administrator, Essen-on-the-Ruhr, Germany. Filed Nov. 26, 1926, Serial No. 150,909, and in Germany Nov. 30, 1925. 5 Claims. (Cl. 34—32.)

1. An apparatus for heating loose material, comprising a vertical rotary drum provided with annular heating chambers located one above the other and spaced from each other to provide chambers for the loose material, heating means for said heating chambers, means for supplying the loose material to the chambers provided between the heating chambers and to remove the said material therefrom, a stationary jacket surrounding said drum and heating chambers and adapted to collect the gas or vapor developed from the loose material, and a liquid seal between said jacket and rotary drum.

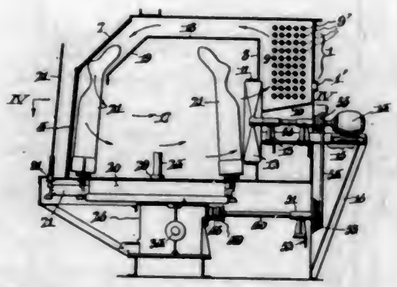
1,690,445. VENTILATOR. FLEMING B. FOWLER, Baltimore, Md. Filed Aug. 31, 1927. Serial No. 216,655. 3 Claims. (Cl. 98—99.)



1. A ventilator of the character described comprising a deflecting baffle, counterpart triangular end casing members struck from sheet metal with iuwardly-directed com-

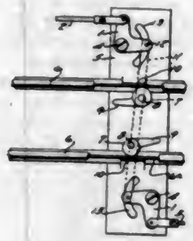
plementary flanges along vertical edges for attachment to the window frame as well as similar flanges along inclined edges to overlap and retain the deflecting baffle, and an open screen cover member also struck from sheet material with perimetric flanges to fit over the end casing members and the deflecting baffle.

---



1,690,446. LEACHING PROCESS. RICHARD F. GRANT, FRANKLIN B. RICHARDS, and HERBERT E. WETHERBEE, Cleveland, Ohio, assignors of one-fourth to Howard M. Hanna, Cleveland, Ohio. Filed Mar. 31, 1925. Serial No. 19,684. 1 Claim. (Cl. 262—3.)

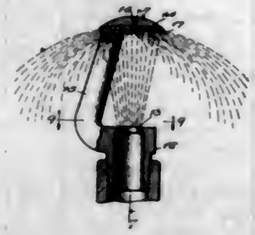
The herein described operations for insuring the leaching of copper values in place, which consists in driving a shaft and connecting drifts to widen operations at a level below that of the surface water, providing localized trenches or containers at the surface appurtenant to such underground workings, supplying a solution of ferric sulphate of approximately 4% dilution above the drifted area of copper ore, permitting its continued percolation in quantity through the ore body, and pumping the surface water and percolating leaching fluid from the level of the drifts.



---

1,690,447. AUTOMATIC DRYING MACHINE. WILLIAM P. GREINER, Philadelphia, Pa., assignor to The Philadelphia Drying Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 5, 1924, Serial No. 754,111. Renewed Aug. 31, 1927. 27 Claims. (Cl. 34—12.)

21. A drying machine with a moisture exhausting zone, article-carriers progressive about said zone, and means adapted to selectively thrust non-consecutive article-carriers horizontal relative thereto to effect application and removal of the articles treated.

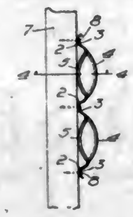


1,690,448. TRACK FOR TOY TRAINS. FRANK HORNBY, Liverpool, England, assignor to Meccano Company, Inc., Elizabeth, N. J., a Corporation of New York. Filed Mar. 18, 1926, Serial No. 95,521, and in Great Britain Mar. 23, 1925. 4 Claims. (Cl. 246—388.)

1. In combination with a track for toy trains, a sleeper element adapted to be positioned in any portion of the track beneath the rails and secured thereto, said element comprising a plate having pivotally mounted thereon at least one bell crank lever adapted to be coupled to an operating rod for a switch, signal, or the like.

---

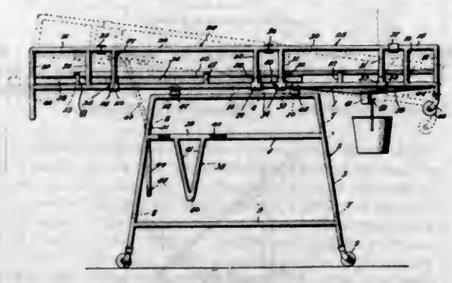
1,690,449. METHOD FOR PREPARING FOOD PRODUCTS. WILLIAM JOURDAN, Chicago, Ill. Filed Aug. 21, 1925. Serial No. 51,620. 10 Claims. (Cl. 99—11.)



4. The herein described method of cooking meat products comprising, subjecting the products to the cooking action of hot water falling by gravity upon the products in a more or less finely divided state and by which the water does not strike the products at predetermined points, the hot water carrying with it suitable coloring matter for application to the product.

6. The herein described method of preparing food products comprising, arranging the products in a substantially closed space, directing hot water in such a manner that the water falls upon the products in drops of non-uniform size which strike the products at indeterminate points, continuing the application of the hot water for a sufficient time to thoroughly cook the products, and before moving the products subjecting the products to a like action of relatively cold water to wash and cool the meat products.

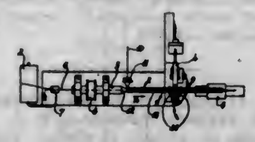
10. The herein described method of cooking meat products, which consists in drenching the products with hot water, continuing the drenching application of the hot water until the products are cooked, and drenching the products with cold water to cool and wash same.



1,690,450. METAL LATH. JOHN H. KILLION, Chicago, Ill. Filed Sept. 17, 1926. Serial No. 136,149. 2 Claims. (Cl. 72—116.)

1. A metal lath construction comprising a metal sheet having a plurality of parallel slits, the metal between adjacent slits constituting ribs, alternate ribs being bowed outwardly from the face of one side of the sheet and the remaining ribs being bowed outwardly from the face of the other side of the sheet, and all of said ribs being stamped to provide a trough on the outer convex surface of the rib, and a curved ridge on the inner surface whereby the original width of the rib is decreased.

---



1,690,451. CONVERTIBLE EMBALMING TABLE. HARRY M. LEONARD, Rantoul, Ill. Filed Sept. 10, 1926. Serial No. 134,704. 5 Claims. (Cl. 45—50.)

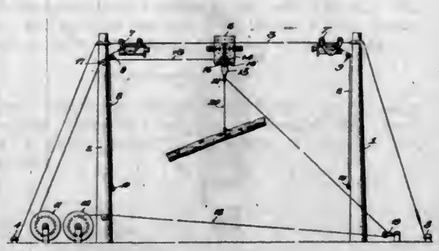
1. An embalming table comprising a bottom frame and side frames upstanding therefrom, frame members extending longitudinally between the side frames of the table and in parallel relation to one another, and a bottom comprising a sheet metal body having alternately arranged upwardly and downwardly presented corrugations disposed between the side members of the frame and with certain of the downwardly presented corrugations engaging over said parallel frame members.

---

1,690,452. MACHINE FOR THE MANUFACTURE OF WIRE SPIRAL. JEAN PIERRE MANENT and MARIUS MANENT, Lyon, France. Filed July 30, 1926, Serial No. 126,040, and in France Aug. 1, 1925. 11 Claims. (Cl. 153—67.)

1. In a machine for making wire-spiral, mechanism for continuously coiling a wire around a continuously-advancing core-forming thread; automatically-operating mechanism for periodically severing a length of coil from the front end of the advancing coil; and means for automatically clamping the free end of the coil, in rear of the severed length, to the thread after each severing operation and while the advance of said thread continues.

---

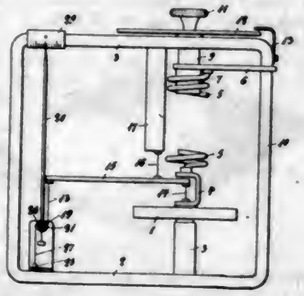


1,690,453. BELTING. FRANK O. MARSHALL, Chicago, Ill. Filed May 2, 1925. Serial No. 27,356. 6 Claims. (Cl. 74—63.)

2. A belt formed of flexible material, provided with relatively long and narrow and substantially rigid stiffening elements, said elements being disposed in parallel spaced apart rows extending both longitudinally and transversely of the belt said rows being sufficiently spaced apart longitudinally of the belt to permit the same to freely flex in the longitudinal direction, and said transverse rows being disposed transversely of the belt to prevent the opposed longitudinal marginal areas from flexing in a transverse direction while permitting the belt to flex intermediate said marginal areas in a transverse direction to conform to the crown of a pulley when applied thereto.

---

1,690,454. TRANSPORTER. HERMAN OSCER NELSON, Doty, Wash. Filed Apr. 11, 1927. Serial No. 182,875. 9 Claims. (Cl. 212—103.)

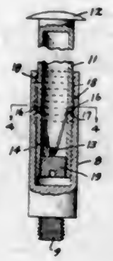


1. In a device of the character described, the combination of a track or way, an abutment at either end thereof, a carriage mounted to travel on said track or way, and a sheave block supported by said carriage, said carriage having two oppositely disposed, horizontally sliding members each with an abutment-engaging shoulder on its outwardly extending end, a downwardly extending sliding member having a sheave block supporting shoulder on its lower end, catches for retaining the several shoulders in engaging relation, means actuated by the downwardly extending sliding member for tripping the catches of the abutment-engaging shoulders, and means actuated by the horizontally sliding members for tripping the catch of the sheave block engaging shoulder.

---

1,690,455. APPARATUS FOR MEASURING VARIABLE FORCES. JOSUA GABRIEL PAULIN, Stockholm, Sweden. Filed Jan. 15, 1926, Serial No. 81,546, and in Germany Nov. 23, 1925. 10 Claims. (Cl. 73—4.)

1. In an apparatus for measuring variable forces in combination with a movable measuring member operating under the influence of said forces and a device for indi-

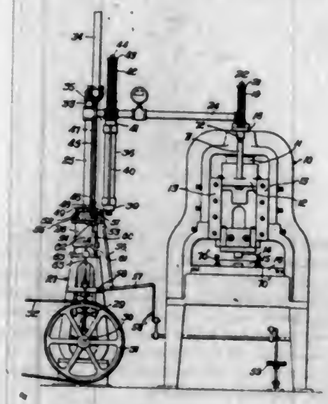


cating the movements of the measuring member, a movement transmitting lever having arms of different length, a yielding suspension device for said lever secured to the lever in the proximity of its centre of rotation, means connecting the shorter lever arm with the measuring mem-

ber, and means connecting the longer lever arm with the indicating device so as to transmit magnified movements of the measuring member to the indicating device through the medium of said lever adapted to operate frictionless and without play.

---

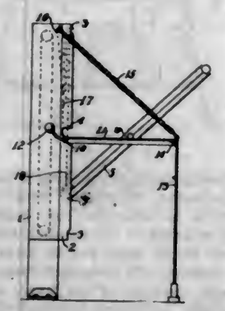
1,690,456. BINDER POST. HAROLD T. PAYNE, Sacramento, and FORREST R. YOUNG, Quincy, Calif. Filed Feb. 21, 1927. Serial No. 170,023. 1 Claim. (Cl. 85—4.)



A binder post of the character described comprising a cylinder formed with ratchet teeth in the inner face thereof and a hollow plunger slidable in the cylinder having a V-shaped spring therein with a pin extending transversely through the plunger and the apex of the spring and with the ends of the spring bent outwardly and projecting outwardly through the wall of the plunger for engagement with the ratchet teeth so as to allow relative motion of the cylinder and the plunger in one direction only and a plug in the end of the plunger extending to within close proximity of the pin for confining the apex of the spring therebetween.

---

1,690,457. APPARATUS FOR PERFORMING PRESSING OPERATIONS. GEORGE ALGER PENNOCK, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 10, 1923. Serial No. 637,972. 10 Claims. (Cl. 138—10.)



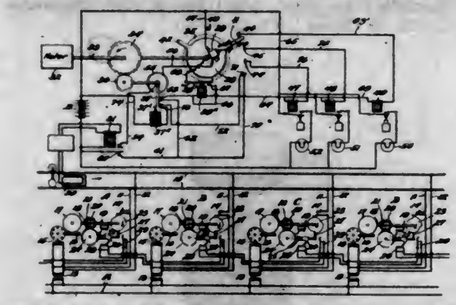
1. In an apparatus for performing pressing operations, a pressing mechanism having a ram, a valveless pressure mechanism, a body of fluid connecting the ram and said pressure mechanism in such a manner that each actuation of the ram is directly responsive to each actuation of the pressure mechanism, said pressure mechanism operable throughout its effective compressing stroke to produce a working pressure upon the ram and capable of supplying

a pressure in excess of that required to complete the pressing operation of the ram, and a mechanism for diverting a portion of the fluid and maintaining the continuity of the fluid body to counteract the development of excess pressure by the pressure mechanism.

---

1,690,458. DRYING-FRAME SUPPORT. LOREN W. RICKEY, Santa Cruz, Calif., assignor of one-half to William O. Kerrick, Santa Cruz, Calif. Filed Oct. 11, 1926. Serial No. 140,937. 3 Claims. (Cl. 45—24.)

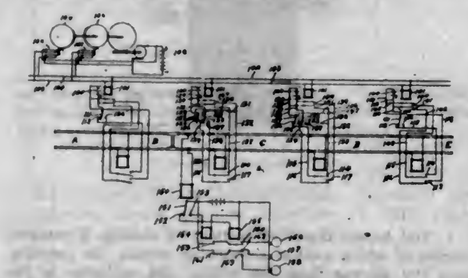
2. A structure of the character described, comprising a supporting frame and a stretcher frame, guideways in the supporting fame having openings in the opposite ends thereof and rollers carried by said stretcher frame adapted to pass through said openings and engage the said guideways, pivots mounted on said stretcher frame on its longitudinal axis, collapsible supports connected to the supporting frame at n point midway between the guideway openings and means for slidably supporting said pivots on the collapsible supports.



---

1,690,459. AUTOMATIC TRAIN-CONTROL SYSTEM. EDWARD C. SASNETT, Washington, D. C. Filed Aug. 7, 1925. Serial No. 48,747. 21 Claims. (Cl. 246—63.)

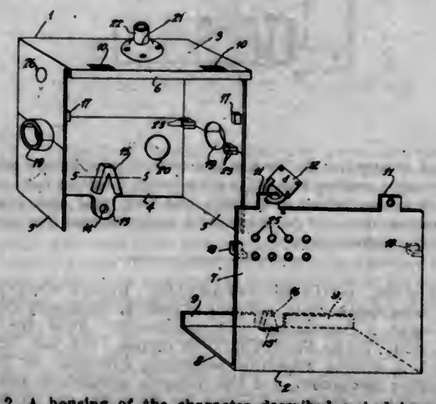
1. A railway signalling system including a stretch of track the rails of which are conductively continuous, means for connecting alternating electrical energy intermittently across the track rails at suitably spaced points, said means



operating to connect energy at said points asynchronously, and signalling means for the stretch responsive to said en-

ergy and adapted to give different indications according to the number of points from which energy is transmitted thereto.

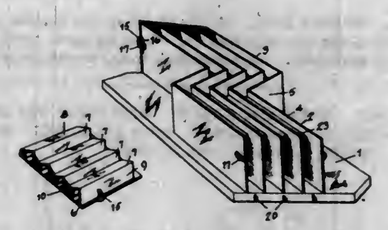
---



1,690,460. RAILWAY SIGNALING. EDWARD C. SASNETT, Washington, D. C. Filed Oct. 9, 1925. Serial No. 61,425. 9 Claims. (Cl. 246—59.)

1. A railway signaling system comprising a track divided into insulated blocks, track relays connected across the rails at the entrance ends of the blocks, local sources of direct current adapted to be connected across the rails at the exit ends of the blocks through connections controlled by said track relays, selective means operated from a central station controlling said connections for periodically reversing said connections, a vehicle traveling on the track having a polarized relay connected across the track rails and train governing mechanism controlled by said relay.

---



1,690,461. VALVE HOUSING. HENRY SIEBEN, New York, N. Y. Filed May 9, 1927. Serial No. 189,865. 5 Claims. (Cl. 137—111.)

2. A housing of the character described embodying an open box provided with openings in its walls and comprising a plurality of sections separable through at least two of said openings, a cover provided with extensions adapted to project through cooperating openings in the box when the cover is in closed position, an extension on the box adapted to extend through an opening in the cover when said cover is in closed position, and means for securing the extensions of the box and cover against withdrawal through the associated openings to lock the cover in place.

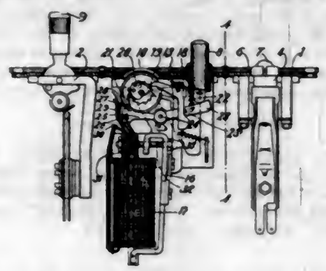
---

1,690,462. MOLD FOR CONCRETE BLOCKS. DAVID C. SMITH, Toledo, Ohio, assignor, by mesne assignments, to Kadow Foundation, Incorporated, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 15, 1927. Serial No. 168,320. 2 Claims. (Cl. 25—121.)

1. In a mold for cement blocks, a plurality of frames, each frame formed of three connected parts, two of the parts extending at an angle to and from the ends of the third part and forming end parts of the frame, a base for supporting the frames on their edges, the corresponding parts of the frames being located in substantially parallel relation, end plates having ridges for spacing the frames, means for removably connecting the end plates to the frames, the faces of the end parts of the frames having projecting parts for shaping the faces of the blocks.

---

1,690,463. MARINE PROPULSION AND POWER GENERATOR. GOTTLOB J. STRADINGER, Colburn, Wis. Filed Apr. 4, 1927. Serial No. 180,868. 3 Claims. (Cl. 115—64.)

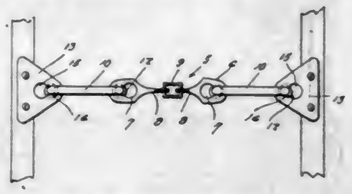


1. A marine propulsion comprising a vessel, a master shaft journalled thereon, guides mounted thereon, bearings slidably mounted between the guides, a counter shaft journalled in the bearings, chains trained around the shafts, blades carried by the chains, and a lever pivoted upon the vessel and engaging the counter shaft for moving the same along the guides.

---

1,690,464. TELEPHONE-METER UNIT. GEORG TAUCHMANN, Berlin-Schoneberg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed Apr. 3, 1926, Serial No. 99,444, and in Germany June 4, 1925. 3 Claims. (Cl. 235—144.)

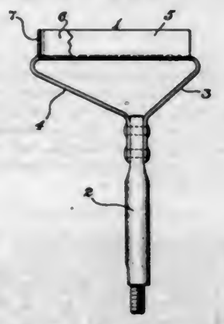
1. In a meter unit having an operating mechanism for the counting discs, consisting of a ratchet wheel and normally engaged operating and holding pawls, a restoring



mechanism consisting of a cam and a restoring lever, said lever pivoted at a central point and having a pin on each

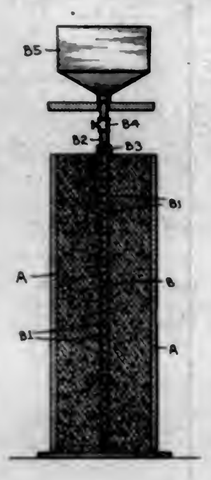
side of the pivot point, one pin engaging the holding pawl and the other pin engaging the operating pawl when the lever is operated, to disengage both from the ratchet wheel.

---



1,690,465. BED-RAIL BRACE. OTTO WARD and JOHN COMPTON, Binghamton, N. Y. Filed Apr. 5, 1927. Serial No. 181,109. 1 Claim. (Cl. 5—305.)

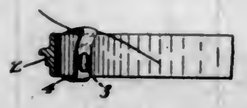
In a structure of the class described, a pair of attaching plates of duplicate form adapted to be fastened to the under edges of a pair of bed rails, said plates having projecting portions provided with keyhole slots, a turnbuckle comprising a pair of duplicate members including flat heads having keyhole slots, and screw threaded shanks, together with a connecting link between said shanks, and a pair of connecting rods of duplicate form provided at opposite ends with laterally directed portions equipped with heads adapted to be separably connected to said keyhole slots in said turnbuckle members as well as the keyhole slots in said attaching plates.



---

1,690,466. BUCKET FOR USE IN HARDENING FURNACES. JOHN M. WASHBURN, Hartford, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 19, 1925. Serial No. 76,396. 5 Claims. (Cl. 198—152.)

1. A bucket of the class described comprising an integral piece of sheet metal having upright and depending flange sections with the latter converging toward a point of remote support.

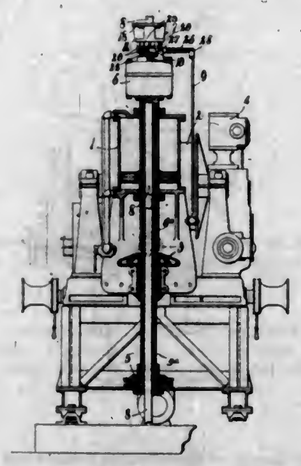


1,690,467. METHOD OF AND APPARATUS FOR MOLDING AND CURING CONCRETE. MARVIN S. WEAVER, Southern Pines, N. C. Filed Nov. 9, 1925. Serial No. 68,023. 9 Claims. (Cl. 25—155.)

1. The herein described method of making a concrete structure, which method consists in mixing the constituents and placing them for setting and enclosing in the mass thus formed means for receiving and delivering water into the interior of said mass, and placing water under pressure into said mass, said pressure exceeding gravity pressure due to height of water in said mass, whereby water permeates outward through said mass, substantially as described.

---

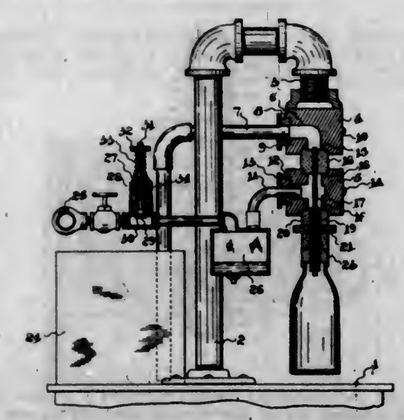
1,690,468. TWISTER TRAVELER. PHILIP C. WENTWORTH, Providence, R. I. Filed July 21, 1926. Serial No. 123,872. 1 Claim. (Cl. 118—61.)



A twister traveler for use on a vertical twisting ring comprising a member presenting a top flange, a bottom foot, and a back connecting said flange and foot, said back being pressed out to provide a lubricant pocket terminating short of the traveler foot.

---

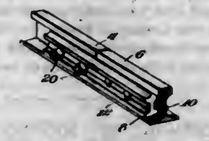
1,690,469. DRILLING APPARATUS. EUGENE WHINNEN, Long Beach, Calif., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 3, 1924. Serial No. 703,957. 39 Claims. (Cl. 255—22.)



1. A drilling apparatus comprising hydraulic rod line feeding mechanism, rod line rotating mechanism, and a plurality of chuck mechanisms for connecting the rod line in driving relation with said feeding and rotating mechanisms, one of said chuck mechanisms being connectible to and rotatable with the rod line, and operating means for substantially instantaneously connecting or disconnecting

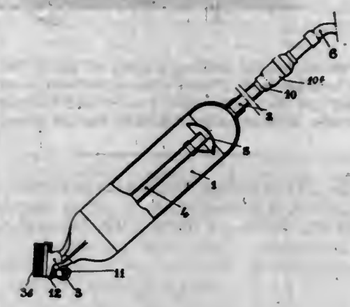
said last mentioned chuck mechanism at will, said operating means being operative to disconnect said chuck mechanism from the rod line during rotation thereof.

---



1,690,470. BOTTLE-FILLING DEVICE. GILFORD D. BLY, Toronto, Ontario, Canada. Filed Feb. 11, 1927. Serial No. 167,452. 5 Claims. (Cl. 226—116.)

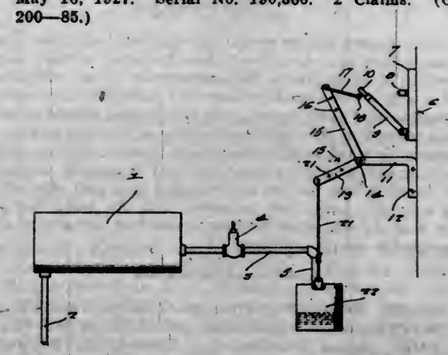
1. A filler head for bottle filling apparatus comprising two blocks aligned with one another, each having a space for fluid formed therein, aligned openings communicating with such spaces being formed in two sides of one block and the adjacent side of the other; a pipe for fluid connected with each block and communicating with the space therein; a fluid tube extending through the openings and space of one block and into the interior space of the other through the opening therein; an annular elastic gasket fitted between the blocks and through which the tube passes; means for clamping the blocks to compress the elastic gasket to form a fluid tight joint between the gasket and the tube and the block; and a tube connected with the second opening of the first mentioned block surrounding the first mentioned tube, one of the tubes being longer than the other.



1,690,471. SPLICE BAR. CHARLES W. BREED, Western Springs, Ill. Filed Feb. 2, 1928. Serial No. 251,254. 6 Claims. (Cl. 238—243.)

1. An unsymmetrical splice bar having the portions above and below the horizontal neutral axis of substantially equal section modulus and the portions to the right and left of the vertical neutral axis of substantially equal section modulus.

---

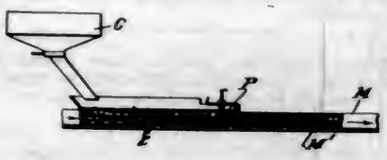


1,690,472. CLEANING MEANS. PAUL BRETON, Bellevue, France. Filed Dec. 22, 1925, Serial No. 76,951, and in France Dec. 31, 1924. 2 Claims. (Cl. 15—10.)

1. A vacuum cleaning apparatus comprising in combination a collecting chamber having curved walls, a suction nozzle communicating with said chamber so as to discharge fluids substantially tangentially to a wall thereof and above the level of the bottom of said chamber, an aspirating conduit making connection substantially tangentially with a wall of said chamber and adjacent the bottom thereof, said conduit being constricted at the point where it communicates with the chamber, and means for applying suction to said aspirating conduit.

---

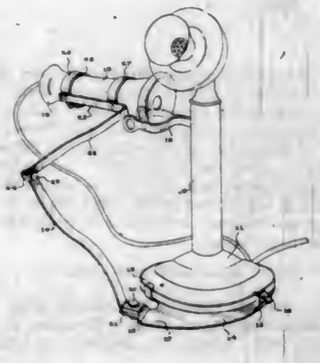
1,690,473. OPERATING MECHANISM FOR CIRCUIT CONTROLLERS. PAUL BROWN, Herndon, Kans. Filed May 10, 1927. Serial No. 190,366. 2 Claims. (Cl. 200—85.)



1. A circuit maker and breaker of the class described comprising a stationary contact, a vertically swinging contact for cooperation with the stationary contact, a bracket

supported below the contacts, a substantially L-shaped lever pivoted at its bend on the bracket, an operative connection between the upper end of the vertically extending arm of the L-shaped lever and the movable contact, and a weight associated with the outer end of the horizontally extending arm of the L-shaped lever for effecting the actuation of the lever to move the vertically swinging contact out-of engagement with the stationary contact.

---

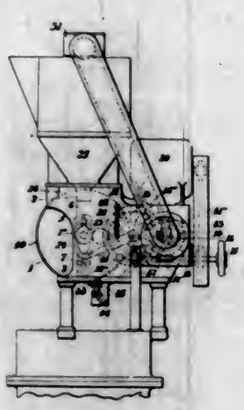


1,690,474. METHOD OF MAKING REENFORCED BLOCKS. LOUIS WILLIAM CAFFERATA, Newark-on-Trent, England. Filed June 15, 1925. Serial No. 37,177. 2 Claims. (Cl. 25—154.)

1. The method of making plaster of Paris blocks, consisting in placing in a mold a buoyant reenforcement and in filling the mold with fluid plaster and keeping the reenforcement submerged until held by the set of the plaster.

---

1,690,475. TELEPHONE-RECEIVER SUPPORT. CLARK H. CARMER, Williamsville, N. Y. Filed May 15, 1925. Serial No. 30,554. 1 Claim. (Cl. 179—147.)



In a support for the receiver of a portable telephone, the combination of a sheet metal base including a main body portion of substantially the configuration of the telephone base, and a foot extending forwardly from and in the same plane as said body portion, said foot having its end raised and offset from the main body portion of the base, and in a horizontal plane parallel thereto, an upright receiver supporting arm having its lower end bent in angular relation to the main body portion and engaging upon said offset end of said foot, and a bolt extending thru the lower end of the arm and said offset portion of said foot, adjustably securing the arm to said base.

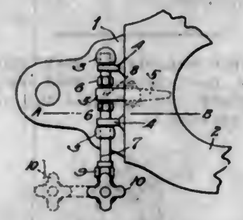
---

1,690,476. APPLIANCE FOR DELIVERING GRANULAR MATERIAL IN MEASURED QUANTITIES BY VOLUME. EJNAR CHRISTIANSEN, Birmingham, England. Filed June 17, 1927, Serial No. 199,557, and in Great Britain June 28, 1926. 11 Claims. (Cl. 221—102.)

1. A machine for delivering granular material in measured quantities by volume, comprising a rotating member having recesses in diametrically opposite sides, pistons forming the bottoms of the recesses, and a link which is located on the outside of the rotatable member and which adjustably connects opposite pistons to vary the capacity of the recesses.

---

1,690,477. DISPLAY DEVICE. DAVID R. COLLINS, Minneapolis, Minn., assignor of one-half to Ray E. Bartholdi, Chicago, Ill. Filed Mar. 25, 1927. Serial No. 178,262. 6 Claims. (Cl. 40—129.)



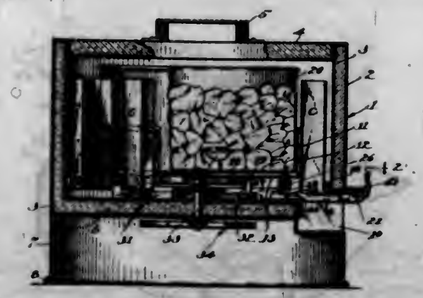
1. An electric display device comprising a circular concaved reflector, a ring disc formed integrally at and extending from the perimeter of said reflector, lighting means fixed in said reflector, a clamp ring corresponding to the ring extension of the reflector, an illuminable display element clamped between said two rings in spaced relation to said lighting means, said display element comprising an outer transparent disc, a like inner disc, a display plate between said transparent discs and carrying illuminable areas of suitable colors visible in daytime and illuminable in the dark.

---

1,690,478. SANITARY FIXTURE. RAYMOND E. CRANE, Kittanning, Pa. Filed Aug. 17, 1927. Serial No. 213,666. 8 Claims. (Cl. 4—7.)

1. A sanitary fixture having a seat shelf and basin and being provided with a seat, a hinge by which said seat is attached to said fixture, a discharge nozzle extending forwardly from the seat shelf of the fixture toward the basin thereof, means for connecting the nozzle to swing the same in an upwardly direction so that it will not interfere with the proper cleansing of the fixture, and means for supplying water to said forwardly extending nozzle.

---



1,690,479. CONTAINER WITH COVER-LIFTING AUXILIARIES. CHARLES J. I. DEVLIN, San Francisco, Calif. Filed Mar. 19, 1928. Serial No. 262,846. 5 Claims. (Cl. 220—60.)

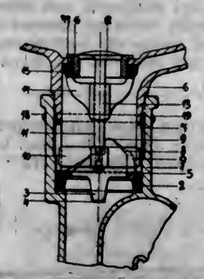
1. A container comprising a cap, a holder normally received within said cap, and means carried by said cap for spacing said holder above a supporting surface, said means providing access to said holder for permitting said holder to be moved toward the supporting surface.

---

1,690,480. SANITARY BUTTER-SLICING MACHINE. JAMES S. DONNELLAN, Los Angeles, Calif. Filed Nov. 22, 1926. Serial No. 149,932. 10 Claims. (Cl. 31—21.)

2. In a butter slicing machine, a container, a cover therefor, said container having an opening in the bottom thereof, a tray removably and rotatably mounted in said container, a pan adapted to contain ice in said tray, a ratchet and pawl mechanism adapted to rotate said tray, means comprising a handle adapted to operate said mechanism, a plurality of open ended, tubular, spaced storage compartments mounted in circumferential marginal relation on said tray, each of said compartments being adapted to house a bar of butter, a butter supporting member resiliently mounted on each of said compartments and having an inwardly extending ledge extending partially across an open end of said compartments, a lug on said member, a cam member adjacent said opening in the container, said lug being adapted to engage said cam member whereby said ledge may be withdrawn from its position across the tubular compartment, said compartments being adapted to be brought into alignment with the opening of said container, a slidable tray disposed over said opening, said second mentioned tray comprising a wedge-shaped ledge and a rectangular ledge, said ledges being adapted to be disposed over said opening, a cutter comprising a thin wire disposed between said ledges, means for reciprocating said tray whereby when one of said ledges is withdrawn, said other ledge will be disposed over the opening, and when said other ledge is withdrawn, the cutter will slice the butter in one of said compartments and said first mentioned ledge will resume its position over said opening beneath the butter, means comprising a resilient member for removing a portion of the butter thus cut from said other ledge and allowing the same to pass through said opening, and a pocket beneath said opening adapted to receive a slice of butter thus cut.

10. A cutter for butter slicing machines comprising in combination a strap, a tray slidable in said strap, a pair of butter supporting ledges on said tray, a cutter comprising a piece of thin wire disposed between said ledges, a strip on said strap, and an ejector attached to said strip.



---

1,690,481. DYEING, PRINTING, OR STENCILING OF ACETYL CELLULOSE OR PRODUCTS MADE THEREWITH. GEORGE HOLLAND ELLIS and WILLIAM OAKLAND GOLDTHORPE, Spondon, near Derby, England, assignors to Celanese Corporation of America, a Corporation of Delaware. Filed Aug. 6, 1925, Serial No. 48,666, and in Great Britain Aug. 14, 1924. 29 Claims. (Cl. 8—5.)

1. A process for the dyeing of materials comprising cellulose acetate which comprises treating said materials with relatively water insoluble organic compounds capable of coloring cellulose acetate, said organic compounds being employed in the form of solubilized modifications obtained by pretreating them with a solubilizing agent comprising a body of oily or fatty characteristics and with at least one auxiliary solvent.

---

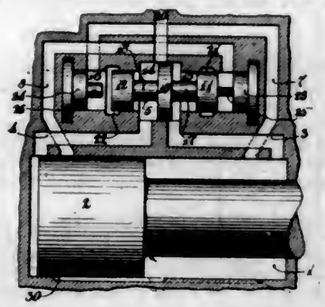
1,690,482. BASIN. CARL FRIEDRICH, Lauchhammer, Germany, assignor to Mitteldeutsche Stahlwerke Aktiengesellschaft, Lauchhammer, Germany. Filed May 28, 1928, Serial No. 281,326, and in Germany Mar. 9, 1927. 4 Claims. (Cl. 4—166.)

1. A basin comprising in combination an exit tube, a basin rotatably connected to said tube, an up and down movable valve for opening and closing the outlet of said basin, and a cam adapted to raise and lower said valve by rotation of said basin.

---

1,690,483. METHOD OF FINISHING FLAT POWDER PUFFS AND IMPROVED PUFF. CAMILLE HENRI FUCHS, New York, N. Y., assignor to The Maurice Levy Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 20, 1926. Serial No. 149,629. 2 Claims. (Cl. 132—78.5.)

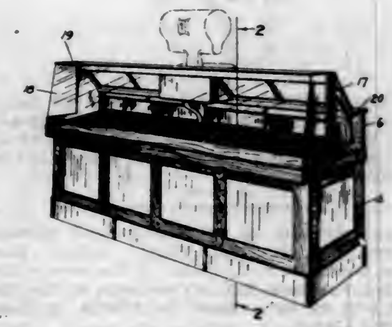
1. The method of finishing a flat powder puff having threads forming loop-like stitches at the periphery thereof, said stitches terminating in three threads hanging



from the bottom face of the puff and a thread hanging from the top face of the puff, which consists in pulling said top thread through the edge of the puff so that each

of the before mentioned four threads hang from the bottom face of the puff, and then causing free ends of said four threads to engage some of said stitches at the bottom face of the puff.

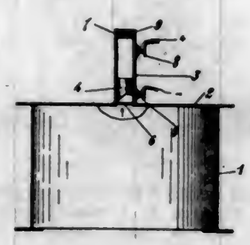
---



1,690,484. MOTOR. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 30, 1920. Serial No. 355,149. 20 Claims. (Cl. 121—28.)

1. A fluid pressure percussive motor comprising a cylinder, a piston therein, a valve chest having differential bores, a three-spool valve therein having an enlarged central spool and end spools of equal diameters, live fluid distribution passages leading to the ends of the cylinder controlled by said central spool, fluid exhaust passages leading to the cylinder at points separated from the ends thereof controlled by said end spools, means for substantially balancing the unbalanced force produced by the action of live fluid upon said middle spool prior to the moment when throwing pressure is transmitted to the valve, and means for entirely overcoming said unbalanced force for throwing the valve.

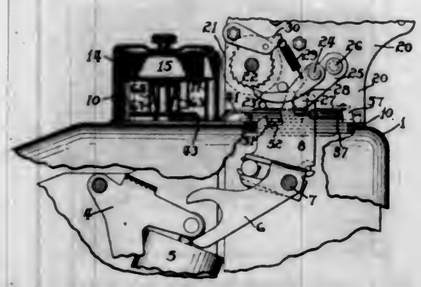
---



1,690,485. REFRIGERATING SHOWCASE. MICHAEL J. GOALSTONE, Denver, Colo. Filed Mar. 9, 1925. Serial No. 14,099. 3 Claims. (Cl. 312—114.)

1. A refrigerator showcase comprising a glass enclosed display compartment of tapering formation, and a tapering insert conforming to the configuration of the adjacent portions of the display compartment and arranged within the contour thereof and extending inwardly from the rear of the same in spaced relation to the floor thereof and open at the top and back to provide an exteriorly open space for a weighing scale.

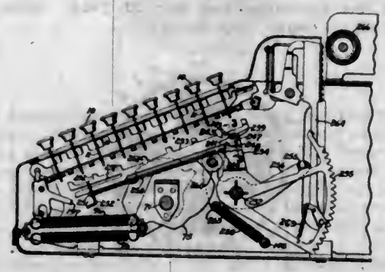
---



1,690,486. DEVICE FOR GIVING WARNING OF FIRE. EDMOND HALF, Paris, France. Filed Sept. 18, 1924, Serial No. 738,432, and in France May 10, 1924. 2 Claims. (Cl. 200—140.)

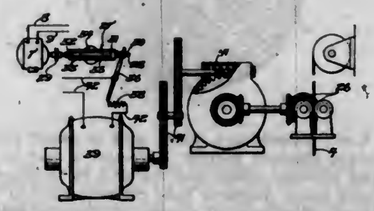
1. In a switch adapted to be operated by a sudden rise of temperature, the combination of a reservoir for air having walls with a high coefficient of thermal conductivity, a tube forming a cylinder in connection with the said reservoir, a slidable plug loosely mounted in the said cylinder, and having its lower end bevelled, means for retaining the plug in the said cylinder, means above the said plug for allowing air to escape to the outside, and contacts adapted to be operated when the plug is moved, substantially as described.

---



1,690,487. ATTACHMENT FOR CALCULATING MACHINES. ALLEN A. HORTON, Plymouth, Mich., assignor to Burroughs Adding Machine Company, a Corporation of Michigan. Filed Dec. 21, 1925. Serial No. 76,912. 13 Claims. (Cl. 197—151.)

1. In combination, a calculating machine having an enclosing casing, an operating means including a member projecting through the casing, a printing mechanism including type bars positioned to move to printing position through an opening in the casing, and an independent self-contained paper and ribbon unit detachably secured to the outside of the casing, said unit including a platen operatively positioned relative to the type bars, operating means for the platen, ribbon spools supporting a type ribbon, and an operating means for the ribbon spools, said operating means for the platen and ribbon spools having portions which are operatively positioned relative to the member projecting through the casing when the paper and ribbon unit is mounted on the casing.



1,690,488. CUSHIONING MECHANISM FOR CALCULATING MACHINES. ALLEN A. HORTON, Plymouth, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Original application filed Jan. 29, 1926, Serial No. 84,616. Divided and this application filed July 8, 1926. Serial No. 121,070. 17 Claims. (Cl. 101—93.)

1. The combination in a calculating machine of a member adapted to be moved and suddenly stopped, a second member connected to the first by a pin and slot connection, a pivoted connecting piece between said members normally urged in one direction by a spring, said connecting piece being connected to the two members so that, as the first member is stopped, movement of the second member relative to the first will turn the connecting piece about the pivot against the action of the spring, said connecting piece also engaging the first member to counterbalance a portion of the weight of the said member.

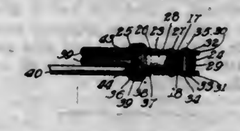
---

1,690,489. AUTOMATIC CONTROL DEVICE FOR ELECTRIC-ARC WELDING APPARATUS. WALTER REGINALD HUME, Melbourne, Australia. Original application filed Sept. 21, 1925, Serial No. 57,744, and in Australia Oct. 9, 1924. Divided and this application filed Dec. 22, 1927. Serial No. 241,021. 5 Claims. (Cl. 219—8.)

1. In electric arc welding apparatus the combination of an electric motor connected into the welding circuit, a centrifugal governor operated by said motor, an electrode feeding mechanism, a second electric motor adapted to drive said feeding mechanism, means for regulating the supply of current to the last named motor, and means interposed between said governor and said regulating means for communicating to the latter the movements produced by the governor in accordance with fluctuations in the current passing through the first named motor, for the purpose specified.

---

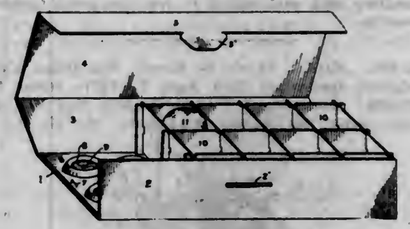
1,690,490. AUTOMOBILE CHASSIS-LUBRICATING SYSTEM. GUS A. JAMERSON, Cincinnati, Ohio, assignor to Max Stern, Cincinnati, Ohio. Filed Feb. 6, 1924. Serial No. 690,940. 5 Claims. (Cl. 184—7.)



1. A lubricator of the character described comprising a tubular body having a circumferential groove in its outer surface and a hole connecting said groove with the bore of said body, a collar mounted on said body, said collar being constructed for the connection thereto of a supply tube and having a hole therethrough providing communi-

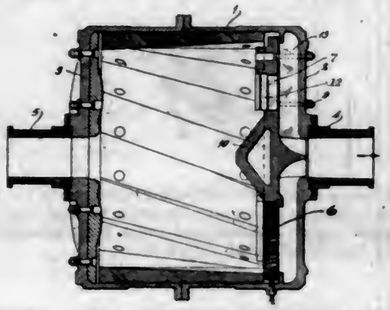
cation between said tube and said groove, means for holding said collar in its operative position on said body, and adjustable means adjacent said collar for regulating the flow of lubricant through said body.

---



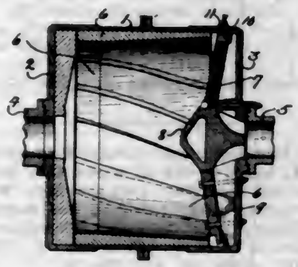
1,690,491. PORTABLE ELECTRIC LAMP. GEORGE C. KNAUFF, Chicago, Ill. Filed June 6, 1927. Serial No. 196,717. 7 Claims. (Cl. 240—52.)

1. In a portable electric light fixture, the combination of a light socket, a clamp for holding the fixture, a clip secured to said light socket, said clip being provided with a pair of legs, spring mechanism intermediate said clip and clamp, said spring mechanism comprising a pin pivotally connected at one end in substantially parallel relation with said legs and secured at its other end to said clamp, and a spring on said pin pressing at one end against said clamp and at its other end against the edges of said legs.



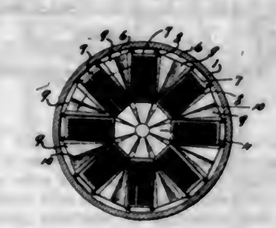
---

1,690,492. EGG CARRIER. MORRIS KOPPELMAN, Brooklyn, N. Y., and WINFIELD H. MAPES, Glen Ridge, N. J., assignors to Holed-Tite Packing, Inc., Wilmington, Del., a Corporation of Delaware, and Mapes Consolidated Manufacturing Company, Wilmington, Del., a Corporation of Delaware. Filed May 11, 1927. Serial No. 190,408. 5 Claims. (Cl. 229—29.)



1. In a device of the character described, a sheet of material adapted to be folded and to form a receptacle for fragile articles having a plurality of sides on opposite sides of the said articles, holders for said articles on one side of the sheet consisting of relatively yielding material having inwardly extending unbroken protuberances of the same material, said foldable sheet of material being relatively stiff and strong as compared with the material of the holders, said holders and foldable sheet being composed of separate pieces of material secured together.

1,690,493. MILL. FRANK E. MARCY, San Diego, Calif. Filed June 7, 1927. Serial No. 197,054. 35 Claims. (Cl. 83—9.)

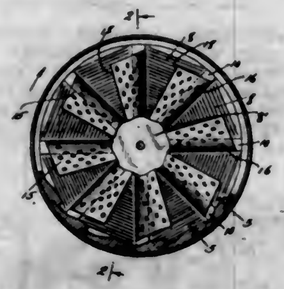


1. A mill comprising a rotatable drum or barrel adapted to receive a load of freely movable reducing bodies and material to be reduced, a feed end and a discharge end for said drum or barrel, a grate adjacent said discharge end, and load-deflecting means adjacent said grate and cooperating therewith for freeing the grate of oversize during rotation of the mill.

1,690,494. MILL. FRANK E. MARCY, San Diego, Calif. Original application filed June 7, 1927, Serial No. 197,054. Divided and this application filed Dec. 28, 1927. Serial No. 243,051. 11 Claims. (Cl. 83—9.)

1. A mill comprising a rotary drum or barrel, inclined grate members adjacent the discharge end, and a member cooperating with said grates to free the grate members of oversize.

1,690,495. MILL. FRANK E. MARCY, San Diego, Calif. Original application filed June 7, 1927, Serial No. 197,054. Divided and this application filed Dec. 28, 1927. Serial No. 243,052. 14 Claims. (Cl. 83—9.)



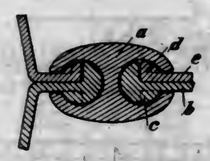
2. A mill comprising in combination a rotary drum or barrel, rectangular grate sections disposed radially of the mill drum adjacent the discharge end thereof, and members of triangular cross-section intermediate adjacent grate sections for clamping the grate sections in place, said clamping members being so disposed that the apices thereof project inwardly of the mill beyond the inner face of the grate sections.

1,690,496. MILL. FRANK E. MARCY, San Diego, Calif. Original applications filed June 7, 1927, Serial No. 197,054, and Dec. 28, 1927, Serial No. 243,052. Divided and this application filed Mar. 21, 1928. Serial No. 263,408. 7 Claims. (Cl. 83—9.)

1. A mill comprising in combination, a rotary drum or barrel, inclined grate sectors adjacent the discharge end of the mill, solid sectors intermediate the grate sectors, a substantially conical member about which said grate sectors and solid sectors are assembled, said solid sectors and said conical member cooperating with the grate sectors to free the grate of oversize.

1,690,497. MILL. CLARENCE G. WILLARD, Denver, Colo., assignor to The Mine and Smelter Supply Company, Denver, Colo., a Corporation of Colorado. Filed June 10, 1927. Serial No. 197,798. 4 Claims. (Cl. 83—9.)

1. A mill comprising a rotary drum or barrel providing a reducing chamber adapted to receive a load of freely movable reducing bodies and material to be reduced, a feed head and a discharge head for said drum or barrel, and means spaced from but adjacent each head of said drum or barrel for effecting lateral movement of the mill load while maintaining the length of the reducing chamber.

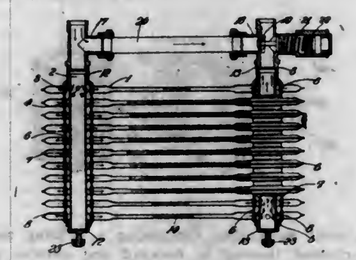


1,690,498. BRACELET EXTENSION DEVICE. NELS T. NELSON, Attleboro, Mass., assignor to J. F. Sturdy's Sons Company, Attleboro Falls, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1928. Serial No. 271,245. 7 Claims. (Cl. 24—71.)

1. An extension device comprising two sections hinged together at one end and adapted to be swung to an end-to-end extended position, a slide operatively mounted in one of said sections, longitudinally spaced means carried by said slide to adjustably receive the end of the strap.

1,690,499. CONNECTING PIECE FOR IRON SHEET PILING. KARL NOLTE, Dortmund, Germany. Filed Sept. 30, 1927, Serial No. 223,127, and in Germany Aug. 22, 1927. 1 Claim. (Cl. 61—60.)

In combination with sheet metal piling composed of sets of similar concavo-convex sections, the sections of one set having at each side edge oppositely extending flanges, and the sections of the other set having at their opposite side edges angular flanges extending in one direction, and shaped to fit between the flanges of a section of the first named set when the sections of the two sets are placed face to face with their concavities adjacent, and connecting pieces for connecting the sections of the first named set when arranged side by side in similar or opposite relation to form a sheet wall, and for connecting the sections of the second set to each other and to the sections of the first set when the sections of the two sets are arranged face to face with their concavities adjacent to form a wall of tubular portions, each connecting piece including a web to extend between adjacent edges of the sections, and provided at each side edge with oppositely extending means to engage outside the flanges of the sections.

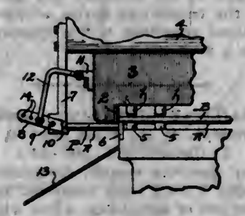


1,690,500. BATTERY TESTER. EDGAR G. PETERS, Cleveland, Ohio. Filed Sept. 12, 1927. Serial No. 218,989. 5 Claims. (Cl. 136—182.)

1. A device of the class described, comprising a plug adapted for application to a battery cell and having a cavity and a portion adapted to extend therebelow into the electrolyte of said cell, said portion having a well opening into said electrolyte and communicating with said cavity, means for inducing an electrolyte rise in said well to a predetermined elevation, a float in said well, a contactor carried by said float, a resistance arranged in said cavity for engagement by said contactor when said float is elevated by said electrolyte rise, and electrical connections arranged to include in a circuit portions of said resistance dependent upon the elevation of the contactor.

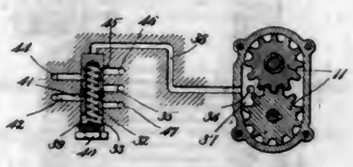
1,690,501. HEAT EXCHANGER. CHARLES HAROLD POTTS, Westminster, London, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Jan. 11, 1928, Serial No. 245,915, and in Great Britain Oct. 8, 1926. 11 Claims. (Cl. 257—245.)

1. A heat exchanger comprising a tier of hollow, shallow, thin metal elements having inlet holes at one end and outlet holes at the other end, an inner ring having radial holes inside each element at each end, an outer ring between the elements of each adjacent pair at each end, complementary annular projections and recesses at the adjacent faces of adjacent rings and engaging one wall of an element between them and means for locating



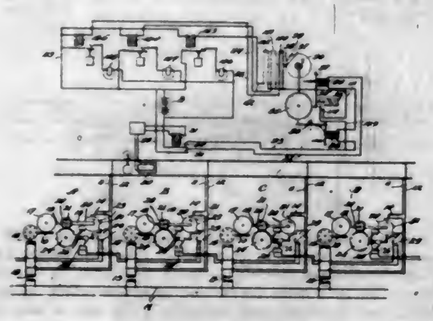
and clamping the parts in position and for providing a succession of annular spaces for enabling the fluid in the exchanger to pass through the elements in series.

1,690,502. OVERHEAD STEEL-PLATE-CONVEYER MECHANISM. GWYNNE RAYMOND, Kansas City, Mo., assignor to Black, Sivalls & Bryson Manufacturing Company, Kansas City, Mo., a Corporation of Delaware. Filed Aug. 1, 1927. Serial No. 209,802. 15 Claims. (Cl. 104—101.)



1. The combination of a main track, a branch track, a switch for connecting said main and branch tracks, a pair of inter-connected devices adapted to travel in tandem relation on said main track, and means actuated by said devices for operating said switch to guide one of said devices onto the branch track.

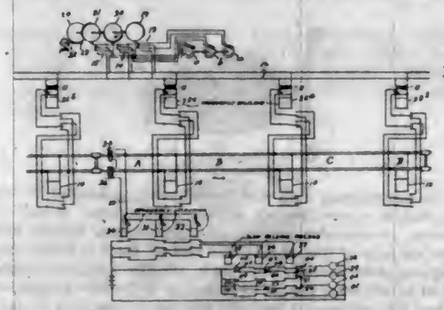
1,690,503. SHEARING MACHINE. ARVID RHODES, Chicago, Ill., assignor to The Railroad Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 22, 1927. Serial No. 207,627. 5 Claims. (Cl. 164—59.)



1. In a machine for shearing metal bars, the combination of a reciprocating head having a shear blade, a bar-support mounted on the machine beyond the leading end of the bar being sheared and movable into and out of position to engage and disengage said leading end of the bar, and connections between said support and head to actuate the support as the blade is operated.

1,690,504. DRILL MECHANISM. THORE R. E. RUNDQVIST, Claremont, N. H., ass'gnor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar 13, 1924. Serial No. 699,110. 19 Claims. (Cl. 121—5.)

1. A drill mechanism comprising a drilling motor, n steel actuated thereby, a forward and reverse positive feeding means therefor comprising but a single reversible pressure fluid actuated motor, an independent pressure fluid actuated rotation motor for said steel, and pressure fluid operated means responsive to the resistance to steel rotation for reversing said feeding means.

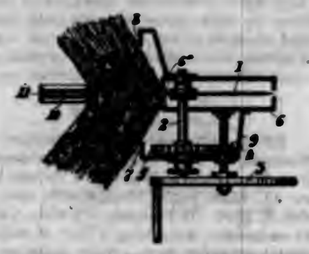


1,690,505. AUTOMATIC TRAIN-CONTROL SYSTEM. EDWARD C. SASNETT, Washington, D. C. Filed Aug. 7, 1925. Serial No. 48,746. 14 Claims. (Cl. 246—63.)

1. A railway signalling system including a stretch of track the rails of which are conductively continuous throughout, means for impressing impulses of alternating energy across the track rails at a plurality of spaced points, said means operating to impress impulses at said points asynchronously, a vehicle have a translating device responsive to the impulses, and governing means controlled by the translating device adapted to give different indications according to the number of impulses transmitted in a fixed time.

1,690,506. RAILWAY SIGNALING. EDWARD C. SASNETT, Washington, D. C. Filed Nov. 20, 1925. Serial No. 70,325. 21 Claims. (Cl. 246—34.)

1. A railway signaling system, comprising a track divided into blocks, a track relay connected across the rails at the entrance end of each block, a line wire, means at a central station for successively and periodically connecting sources of alternating current of different frequencies to said line wire, a selective relay for each block connected to said line wire, said relays being arranged in successive groups with relays of the same group responsive respectively to currents of different frequencies and corresponding relays of the several groups responsive to current of the same frequency, connections from the line wire to the exit ends of the blocks closed independently of the track relays when said selective relays are energized and closed through front contacts of the track relays when the selective relays are deenergized, and signaling mech-

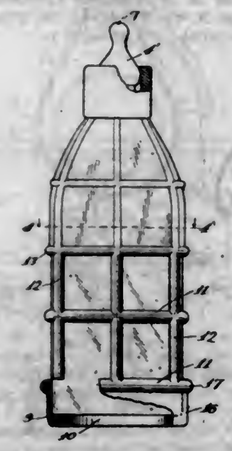


anism connected to the track rails selectively responsive to the frequencies of the currents flowing through the track rails.

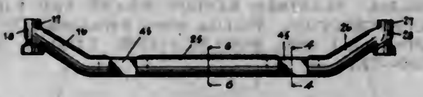
1,690,507. TRAVELING BAG, SUITCASE, AND THE LIKE. BENJAMIN H. SHWAYDER, Denver, Colo. Filed Oct. 13, 1925. Serial No. 62,240. 1 Claim. (Cl. 190—54.)

In a bag or case of the character described, the combination with a flexible body part, of a frame structure comprising a channel member and a frame member, the channel member receiving the portions of the flexible body part at the sides of the opening defined by the frame, and a separate frame covering of flexible material arranged on the exterior of the channel member and covering the frame member and having both its marginal edge portions extended into the channel member and clamped in the channel member and located at opposite sides of the said portions of the flexible body part between the same and the sides of the channel member.

1,690,508. STRAW OR LIKE CUTTING MACHINE. JOSEPH STOKES, Trench, near Wellington, England. Filed June 6, 1927, Serial No. 196,751, and in Great Britain Sept. 30, 1926. 4 Claims. (Cl. 146—116.)



4. A machine for cross cutting bundles or boltings of straw, comprising a knife having a curved periphery mounted to rotate about an axis eccentric to the curved cutting

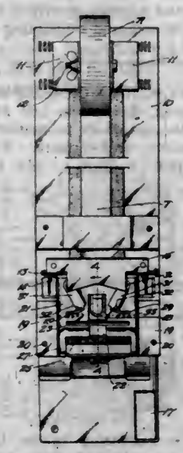


edge, relatively movable jaws for gripping the bundle of straw on each side of the cutter, and a frame on which the rotary cutter is mounted and having a slotted part behind which the cutter lies in the out of cutting position.

1,690,509. BOTTLE PROTECTOR. MARTIN L. THORESON and GRACE A. THORESON, Los Angeles, Calif. Filed Nov. 22, 1926. Serial No. 149,958. 5 Claims. (Cl. 215—11.)

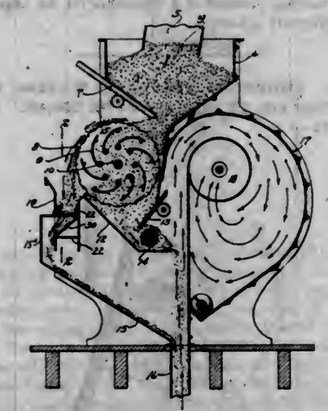
1. The combination with a bottle having an open end an annular bead thereon of a nipple having an inturned annular flange adapted to encircle said bead, a protective covering having an annular reinforcing strip at its upper end extending for an appreciable distance above the upper end of the bottle to prevent fracture thereof, said strip being adapted to press the flange of said nipple directly against said annular bead.

1,690,510. AUTOMOBILE AXLE. BERTIS H. URSCHEL, Bowling Green, Ohio, assignor to Urschel Engineering Company, Bowling Green, Ohio, a Corporation of Ohio. Filed Oct. 5, 1927. Serial No. 224,136. 8 Claims. (Cl. 301—124.)



1. An axle for vehicles comprising a tubular member, the ends of the tubular member turned to extend substantially vertically and tubes fitting the interior of the said turned end portions of the tubular member and extending through the elbow formed at the junction of the main portion of the axle member and the substantially vertical ends.

1,690,511. AXLE FOR SELF-PROPELLED VEHICLES. BERTIS H. URSCHEL, Bowling Green, Ohio, assignor to Urschel Engineering Company, Bowling Green, Ohio, a Corporation of Ohio. Filed Mar. 7, 1928. Serial No. 259,798. 14 Claims. (Cl. 301—124.)

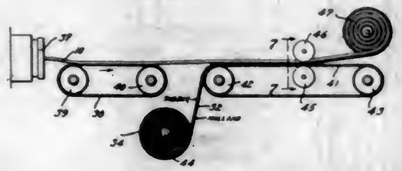


3. An axle for a vehicle comprising a tube having substantially rectangular end portions, bearing members extending through the end portions and the side walls of the ends bent around the outer sides of the bearing members.

1,690,512. GUMMED-TAPE-SERVING MACHINE. WILLIAM A. UTTZ, Sr., St. Louis, Mo., assignor to Perfection Package Sealer Company, Inc., Dallas, Tex., a Corporation of Texas. Filed Nov. 25, 1927. Serial No. 235,671. 15 Claims. (Cl. 271—2.6.)

1. In a machine for dispensing gummed tape, a tape guide including a lower plate over which a tape travels, an upper plate spaced slightly above the lower plate and under which said tape travels, said upper plate having a pair of symmetrically disposed arcuate slots spaced evenly on opposite sides of the center line of movement of the tape, guide arms pivoted concentrically of the slots, and fingers projecting from the free ends of said arms through said slots and depending below the upper plate.

1,690,513. RECLAIMING ATTACHMENT FOR SCALPERS. JOHN J. VARUSKY, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 3, 1927. Serial No. 165,563. 2 Claims. (Cl. 209—234.)



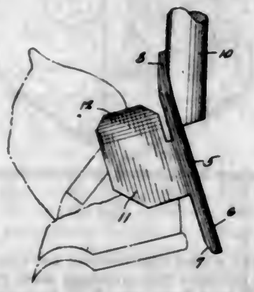
1. A scalping screen continuously movable in a definite direction and provided with openings much larger than required to freely pass therethrough all grains such as wheat, oats, barley and rye, whereby the body of commingled grain will pass freely through said scalping screen but large long objects such as straw, sticks, nails, leaves and pieces of paper will be carried over said scalping screen carrying

therewith a small amount of good grain, in combination with a reclaiming screen receiving the materials carried over by said scalping screen and having openings through which the grain can pass but through which the foreign objects such as straw, sticks, nails, leaves and pieces of paper cannot pass, whereby the grain is saved from the said coarse scalpings, and a grain receiving hopper common to said scalping screen and said reclaiming screen.

---

1,690,514. MANUFACTURE OF RUBBER TIRE TREADS. HENRY A. WALTER, Barberton, and JESSE R. CROSSAN, Wadsworth, Ohio, assignors to Seiberling Rubber Company, a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 180,109. 8 Claims. (Cl. 154—2.)

7. A method for producing rubber tire treads, which consists in forming a relatively thin sheet of rubber in a calender, the sheet being equal in width to a plurality of treads laid side by side, running through the calender with said rubber sheet, a covering of holland of corresponding width, whereby to effect a firm surface union between the rubber and the holland, longitudinally slitting the united sheets into a plurality of tread base strips, forming a series of tread bodies of rubber with the desired cross sectional configuration, and uniting a tread body to the uncovered surface of each of the thin calendered sheets.

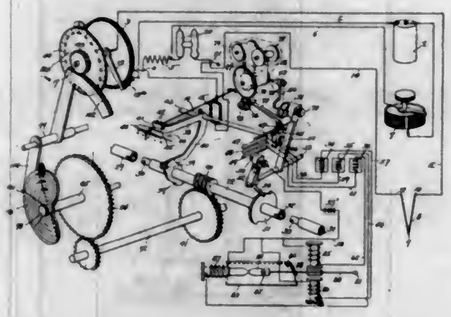


---

1,690,515. COMPOSITION OF MATTER CONTAINING A CELLULOSE DERIVATIVE. HARRY M. WEBER, Montclair, N. J., assignor to Ellis-Foster Company, Montclair, N. J. Filed Oct. 13, 1925. Serial No. 62,293. 12 Claims. (Cl. 134—26.)

1. A composition of matter comprising a cellulose ester and the reaction product of a vegetable oil, an organic acid and a polyhydric alcohol.

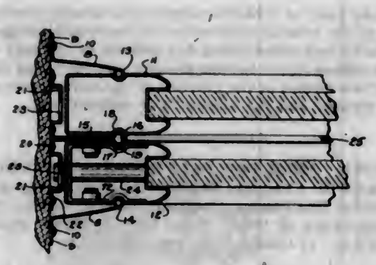
---



1,690,516. SHOEHORN. BARNEY C. WICKERS, Lebanon, Ind. Filed Feb. 10, 1928. Serial No. 253,462. 1 Claim. (Cl. 132—7.)

In a device of the character described, a body portion including a length of sheet metal having its side edges curved upwardly, flanges extending outwardly from the curved side edges of the body portion, the lower ends of the flanges extending inwardly to grip an overshoe to force the overshoe from its position on a shoe, the lower ends of the flanges being spaced from the lower end of the body portion to define a shoe horn, and the upper ends of the flanges being curved outwardly to define a guide.

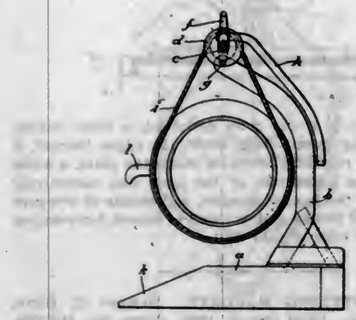
---



1,690,517. ELECTRICAL CONTROLLER AND RECORDER. CHARLES H. WILSON and CUTHBERT J. BROWN, North Pelham, N. Y. Filed Aug. 28, 1924. Serial No. 734,671. 19 Claims. (Cl. 234—11.)

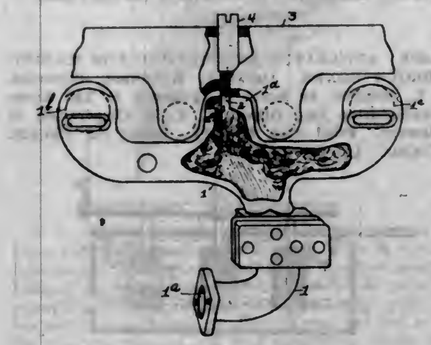
1. In an electrical controller having a galvanometer and its boom and means providing an increasing and decreasing control for a thermic apparatus, the combination of means separate from but controlled by the galvanometer boom for selecting the controlling means to be energized, means for sending operating impulses to each of said controlling means, and means controlled by said selecting means for separately recording the duration of the increasing control and of the decreasing control.

---



1,690,518. FLEXIBLE WINDOW FRAME AND SASH CONSTRUCTION. WILLIAM WOOP, Farmingdale, N. Y. Filed July 1, 1926. Serial No. 119,829. 7 Claims. (Cl. 189—72.)

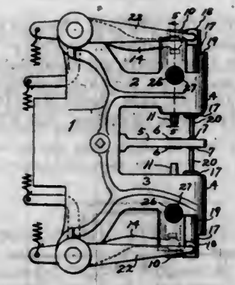
1. In a window frame and sash construction, a longitudinally slidable sash member provided with a longitudinally extending groove in one of its lateral faces, a resilient guide member having a bead formed thereon for engagement with said groove, and means for engaging the opposite face of the sash member.



1,690,519. APPARATUS FOR LIFTING AND TAPPING BUTTS. ANDERS EDVARD ADOLFSSON, Korsnas, Sweden. Filed Sept. 15, 1924, Serial No. 737,902, and in Sweden Apr. 6, 1921. 1 Claim. (Cl. 248—52.)

In an apparatus for tapping butts, the combination of two closed bands, block sheaves supporting the bands, a shaft on which the sheaves are mounted, means for rotating the shaft to rotate the sheaves, bearings for the shaft having supporting parts eccentric to the shaft, a base, an upright secured to one end of the base and provided with means for pivotally supporting the bearings by their supporting parts, a lever secured to the bearings for rotating the shaft whereby a butt resting in the bands can be raised or lowered to or from a position on the base and whereby a butt can be raised to a first position on the base to facilitate the assembly of the bands therewith and to be further moved by the chains and lever mechanism to a tapping position.

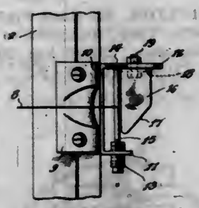
---



1,690,520. FUEL HEATER. IRVING E. ASKE, Duluth, Minn. Filed May 12, 1924. Serial No. 712,654. 1 Claim. (Cl. 257—241.)

The combination of a hydrocarbon fuel supply manifold having an intake port and a dome formed thereon approximately in axial alignment with said intake port, of a heat transmitting rod extending through the wall of said dome into the chamber within said dome, an exhaust manifold for products of combustion, and a heat transmitting rod adapted to contact with the first said rod and extending through the wall of said exhaust manifold into the passage for the products of combustion therein.

---



1,690,521. EYELETING MACHINE. JOSEPH W. BARNA and NATHAN A. THOMAS, Chicago, Ill. Original application filed Dec. 1, 1926, Serial No. 151,913. Divided and this application filed Jan. 20, 1928. Serial No. 248,062. 1 Claim. (Cl. 218—15.2.)

In a duplex eyeleting machine, a head having upper and lower bearing-blocks, guidways in the blocks having lateral discharge passages through the blocks on the same sides, reciprocating tubular punch-spindles in the guideways and having lateral orifices in register with said openings, and inclined guides at the outer ends of said orifices to discharge the punchings through the latter.

---

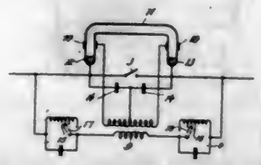
1,690,522. SILK CLEANER. FRANK BAUMAN, Honesdale, Pa. Filed Aug. 17, 1927. Serial No. 213,674. 2 Claims. (Cl. 28—68.)

1. A thread cleaner comprising a substantially U-shaped frame having its ends of uneven length, one of the ends having an opening, a plug threaded into the opposite end, a hardened metal rod mounted at one end in said plug and at the opposite end in the opening formed in the end of the frame, a hardened metal plate having an edge arranged adjacent the rod and having an end portion bent and placed against the inner side of the long end of the frame and means for securing the plate to the frame.

---

1,690,523. METHOD OF FORMING CLOSURES. WILLIAM M. BELL, Portsmouth, Ohio. Filed Sept. 26, 1927. Serial No. 222,157. 5 Claims. (Cl. 29—148.2.)

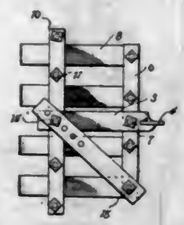
1. A method of forming a closure for sheet metal containers, consisting in providing a ring member from a



length of sheet metal, and simultaneously bending the circular member to define a short flange and a long flange, bending the long flange inwardly towards the short flange

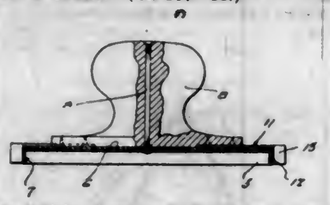
defining a flange receiving space presenting a curved inner surface, and finally threading the inner surface of the short flange.

---



1,690,524. SWITCHING SYSTEM. RUDOLF G. BERTHOLD, Berlin-Siemensstadt, Germany, assignor to Siemens-schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed June 22, 1926, Serial No. 117,793, and in Germany June 27, 1925. 3 Claims. (Cl. 175—294.)

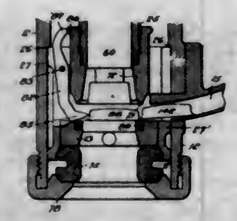
1. The combination of an electric circuit, a main switch in said circuit, an oscillatory circuit having an inductance and a capacity connected in parallel to each other, said circuit being connected in parallel relation to said main switch and adapted to take up the energy of said electric circuit to be broken, a gas discharge tube also connected in parallel relation to said main switch, ignition electrodes upon said gas discharge tubes, and electric connections adapted to excite said ignition electrodes from said oscillatory circuit.



---

1,690,525. CULTIVATOR. ED. BEST, Appleton, and LEWIS R. VINES, Loretto, Tenn., assignors to one-third to J. N. Guthrey, Tennessee. Filed Aug. 31, 1927. Serial No. 216,736. 2 Claims. (Cl. 97—8.)

1. An attachment for cultivators comprising an auxiliary beam, means for securing said beam to a cultivator beam, cross bars pivotally attached to the auxiliary beam, a plurality of ground-engaging elements each pivotally attached to the front cross bar and loosely freely supported by the rear cross bar, and a locking brace pivotally attached to the auxiliary beam adjacent the rear end thereof and pivoted to the front cross bar at one side of the auxiliary beam.

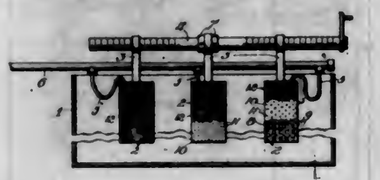


1,690,526. INDIVIDUAL CAKE MOLD. HENRY BILODEAU, Wilkes-Barre, Pa. Filed Oct. 26, 1927. Serial No. 228,789. 2 Claims. (Cl. 107—51.)

1. In an article of the class described, a plate having a wall extending downwardly about the edges thereof, a handle member rotatably mounted above the plate, a knife arranged at the under side of the plate and operatively connected with the handle member, and a pair of scrapers attached to said handle member and arranged for rotation about the outer edge of said wall.

---

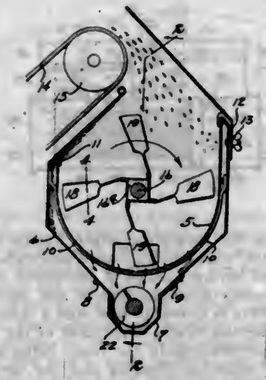
1,690,527. BOTTLING MACHINE. SAMUEL C. BOND, Hollyoak, Del. Filed Oct. 5, 1923, Serial No. 666,758. Renewed Apr. 1, 1927. 7 Claims. (Cl. 226—77.)



1. In a filler head, an axially movable valve casing, a sub-head movable with respect to said valve casing, a throat carried by said sub-head and movable within said valve casing, means within said valve casing to form a seal with said throat, and means operable upon movement of said throat into sealing engagement to form a seal about the neck of a bottle inserted within the filler head.

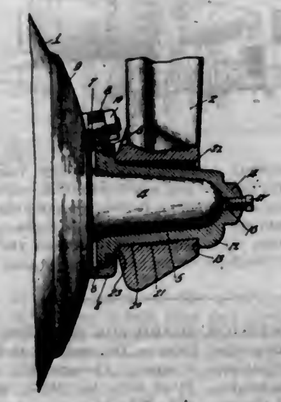
4. In a filler head, a hollow movable sub-head, a throat secured thereto, a pivoted cap stop, and means on said throat for rocking said pivoted cap stop for centering a bottle cap with respect to the axis of the filler head.

---



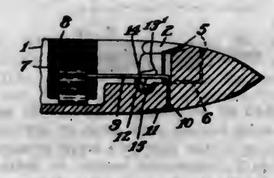
1,690,528. APPARATUS AND METHOD FOR MAKING FIBROUS BOXES. OSCAR P. BUSHNELL, Belleville, N. J., assignor, by mesne assignments, to The Arvey Manufacturing Co., Olean, N. Y., a Corporation of Delaware. Filed Aug. 4, 1924. Serial No. 730,123. 5 Claims. (Cl. 92—56.)

1. Apparatus for the making of battery containers, which comprises a tank for holding wood pulp in suspension, a plurality of formers on which the pulp may be deposited by suction, means by which suction may be applied to the formers to cause the pulp to be deposited thereon, and means for causing the formers to approach toward and recede from each other in a horizontal plane.



1,690,529. GRAIN SEPARATOR. CLARENCE W. CARTER, Minneapolis, Minn. Filed Jan. 27, 1927. Serial No. 164,004. 9 Claims. (Cl. 209—283.)

1. A separator of the kind described comprising a sieve and propelling means operative to propel the stock against the sieve with a to and fro movement in a circular path greater in one direction than in the other so that the stock is given a resultant progressive flow in a given direction.



---

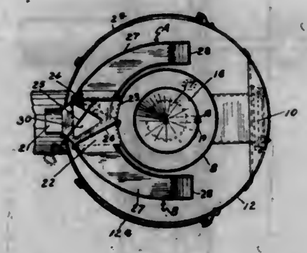
1,690,530. QUICK-DETACHABLE DISK BEARING. HENRY P. CORBIN, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,284. 5 Claims. (Cl. 308—19.)

1. A quick-detachable, agricultural-disk bearing having a cone-shaped member, a socket member in which the cone-shaped member is journalled for rotation, means for holding the socket member on the cone-shaped member but permitting relative rotation of the two, said socket member having a projected lug near its rear end and a shoulder near its forward end, and supporting means having an opening for receiveing the socket member, which opening is provided with a slot to receive the lug, said supporting means having a cam surface adjacent the rear end of its opening so that by passing the lug through the slot and turning the socket member, the cam surface will co-operate with the lug to cause it to force the shoulder into contact with the supporting means to thereby tighten and hold the socket member in the supporting means.

1,690,531. THREAD GUIDE FOR SHUTTLES AND THE LIKE. JEAN B. DAUDELIN, Fall River, Mass. Filed Oct. 18, 1926. Serial No. 142,235. 7 Claims. (Cl. 139—213.)

1. In a shuttle having a weft carrier and a delivery eye, a thread guide disposed between said weft carrier and eye and consisting of a plurality of spaced, flat turns disposed in broadside relation to each other and wound in a direction opposite to the unspooling action of the weft delivering from said weft carrier whereby the weft in unspooling will automatically work itself towards the center of the guide, said guide having a tensioning element around which the weft wraps itself as it enters said guide.

---



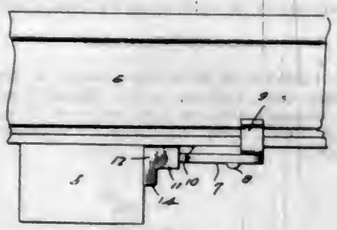
1,690,532. MINE-CAR BUMPER. GLENN E. EDMUNDS, Columbus, Ohio, assignor to The Bonney-Floyd Company, Columbus, Ohio, a Corporation of Ohio. Filed July 28, 1927. Serial No. 208,972. 8 Claims. (Cl. 213—220.)

3. An integral bumper casting for a car of the class described comprising a top web portion and integrally formed side wall brace portions extending upwardly above the plane of said top web portion adjacent the ends of the bumper, said brace portions being provided with means for attaching wall brackets.

---

1,690,533. HEATER CONSTRUCTION. CARL F. EFRAMSON, Minneapolis, Minn. Filed Sept. 19, 1927. Serial No. 220,532. 4 Claims. (Cl. 126—99.)

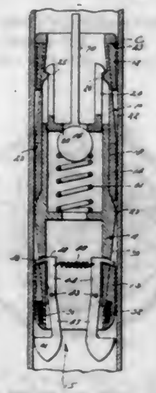
1. The combination with a heating unit, of means for utilizing the heat of air and gases thrown off by the fire of the unit, comprising radiator forming flues extending laterally about the heating unit, and means for deflecting such air and gases from a direct line of draft and through said flues, said means comprising a stationary deflector and a movable damper acting deflector co-operating therewith.



1,690,534. SELF-FLUXING SOLDER AND METHOD OF MAKING SAME. JOHN PEABODY ERICH, Chicago, Ill., assignor to Chicago Solder Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1926. Serial No. 152,398. 4 Claims. (Cl. 113—110.)

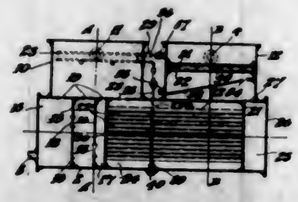
1. The method of preparing a flux cored solder tube, which consists in sealing said tube by compressing the walls of a section of the tube into metal-to-metal contact, and grooving such compressed section to deflect the longitudinal line of the flux core and the line of contact of said compressed walls.

---



1,690,535. RAIL ANTICREEPER. PHILIP JEABOLD GILLEN, Nova, Ohio. Filed Jan. 25, 1928. Serial No. 249,402. 3 Claims. (Cl. 238—324.)

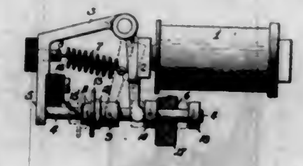
1. A device of the class described comprising a pair of members pivoted together intermediate their ends, one end of each member having a laterally disposed hook like jaw and the other end being disposed with a lateral rod extension, and a block with a pair of diagonal openings extending therethrough at an angle to each other for receiving the rod extensions.



---

1,690,536. PLUG FOR WELLS. STEPHEN I. HARTMAN, Santa Ana, Calif. Filed June 20, 1927. Serial No. 200,050. 5 Claims. (Cl. 166—13.)

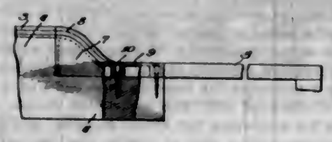
1. A well plug including a body, slip means for holding the body against movement in one direction, slip means for holding the body against movement in the other direction, and means for releasably holding one of the slip means inoperative including a pivotally mounted latch member engaging the said slip means, the mounting of the latch being independent of the slip means.



1,690,537. SEPARATION OF LIQUIDS. HENRY SELBY HELE-SHAW and ALBERT BEALE, London, England. Filed July 19, 1926, Serial No. 123,449, and in Great Britain July 22, 1925. 7 Claims. (Cl. 210—43.)

1. Apparatus for separating mixed liquids of different specific gravities, comprising a vessel perforated along its top portion and having a series of perforated vertical partitions transversely arranged therein and through which the liquid mixture is caused to flow, and a colecting chamber for receiving the lighter constituent of the liquid mixture, the top perforations in the vessel being arranged to open into the collecting chamber and the vertical partitions arranged between the top perforations, the vessel being provided at one end with an inlet for the liquid mixture and an outlet at the opposite end for the heavier constituent of the mixture.

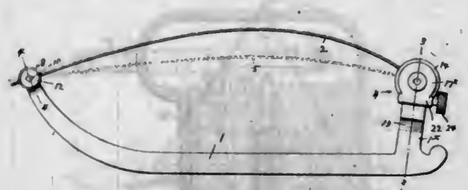
---



1,690,538. MAKE-AND-BREAK DEVICE. FRANK R. HOUSE, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 11, 1920. Serial No. 430,050. 8 Claims. (Cl. 200—87.)

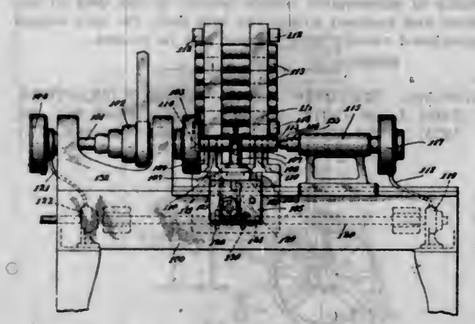
1. An electrical make-and-break device comprising a freely rotatable contact and a non-rotatable contact, means for moving one of said contacts linearly and axially toward and away from the other contact, said contacts being so constructed that upon engagement between the same, rotation of said rotatable contact is caused by said stationary contact.

---



1,690,539. DIVISION GUARD FOR BOWLING ALLEYS. ROBERT E. KENNEDY, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 15, 1927. Serial No. 226,489. 3 Claims. (Cl. 273—54.)

1. In combination with a bowling alley, a gutter, a division running parallel to said gutter, and a terminal member at the forward end of said division composed of more resistant material than said division and constituting a protecting guard.

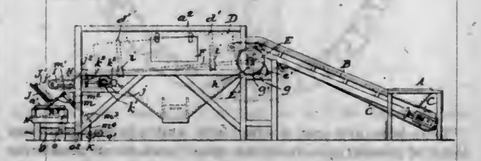


1,690,540. UNIVERSAL CURVE DEVICE. NORMAN E. KLEIN, Medford, Oreg. Filed Oct. 21, 1927. Serial No. 227,754. 8 Claims. (Cl. 33—177.)

1. A device or instrument for the purpose described, comprising a frame, a resilient bendable element, means on the frame for holding said element at one end thereof against lengthwise movement, and element bending means carried by the frame and including a worm gear, turnable in the direction of the length of said element, means for fastening the bendable element to the worm gear, and disposed to cause arching of the bendable elements on turning of the worm gear and a worm meshed with said worm gear and adapted to adjust and hold the latter against casual rotation.

---

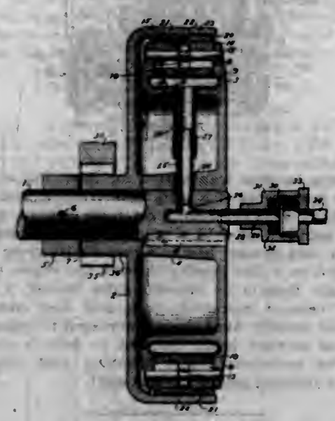
1,690,541. FLUID OR AIR CONTROLLING AND OPERATING DEVICE FOR MACHINE TOOLS OR THE LIKE. ADALBERT R. KUZELEWSKI, New York, N. Y., assignor of one-half to Marburg Brothers, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,834. 12 Claims. (Cl. 82—2.)



1. In a machine tool or the like, a fluid control device consisting of a casing, a fluid inlet and relief for said casing, two valves being mounted movably within said casing, the said valves respectively controlling and timing said fluid inlet and relief, means for adjusting each of the said valves and for locking the said valves in different relative positions, whereby the timing of the said valves may be adjusted independently as desired, substantially as and for the purpose set forth and explained.

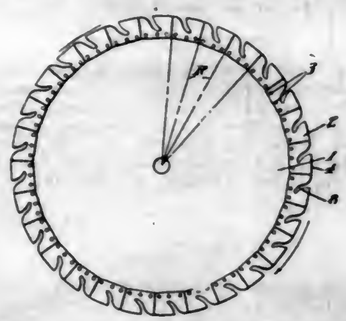
12. In a machine for automatically producing a work piece, a source of fluid being under a greater or lesser than atmospheric pressure, one or more fluid operated devices, one or more fluid control devices, one or more valves arranged rotatively within said control device or devices, one or more mechanisms for successively gripping and releasing said piece or pieces, means being provided, including said fluid and said control device or devices, for automatically operating said fluid operated device or devices the latter in turn operating said mechanism or mechanisms, one or more cams or the like, a shaft revolving only in one direction during a complete working cycle, said valve or valves and said cam or cams being mounted on said shaft revolving with the latter, one or more tool slides, said cam or cams respectively operating said slide or slides, substantially as and for the purpose set forth and explained, and means for adjusting the timing of said valve or valves in relation to said cam or cams, as desired.

---



1,690,542. DISCHARGE LOADING MEANS FOR TILE-CLEANING MACHINES. HARRY D. LILLIBRIDGE, Zanesville, Ohio, assignor to American Eucaustic Tiling Company, Ltd., New York, N. Y., a Corporation of New York. Original application filed July 27, 1921, Serial No. 487,854. Divided and this application filed Apr. 16, 1925. Serial No. 23,594. 3 Claims. (Cl. 226—16.)

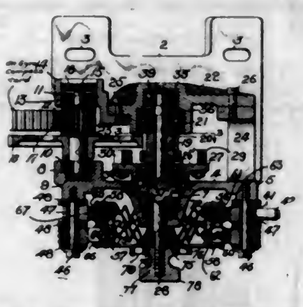
1. In a tile cleaning machine, a delivery mechanism for cleaned tiles embodying a delivery conveyor positioned in loading relation to tile cleaning means, whereby tiles from said cleaning means are deposited upon said delivery conveyor and are free to spread over the surface of said conveyor, a pivoted carrier hung below the delivery end of said conveyor for movement relatively to said conveyor, said carrier having a roller bed for supporting a separate receptacle in loading relation to the delivery conveyor, means for balancing said pivoted carrier and the load imposed progressively thereon by the action of the delivery conveyor in feeding cleaned tiles to the receptacle, and offbearing conveying means positioned for receiving the loaded receptacle upon the depression of the pivoted carrier to substantially the plane of said offbearing conveying means.



---

1,690,543. FLUID-PRESSURE-OPERATED DEVICE. BERT A. LINDERMAN, Muskegon, Mich. Filed Mar. 6, 1924. Serial No. 697,352. 8 Claims. (Cl. 192—88.)

1. A fluid pressure operated device comprising a first member, a second member, a plurality of movable shoes carried by one of said members, the other member having a friction surface engageable by said shoes, an inflatable tube for moving said shoes to effect gripping engagement, a plurality of liners between said shoes and said tube, and means connecting said liners and permitting radial movement thereof upon inflation and deflation of the tube.

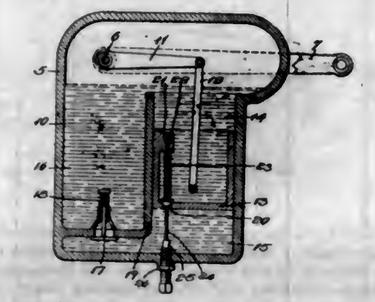


1,690,544. DETACHABLE SAW TOOTH. DANIEL FREDRICK MCGOVERN, Montpelier, Vt. Filed Dec. 6, 1926. Serial No. 152,832. 2 Claims. (Cl. 125—22.)

1. In a rotary saw, a saw blade, and a plurality of saw teeth of generally rectangular shape, each tooth presenting front and rear edges disposed substantially radial to the axis of rotation of the blade and formed respectively with front and rear tongue and groove connections to connect interlockingly with the corresponding edges of the next adjacent teeth and having a pair of downwardly extending flanges adapted to straddle the rim of said saw blade and detachably connect said teeth to said blade.

---

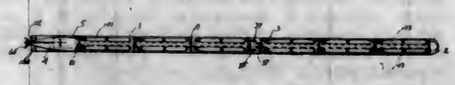
1,690,545. GYROCOMPASS TRANSMITTER. CHESTER B. MILLS, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 9, 1922. Serial No. 593,216. 3 Claims. (Cl. 77—351.)



1. A step by step transmitter for repeating at a distance the movements of a sending instrument, comprising a plurality of fixed contacts, a rotatable element, movable contacts actuated by said element, a pair of fixed stops carried by said element having a rectangular cross section and located on a line passing through the center of rotation of said element on opposite sides thereof, a second rotatable element concentric with said first element, a rectangular member fixed thereon arranged to engage said stops, said member being designed to have a predetermined free movement before engaging said stops and means for rotating said second element.

---

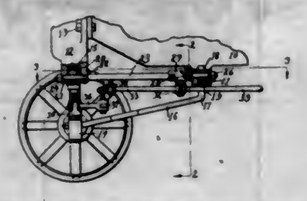
1,690,546. CONTROLLER FOR VEHICLE SPRINGS. FRANK C. MOCK, Chicago, Ill., assignor to Stromberg Research Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1924. Serial No. 730,806. Renewed Apr. 15, 1927. 18 Claims. (Cl. 188—88.)



1. In a fluid controller for vehicle springs adapted to be connected between a body and an axle, the combination of a body of fluid, a container for the fluid, said container having a movable piston, means permitting free movement of the fluid with the piston as the body and axle approach each other and affording resistance to movement of the fluid for reverse movement of the piston as the body and

axle separate, and means for releasing the resistance to movement of the fluid during the last part of the reverse movement of the piston.

---

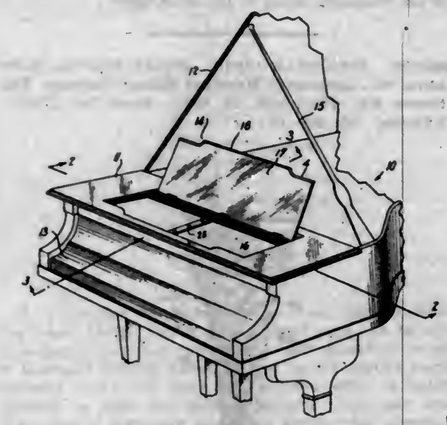


1,690,547. SUBMARINE. GEORGE FRANCIS MYERS. New York, N. Y. Filed Apr. 10, 1917, Serial No. 160,919. Renewed Sept. 26, 1922. Serial No. 590,749. 6 Claims. (Cl. 114—16.)

1. A submergible vessel comprising a hull, and a plurality of submergible vessels carried on the deck of the same and recessed within the said deck, the said second mentioned vessels lying abreast and in tandem.

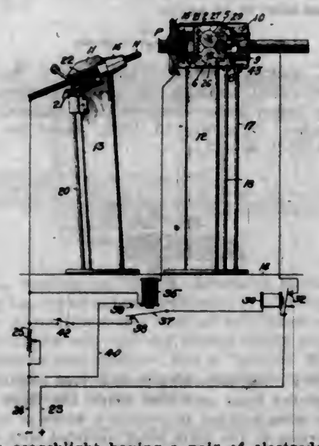
---

1,690,548. STEERING MECHANISM FOR TRACTORS. JOHN LOUIS ORTIZ, Clarinda, Iowa. Filed Dec. 23, 1924. Serial No. 757,662. 8 Claims. (Cl. 280—87.)



1. In combination, a frame member having a downwardly extending lug, said lug being provided with a horizontally extending opening, a radiator supporting frame member provided with a downwardly extending lug, said lug being provided with an opening in alinement with the first said opening, a shaft extending through said opening, an axle member pivotally connected adjacent to the downwardly extending member of said radiator support, said axle being provided with a radius rod, one end of which is pivotally connected to the rear end of said shaft, a sleeve detachably secured to said shaft having a downwardly extending pin, a lever pivotally connected to said pin, means for imparting movement to said lever, a spindle pivotally mounted to each end of said axle, and means operatively connecting said lever and said spindle whereby movement of said lever will impart pivotal movement to said spindles.

7. In a device of the class described, a sleeve having laterally projecting flanges and a downwardly projecting pivot pin, a set screw for each of said flanges, a bell crank lever pivotally connected to said downwardly extending pin, a link for each end of said bell crank lever, and a set screw for said sleeve.

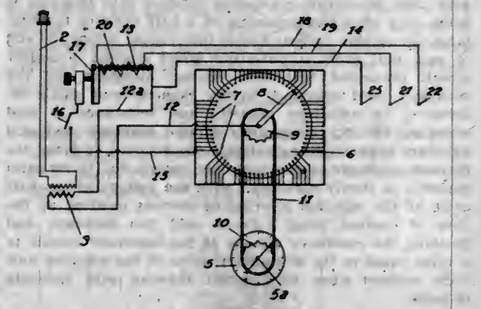


1,690,549. PIANO CONSTRUCTION. HERMAN PALEY, New York, N. Y. Filed Apr. 9, 1928. Serial No. 268,693. 13 Claims. (Cl. 84—180.)

1. A top cover for a grand piano, said cover having an opening therein, and a music rack attached to said top and adapted to cover said opening.

---

1,690,550. SEARCHLIGHT SAFETY MECHANISM. MARTIN L. PATTERSON, Bogota, N. J., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 3, 1924. Serial No. 735,633. 7 Claims. (Cl. 176—51.)



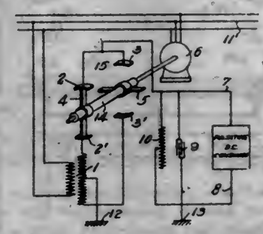
1. In a searchlight having a pair of electrodes, means for feeding each of said electrodes, a main electrical supply for the arc circuit, a circuit-breaker comprising a trip-coil set for a predetermined voltage and shunted across the arc, and means actuated by failure of the feeding means of one of said electrodes whereby the full main line voltage is impressed on said coil to break the arc circuit.

---

1,690,551. DEVICE FOR THE APPLICATION OF ELECTROTHERAPY. FRED P. REED, CHARLES F. STROHM, and CLYDE J. DILLWITH, Stockton, Calif. Filed Nov. 29, 1926. Serial No. 151,355. 1 Claim. (Cl. 174—177.)

Apparatus of the character described comprising means for connection of the apparatus with an alternating electric current supply and including a service plug and a primary circuit therewith, a transformer in the primary circuit, a vibrating inductance coil in the secondary circuit of the transformer, and an interrupter switch interposed in such secondary circuit to provide fixed current interruptions through the inductance coil, and service terminals in the secondary circuit of the inductance coil.

---



1,690,552. VANITY CASE. PHILIP A. REUTTER, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 17, 1926. Serial No. 88,751. 2 Claims. (Cl. 220—35.)

1. In a vanity box, the combination of a body and a cover pivotally associated on a hinge, a housing in the box having a top, an outer peripheral flange engaging within the box body and a depending inner flange spaced from the outer flange, and a catch of spring metal interposed between the flanges and beneath the top of the housing and concealed thereby, and held in position by the spring of the metal.

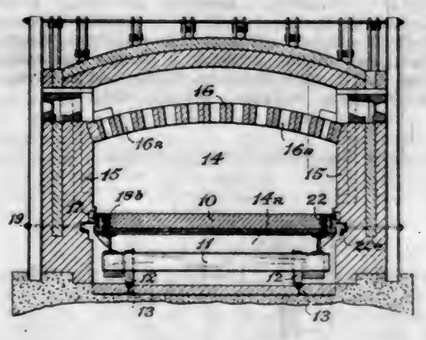
---

1,690,553. ARRANGEMENT CR SYSTEM FOR OPERATING MECHANICAL RECTIFIERS FOR ALTERNATING CURRENT. REINHOLD RÜDENBERG, Berlin-Grunewald, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Dec. 1, 1925, Serial No. 72,608, and in Germany Dec. 12, 1924. 4 Claims. (Cl. 175—364.)

4. In an arrangement for producing and feeding a consumer with pulsating direct current from high tension alternating current, in combination a mechanical rectifier

comprising cooperating stationary and rotating contact elements in circuit with the alternating current supplied, the contact surface arc lengths of said elements being such that the circuit connection between said elements is made only after the beginning of a half cycle of the supplied alternating current and is interrupted before the end of said half cycle, a pulsating direct current consumer circuit connected with said contact elements and the consumer, said consumer having capacity and ohmic resistance, an auxiliary capacity and resistance in said consumer circuit, the capacity of said consumer and said auxiliary capacity being suitably dimensioned to bring the reactance voltage of the consumer circuit due to its total capacity in timely agreement with the voltage of the half cycle of the supplied alternating current existing at the time of contact break between said two elements, and to bring the reactance voltage of the consumer circuit to a value equal to the momentary value of the supplied half cycle voltage when the contact between said elements is made.

---



1,690,554. AIR VALVE. WILLIAM A. RUSSELL, Yonkers, N. Y. Filed Dec. 15, 1921. Serial No. 522,478. 7 Claims. (Cl. 236—62.)

1. In an air valve, the combination of a casing having spaced front and back walls the intervening edge walls being comparatively narrow as compared with the width and height of the front and back walls so as to form a thin flat structure, a valve in the casing, a valve seat for the valve, a support in the casing and means for holding it in position, a float in the casing connected with the valve and guided at one end on the support, a thermostatic strip arranged for free travel co-operating with the float, and means for securing the casing to a radiator.

---

1,690,555. APPARATUS FOR HEAT-TREATING ARTICLES. WILLIAM L. SCHULENBERG, Dunkirk, N. Y. Field Feb. 15, 1927. Serial No. 168,297. 5 Claims. (Cl. 263—28.)

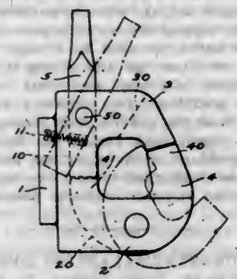
1. In a furnace, or the like, the combination of a chamber member, and a hearth member movable in said chamber member; one of said members comprising a hollow beam having a trough like pocket, the other member comprising a beam having a trough like pocket, and a filling of loose, comminuted, heat insulating material in said pockets; each of said beams having a finage portion adapted to project into the insulating filling of the other beam.

---

1,690,556. ICE-CREAM CONE. JOSEPH SHAPIRO, Baltimore, Md., assignor to Maryland Baking Company, Baltimore, Md. Filed Sept. 24, 1927. Serial No. 221,784. 5 Claims. (Cl. 99—10.)

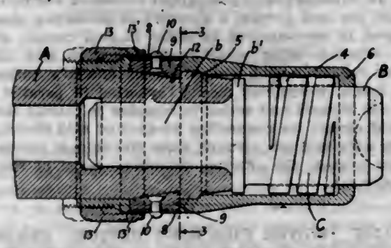
1. A molded edible pastry ice cream cone of the type having a bowl and an integral conical stem or handle portion, characterized by the provision of a plurality of parallel ribs two of which are tangent to the bowl at the mold line, and intermediate ribs extending across the junction of bowl and stem at an angle.

---



1,690,557. SAFETY RAZOR. MARGARET J. SMITH, Los Angeles, Calif., assignor, by mesne assignments, to Western Safety Razor Company, Los Angeles, Calif., a Corporation. Filed May 19, 1923. Serial No. 640,096. 1 Claim. (Cl. 30—12.)

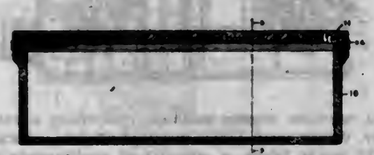
In a safety razor, a backing plate curved lengthwise and having parallel front and rear edges, the front edge of said plate being notched to provide a series of teeth, the central portion of the plate being provided with an aperture, a flexible blade adapted to overlie said backing plate and having its cutting edge positioned above and slightly to the rear of the forward ends of the teeth on the backing plate, said blade having an aperture that is adapted to coincide with the aperture in said plate, a top plate adapted to overlie said blade with its front edge positioned slightly to the rear of the cutting edge of the blade, a threaded shank projecting from the under side of said top plate through the coinciding apertures in the blade and backing plate, a handle having a threaded recess that receives said threaded shank, the rear edges of said back plate and flexible blade coinciding with each other and being provided with coinciding notches, lugs depending from the rear edge of the top plate, which lugs are adapted to occupy the coinciding notches in said backing plate and blade, and the outer faces of which lugs lie flush with the outer coinciding edges of the back plate and flexible blade.



1,690,558. TRAILER HITCH. EARL B. STALEY, Seattle, Wash. Filed Jan. 18, 1927. Serial No. 161,763. 4 Claims. (Cl. 280—33.15.)

1. A coupling device for vehicles, comprising a shrouding frame having two separated lower jaws and an upper jaw spaced above and opposite the ends of said lower jaws, a U-shaped holding finger pivoted by its central portion between said lower jaws and adapted when in holding position to close the opening between lower and upper jaws, and a vertically positioned locking bar pivoted in the upper part of the shrouding frame, with its upper end projecting to form an operating handle, and movable into position to engage and to free the upper face of the inner end of the holding finger.

---



1,690,559. TOOL RETAINER. EDWARD W. STEVENS, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1926. Serial No. 94,684. 6 Claims. (Cl. 121—32.)

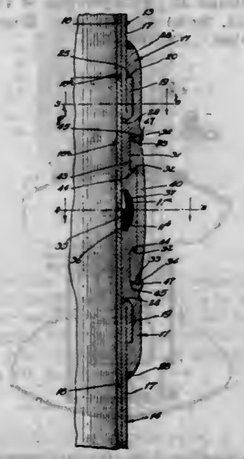
1. The combination with a percussive machine and a working tool to be actuated thereby, of a retainer for releasably maintaining said tool on said machine said retainer engaging said tool and having spring pressed members engaging said machine, and a threaded member projectable over said first named members to prevent releasing movement of the latter.

---

1,690,560. BURIAL VAULT. MURRAY E. STOW, Plainfield, N. J. Filed July 30, 1923. Serial No. 654,582. 8 Claims. (Cl. 72—7.)

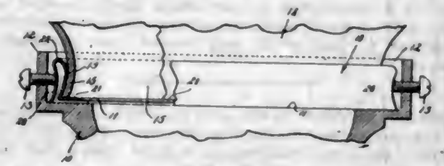
1. In a burial vault a cover member supported directly on the body member, and separate means for sealing said members together, comprising a vertical groove between said cover and body with semi-circular cut-outs at the base of said groove in the body flange and at the head of said groove in the cover flange, a horizontal groove connected to the head of said vertical groove and having rectangular cut-out portions in the cover and body rims contiguous to each other, a cover flange rigidly secured to said cover over said horizontal groove and plastic material sufficient to exactly fill said vertical and horizontal grooves.

---



1,690,561. BUTTON, STUD, OR THE LIKE. ELLEN STURTON, Mapperley, Nottingham, England. Filed Nov. 22, 1927, Serial No. 235,006, and in Great Britain Nov. 22, 1926. 3 Claims. (Cl. 24—90.)

1. A button composed of two parts adapted to be connected together in a readily detachable manner, one part being formed with a reduced shank projecting therefrom, a press-stud fastener for connecting together the said two button parts, said fastener consisting of readily engageable and separable stud and socket elements, one of the fastener elements being embedded in the projecting shank of the one button part and the second fastener element being embedded in the other button part, the last said button part being arranged to engage with the end of said shank surrounding the fastener part which the shank carries when the two parts of the button are united and such parts being held spaced apart by the shank portion.



---

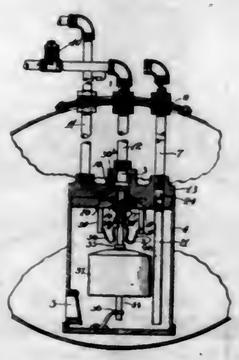
1,690,562. STOVEPIPE-CASING COUPLING. OLIVER C. TROUT, Los Angeles, Calif., assignor, by mesne assignments, to Los Angeles Manufacturing Company, Inc., Los Angeles, Calif., a Corporation of California. Filed June 13, 1925. Serial No. 36,841. 10 Claims. (Cl. 285—129.)

1. In a coupling for casing, the combination of: a pair of flanges, said flanges being secured to ends of casing members; a collar for securing said flanges together; and an annular lip formed on each of said flanges, said lips being adapted to engage said collar, thus securing same in place.

1,690,563. GLOBE-MOUNTING RING. WESTERN UNDERWOOD, Los Angeles, Calif., assignor of one-half to H. H. Walker, Los Angeles, Calif. Filed Dec. 26, 1923. Serial No. 682,600. 2 Claims. (Cl. 240—135.)

2. A single body of metal shaped to form a resilient split ring for use in connection with a globe and holder therefor, the ring including two spaced flange like parts, one within the other, and having their upper edges connected together, one adapted to be held by the holder and the other adapted to hold the globe, the globe holding part having an inwardly extending flange to support the globe.

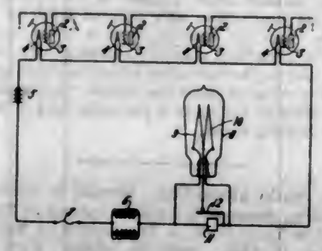
---



1,690,564. SPIRAL FILTER. MARSHALL H. WARD, Brooklyn, N. Y., assignor to Motor Improvements, Inc., Newark, N. J., a Corporation of Delaware. Filed Feb. 4, 1927. Serial No. 165,768. 7 Claims. (Cl. 210—183.)

1. A spacer for a filtering unit of the type described comprising a reticulate strip of thin metal, said strip being laterally slit at intervals to render it substantially non-resilient longitudinally.

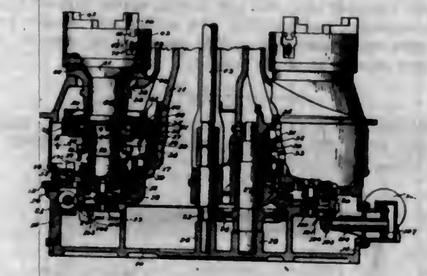
---



1,690,565. FUEL-FEEDING DEVICE FOR INTERNAL-COMBUSTION ENGINES. LEONARD H. WHEELER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 31, 1923, Serial No. 642,422. Renewed Sept. 28, 1928. 4 Claims. (Cl. 158—36.)

1. A fuel feeding device for internal combustion engines and the like, comprising in combination with a main fuel supply tank at a lower level than the engine carburetor, a relatively small container positioned with its fuel-receiving cavity extending above the low liquid level of the main supply tank and connected for fuel inflow from the lower part of said main supply tank to the lower part of said container; a fuel conduit leading from the lower part of the container for supplying the carbureter; a conduit from a source of super-atmospheric pressure connected with the upper part of the cavity of said container; a conduit from the upper part of the container cavity leading to the engine intake, whereby suction may be operative for producing sub-atmospheric pressure in said container; valve means operated by change of level of the liquid in the container for alternating the dominance of super-atmospheric pressure and said sub-atmospheric pressure, for permitting the container to fill from the main supply tank by gravity and atmospheric pressure in said main supply tank during the dominance of sub-atmospheric pressure in the container, and to cause the container to be discharged toward the carbureter during the dominance of super-atmospheric pressure.

---

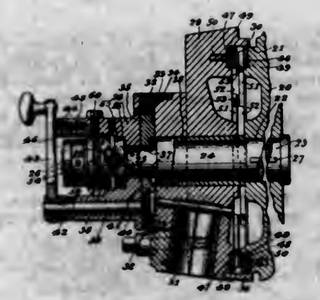


1,690,566. CURRENT-BALLASTING DEVICE. ARTHUR WILLIAM ZIEGLER, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 5, 1925. Serial No. 60,476. 4 Claims. (Cl. 171—312.)

1. In combination, an electrical circuit, a source of potential for said circuit, a plurality of ballasting elements adapted to be connected in series in said circuit, one of said elements being normally connected in said circuit, means for increasing the range of effective ballasting, said means comprising means connected in parallel with said one element and acting in response to voltage changes in said circuit for connecting another of said elements in series with said one element when the voltage across said circuit exceeds the effective ballasting range of the said one element.

---

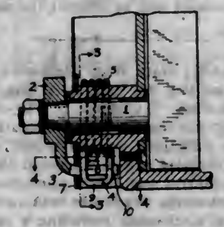
1,690,567. POWER CHUCKING DEVICE. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 12, 1923. Serial No. 680,180. 23 Claims. (Cl. 29—38.)



1. A multiple spindle machine, comprising a rotatable carrier, rotary work tables mounted thereon, chuck jaws on said rotary tables, a plurality of continuously driven chuck operating means mounted on said carrier individual to each work table and movable with said carrier co-axial with each of said respective work tables, and clutch means mounted on said carrier for each of said operating means adapted to be actuated at any point in the rotation of the carrier to connect said operating means to operate the respective chuck jaws.

10. A multiple spindle machine, comprising a carrier, means for rotating said carrier, rotary work tables mounted thereon, means for rotating said tables, means adapted to disconnect said work table driving means at a predetermined point of the rotation of the carrier, and adapted to connect the same after a predetermined interval constituting a work removing and replacing interval, forward and reverse chuck operating means for each table adapted to open and close said chuck jaws, a plurality of manually actuated means mounted on the carrier individual to each table for operatively and selectively connecting said forward and reverse chuck operating means to open and close said respective chuck jaws during said interval and at any point in the rotation of the carrier, and means for continuously driving said chuck operating means.

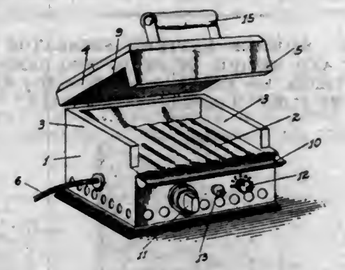
---



1,690,568. TURRET HEAD FOR MACHINE TOOLS. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 29, 1925. Serial No. 40,174. 7 Claims. (Cl. 29—49.)

1. In a machine of the character described, a head support including a stud, a head rotatably mounted on said stud, cooperating locking means carried by said support and head, means for moving said head longitudinally upon the stud to engage and disengage said locking means, and toggle means adapted to maintain the locked relation of said means under pressure in said engaged position.

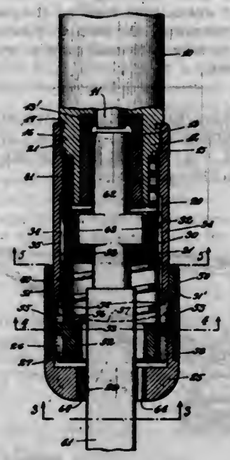
---



1,690,569. OSCILLATOR SPRING. LESLIE F. CURTIS, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Feb. 8, 1928. Serial No. 252,731. 7 Claims. (Cl. 171—209.)

1. A resilient member comprising a helical spring having its ends disposed transversely across the helix.

---



1,690,570. ELECTRIC BROILER. HARVEY O. DALBEY, Sr., Oakland, Calif. Filed Apr. 25, 1927. Serial No. 186,256. 3 Claims. (Cl. 53—5.)

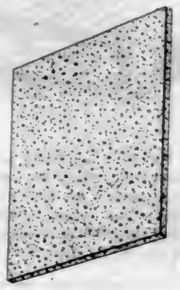
1. An electric broiler comprising a main body having a top plate, an upstanding flange on two sides and the back of the plate, a lid hinged to the body to rest on the flanges and having a depending flange to close the front open space between the side flanges when the lid is closed, and heating elements in the plate and lid.

---

1,690,571. TOOL AND TOOL RETAINER. JOHN SHERMAN, Donaldson, New York, N. Y. Filed Nov. 24, 1923. Serial No. 676,742. 14 Claims. (Cl. 131—32.)

1. The combination with a barrel containing a reciprocatory hammer and a tool to be driven by said hammer, of a tool retainer secured to the barrel and having a relatively strong spring tending to urge the tool toward the hammer, and a relatively weak spring tending to urge the tool away from the hammer.

---

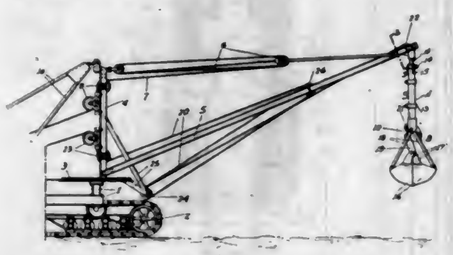


1,690,572. METHOD FOR IMPARTING A LINENLIKE EFFECT TO COTTON. HULDREICH EGLI, Arbon, Switzerland, assignor to Aktiengesellschaft Seeriet, Arbon, Switzerland, a Corporation of Switzerland. Filed Jan. 2, 1926. Serial No. 79,032. 3 Claims. (Cl. 8—20.)

1. Process for producing permanent linenlike effects in cotton goods, which comprises taking for treatment cotton goods (yarns and webs) constituted of threads whose fineness does not exceed English yarn No. 60, and sub-

jecting such goods to the action of sulphuric acid of from about 49° to 50½° Bé. for a period of not less than about four minutes, then washing the goods and thereafter subjecting the same while under tension to a treatment with caustic alkali of about 15° Bé. at ordinary temperatures.

---



1,690,573. STORAGE-BATTERY SEPARATOR ELEMENT AND METHOD OF PRODUCING SAME. NATHAN FALLEK, Los Angeles, Calif. Filed May 4, 1925. Serial No. 27,689. 4 Claims. (Cl. 136—144.)

1. The herein described method of producing storage battery plate separator elements, which consists in producing a pulp composed of pulverized vegetable fibre and water, boiling said pulp, then washing said pulp to remove all dirt and impurities, then subjecting the cleansed pulp to the direct action of steam, then treating the pulp with a soda solution, then rewashing the pulp to remove all traces of soda and then mixing with said pulp a small quantity of pulverized rubber.

---

1,690,574. DREDGER-BUCKET MOUNTING AND OPERATING STRUCTURE. JOHN E. FUNK, Stockton, Calif. Filed Feb. 8, 1927. Serial No. 166,680. 11 Claims. (Cl. 212—425.)

1. In a dredger, a boom, a bucket therebelow, said bucket comprising opposed grabs pivoted together for opening and closing movement, rigid connection means between the boom and bucket and supporting the latter in suspended and definitely spaced relation to the boom, means for closing the grabs including a cable to be pulled, and connections between the cable and boom for causing such pull to exert a positive downward pressure on the boom and bucket.

---

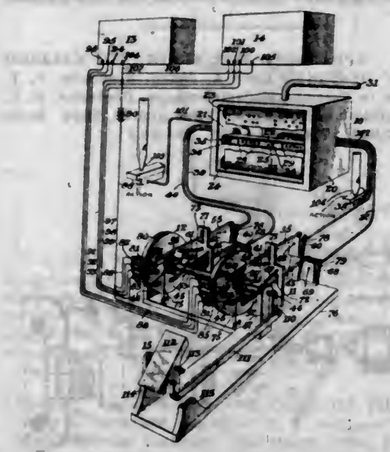
1,690,575. MOUNTING FOR INDICATING INSTRUMENTS FOR AUTOMOBILES. PHILO M. GELATT, La Crosse, Wis., assignor, by mesne assignments, to National Gauge & Equipment Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 19, 1923. Serial No. 675,640. 3 Claims. (Cl. 180—90.)

1. In an instrument mounting for an automobile instrument board, a casing having a closed back with a plurality of perforations for bearings and an open forward end, a rim member secured to said open end having an inner forwardly extending edge, an insertable dial plate member, and an insertable transparent member, securing devices for removably clamping said insertable members against said

inner edge of said rim member, the said inner edge of said rim member being inserted through an opening formed in said instrument board, and means for clamping said casing against the instrument board whereby the rim member will be held against the inner face of the board with the inner edge thereof projecting beyond said board.

---

1,690,576. INVENTORY. FLOYD O. GOODMAN, Lewiston, Idaho. Filed Oct. 10, 1927. Serial No. 225,094. 7 Claims. (Cl. 116—133.)



2. In an inventory comprising a multitude of dials, a dial having numbered graduations, the numbers thereof consisting of a unit numeral suffixed with ciphers, and arranged radially with its unit numeral disposed nearest the center, and provided with an expansible arrow rotatably mounted on said dial and adapted to expose the desired numerals of each number and to conceal the undesired.

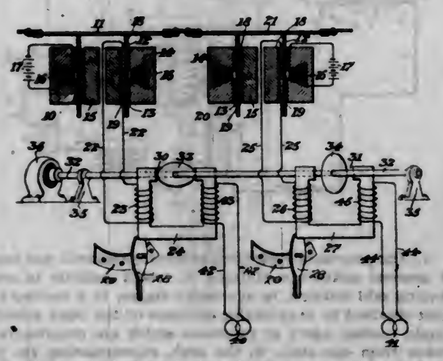
---

1,690,577. ORGAN. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Dec. 12, 1922, Serial No. 606,373. Renewed Mar. 23, 1928. 5 Claims. (Cl. 84—88.)

2. In a musical instrument, the combination with automatic means for producing musical sound, a swell motor for varying the intensity of sound emitted from the instrument, automatic control mechanism controlled by the automatic player mechanism to actuate said swell motor, said automatic control mechanism including a rotatable shaft, a pair of ratchet wheels loosely mounted thereon, a rotary selector element loosely mounted on the shaft and operatively connected to said ratchet wheels, containing elements cooperating with said selecting element and included in the circuit of the swell motor, a pawl for each of the ratchets and bellows for actuating each pawl, and

additional control mechanism movable at the will of an operator for modifying the relative action of said contracting elements and rotary selector.

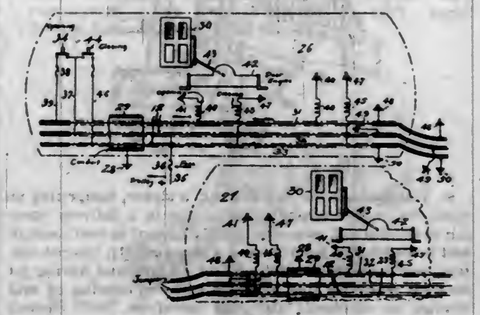
---



1,690,578. SUBMARINE SOUND RECEIVER. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Mar. 14, 1918. Serial No. 222,422. Renewed Oct. 4, 1924. 11 Claims. (Cl. 114—25.)

1. The combination with a movable body, of means for maintaining said body submerged at a predetermined depth while it is being towed through water, said means including a propeller arranged to be rotated as a result of the movement of said body through the water.

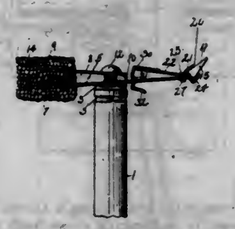
---



1,690,579. SYSTEM FOR THE PRODUCTION OF AND DETECTION OF COMPRESSIONAL WAVES. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Oct. 3, 1918. Serial No. 256,687. 5 Claims. (Cl. 177—386.)

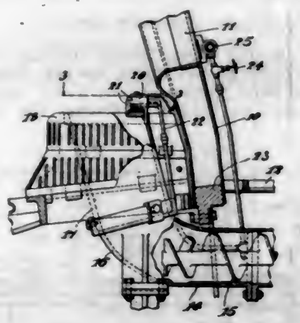
1. The method of producing signal waves which consists in generating a plurality of alternating magnetic fields of force, varying the reluctance of the paths of the magnetic fields periodically to maintain a predetermined phase relationship among the amplitude variations of said plurality of magnetic fields, producing from said magnetic fields a plurality of series of electrical oscillations respectively by induction, and utilizing said electrical oscillations to produce a plurality of series of sound waves respectively.

---



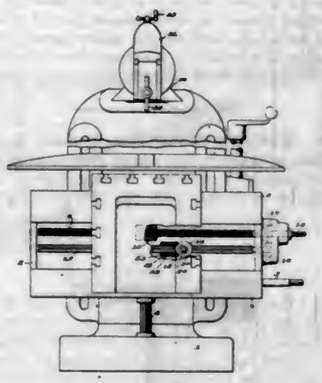
1,690,580. MEANS FOR PROTECTING ELECTRICAL LINE CONDUCTORS. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed July 3, 1924. Serial No. 723,962. 2 Claims. (Cl. 175—294.)

1. In a system of the type described, the combination of electrically operated power devices, a plurality of insulated conductor cores within a conduit, one of said cores being normally energized from one side of a power source the other side of which is grounded, the others of said cores being connected to said electrically operated power devices, and a conducting grounded covering encasing each of said insulated conductor cores to prevent untimely operation of said power devices by reason of the occurrence of a short circuit between said cores one on the other by shunting any short circuit currents caused thereby through said grounded coverings back to the power source, and means connected to said normally energized core for permanently opening the circuit when said short circuit occurs.



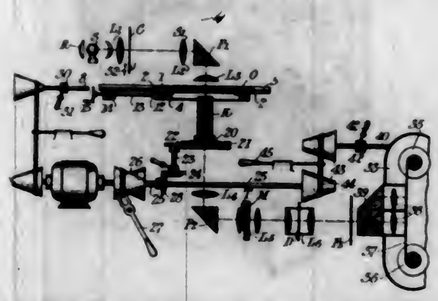
---

1,690,581. WINDOW CLEANER. CHESTER A. HOFF, Akron, Ohio, assignor to The Akron Lamp Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 10, 1927. Serial No. 174,209. 1 Claim. (Cl. 15—121.)



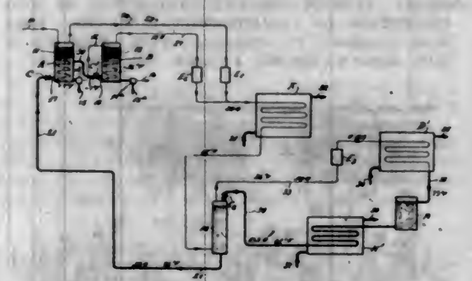
A device for the purposes set forth comprising, a stationary plate having a jaw upon its outer end, a plate pivoted intermediate its ends upon the stationary plate, a jaw upon one end of the plate adapted to cooperate with the first named jaw to clamp a wiper strip, and a secondary jaw upon the other end of pivoted plate adapted to cooperate with the stationary plate to hold a locking strip or wedge for securing the first-named jaws in clamping position.

1,690,582. STOKER. ANDREW M. HUNT, New York, N. Y., assignor to Standard Stoker Company, Incorporated, a Corporation of Delaware. Filed Jan. 27, 1925. Serial No. 5,026. 4 Claims. (Cl. 110—101.)



1. The combination of a fire box, a stoker, comprising an upwardly curved conduit terminating in a delivery opening in the fire box, means for supplying coal to said conduit, and a distributor head having a downwardly tapered bottom, positioned at the top of said conduit and having jet forming means in line with the delivery opening of said conduit to distribute the coal therefrom, said conduit having throughout its length an expanding unobstructed cross-sectional area so that it flares toward its outlet.

1,690,583. FEED CONTROL FOR SHAPING-MACHINE WORKTABLES. HUGO W. JACOBSON, Arlington, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Apr. 2, 1925. Serial No. 20,127. 3 Claims. (Cl. 90—38.)



1. A shaping machine combining a frame; a reciprocating ram; a normally stationary cross head secured to the frame beneath the ram; a work table movable horizontally on said cross head; a feed screw rotatably but non-translatably journaled in said cross head, said screw being provided at one end with means for effecting manual rotation thereof; a non-rotatable nut carried by said work-table and having a threaded connection with said screw; a single purpose shaft rotatably and non-translatably journaled in said cross head parallel with said screw; a spur gear connection between said shaft and said screw; a pair of mating bevel gears carried by said work-table, one of said gears having a spline connection with said single purpose shaft; an operating shaft rotatably journaled in said table transverse to said single purpose shaft and connected to the other of said bevel gears; and manual means for rotating said operating shaft from the front end of said work-table.

1,690,584. APPARATUS FOR PRODUCING KALEIDOSCOPIC DESIGNS. LOYD A. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 21, 1924. Serial No. 707,900. 7 Claims. (Cl. 88—24.)

1. An instrument comprising means for supporting a color screen, two separated design carrying members, means for projecting light in focus from such color screen and each of said design carrying members to a screen, a kaleidoscopic prism mounted in the path of light from one of said design members, certain of said elements being movable, a motion picture camera for recording the images so projected and interconnected means for simultaneously varying the images projected through the kaleidoscopic prism by movement of such elements and for operating the motion picture camera.

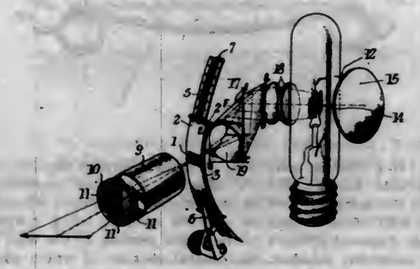
1,690,585. PROCESS FOR TREATING GASES BEARING GASEOUS SYNTHETIC AMMONIA. WALTER H. KNISKERN, Syracuse, N. Y., assignor to Atmospheric Nitrogen Corporation, Solvay, N. Y., a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,677. 10 Claims. (Cl. 183—119.)

1. The process of liquefying synthetic ammonia gas from a gaseous mixture containing it, which consists in subjecting said mixture, in successive stages, to a cooling action obtained by evaporating portions of the same volatile liquid cooling agent at pressures which are progressively lower from one stage to the next, recompressing the resulting vapors of such cooling agent to the same pressure, condensing such compressed vapors to liquid form, and returning such liquid to the evaporating stages.

1,690,586. COLLAPSIBLE PAPER CUP. WILLIAM J. MAIN, Westport, Conn., assignor to Charles Errett, New York, N. Y. Filed Jan. 26, 1924, Serial No. 688,672. Renewed Mar. 27, 1928. 4 Claims. (Cl. 229—53.)

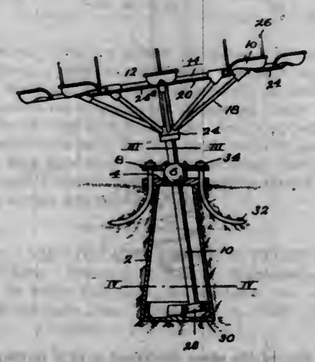
3. A blank for a collapsible paper cup, comprising two similar halves on each side of a median transverse line, the edges of each half of the blank tapering inward toward the ends of said transverse line, and tongues projecting laterally and longitudinally from opposite diagonal corners of said blank.

1,690,587. VANITY BOX AND COMPACT THEREFOR. JOHN L. MCATEER, Brooklyn, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 17, 1928. Serial No. 262,534. 2 Claims. (Cl. 132—83.)



1. In a vanity case, the combination of a body and a cover, one of these parts being provided with an opening surrounded by an annular flange, and a compact holding base having an exterior provided with identification means and removably retained in the case so that it forms a part of the case and the identifying means is exposed through the opening.

1,690,588. TACK AND BRAD DRIVER. WILLIAM ROBERT MCCLUNEY, Warrensburg, Mo. Filed Sept. 9, 1927. Serial No. 218,479. 4 Claims. (Cl. 1—47.)

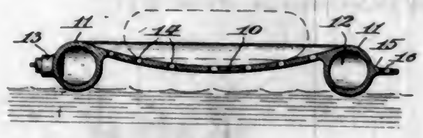


2. An instrument of the class described comprising a handle having a bore formed in a relatively large section and a relatively small section, a cylindrical casing extending into the smaller section and terminating within the bottom of the larger section, said termination of the casing being provided with a bayonet slot, a plunger slidable through the casing and having a laterally extending pin adapted to be engaged with the bayonet slot, a shank engaged on the plunger within the larger section of the bore, a knob on the shank, a spring engaged on the larger section of the bore about the shank impinging against the bottom of the larger section of the bore and the knob.

1,690,589. PROJECTION SYSTEM FOR COLOR MOTION PICTURES. JOSEPH MIHALYI, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 11, 1927. Serial No. 190,508. 4 Claims. (Cl. 88—16.4.)

1. In a projector, a projection gate, a vertically banded light source behind said gate, a projection objective in front of said gate, a filter comprising vertical color bands associated with said objective, and a condensing system between the light source and the gate, and adapted to project an image of the light source through the gate to the filter, and including reflecting surfaces positioned to rotate an image of the banded light source through a vertical angle of ninety degrees, whereby the light bands will appear to be horizontal.

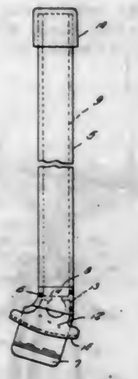
1,690,590. INCLINED REVOLVING TEETER. WALTER D. MOLBY, Baldwin City, Kans. Filed Aug. 8, 1924. Serial No. 730,958½. 2 Claims. (Cl. 272—50.)



1. An amusement device consisting of a casing adapted to be set into the ground and provided at its upper portion with a socket and at its lower portion with an annular channel, an inclined shaft extending into said casing and said channel and having both ends free for describing orbits in either direction and also to rotate axially in either di-

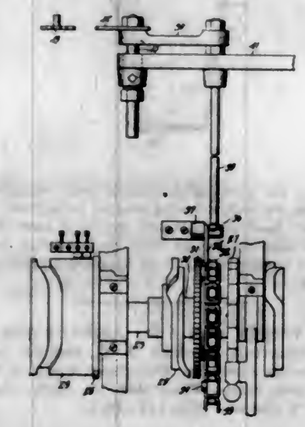
rection independently of any orbital movement, an antifriction roller mounted upon the lower end of said shaft and arranged to travel in the channel in the lower portion of the casing, a ball fixed to the shaft intermediate the ends of the latter and freely mounted in the socket in the upper portion of the casing, and passenger carrier means mounted upon the upper portion of the shaft.

---



1,690,591. BUOYANT SOAP DISH. HENRY F. NELTHORPE, Los Angeles, Calif. Filed Jan. 22, 1927. Serial No. 162,693. 2 Claims. (Cl. 45—28.)

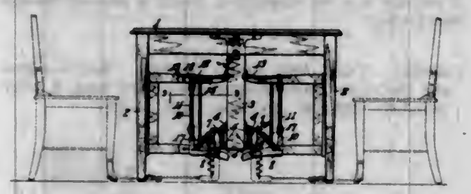
1. In a buoyant soap dish, a shallow concave member, an inflatable member formed integral with and depending from the marginal portion of said shallow concave member, the wall of said shallow concave member being tangentially disposed relative to the upper portion of the wall of the inflatable member, the central portion of which shallow concave member is perforated, and which marginal inflatable member extends a substantial distance below the lowermost portion of the shallow concave member so that the latter is supported above the surface of the water when the soap dish is positioned on a body of water.



---

1,690,592. ADJUSTABLE PIPE-BENDING TOOL. WILFORD H. NEWLAND, Inglewood, Calif. Filed Aug. 29, 1927. Serial No. 216,186. 2 Claims. (Cl. 81—15.)

1. In a tool of the class described, a tube having one end terminating in a hook extension forming a fixed jaw, a shank slidable in the tube and having one end adjacent the jaw formed with a ball, a movable jaw formed with a socket to slip over the ball, said end of the tube being formed with an opening so that the socket may be slipped over the ball, a plate for closing said opening to prevent the socket from disengaging with the ball, and means for holding the plate in place.

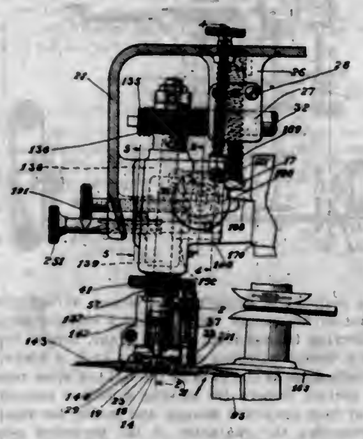


1,690,593. DIAL-CAM-CONTROLLING MECHANISM. NAPOLEON J. PERRY, Nashville, Tenn., assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Filed Sept. 13, 1920, Serial No. 409,983. Renewed Mar. 23, 1928. 12 Claims. (Cl. 66—24.)

1. In a dial and cylinder knitting machine a dial cam support, needle operating cams on the same, pins on the cams, a positioning cam for the needle cams, the positioning cam having grooves therein for engaging said pins on the needle cams and means for indicating twenty-four successive positions of the needle-cams, substantially as set forth.

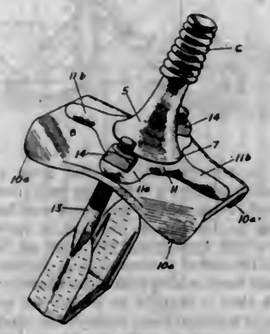
---

1,690,594. TABLE AND CHAIR STRUCTURE. WILLIAM S. PHILLIPS, Cameron, W. Va. Filed June 25, 1927. Serial No. 201,321. 1 Claim. (Cl. 155—80.)



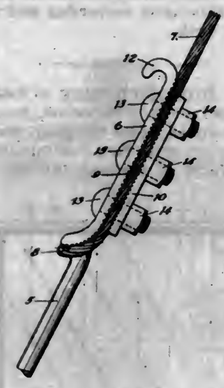
The combination with a table and a chair, of a fixed support carried by and depending from the under side of the table top, brackets carried by said support adjacent to its lower end, a vertically disposed hinge-like supporting member pivotally mounted on each bracket, said member having an outwardly directed arm at its upper end, a pair of telescopically related bar sections whereon said chair may be supported in an elevated position, one of said sections having pivotal connection with said chair, the other of said sections having a terminal arm disposed at a right angle thereto, said terminal arm being pivotally attached to the lower end of said supporting member and being adapted, in the lowered position of said sections, to occupy vertically alined relation to said member, and a retractile coil spring having one end attached to the arm of said supporting member and the other end attached to the last mentioned bar section at a point adjacent to the angle between said section and its arm, whereby, when said last mentioned arms is positioned in vertically alined relation to said supporting member, said spring is caused to assume parallel relation to the last named elements, in which position it is powerless to produce relative movement of said elements.

---



1,690,595. SKIVING MACHINE. ANDREW R. RIDDERSTROM, Nahant, Mass., assignor to Beacon Folding Machine Company, Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 4, 1924. Serial No. 684,437. 17 Claims. (Cl. 69—16.)

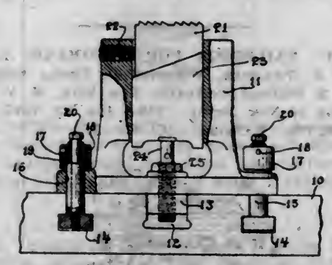
1. A machine of the class described having, in combination, a knife, a feed roll and a feed disk for feeding material to the knife, the feed disk being adjustable with a combined longitudinal and transverse movement in a plane through the axis of the feed disk substantially parallel to the axis of the feed roll, and means for adjusting the feed disk with a combined longitudinal and transverse movement in the said plane.



---

1,690,596. INSULATOR PIN. CARL P. SEYLER, Pittsburgh, Pa. Filed May 14, 1925. Serial No. 30,185. 1 Claim. (Cl. 173—321.)

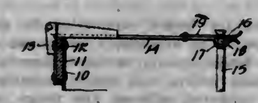
An insulator pin construction including a saddle plate of rectangular form having its corners bent to provide cross-arms engaging means and its central portion pressed out to form a central apertured seat portion and laterally and longitudinally extending strengthening ribs, a pin extending through the apertured seat portion having fastening means thereon in contact with each face of the plate and between which the plate is held, said laterally extending ribs each formed with a bolt receiving opening.



1,690,597. ANCHOR DEVICE. CARL P. SEYLER, Pittsburgh, Pa. Filed May 21, 1927. Serial No. 193,205. 5 Claims. (Cl. 24—125.)

1. In an anchoring device, the combination with a guy-rod having an integrally formed elongated guy receiving head at one end thereof, and a curved bearing over which the guy is looped, a clamp member for clamping a looped portion of the guy on the head, and means for attaching the clamp member to the head.

---

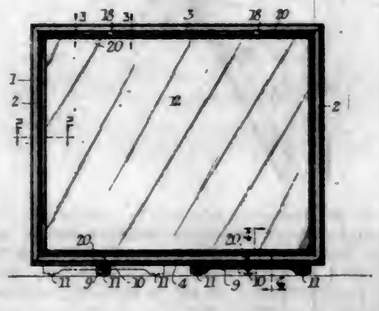


1,690,598. WORK DRIVER FOR CAR-WHEEL LATHES. MAURICE W. SHELHOUSE, Hamilton, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed May 15, 1926. Serial No. 109,393. 7 Claims. (Cl. 82—40.)

1. A work driver for lathes comprising in combination, a face plate, a bracket adjustably mounted on said face plate, a work engaging jaw adjustable on said bracket, guiding means for said bracket permitting radial movement of said bracket on said face plate, retaining means therefor, movable with said bracket, and resilient means interposed in said retaining means permitting manual adjustment of said bracket along said guiding means when the retaining means are released.

---

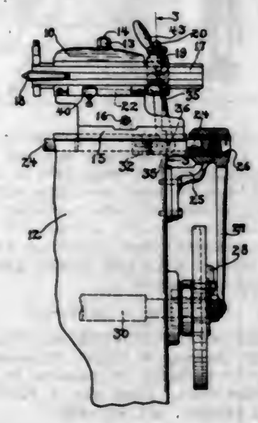
1,690,599. AIR-AGITATING-TUBE SUPPORT FOR ICE MACHINES. NORMAN M. SMALL, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Mar. 4, 1927. Serial No. 172,747. 2 Claims. (Cl. 62—159.)



1. The combination with an ice can for containing water to be frozen and a tube for supplying air for agitating the water during the freezing operation, of a

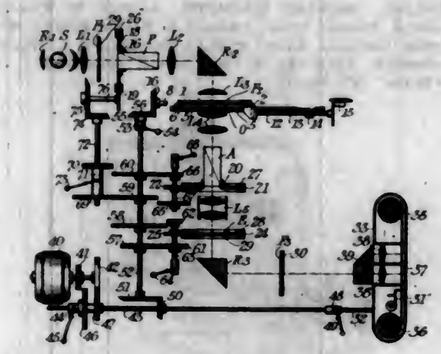
bracket for supporting said tube, said bracket being permanently hinged to the can at one side thereof and being swingable to a position out of the path of the ice being discharged from said can, and means at the free end of the bracket for detachably supporting said air tube, substantially as set forth.

---



1,690,600. MOTION-PICTURE SCREEN. ADOLPH STUBER and ERNEST E. UNDERWOOD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 19, 1926. Serial No. 117,096. 4 Claims. (Cl. 88—24.)

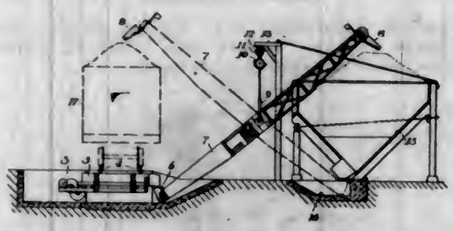
1. In a motion picture screen, the combination with a support including a projecting wall, a screen surface, a member adapted to carry the screen surface, movable connections between the member carrying the screen surface and the support, said movable connections being adapted to support the screen surface in a predetermined position facing, but spaced from the protecting wall of the support.



---

1,690,601. TAILSTOCK FOR AUTOMATIC LATHES. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 22, 1927. Serial No. 162,779. 6 Claims. (Cl. 82—31.)

1. A tailstock for lathes comprising in combination, a frame adapted to be adjustably positioned on a lathe bed, a spindle longitudinally movable therein, means to move said spindle within said frame comprising an oscillating shaft mounted adjacent the frame, a pivotally mounted lever adapted to be actuated by oscillatory movement of said shaft, and means frictionally connecting said pivotally mounted lever and spindle.



1,690,602. OPTICAL INSTRUMENT. ADRIAAN P. H. TRIVELLI, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 27, 1924. Serial No. 722,837. 6 Claims. (Cl. 88—24.)

1. An instrument comprising a source of light, an optical system for evenly illuminating a certain plane and for projecting images from such a plane, means for positioning a design carrying member at such a plane, light polarizing means in the path of the light, a color recording motion picture camera for making a motion picture color record of such projected images, and means for simultaneously changing the character of the projected polarized light and operating the motion picture camera.

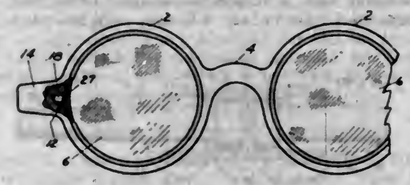
---

1,690,603. METHOD OF AND APPARATUS FOR HANDLING MATERIAL. HENRY B. WALKER, Marion, Ohio, assignor to The Fairfield Engineering Company, Marion, Ohio, a Corporation of Ohio. Filed Sept. 15, 1926. Serial No. 135,550. 1 Claim. (Cl. 214—1.)

Apparatus for transferring material from a point beneath a railroad track into a vehicle on said track, comprising a bin located to one side of said track and having a discharge opening in its bottom portion, a conveyor, and means for pivotally supporting the same at its mid portion, on vertically alined horizontal and vertical axes and between the said track and bin, and the conveyer also being of such length that it may be so positioned as to permit either transfer of material from beneath the track to the top of the bin or frame bottom of the bin into a vehicle mounted on the track.

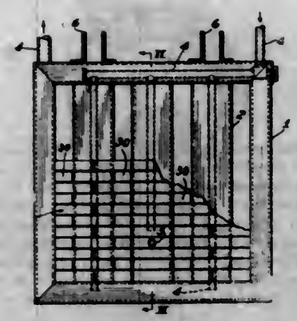
---

1,690,604. SPECTACLE TEMPLE. JAMES W. WELSH, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,437. 10 Claims. (Cl. 88—52.)



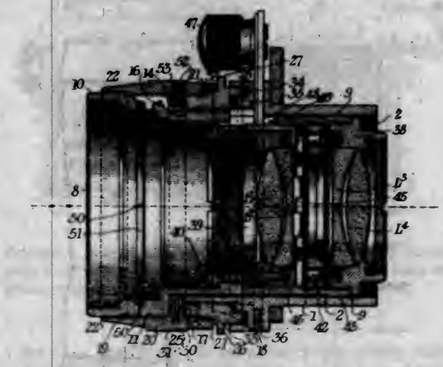
1. A spectacle temple comprising an element in the form of a helix, a terminal member provided with a counterbored recess having an end wall provided with an opening communicating with the bore of the helix, the opening in the end wall being smaller in cross dimension than the enlarged portion of the counterbored recess, and a rod in the helix having an enlarged element seated in the enlarged portion of the counterbored recess.

---



1,690,605. OPHTHALMIC MOUNTING. JAMES WILSON WELSH, Providence, R. I., assignor to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 16, 1925. Serial No. 23,440. 4 Claims. (Cl. 88—47.)

1. An ophthalmic mounting having a lens-receiving groove provided with a notch, the walls of the groove and of the notch comprising non-metal material, and a non-metal member rigidly seated in the notch and rigidly united with the non-metal material, the non-metal member projecting from the wall of the groove and being adapted to engage a lens.



---

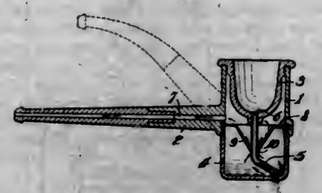
1,690,606. FURNACE DOOR. EDWARD WILLIAMS, Charleroi, Pa., assignor to Williams Welding & Manufacturing Company, Charleroi, Pa., a Corporation of Pennsylvania. Filed July 29, 1927. Serial No. 209,274. 2 Claims. (Cl. 122—498.)

1. A supporting grid for brick-work which with the supported brick-work constitutes a furnace door, such grid being formed of lengths of metallic conductor for liquid, fitted together, the structure including a marginal portion and an intermediate portion extending transversely between opposite members of the marginal portion, the marginal portion extending transversely beyond the intermediate portion by a pace interval equal, with tolerance, to the width of a standard brick, and the grid spaces being equal, with tolerance, to the width of a standard brick.

1,690,607. FOCUSING OBJECTIVE MOUNT FOR CAMERAS. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 5, 1927. Serial No. 189,132. 18 Claims. (Cl. 95—45.)

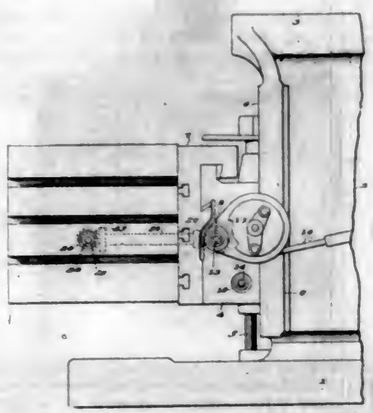
1. In a focusing mount for cameras the combination with a support of an objective mount carried thereby, and a ring having a screw thread engagement with the support and also with the mount for moving one relative to the other, said ring including means for initially adjusting an objective relative to the support.

---



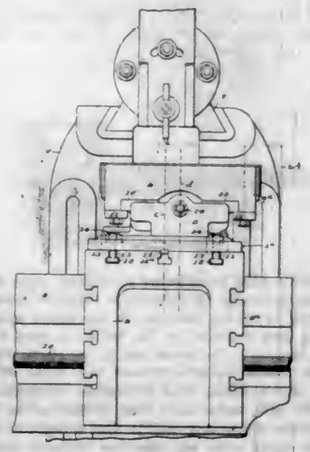
1,690,608. SAFETY RAZOR. VAHAN P. YACOUBIAN, New York, N. Y. Filed Jan. 16, 1928. Serial No. 247,107. 1 Claim. (Cl. 30—12.)

A top member for a safety razor holder having plane guide surfaces on its upper side extending inward at an inclination from parallel side edges, said surfaces being wide at one end and decreasing in width to the other end.



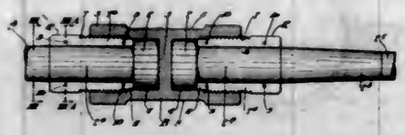
---

1,690,609. TOBACCO PIPE. DANIEL F. ZANE, Steubenville, Ohio. Filed Apr. 30, 1927. Serial No. 187,772. 3 Claims. (Cl. 131—12.)



3. A tobacco pipe comprising a tubular body having a stem leading laterally therefrom, a tobacco bowl detachably mounted in closed relation to the upper end portion of said body and enclosed by the latter, a fluid receptacle detachably secured at its upper end to the lower end of said body, a tube leading from said bowl to a point within said receptacle, and a liquid trap interposed between said receptacle and said body, said trap including an inverted conical member depending within the receptacle and provided at its apex with an aperture through which said tube extends, the defining walls of said aperture being spaced relative to said tube to form an intermediate passage.

1,690,610. MOVABLE AND STATIONARY FEED CONTROL FOR SHAPING-MACHINE WORKTABLES. WILLIAM F. ZIMMERMANN, Maplewood, and DANIEL VAUGHN WATERS, Hillside, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Apr. 1, 1925. Serial No. 19,885. 2 Claims. (Cl. 90—38.)



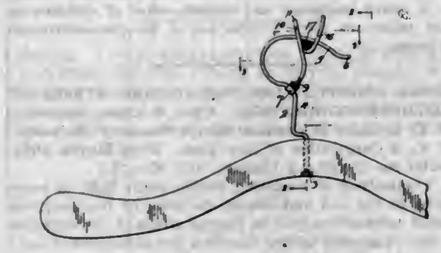
1. In a shaping machine, the combination comprising a cross head; a work carrying table mounted on said cross head; a bracket removably secured to said table and providing spaced walls; a nut fixedly mounted in one wall of said bracket; a screw shaft rotatably mounted on the cross head and engaging said nut to effect movement of the table along the cross head; a gear wheel having a spline connection with said screw shaft and having a bearing in the other wall of said bracket to be moved in accordance with its movement; an operating shaft projecting from the table and adapted to receive an operating crank; and mechanism for connecting the operating shaft to said gear wheel to control the table movement by said operating shaft.

1,690,611. ECCENTRIC VISE. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed May 12, 1927. Serial No. 190,920. 2 Claims. (Cl. 90—60.)

1. In combination with a shaping machine having a work table providing vertically disposed work-aligning side faces; a work-holder comprising a base member substantially the width of said table adapted adjustably to be secured thereto; a body member mounted on said base member with its center line at one side of the center line of said base member; a swivel connection between said base member and said body member, the axis of said swivel connection being at one side of the center line of said body member; and relatively movable work-holding jaws carried by said body member, said jaws projecting beyond the sides of said body member and extending substantially different distances to opposite sides of the center line of said base member, one end of said jaws overhanging one edge of said base member and the adjacent work-aligning side face of said table to grip a vertically extending work-piece aligned by said side face of the table, said body member being adapted to be swung about said axis to cause said ends of the jaws to overhang the other work-aligning side face of said table to grip a work-piece aligned by the last named side face.

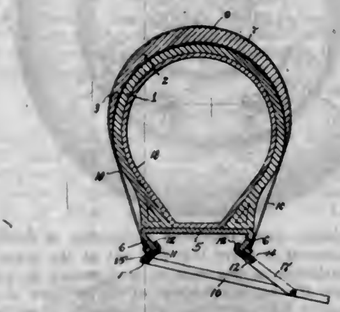
1,690,612. METHOD OF MAKING SUCKER RODS. FRANK E. ANDERSON and FORREST H. THORPE, Columbus, Ohio, assignors to The Columbus Sucker Rod Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 25, 1925. Serial No. 71,340. 3 Claims. (Cl. 29—148.)

3. The method of making sucker rods which consists in enlarging each end of the rod by upsetting, forging integral heads on the upset ends, then uniformly heating said rods above the upper critical point, and quenching said rods, then heating said rods to a point below the critical point, and allowing said rods to cool slowly in air.



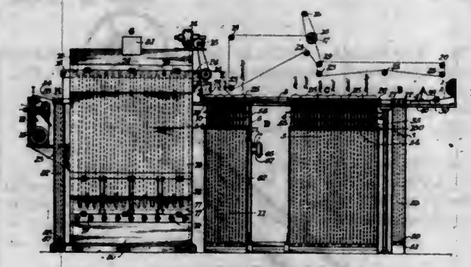
1,690,613. LOW-AIR-PRESSURE DETECTOR AND SIGNAL INNER TUBE. FORREST J. AUSTIN, Hiawatha, Kans. Filed Sept. 15, 1927. Serial No. 219,751. 1 Claim. (Cl. 116—34.)

An inner tube for pneumatic tires comprising a hollow tubular continuous body, a flexible resilient hump formed integrally on the inner portion of the tube and projecting inwardly thereof toward the tread, said hump being semi-cylindrical in cross section and from its center tapering toward its end to gradually merge into the thickness of the tube wall, said hump being formed with a block extension projecting outwardly of the lumen toward the center of the tube, said block having curved sides to conform to the curvature of the beads of the pneumatic tire shoe in which the tube is to be used.



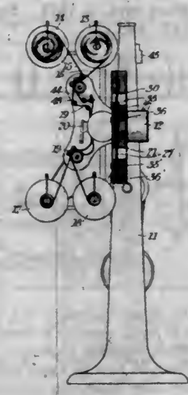
1,690,614. HANGER. SIGMUND BOWER, Brooklyn, N. Y., assignor of one-half to Charles G. Hensley, Brooklyn, N. Y. Filed Dec. 1, 1926. Serial No. 152,004. 12 Claims. (Cl. 223—64.)

1. A hanger of the character described, comprising a garment holding member, a supporting hook therefor for engaging a support such as a line, a pivotal locking member arranged to swing in a plane parallel with the plane of said hook, and adapted to straddle said hook, said locking member and hook co-operating to grip the line between them for the purpose set forth.



1,690,615. MECHANISM FOR VULCANIZING TIRES. WILBUR B. BURKE, East Cleveland, Ohio. Filed June 11, 1923. Serial No. 644,654. 6 Claims. (Cl. 18—18.)

1. In mechanism for vulcanizing together the parts of a tire casing, the combination of a base adapted to fit within the beads of such casing; a shell of non-stretchable material engageable against the exterior of the assembled casing; interengaging means on the shell and the base for detachably securing the same together; and means for expanding said casing from within, said base providing an unobstructed seat for such beads whereby free lateral movement of the latter into contact with said shell is permitted.

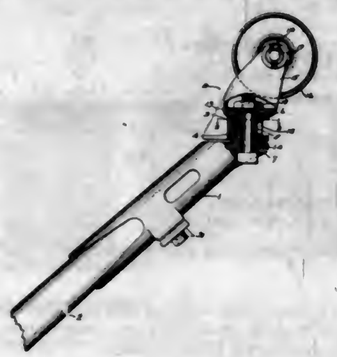


1,690,616. FILM-TREATING APPARATUS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 3, 1923. Serial No. 616,846. Renewed Dec. 2, 1927. 11 Claims. (Cl. 95—94.)

1. Apparatus for the continuous treatment of strip film by a reversal process and comprising a series of development and treatment tanks wherein a latent image on such film may be developed and the resulting image treated, a printing station and controllable illuminating means at said station, and a second series of development and treatment tanks wherein a latent image formed at such station may be developed and the resulting image treated, and means for

driving a single long strip of film continuously through said first series of tanks, then past said station and then through said second series of tanks.

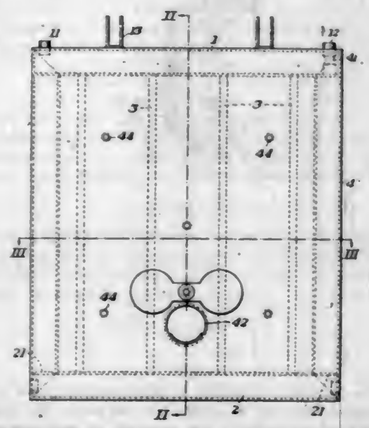
1,690,617. METHOD OF MAKING DUPLICATE NEGATIVES. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 6, 1924. Serial No. 711,480. 19 Claims. (Cl. 95—75.)



1. The method of making a photographic print of corrected contrast from an image bearing layer that includes the steps of determining the contrast of such image and light printing such image upon a layer predominantly sensitive to certain wave lengths, and containing a dye absorptive of light of such wave lengths, the light used in printing being adjusted to comprise more or less light of said wave lengths in accordance with the determination of such contrast.

1,690,618. TROLLEY HEAD. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 23, 1927. Serial No. 214,847. 2 Claims. (Cl. 191—60.1.)

1. A trolley head comprising a pole casting having a hollow projecting member therefrom with a side opening and two vertical central openings, a harp member having spaced parts to support a collector and a hollow projecting member therefrom with a side opening and a bottom opening and arranged to receive the first said hollow projecting member and a top opening to register with the said vertical central openings, means passing through the reg-



istering openings to hold the said parts together in rotative relation, a helical spring mounted in the first said projecting member with its ends projecting laterally and

engaging the edges of the walls forming the side openings in the said parts and adapted to yieldingly hold the pole casting and the harp member in predetermined relation.

---

1,690,619. DOOR FOR FURNACES. BAYARD H. CHRISTY, Sewickley, Pa., assignor to Williams Welding & Manufacturing Company, Charleroi, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1927. Serial No. 217,027. 2 Claims. (Cl. 122—498.)

1. A supporting structure for a furnace door including upper and lower headers with interconnecting circulation pipes, and an intermediate hollow body within which said circulation pipes extend, the whole constituting a structure with a reentrant space on one side for the reception of a body of refractory material, the upper header being provided with an inlet orifice, the lower header with an orifice opening to the space within the intermediate hollow body, and an outlet pipe leading from the space last named through the upper header.

---

1,690,620. CELLULOSE ESTERS CONTAINING UNSATURATED ORGANIC ACID GROUPS. HANS T. CLARKE and CARL J. MALM, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 4, 1927. Serial No. 188,862. 6 Claims. (Cl. 260—101.)

1. An organic ester containing a cellulose group esterified with an acyl group corresponding to a monocarboxylic organic acid in which there is an ethylenic bond.

1,690,621. CELLULOSE ESTERS CONTAINING NITRO GROUPS AND HALOGEN-SUBSTITUTED ACYL GROUPS. HANS T. CLARKE and CARL J. MALM, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 14, 1927. Serial No. 191,543. 14 Claims. (Cl. 260—101.)

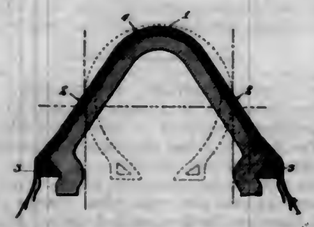
1. A mixed inorganic and organic ester of cellulose in which there are nitro groups and a halogen-substituted acyl group.

---

1,690,622. COMPOSITION FOR JOINING STRIPS OF MOTION-PICTURE FILMS. OTTO W. COOK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 6, 1925. Serial No. 28,508. 2 Claims. (Cl. 87—17.)

1. The method of rendering visible under light of wave lengths in the red and orange portions of the spectrum a liquid composition used in joining strips of photographic film that comprises adding thereto a dye absorptive of light of such wave lengths.

---

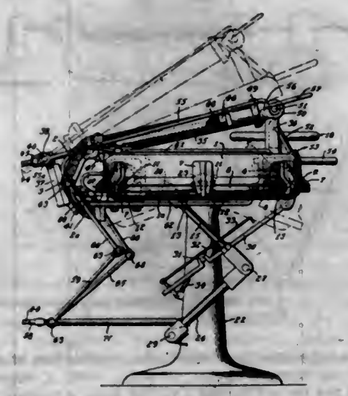


1,690,623. COLLAPSIBLE CORE. PETER DE MATTIA, Passaic, N. J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 16, 1924. Serial No. 744,046. 35 Claims. (Cl. 154—9.)

1. A collapsible core comprising a plurality of sections which are mounted to move into and out of the plane of operative continuity, a key section, and means to automatically move the key section out of the position of operative continuity upon swinging the plurality of sections out of the plane of operative continuity.

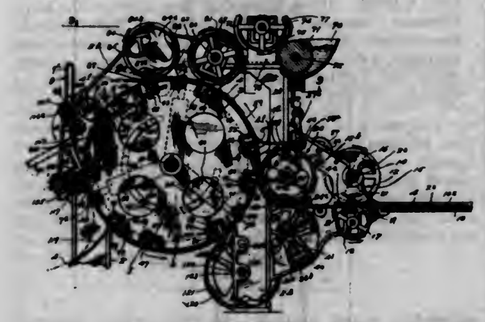
---

1,690,624. PROCESS FOR MAKING PNEUMATIC TIRES. BARTHOLD DE MATTIA, Clifton, N. J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 29, 1925. Serial No. 59,394. 3 Claims. (Cl. 154—14.)



1. The process of manufacturing a pneumatic tire which consists in building the unvulcanized tire to conform in cross section to an inverted letter V the tread defining the apex and the beaded edges delimiting the tips of the V, in forcing the beaded edges toward each other, in expanding the tire uniformly from the inside thereof to impart to it its ultimate shape and size, and in retaining the tire thus stretched during vulcanization thereof.

---



1,690,625. COUNTERBALANCING DEVICE FOR VULCANIZING MOLDS. PETER DE MATTIA, Passaic, N. J., assignor, by mesne assignments, to National Rubber Machinery Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 27, 1926. Serial No. 137,845. 10 Claims. (Cl. 18—17.)

1. In a vulcanizing mold, a normally horizontal fixed mold section, a movable mold section hinged with reference thereto, counterbalancing means overlying the movable mold section and movable therewith, and means for tilting the mold sections as a unit.

---

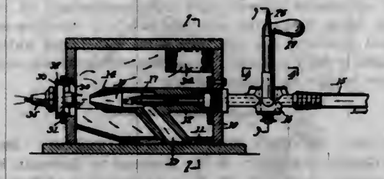
1,690,626. MACHINE FOR FORMING BAG BOTTOMS IN BAG TUBES. JAMES DUVALL, Camas, Wash., assignor to Crown Willamette Paper Company, San Francisco, Calif., a Corporation of Delaware. Filed Oct. 27, 1924. Serial No. 746,121. 22 Claims. (Cl. 93—21.)

1. In a bag-bottom forming machine, a rotated main cylinder, a coacting rotated roll adjacent the latter, means carried by the main cylinder and the roll, respectively, adapted to seize and hold the forward-end portions of the opposite walls of the bag-tube, thereby to pull said bag-tube portions in opposite directions during the rotation of said main cylinder and said roll; the means carried by the roll comprising a clamp element and supplemental yielding holding means, the clamp element adapted to release when the supplemental means function and the latter means being adapted to yield to the pull of said holding means of the main cylinder when said separated portions are in tension.

---

1,690,627. PROCESS OF MAKING ARSENATE OF LIME. CARLETON ELLIS and VERNON T. STEWART, Montclair, N. J., assignors to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Mar. 5, 1923. Serial No. 623,010. 3 Claims. (Cl. 23—53.)

1. The process of making arsenate of lime which comprises reacting on powdered quick lime with a solution of arsenic acid containing water in excess of that required to completely hydrate the lime and thereafter desiccating the product by the addition of pulverized quick lime.

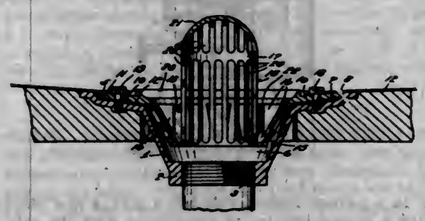


---

1,690,628. PROCESS OF MAKING ARSENATES. CARLETON ELLIS and VERNON T. STEWART, Montclair, N. J., assignors to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Original application filed Mar. 5, 1923, Serial No. 623,010. Divided and this application filed Oct. 16, 1924, Serial No. 744,058. Renewed Apr. 4, 1928. 4 Claims. (Cl. 23—53.)

4. A process of making calcium arsenate, which comprises grinding quick lime with arsenic acid, while in the presence of an insufficient amount of water to produce a pasty mass.

---



1,690,629. SPARK-PLUG-CLEANING DEVICE. GEORGE W. FLEMING and ROBERT W. ELLINGHAM, Worcester, Mass., assignors to Fleming Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 6, 1927. Serial No. 238,200. 2 Claims. (Cl. 51—8.)

2. In a device for cleaning spark plugs, the combination with a receptacle having a layer of abrasive therein in fine particles, of a nozzle provided with an inlet extending down into the body of the abrasive, said receptacle having an opening in line with said nozzle and provided with a concave seat, and an adapter for the spark plug having a convex surface fitting said seat, whereby the spark plug adapter can be held against the seat to receive the force of the abrasive at various angles.

---

1,690,630. ROOF DRAIN. WELL S. FLEMING, Portland, Oreg. Filed Feb. 10, 1926. Serial No. 87,281. 7 Claims. (Cl. 182—31.)

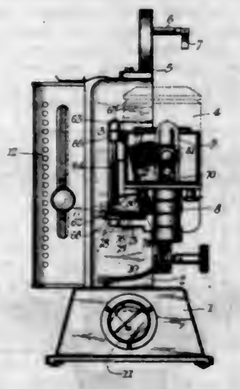
1. In a drain of the class described, an inwardly sloping body affording an inverted conical chamber and having means to connect a drain-pipe thereto, said body in-

cinding an integral, laterally arranged flange having drainage into said chamber, a cover-plate arranged to be secured in superposed relation to said body-flange with a sheet of water-proofing material therebetween, an inverted conical skirt extending integrally from said cover-plate within said body chamber perforated to allow drainage therethrough, and a slotted dome centrally supported upon said skirt and extending above the level of said cover-plate affording an annular depression between the skirt and said dome.

---

1,690,631. PROCESS FOR TREATMENT OF PAPER. DAVID GENESE, deceased, Baltimore, Md., by Norris Genese, Baltimore, Md., administrator, assignor of one-half to William H. Orem, Baltimore, Md. Original application filed Aug. 18, 1926, Serial No. 130,070. Divided and this application filed Aug. 31, 1927. Serial No. 216,772. 1 Claim. (Cl. 91—70.)

The process of modifying paper to increase the elasticity and shrinkability thereof, comprising moistening the paper with a concentrated solution of boracic acid, and drying the paper under heat and pressure.

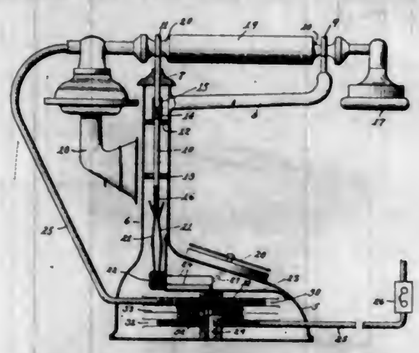


---

1,690,632. PROCESS OF MAKING CHLOROFORM-SOLUBLE CELLULOSE ACETATE. HARRY LE B. GRAY and CYRIL J. STADD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 6, 1927. Serial No. 196,999. 4 Claims. (Cl. 260—101.)

1. In the process of manufacturing cellulose acetate the steps of thoroughly mixing 100 parts by weight of esterifiable cellulose material with an esterifying catalyst and less than 250 parts of liquid acetic anhydrid of which there is at least the theoretical quantity for fully esterifying said material, said anhydrid containing less than 15% of solvent diluent, and the temperature of the reaction being below the solution point of cellulose acetate in said mixture, the reaction being continued until said material is fully converted into chloroform-soluble cellulose acetate in the undissolved state.

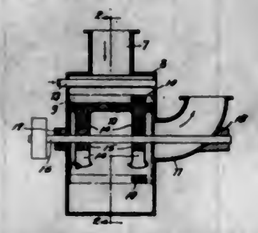
---



1,690,633. MOTION-PICTURE PROJECTOR. NEWTON B. GREEN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 15, 1925. Serial No 50,444. 2 Claims. (Cl. 88—17.)

1. In a motion picture projector, a gate, a first shutter having a normal position in registration with the gate, a lamphouse adapted to illuminate the gate and hinged to swing to an inoperative position, a member connected to the shutter, a cam connected to the lamphouse and operative to engage said member and move said shutter out of registration with the gate as the lamphouse is swung, and a second shutter having a normal position out of registration with the gate and having a member adapted to engage and move said first named member whereby the second shutter may be actuated to be moved into registration with the gate and the first shutter may be thereby moved out of registration with the gate.

---

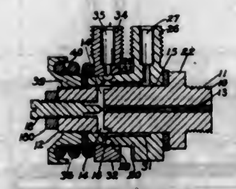


1,690,634. TELEPHONE. FREDERIC CECIL GREENE, Atlanta, Ga., assignor of four-tenths to Frank Branan, Macon, Ga. Filed Aug. 26, 1927. Serial No. 215,683. 5 Claims. (Cl. 179—155.)

3. In a telephone instrument, the combination of a hand set and an electric circuit therefor, with a supporting standard for the set having a hollow base, a bearing in the hollow base, separate spring-driven reels journaled in the base on the bearing therein, an insulating cord for the circuit wires of the instrument leading through the hollow base to the hand set and having an intermediate part in fixed relation to the bearing between the reels, and a division plate mounted on the bearing between the reels, one of the reels operating to wind the slack of the cord leading into the hollow base and the other of the reels operating to wind the slack of the cord between the fixed part thereof and the hand set, the division plate operating to separate the compensating coils of the cord wound on the bearing by the reels.

---

1,690,635. APPARATUS FOR CLEANSING AND COOLING GASES. OTTO HUBMANN, Frankfort-on-the-Main, Germany, assignor to Metallbank & Metallurgische Gesellschaft Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 8, 1926, Serial No. 147,147, and in Germany Aug. 8, 1925. 3 Claims. (Cl. 261—90.)



1. In combination, in an apparatus for separating from gases particles suspended therein, a chamber, a gas and liquid contacting means disposed within said chamber, said means including a cylindrical member revolvable about its axis, the walls of said cylinder having a plurality of narrow passageways adapted to the passage of fluids provided therein, each of said passageways having a converging fluid inlet and a diverging fluid discharge opening, and means for introducing a gas and liquid into the chamber and simultaneously through the passagewnys, the walls of said chamber cooperating with said cylinder to prevent the gases from traversing said chamber except through the narrow passageways in the walls of said cylinder.

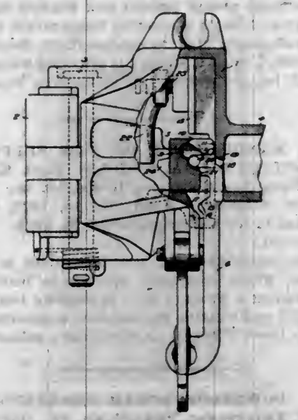
---

1,690,636. LUBRICATOR. GUS A. JAMERSON, Cincinnati, Ohio, assignor to Max Stern, Cincinnati, Ohio. Filed Nov. 19, 1925. Serial No. 70,156. 11 Claims. (Cl. 184—7.)

7. In a device of the class described the combination of a stud, a sleeve carried by the stud and having a tapering section on its exterior wall, means for clamping the sleeve to the stud, a collar rotatably mounted on the tapered wall of the sleeve, the sleeve, collar and stud having communicating passages therein for providing communication between the interior of the stud and the exterior of the sleeve and collar and spring means for retaining the collar in rotatable engagement upon the tapering outer wall of sleeve and precluding leakage between the sleeve and collar.

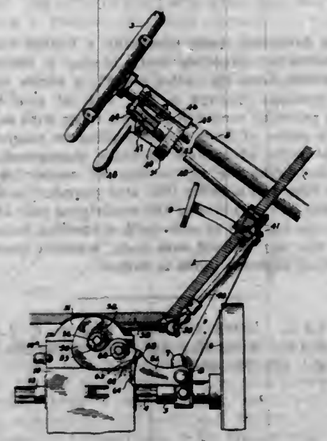
---

1,690,637. SEPARABLE FASTENER. GUSTAV JOHNSON, West Roxbury, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924. Serial No. 757,151. 15 Claims. (Cl. 24—217.)



1. A separable fastener comprising, in combination, a stud having a head, a neck and a shank portion, a cooperating socket including a back plate and a front plate adapted to be secured to opposite sides of a carrying medium, a boss portion providing a plurality of resilient stud-engaging fingers extending from said back plate through the carrying medium toward said front plate, said fingers surrounding the stud-receiving aperture passing through said back plate, and means extending from one plate through the carrying medium to engage the other plate and secure the socket parts in position.

---



1,690,638. CAR COUPLER. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 5, 1926. Serial No. 86,166. 12 Claims. (Cl. 213—126.)

1. A car coupler involving a coupler head, a knuckle rotatably mounted thereon, a lock for the knuckle, and a lifter for actuating the lock, said lifter being slidably connected to the lock and having an inclined face for cooperating with the latter, said inclined face being adapted when the lifter executes an unlocking movement to move into engagement with the lock and cause the latter to move to unlocked position, the said lock after having been raised to unlocked position being adapted under the influence of gravity to slide down the said inclined face and shift laterally so as to engage and be supported by said knuckle in a lock set position.

---

1,690,639. GEAR-SHIFTING MECHANISM. ELMER G. KESLING, Bloomfield, N. J. Filed Feb. 1, 1924. Serial No. 689,990. 10 Claims. (Cl. 74—58.)

1. In a gear shifting mechanism, the combination with a plurality of shiftable elements, of a selector shaft movable longitudinally to select the shift desired and partially rotatable to complete the shift, a rockable element geared to the selector shaft to effect the partial rotation thereof, and a clutch lever having a delay gear connection with said rockable element, whereby the selector shaft is rotated only during the latter part of the movement of said lever.

---

1,690,640. MANUFACTURE OF SULPHURIZED DERIVATIVES OF PHENOLS. EMIL KRAUS, The Hague, Netherlands, assignor to Fabriek van Chemische Producten, Schiedam. Filed Feb. 16, 1926, Serial No. 88,704, and in the Netherlands Aug. 5, 1925. 14 Claims. (Cl. 260—20.)

1. In the manufacture of sulphur derivatives of phenols, the process which comprises adding to a phenol a quantity of alkali sufficient to convert more than approximately one-fourth of the phenol into alkali phenolate but

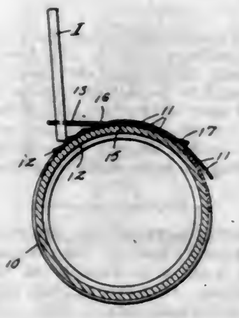
insufficient so to convert the whole of the phenol, heating the mixture until free from water, adding from 1 to 2 atomic proportions of sulphur for each molecular proportion of the total phenol present and heating the mixture for a sufficient time to a reacting temperature above 100° C. but insufficiently high to substantially decompose the desired product, until a product is obtained whose solution in an alkali has the property of fixing basic colors on cotton.

---

1,690,641. MANUFACTURE OF NEW SULPHURIZED DERIVATIVES OF NAPHTHOLS. EMIL KRAUS, The Hague, Netherlands, assignor to Fabriek van Chemische Producten, Schiedam. Filed Feb. 16, 1926, Serial No. 88,705, and in the Netherlands Nov. 24, 1925. 15 Claims. (Cl. 260—20.)

4. In the manufacture of new derivatives of naphthol, the process which comprises heating to boiling in an aqueous medium a mixture of a naphtholic body, sulphur and an alkali and treating the obtained sulphurized derivatives with a lower aliphatic aldehyde and a soluble sulphite.

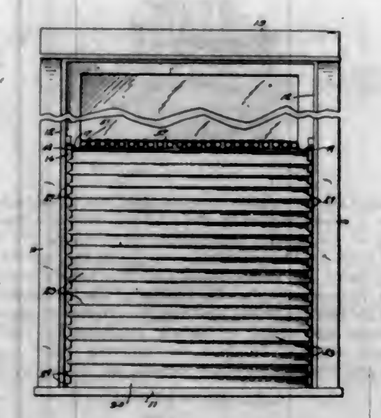
---



1,690,642. DOWNFLOW STEAM GENERATOR. FREDERICK W. KRONENBERG, Philadelphia, Pa. Filed Apr. 15, 1922. Serial No. 552,854. 2 Claims. (Cl. 122—258.)

1. In a downflow steam generator, a header comprising a longitudinally extending body having a chamber extending throughout its entire length, a series of spaced outflow openings through a side wall of said body arranged in pairs for connecting upflow tubes with said chamber, and a series of boxes corresponding in number to the number of pairs of outflow openings superposed on said body, each box having an opening for connection with a downflow tube and opening into said chamber to the space between the two openings of the underlying pair of outflow openings, the top wall of each outflow opening being closely adjacent the top wall of said body, whereby communication between adjacent boxes is baffled.

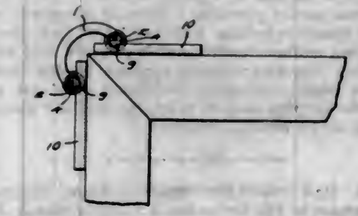
---



1,690,643. HOSE CLAMP. SAMUEL C. LAVENDER, Lorenzo, Tex. Filed Mar. 13, 1928. Serial No. 261,334. 5 Claims. (Cl. 24—19.)

1. A hose clamp comprising a metallic band having at one end a series of longitudinally spaced transversely extending slots, the opposite end of the band having upon its outer face a spring tongue for engagement in said slots, the last named end of the band outwardly of said spring tongue having a slot through which the first named end of the band may be passed.

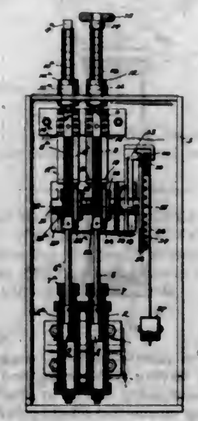
---



1,690,644. COLLAPSIBLE WINDOW SHUTTER OR SHIELD. IRA LENNOX, Grand Junction, Colo. Filed July 16, 1927. Serial No. 206,205. 10 Claims. (Cl 189—60.)

1. The combination with a window frame, of a collapsible shutter comprising a plurality of inverted V-shaped leaves, links pivotally connecting the leaves with each other, each link having sliding engagement with one of said leaves, the window frame having guides with which said leaves engage, the ends of the leaves having sliding engagement with the guides, means for supporting the uppermost leaf at any one of a plurality of elevations on the window casing.

---



1,690,645. PROTRACTOR. LEWIS C. LLOYD, Wilmington, Calif. Filed Sept. 29, 1927. Serial No. 222,839. 3 Claims. (Cl. 33—102.)

1. A protractor comprising an arcuate arm provided at its ends with rings, disks mounted for turning movement within the rings, rule sections and bracket lugs mounted upon the disks and adapted to retain said rule sections.

1,690,646. MOTOR-CONTROL MECHANISM. HENRY C. A. MEYER, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 31, 1925. Serial No. 19,750. 12 Claims. (Cl. 161—15.)

1. In a motor control mechanism, the combination of a reversible fluid pressure motor; a constant speed control therefor; and connections between the motor and said speed control for bringing the latter into operation only during one portion of the motor stroke.

---

1,690,647. ESTERS OF CHOLESTEROL WITH UNSATURATED ACIDS. WALTER MINNICH, Montreaux, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 10, 1924, Serial No. 749,045, and in Switzerland Nov. 19, 1923. 1 Claim. (Cl. 260—106.)

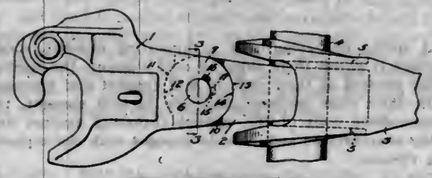
As articles of manufacture useful in therapeutics the herein described esters of cholesterol with unsaturated acids of the general formula: R.COOH wherein R stands for an aliphatic or aliphatic-aromatic hydrocarbon radical carrying at least one treble linkage.

---

1,690,648. PLASTIC PREPARATION. EDWIN K. O'BRIEN, Charlottesville, Va. Substitute for application Serial No. 752,025, filed Nov. 24, 1924. This application filed Nov. 26, 1927. Serial No. 236,013. 5 Claims. (Cl. 106—24.)

5. As a new article of manufacture, a preparation comprising portions of the plant known as the Jerusalem artichoke dried and reduced to a finely divided condition, mixed with substances adapted to render the whole resistant to deteriorating effects of heat and moisture.

---

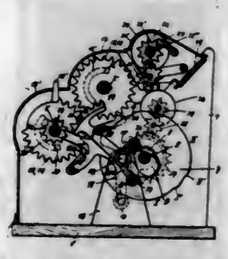


1,690,649. ADJUSTABLE WINDOW SCREEN. ROBERT L. RADFORD, Biltmore, N. C., assignor of one-third to H. B. Leavitt, Asheville, N. C. Filed May 24, 1927. Serial No. 193,837. 4 Claims. (Cl. 156—14.)

1. In a window screen, the combination with a frame member, a combined filler and adjustment strip including a yielding body having flanges of different length projecting from the same side thereof, fastenings for securing the short flange to the window frame and the opposite flange frictionally and slidably engaging the opposite side of the screen frame.

---

1,690,650. DRAFT APPLIANCE FOR RAILWAY CARS. WILLIAM J. REGAN and ENOCH GEORGE, Jr., Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 1, 1926. Serial No. 112,862. 3 Claims. (Cl. 213—18.)



1. A railway draft appliance comprising a car coupler, a yoke device, and means for transmitting draft forces from the coupler to the yoke device, said coupler involving a coupler head, a coupler shank, and a pivot pin for pivotally connecting the head and shank forwardly of said means for transmitting draft forces from the coupler to the yoke device, said pivot pin being disposed wholly above the under face of said shank and having interlocking engagement with said coupler preventing its removal in all normal relative positions of the coupler head and shank.

---

1,690,651. CALCULATING MACHINE. ALBERT SCHUBODE, Brunswick, Germany, assignor to Firma Hannoverakassen-Gesellschaft m. b. H., Peine, Hannover, Deutschland, Germany. Filed Jan. 5, 1923, Serial No. 610,934, and in Germany Jan. 14, 1922. 4 Claims. (Cl. 235—73.)

1. In a calculating machine having a setting-up member the return to zero position of which is utilized for transferring the value set-up, and a counting member, and a calculating member disposed between the setting up and counting members and adapted to receive the value set-up from the setting-up member and pass it on to the counting member, a crank device including a shaft and adapted, on being turned, to couple the calculating

member with the setting-up member and the counting member and to transfer the value, a cam disc on the shaft of said crank, a carrier for the setting-up member coacting with said cam disc, said cam disc adapted, on the crank being turned, to first couple the setting-up member

with the calculating member and then advance both until the calculating member engages the counting member, and again disengage the calculating member first from the counting member and thereafter from the setting-up member before a full revolution of the crank is completed.

---

1,690,652. SPRING-PAD CONSTRUCTION. HARRY ALBERT STEELE, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 1, 1926. Serial No. 132,965. 1 Claim. (Cl. 68—9.)

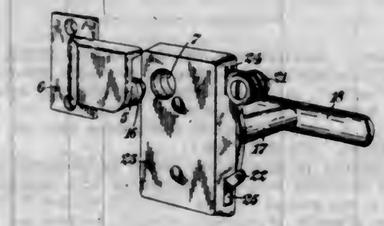
A spring pad comprising a supporting element, coiled springs lying on their sides on said element, the springs being secured at their ends to said element and arranged with their coils inclined relatively to said element, the intermediate coils of the springs thrusting against and being unsecured to and slidably engaged with the supporting element.

---

1,690,653. TESTING DEVICE. WILLIAM H. TARVER, Pooler, Ga. Filed Mar. 26, 1925, Serial No. 18,515. Renewed Sept. 25, 1928. 1 Claim. (Cl. 175—183.)

In combination with a vehicle including a dash and a transparent wall above the dash, guide ways carried by the dash, a box supported in the guide ways for vertical movement from a position where it lies wholly between the guides and against the dash to a position where it projects above the upper ends of the guides and partially confronts the transparent wall, means for supporting the box in either of said positions, the walls of the box paralleling the dash having alined pairs of sight openings, ignition testing implements within the box and having sight openings alining with the pairs of openings of said walls, and means associated with the box for connecting the ignition testing implements of the box with an ignition circuit.

---



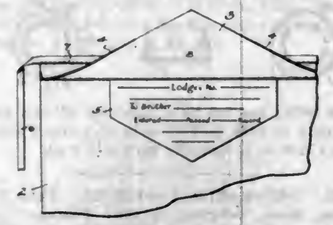
1,690,654. CONTAINER FOR PLASTIC MATERIAL. ARTHUR H. TROTTER, Syracuse, N. Y. Filed Apr. 22, 1924. Serial No. 708,284. 4 Claims. (Cl. 221—60.)

1. A container for plastic material comprising a tubular compressible body having a flattened end portion folded upon itself, and reinforcing means at the folded end portion, the reinforcing means including spaced apart portions located to expose the folded terminal edge of said end portion.

---

1,690,655. LATCH FOR CARRIAGE DOORS AND THE LIKE. CHARLES TERRES WEYMANN, Paris, France, assignor to Weymann's Motorbodies (1925) Limited, London, England, a British Company. Filed Nov. 19, 1927, Serial No. 234,445, and in Great Britain Oct. 22, 1926. 1 Claim. (Cl. 292—226.)

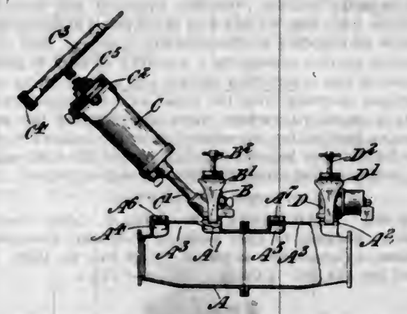
In a door latch, the combination with a latch casing provided with an aperture therein, of a keeper stud having a main tapered recess formed therein and a secondary recess adjacent the main recess and arranged for movement into and out of said aperture, a swinging detent mounted in said casing and movable transversely of the stud for selective engagement with either of said recesses, an arm rigid with said detent, a spring engaging said arm to urge the detent into engagement with the stud, a dog for engaging said arm to retain the latter in stud engaging position, and a second arm rigid with the detent and extending outside of the latch casing for operating the detent.



---

1,690,656. LODGE OR FRATERNAL PARAPHERNALIA. CHARLES E. WILLIAMS, Columbus, Ohio, assignor to The Lilley Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 13, 1926. Serial No. 80,027. 1 Claim. (Cl. 40—1.5.)

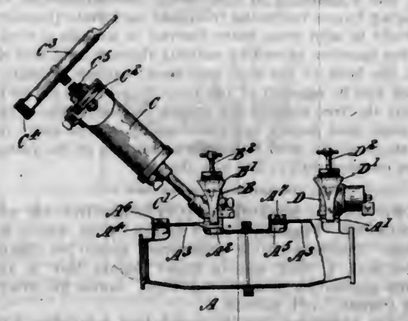
A lodge apron comprising a main body section, a flap section and an indicia bearing slip interposed between said



body and flap sections, and a securing tape uniting said body and flap section and said slip along their adjoining

upper edges only, said tape having its ends extending so as to permit of the application thereof to the waist of the wearer.

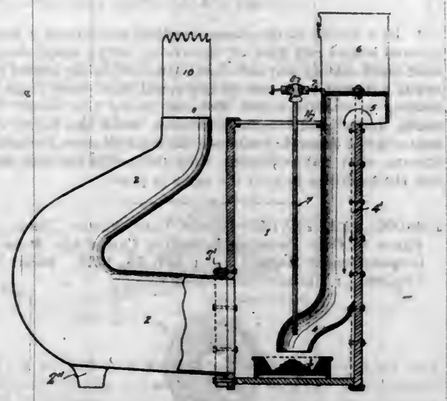
---



1,690,657. FILLING OF JOINT BOXES FOR ELECTRIC CABLES AND APPARATUS THEREFOR. ALFRED EDGAR WILSON, Bromley, England. Filed June 18, 1925, Serial No. 38,116, and in Great Britain July 26, 1924. 2 Claims. (Cl. 247—1.)

1. Apparatus for filling a joint box for electric cables comprising a detachable fitting adapted to receive a pump and to be fitted to an entrance or filling hole in the box, and another detachable fitting adapted to be fitted to a vent hole in the box and furnished with a relief valve, means being provided in each of the fittings for closing the filling hole and the vent hole whilst the compound is under pressure.

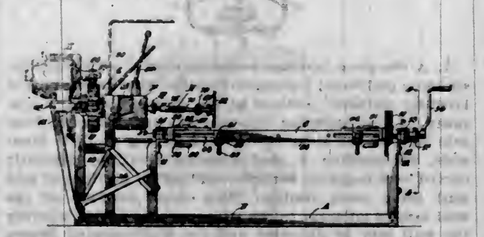
---



1,690,658. FILLING OF JOINT BOXES FOR ELECTRIC CABLES. ALFRED EDGAR WILSON, Bromley, England. Original application filed June 18, 1925, Serial No. 38,116, and in Great Britain July 26, 1924. Divided and this application filed May 7, 1926. Serial No. 107,526. 3 Claims. (Cl. 247—1.)

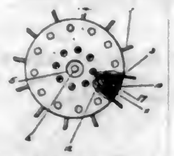
1. A method of filling a joint box for electric cables consisting in filling the box through an entrance hole with fluid compound under pressure until said compound extrudes through a variable relief vent in the box and then closing the entrance hole and the vent hole to seal the box while the compound is still under pressure.

---



1,690,659. OIL-BURNING STOCK-TANK HEATER. ERNEST WYKES, Humboldt, Iowa. Filed Apr. 16, 1924. Serial No. 706,934. 2 Claims. (Cl. 126—360.)

1. In an oil-burning stock tank heater, the combination with a combustion chamber having an open upper end and a radiator recurved between its ends and having one end communicating with said combustion chamber, of a burner loosely mounted within said combustion chamber, a removable cover on the open end of said chamber, an air conduit hooked over one wall of said chamber with its upper end outside of and downwardly opening relative to said chamber, said conduit passing through said cover and having its lower end opening above and spaced from said burner, a fuel tank carried by the upper end of said conduit and a valve-controlled fuel pipe leading from said tank through said cover and having its lower end intersecting said conduit to discharge axially above said burner.



---

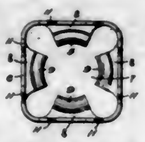
1,690,660. REPAIR STAND FOR ENGINES, TRANSMISSIONS, AND THE LIKE. ELBA O. ADKINS, Huntington, W. Va., assignor of one-half to The Huntington Auto Supply Company, Huntington, W. Va., a Corporation of West Virginia. Filed Mar. 10, 1926. Serial No. 93,814. 4 Claims. (Cl. 29—89.5.)

1. A device for repairing and rebuilding machinery comprising a supporting frame, a cradle mounted in said frame including end bars and longitudinally extending clamping bars, means adjustably connecting the longitudinal bars with the end bars, adjusting means for adjusting the longitudinal bars to clamp the work between them, means rotatably connecting the end bars with the supporting frame, and means for varying the angular position of the cradle with respect to the frame.

1,690,661. PAPER BEATER. AMOS C. BONTELL, Pittsfield, Mass. Filed Feb. 25, 1928. Serial No. 257,042. 3 Claims. (Cl. 92—22.)

1. In a device of the class described comprising a metal covered beater roll filler of transverse wedge shape design, head rings rigidly and exteriorly attached to the beater roll heads adjacent each end of the metal filler, said rings extending a predetermined distance above the beater roll heads, and a predetermined distance below the beater roll blades, a rod extending between the head rings and attached thereto, said rod extending thru the metal covered filler and the headings to hold the same in place.

---



1,690,662. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Nov. 18, 1924. Serial No. 750,590. 1 Claim. (Cl. 16—4.)

A fastener socket having a stud-receiving aperture, a web surrounding said aperture and divided by a series of alternating short and long slots to provide a series of stud-engaging fingers surrounding said aperture, said fingers having their free ends terminating in a common plane adjacent to said aperture so that the free ends of all of said fingers may make fastening engagement with a neck of a cooperating stud and each of the fingers of the series surrounding the stud-receiving aperture having one lengthwise edge shorter than the other lengthwise edge as and for the purposes described.

---

1,690,663. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Feb. 26, 1925. Serial No. 11,694. 2 Claims. (Cl. 16—4.)

1. A one-piece fastener socket having a continuous upstanding peripheral rectangular wall portion having curved laterally yieldable portions at the corners thereof, a plurality of stud-engaging fingers extending inwardly from said wall at the sides thereof and having at their inner ends, surrounding a stud-receiving aperture, generally curved neck-engaging portions, said corner portions of said wall being more resilient than those portions of the wall located adjacent to the stud-engaging fingers whereby the wall may be distorted and the stud-engaging fingers spread laterally to permit passage of the head of a stud therebetween.

---

1,690,664. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Jan. 16, 1926. Serial No. 81,862. 19 Claims. (Cl. 16—4.)

1. A fastener socket having a laterally yieldable wall adapted to rest directly on and be secured to a socket-carrying support at the same side from which the stud enters and continuing as an inbent extension, said inbent

extension being severed by a plurality of cuts extending substantially to said wall whereby to provide stud-engaging jaws which move laterally with said wall.

---

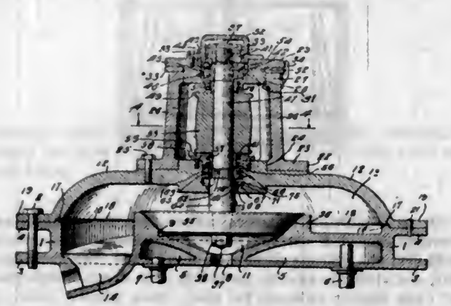
1,690,665. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Apr. 15, 1926, Serial No. 102,348. Renewed Aug. 14, 1928. 9 Claims. (Cl. 16—4.)

1. A fastener socket having a peripheral wall, a plurality of attaching prongs extending upwardly from said wall to secure said socket to a socket-carrying support, a stud-engaging portion extending inwardly and upwardly from the lower edge of said wall to provide a stud-engaging portion surrounding a stud-receiving aperture, said stud-engaging portion severed by a plurality of slits to permit expansion and contraction thereof and a plurality of ears extending inwardly from the upper edge of the peripheral wall to provide a surface above the plane of the stud-engaging portion for engagement with the support to prevent interference between the support and the stud-engaging portion during expansion and contraction thereof.

---

1,690,666. SNAP FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed July 23, 1926, Serial No. 124,383. 4 Claims. (Cl. 24—216.)

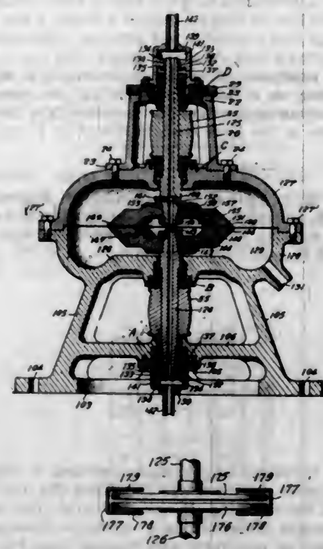
1. A snap fastener comprising, in combination, a stud member having a head, a neck and a shank portion, a socket for engagement with said stud comprising a back plate and a front plate located at opposite sides of a support, attaching means presented by one of said plates and passing through the other plate to secure both plates to the support and a plurality of contractible and expansible stud-engaging fingers extending from said back plate through an aperture in said front plate thereby to provide a stud-receiving aperture extending entirely through said socket so that the head of the stud may pass entirely through the socket and be exposed at the front face of the support to permit the free ends of the fingers to engage the neck of the stud, said fingers being sufficiently spaced away from the shank of the stud to permit separation of the fastener by an outward pull at any side thereof.



---

1,690,667. MINUTE DISINTEGRATION OF SUBSTANCES. FREDERICK JOHN EDWIN CHINA, Esher, England. Continuation of application Serial No. 599,038, filed Nov. 4, 1922, and in Great Britain Mar. 8, 1922. This application filed Dec. 10, 1923. Serial No. 679,748. 42 Claims. (Cl. 83—13.)

1. An apparatus for disintegrating particles, liquid or solid, suspended in a liquid comprising, closely adjusted

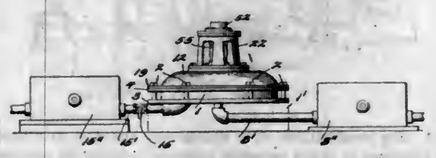


adjacent surfaces relatively movable one past the other at high velocity, means for holding the surfaces fixedly spaced, means for causing such movement of said surfaces, and means for introducing the fluid in a film between said surfaces whereby the particles are disintegrated by reason of the disruptive forces within the film.

26. A method of disintegrating particles suspended in a liquid comprising, subjecting a very thin film of the liquid to the action of closely adjacent non-contacting fixedly spaced surfaces relatively movable one past the other at high velocity, and introducing the particles to be disintegrated on the film itself.

---

1,690,668. DISINTEGRATING DEVICE. FREDERICK JOHN EDWIN CHINA, Esher, England. Original application filed Dec. 10, 1923, Serial No. 679,748, and in Great Britain Mar. 8, 1922. Divided and this application filed Mar. 12, 1926. Serial No. 94,349. 55 Claims. (Cl. 83—7.)

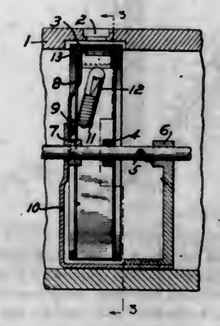


1. An apparatus for disintegrating particles, liquid or solid, comprising, rotatable members having annular working surfaces, means for fixedly spacing said surfaces in very close proximity, shafts upon which the rotatable members are mounted, means for rotating the shafts so that the working surfaces move past each other at high velocity, and means for introducing the liquid with suspended particles therein in a thin film between the working surfaces at their inner peripheries, whereby the particles are disintegrated by reason of the disruptive forces within the film.

39. A method of disintegrating particles suspended in a liquid comprising applying the liquid containing the particles to the peripheries and adjacent surfaces of two closely adjacent, annular members each rotating at high and equal velocity in opposite directions, whereby the liquid is reduced to a thin film and the centrifugal action of said surfaces on the liquid film is substantially neutralized and said liquid film is subjected to the shearing action of the rapidly moving closely spaced working surfaces of the annular members and the particles disintegrated by the disruptive forces within the film itself.

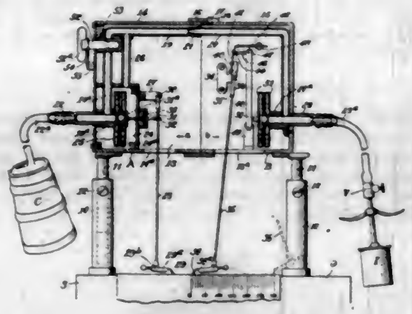
---

1,690,669. METHOD AND APPARATUS FOR PRODUCING SUSPENSIONS. FREDERICK JOHN EDWIN CHINA, Esher, England. Original application filed Dec. 10, 1923, Serial No. 679,748, and in Great Britain Mar. 8, 1922. Divided and this application filed Feb. 25, 1928. Serial No. 257,079. 27 Claims. (Cl. 83—13.)



1. A method of disintegrating particles suspended in a liquid comprising, subjecting a very thin film of the liquid with the suspended particles therein to the action of closely adjacent fixedly spaced smooth surfaces relatively movable one past the other at high velocity, and applying pressure to the liquid that is leaving the film in a direction opposite the direction of flow of the liquid, the particles being disintegrated by reason of the disruptive forces within the film itself, which increase with the increase of the relative velocities of the moving surfaces, and decrease with the increase in the thickness of the film.

6. An apparatus for disintegrating particles, liquid or solid, by reason of the disruptive forces in a film of liquid comprising, members having closely and fixedly spaced working surfaces, means for moving said surfaces one past the other at high velocity, and impeding means adjacent the discharge periphery of the working surfaces preventing the free flow of the liquid from between said working surfaces.

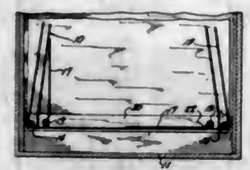


---

1,690,670. ILLUMINATED DIAL. LESLIE F. CURTIS, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Oct. 11, 1926. Serial No. 140,743. 10 Claims. (Cl. 116—129.)

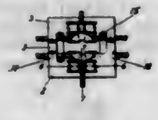
1. In a device of the kind described, a movable translucent dial, a stationary source of light, and a stationary line indicator arranged in the path of the rays of light from the source to the underside of the dial.

1,690,671. BLOOD-PRESSURE APPARATUS. CHARLES E. DRESSLER, New York, N. Y. Continuation of application Serial No. 731,743, filed Aug. 13, 1924. This application filed May 9, 1927. Serial No. 189,805. 11 Claims. (Cl. 234—17.)



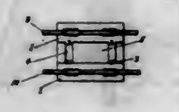
1. The combination of a diaphragm adapted to vibrate in response to blood pressure pulsations acting on one side of said diaphragm against atmospheric pressure on the other side thereof, a second diaphragm adapted to vibrate in response to the same blood pressure pulsations acting on one side of said diaphragm against a pressure greater than atmospheric pressure on the other side of said second diaphragm, and recording means actuated by said diaphragms for simultaneously recording the blood pressure pulsations and the appearance and disappearance of the pulse, the pulsations of which are recorded.

1,690,672. MOISTURE-INDICATING INSTRUMENT FOR WOOD. MATTHEW ELDRIDGE DUNLAP, Madison, Wis., assignor to the Government and the People of the United States of America. Filed Feb. 4, 1928. Serial No. 251,904. 2 Claims. (Cl. 73—24.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)



1. An instrument of the character described, a capillary tube, a hygroscopic membrane capable of shrinking and swelling and containing mercury, attached to one end of the capillary tube, a chamois skin pad at the other end of the capillary tube, a viscose cap adapted to hold said pad in place on the capillary tube, a scale adjacent said tube, a support adapted to hermetically engage the capillary tube and the object to be tested, and a housing for said membrane on said support.

1,690,673. CAMERA. HATTIE FORST, Milwaukee, Wis. Filed Mar. 12, 1927. Serial No. 174,926. 2 Claims. (Cl. 95—31.)



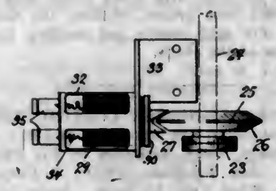
1. In a multiple exposure camera, a pair of shafts revolubly mounted within the rear portion of the camera adjacent the film exposure area, and a thin, flat, rectangular, non-yieldable shutter carried by each shaft, the portion of each shutter adjacent its shaft being slightly offset to permit a flat disposition of the major portion of the shutter.

1,690,674. ELECTRICAL CONDENSER. PRESTON E. GILLING, East Orange, N. J., assignor to Radio Condenser Company, Camden, N. J. Filed Feb. 19, 1925. Serial No. 10,214. 7 Claims. (Cl. 175—41.)

1. For a condenser of the class described, a metallic member acting as a clamping means for the condenser stack and having means for slidably receiving a plurality of conductors, in the same straight line or at an angle as desired.

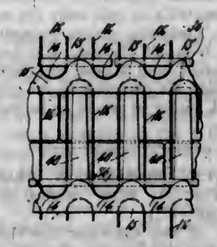
1,690,675. ELECTRICAL CONDENSER. PRESTON E. GILLING, East Orange, N. J., assignor to Radio Condenser Company, Camden, N. J. Filed Feb. 25, 1925. Serial No. 11,400. 5 Claims. (Cl. 175—41.)

1. For a condenser of the class described, a clamping terminal member having parts for embracing the stack with means for retaining the member in position on the stack and means for attaching a conductor thereto comprising a pair of perforated ears formed from the member so that the center line of the perforations are substantially in alignment.

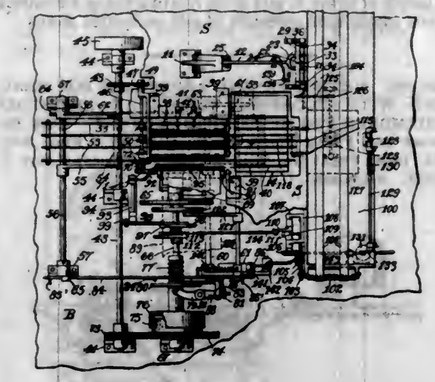


1,690,676. RADIO VACUUM TUBE CONDENSER. PRESTON E. GILLING, Camden, N. J., assignor to Radio Condenser Company, Camden, N. J. Filed July 14, 1927. Serial No. 205,550. 10 Claims. (Cl. 250—27.5.)

5. A device to slip over the terminals of a radio vacuum tube, consisting of a plate having openings therein for the tube terminals, at least one condenser assembled on the plate and means connected with the condenser for completing electrical contact with a pair of tube terminals when the tube terminals are pushed through the holes in the plate.



1,690,677. MICROSCOPE. ROBERT G. GUTHRIE, Chicago, Ill., assignor to E. Leitz, Inc., a Corporation of New York. Filed July 15, 1927. Serial No. 205,862. 2 Claims. (Cl. 88—39.)

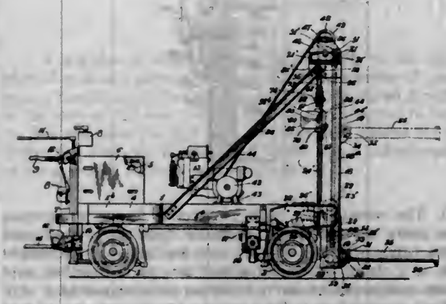


1. In a microscope in combination a fine adjustment mechanism for focussing purposes including a shaft, a member secured to said shaft and comprising an operating knob and a wheel, a bracket secured to said microscope, an electromagnet mounted for movement into operative relation to the said wheel, means on said magnet adapted to engage said wheel, and means for energizing said electromagnet to cause it to be attracted by the wheel to lock it and the said shaft against rotary movement.

1,690,678. ELECTRICAL RESISTANCE FURNACE. ALBERT J. HANSON, Arlington, Mass., assignor to American Metallurgical Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 23, 1924. Serial No. 687,913. Renewed May 7, 1927. 13 Claims. (Cl. 266—1.5.)

1. In an electric resistance furnace, in combination, a chamber wall, a resistor section having a plurality of bends at two of the opposite sides thereof, insulating members projecting from the wall on opposite sides of the resistor section and having spaced apart recesses in adjacent surfaces, and means cooperating with said bends for retaining them in the recesses and the resistor section in place upon the chamber wall.

1,690,679. AUTOMATIC WEIGHING MECHANISM. FRANK S. HEBDEN, Passaic, N. J., assignor to Merrick Scale Mfg. Company, Passaic, N. J., a Corporation of New Jersey. Filed Feb. 25, 1927. Serial No. 170,790. 52 Claims. (Cl. 265—9.)

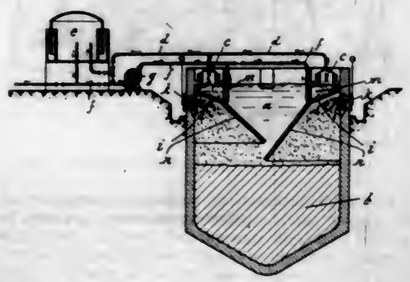


1. The combination with weighing mechanism, of an article support, article transferring means operative to lift an article from said support and transport the article to and deposit it on the weighing mechanism and return the same to initial position, and means to render said article transfering means operative and render the same inoperative when returned to initial position.

1,690,680. COMPOSITION FOR POLISHING SURFACES COMPOSED OF CELLULOSE-ESTER COMPOSITIONS. JOSEPH E. HIRSH, Brooklyn, and ARTHUR D. ROBSON, New York, N. Y., assignors to Standard Varnish Works, New York, N. Y., a Corporation of New York. Filed Mar. 10, 1927. Serial No. 174,405. 5 Claims. (Cl. 51—280.)

1. An improved levelling, smoothing, and polishing composition comprising a cellulose ester softening agent, an inert diluent or lubricant, and an abrasive.

1,690,681. INDUSTRIAL TRUCK. AMIEL G. HUTZLEY, Warren, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 24, 1924. Serial No. 722,125. 28 Claims. (Cl. 254—174.)



1. In apparatus of the class described, the combination of a support, a load handling member movably supported thereon, a drum rotatably mounted on said support, means

for rotating said drum in either direction, a flexible member adapted to wind on and off said drum at one end and operatively engaging said load handling member to move it in one or more directions, means connecting the opposite end of said flexible member to said support and arranged to take up slack occurring therein at any time, and means interposed between said connecting means and the supply of power to said drum rotating means for cutting off said supply upon operation of said connecting means.

---

1,690,682. METHOD OF AND APPARATUS FOR DEALING WITH FLOATING SLUDGE IN DIGESTION CHAMBERS FOR SEWAGE TREATMENT. KARL IMHOFF and FRANZ FRIES, Essen, Germany. Filed Aug. 25, 1924, Serial No. 734,009, and in Germany May 7, 1924. 5 Claims. (Cl. 210—2.)

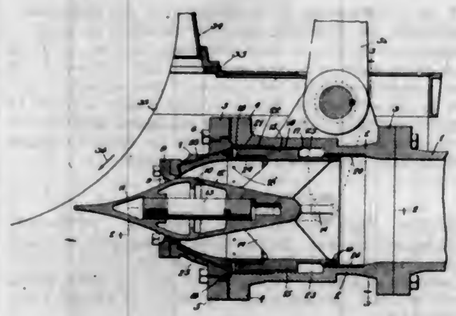
1. A method of dealing with floating sludge in digestion chambers for sewage treatment, consisting in intentionally covering the floating sludge below the water level in the digestion chamber thereby keeping the same continuously submerged until its being eventually let-off, and allowing the gases ascending from the digestion chamber to escape to the water level directly through said covering, substantially as set forth.

---

1,690,683. CLAMP FOR ELECTRIC SOCKETS. GUSTAF A. JOHNSON and FRANK E. JOHNSON, New Bedford, Mass., assignors to John I. Paulding, Inc., New Bedford, Mass., a Corporation of Massachusetts. Filed May 6, 1926. Serial No. 107,123. 10 Claims. (Cl. 173—362.)

1. The combination with an electric fixture comprising two parts having flanged engaging ends and one of said parts being provided with an opening adjacent its flanged end, of a clamp for clamping said two parts together, said clamp comprising an outer clamping member provided with oblique clamping ends for engaging the flanges of said two parts, one of said ends passing through the said opening in one of said parts and being adapted to engage the inner face of the wall of said part, an inner member engaging the inner faces of said parts and having one end turned to enter the said opening and to bear against the oblique portion of the end of the outer member within said opening and means connecting said outer and inner members to draw them together into clamping relation.

---



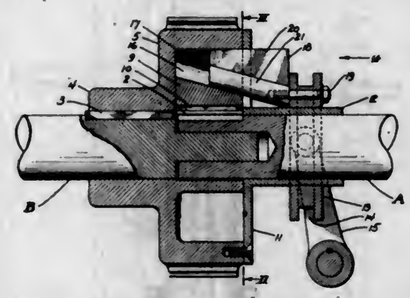
1,690,684. CYLINDRICAL MEMBER AND METHOD OF MAKING THE SAME. WALLACE C. JOHNSON, New York, N. Y. Filed July 24, 1924. Serial No. 728,038. 3 Claims. (Cl. 29—188.)

1. The method of making a cylindrical member which consists in forming a groove longitudinally of a cylinder, covering said cylinder with sheet metal with the edges thereof opposite said groove, bending the edges of the sheet metal into said groove and welding together the adjacent edges of the sheet.

---

1,690,685. NEEDLE-NOZZLE CONSTRUCTION. LEOPOLD M. KARNASCH, San Francisco, and ELY C. HUTCHINSON, Oakland, Calif., assignors to The Felton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed Aug. 16, 1926. Serial No. 129,638. 6 Claims. (Cl. 253—24.)

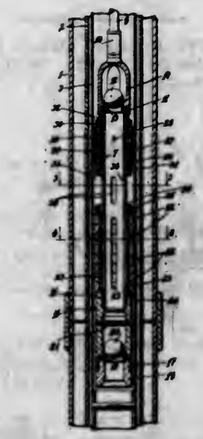
1. Hydraulic control apparatus, comprising a nozzle body, a needle operatable in said body for controlling discharge therefrom, operating means connected with said needle extending laterally through said body operatable from the side thereof, and means cooperating with said needle and said body for distributing the pressure therein for balancing said needle in whole or in part at all positions of operation.



---

1,690,686. CLUTCH. FREDERICK W. KRAFFT, Berkeley, Calif. Filed Feb. 11, 1926. Serial No. 87,540. 2 Claims. (Cl. 192—71.)

1. In a device of the character described, a driving shaft member having a plurality of teeth formed on its exterior surface, a clutch member surrounding the shaft member and freely turnable with relation thereto, a plurality of jaw members radially movable in the clutch member, an end plate on the clutch securing the jaw members against longitudinal movement, said end plate having a plurality of openings formed therein, and each jaw member being longitudinally slotted and having a pair of inclined shoulders formed therein extending from end to end, a shifting collar longitudinally movable with relation to the driving shaft member, jaw guiding members



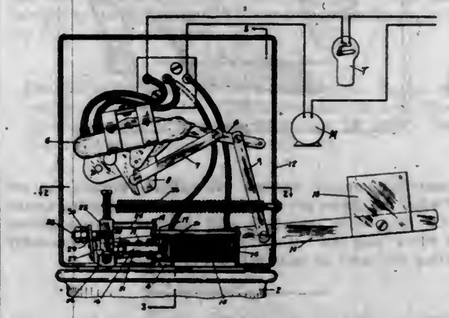
secured to the shifting collar, said jaw guiding members extending through the openings in the end plate and engaging the inclined shoulders in the jaw members to im-

part a radial movement to the jaw members in an outward or inward direction, and teeth on each jaw member engageable with the teeth on the driving shaft member.

---

1,690,687. PUMP PLUNGER. REES H. LEMMON, Long Beach, Calif. Filed Mar. 22, 1926. Serial No. 96,485. 3 Claims. (Cl. 103—225.)

1. A pump plunger comprising a tube, a working valve secured to the upper end of the tube, a working valve secured to the lower end of the said tube, a plurality of packing rings of greater interior diameter than the exterior diameter of the said tube mounted on the tube, a retaining collar screw-threaded on the said tube and engaging the said rings, slots formed in the said tube behind the said rings for admitting fluid pressure outward to the space provided by the rings of the tube for expanding the said rings, a second packing assembly spaced from and above the said packing rings, and a slotted section of the said tube intermediate the said packing assemblies, placing the space between said assemblies in communication with the bore of said plunger.

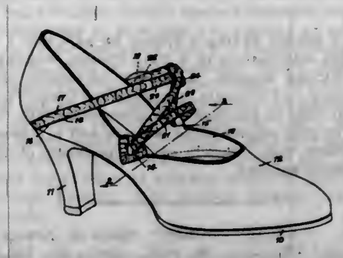


---

1,690,688. COMPOUND FOR BREAD MAKING. ERNEST E. LINDSEY, San Francisco, Calif. Filed Mar. 23, 1927. Serial No. 177,843. 4 Claims. (Cl. 99—11.)

1. A bread-making compound consisting of cheese, dissolved with the seasoning and shortening ingredients of bread, mixed at a temperature sufficient to bring about sterilization and dissolution, whereby to form a semi-solid or paste-like product, said compound having good keeping qualities and being capable of forming a cheese-flavored bread when combined with flour, yeast, and liquid.

---

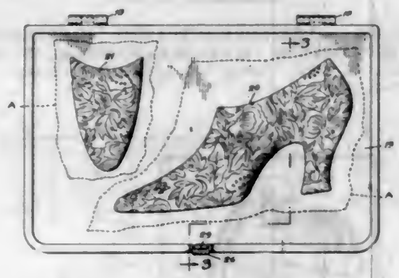


1,690,689. PRESSURE-ACTUATED ELECTRIC-CIRCUIT CONTROL. IRA E. MCCABE, Chicago, Ill. Filed Apr. 12, 1926. Serial No. 101,589. 4 Claims. (Cl. 200—144.)

1. In a pressure operated electric circuit control, an expansible and contractible element, an electric switch in the circuit to be controlled, means actuated by the expansible and contractible element to operate the switch to open and close the circuit, a pressure responsive electric conducting element of varying resistance in the circuit at one side of the switch, and means actuated by the movement of the switch operating means to vary the pressure upon said element in proportion to the direction and amount of movement of said switch operating means.

---

1,690,690. SHOE. CHARLES MILLER, Long Island City, N. Y. Filed Nov. 10, 1926. Serial No. 147,462. 2 Claims. (Cl. 36—50.)

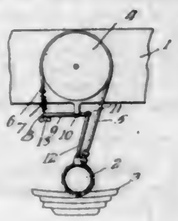


1. A low shoe or slipper having in proximity to the upper edge of each side portion of its upper a like number of openings, a flexible strap having one end thereof secured directly to the shoe at the heel portion thereof and adapted to have its free end pass through said openings, and means for securing the free end of said strap to the upper subsequently to being passed through said openings.

---

1,690,691. PATTERN-DISPLAYING DEVICE. CHARLES MILLER, Long Island City, N. Y. Filed Dec. 18, 1926. Serial No. 155,752. 4 Claims. (Cl. 35—17.)

1. A pattern displaying device, comprising a base plate having on one of its faces in bas-relief a portion of the figure of a given object for receiving thereon a removable sheet of the material of which at least a part of the object is to be made, a cover plate for being removably disposed on the base plate, said cover plate having a cutout positioned

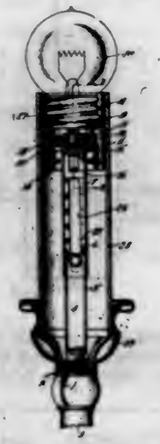


for receiving the figure and the cut-out being of a shape conforming to the contour of the figure of the base plate, the cut-out also being of slightly larger area than the contour of the figure whereby the figure and the portion of the sheet

of material imposed thereon will extend through the cut out when the plates are closed together, and coacting means on the face of the base plate and the cover plate adjacent the figure and the cut-out for stretching and removably holding the sheet of material taut on the figure.

---

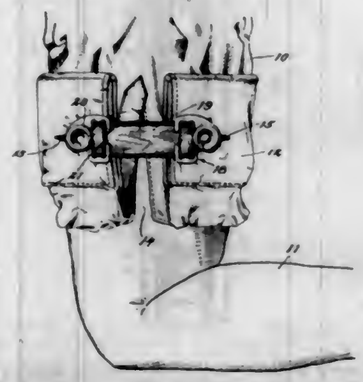
1,690,692. SHOCK ABSORBER. FRANK C. MOCK, Chicago, Ill., assignor to Stromberg Research Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1924. Serial No. 729,459. 21 Claims. (Cl. 267—9.)



2. In a vehicle having a frame, an axle and a vehicle spring, the combination of a rigid friction element and a flexible friction element, means for controlling the pressure between said elements to increase the friction for recoil movement only of the spring in accordance with the position of the axle above neutral position and to release pressure between said elements for all positions of the axle below neutral position.

---

1,690,693. CANDLE SOCKET. KARL K. NIELSEN, Chicago, Ill. Filed Jan. 28, 1927. Serial No. 164,165. 8 Claims. (Cl. 173—358.)



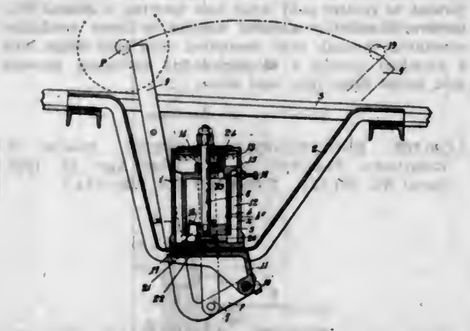
1. An electric candle socket including a support having a top and a pair of shanks supporting the top, an intermediate insulator seated on the said top, a socket shell having its base seated on the intermediate insulator, an insulator above the said intermediate insulator disposed within and seated on the base of the socket shell and a lower insulator underhanging the top of the support; a wire terminal secured to the socket shell and having a downwardly extending portion, a second wire terminal having a part seated on the upper insulator and having a downwardly extending portion; there being alined perforations in the three insulators, the seating part of the second wire terminal, the base of the socket shell and the support top; and a fastening member extending through the said alined perforations and headed at each end and approximately fitting the perforations of the three insulators but smaller in diameter than the perforations in the support top and in the socket shell base; the three insulators having two sets of alined lateral notches through which sets of notches the downwardly extending portions of the wire terminals respectively extend, and the lower insulator having shoulder

formations engaging one shank of the support to prevent rotation of that insulator with respect to the support about the fastening member.

---

1,690,694. SLEEVE HOLDER. HARRY P. NISSEN, Oakland, Calif. Filed Nov. 22, 1926. Serial No. 149,968. 3 Claims. (Cl. 24—73.)

1. In a device of the character described, a flat member having a hook at one end adapted to releasably connect with a cuff link, the other end of said member being formed with a pair of spaced slots disposed transversely of the hooked end, the end of said member adjacent the slots being cut away to provide an opening communicating with the outermost slot.



---

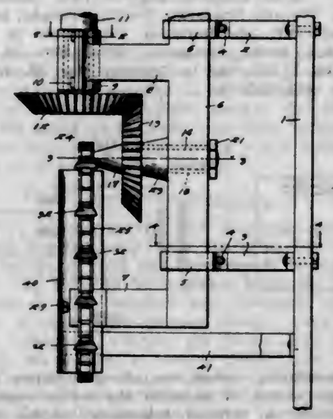
1,690,695. APPARATUS FOR RETARDING WAGONS, TUBS, AND THE LIKE. BERTRAM NORTON, Claverley, near Wolverhampton, England. Filed Sept. 17, 1927, Serial No. 220,239, and in Great Britain Jan. 29, 1927. 8 Claims. (Cl. 104—256.)

1. Apparatus for retarding wagons or tubs comprising in combination a cataract having a cylinder containing oil or other liquid, a piston working in the cylinder, means for restricting the passage of the liquid from the high pressure side of the piston whereby the liquid is permitted to escape under restraint, and a jutting impact arm or member connected to the piston and adapted to project into retarding

position in the path of a vehicle passing thereover and to move forwardly clear of the vehicle to non-retarding position subject to a reluctant movement of the cataract ap-

paratus upon a propellant force acting against the impact arm or member, and means for causing the impact arm or member to return to retarding position.

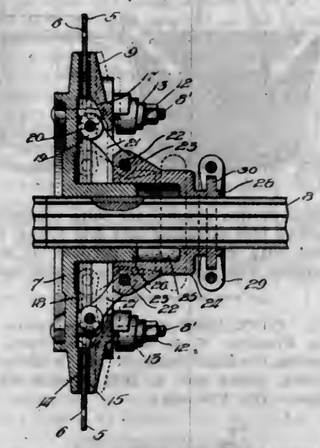
---



1,690,696. RUBBER HEEL. HARRY G. NORWOOD, Baltimore, Md., assignor to A. D. T. Libby, Newark, N. J. Filed Feb. 10, 1927. Serial No. 167,347. 8 Claims. (Cl. 36—35.)

1. In a flexible heel having a rim portion to fit on the heel lift, means for increasing the resilience of the heel comprising a central arch and an annular arch between the rim and the central arch, said central arch being proportioned so as to have somewhat more resilience than the outer arch.

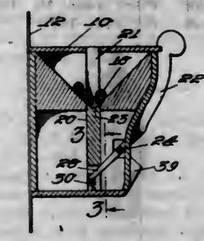
---



1,690,697. MORTISING MACHINE. CARL PALMU, Duluth, Minn. Filed May 11, 1927. Serial No. 190,472. 1 Claim. (Cl. 144—72.)

In a mortising machine, a vertically movable bar, supporting means therefor, parallel spaced lateral extensions of said bar, bearings at the free ends of said extensions, said bearings being in a common plane, a driven shaft rotatably mounted on said arm and projecting laterally thereof between said lateral extensions and terminating in the common plane of the ends thereof, a sprocket carried at the outer end of said shaft to rotate therewith, a stem adjustable vertically within the bearing of one lateral extension of said arm and parallel therewith, a second sprocket rotatably supported at the end of said stem in alignment with the first mentioned sprocket, an endless chain extending over said sprockets, a drive shaft arranged in the bearing at one end of one of said extensions from the bar in the plane of said endless chain, and cutter blades carried by certain links of said chain, substantially as and for the purpose set forth.

---

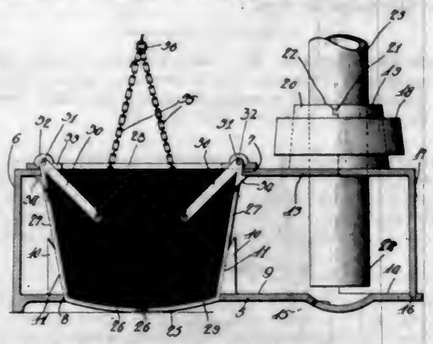


1,690,698. CLUTCH. WILLIAM J. PEARMAIN, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 28, 1927. Serial No. 164,144. 3 Claims. (Cl. 192—68.)

1. In a clutch of the class described, an intermediate disk, a fixed and a floating friction member arranged respectively on opposite sides of said disk and adapted to engage the same, one of said members having a frusto-conical surface adjacent the other of said members, rollers intermediate said frusto-conical surface of the floating member and the adjacent surface of the fixed member and adapted when moved outwardly to force said members apart, an axially movable sleeve, links connecting said rollers to said sleeve, the construction being such that said links may be moved past their dead center to lock the clutch in open position, and springs pressing said floating member toward the fixed member.

---

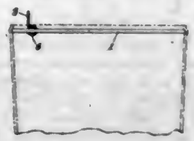
1,690,699. CIGARETTE AND MATCH DISPENSER. ERNST PETERSON, Rockford, Ill. Filed July 22, 1926. Serial No. 124,114. 1 Claim. (Cl. 312—79.)



In a combined cigarette and match dispenser, a receptacle for the objects to be dispensed, a pair of ejector plates passing upwardly through said receptacle to dispense two

objects at one ejecting movement, and a forked handle for moving both of said ejecting means, said handle being pivoted on the interior wall of the casing and having its manually operated end positioned alongside the outer wall of the casing, together with springs for returning the ejector members to original position after an ejecting movement, and latch means for locking the handle in object ejecting position against the tension of said spring.

---



1,690,700. BILGE SUCTION STRAINER FOR SHIPS. HEINRICH A. W. PETERSEN, Gary, Ind. Filed Sept. 12, 1923. Serial No. 662,181. 9 Claims. (Cl. 210—170.)

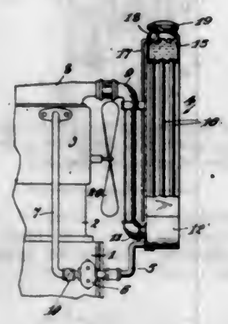
1. A bilge suction strainer for ships comprising a casing, a suction pipe extending into said casing, and means co-operable with interengaging portions of said casing for detachably securing said casing to said suction pipe.

---

1,690,701. CONTAINER CLOSURE. JAMES D. REIFSNYDER, Flushing, N. Y., assignor to Tulip Container Corporation, College Point, N. Y., a Corporation of New York. Filed Apr. 5, 1927. Serial No. 181,018. 2 Claims. (Cl. 229—43.)

1. A container closure comprising a disc of fibrous material having a metallic lifter provided with an eye at one end which encircles a portion of said disc at a point removed from but closely adjacent to the edge of the disc, said eye and cooperating disc portion forming a hinged connection between said disc and said lifter wherein the eye encircled portion acts as the hinge pin about which the lifter is adapted to be freely moved pivotally.

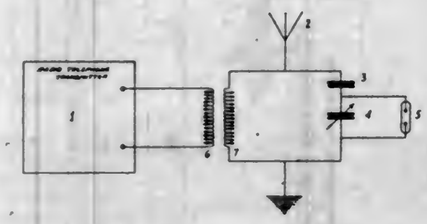
---



1,690,702. SPARK PLUG. LOUIS ROTELLA, Montreal, Quebec, Canada. Filed June 10, 1925. Serial No. 36,246. 1 Claim. (Cl. 123—169.)

In a spark plug, a dome of translucent material having a circular bore through the upper wall thereof and a metal filler fixedly secured in said bore and having a central threaded orifice therethrough, a threaded sleeve frictionally secured on the lower portion of said dome and extending therefrom and externally threaded, a shell formed to receive said dome and forming a ground connection, insulating material therein, a lower conductor extending through said insulation into said dome, and a terminal having a conductor rod extending through said metal filler into said dome.

---

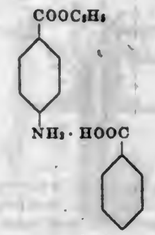


1,690,703. ENGINE-COOLING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Apr. 19, 1927. Serial No. 184,877. 7 Claims. (Cl. 123—174.)

1. In combination, a force feed circulating system for cooling variable duty engines by heating water to absorb heat of the engine under certain conditions and by also boiling it to produce large volumes of steam under other conditions, means for cooling the water and condensing the steam, including an air cooled, water-filled radiator of the upright type having passages of great radiating capacity connected at the bottom through a lower chamber of small radiating capacity and at the top by an upper chamber whereby said passages are submerged; said force feed system intaking water from and discharging water and steam to said lower chamber, and means enclosing a body of water adjacent said discharge and intake of the force feed system adapted to restrict thermo-circulation between said body and the bottoms of said radiating passages.

---

1,690,704. MODULATION-INDICATING ARRANGEMENT. WALTER SCHAFFER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany. Filed Feb. 24, 1925, Serial No. 11,021, and in Germany Mar. 15, 1924. 5 Claims. (Cl. 250—6.)

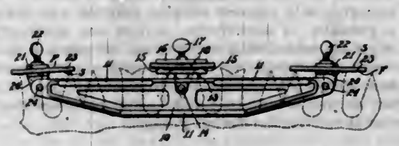


1. A modulating system comprising a source of carrier energy, means to modulate the carrier energy, an output circuit, a variable impedance coupled thereto having an adjustable setting means, and an indicating means uniquely responsive to an intensity of modulation determined by the adjustment of the setting means.

1,690,705. BENZOIC ACID SALT OF AMINO BENZOIC ESTERS. HERMAN SEYDEL, Jersey City, N. J. Filed Apr. 5, 1927. Serial No. 181,269. 6 Claims. (Cl. 260—105.)

6. As a new product, the substance having the structural formula—

---

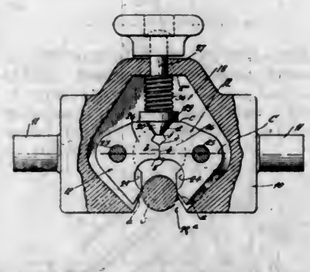


1,690,706. TOOTHBRUSH. JACOB SILBERSTANG, New York, N. Y., assignor of one-half to Jack I. Saks, New York, N. Y. Filed Feb. 14, 1925. Serial No. 9,257. 5 Claims. (Cl. 15—172.)

1. The combination of a handle having an end portion providing a supporting means, a pair of members rotatably mounted on said end portion, each member being provided with a row of bristle tufts, said tufts being graduated in lengths from one end to the other of the member whereby said member may be rotated to effect a brushing surface of concave or convex contour.

---

1,690,707. SAW JOINTER. OLIVER ST. CLAIR, Indianapolis, Ind., and BAZEL R. WATSON, Snohomish, Wash., assignors to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 16, 1926. Serial No. 135,737. 2 Claims. (Cl. 76—47.)

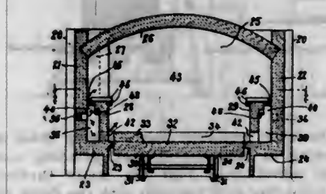


1. A saw jointer comprising a rigid main body, a file holder laterally adjustable on the main body, and two file-shoe dogs one mounted at each end of the main body and angularly adjustable thereon, the adjustment of the file holder on the main body being independent of the dogs, each of said dogs having a jaw formed to receive and hold a file-shoe element.

---

1,690,708. COMPOSITION OF MATTER AND MOLD MADE THEREFROM AND METHOD OF CASTING POTTERY IN THE MOLD. JOHN D. WIGGIN, Montclair, and MATHIAS M. REMMES, Belleville, N. J., assignors to H. B. Wiggin's Sons Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Oct. 29, 1924. Serial No. 746,666. 30 Claims. (Cl. 25—156.)

25. In the method of casting pottery, the steps including preparing a slip containing a soluble carbonate, preparing a mold the material of which comprises plaster of Paris and a substance which will prevent a reaction between the carbonate in the slip and the calcium sulphate in the plaster of Paris, casting the slip in the mold, removing the cast, and firing it.

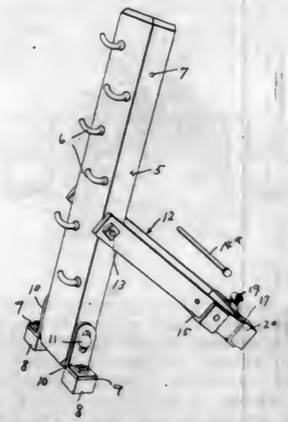


1,690,709. ROD ELEVATOR. WILLIAM WEBSTER WILSON, Los Angeles, Calif. Filed Nov. 6, 1924. Serial No. 748,004. 3 Claims. (Cl. 294—91.)

1. In an elevator, the combination of a body member, two opposed jaws pivotally mounted on the body member and movable on their pivotal centers to open and close the elevator whereby rods may be inserted in and withdrawn from the elevator, a plunger slidably mounted on the body member, spring means adapted to urge the plunger in one direction to engage and hold the jaws in selected position, a handle on the plunger and capable of limited longitudinal movement with respect thereto, said spring means being adapted to hold the handle and plunger yieldably against relative movement, said handle being adapted to be actuated to slide the plunger in the opposite direction against the action of said spring and thereby to release it from holding engagement with the jaws; and closing movement of said jaws being adapted to slide the plunger through the handle and out of holding position against action of said spring.

---

1,690,710. FURNACE. GEORGE F. BEACH, Philadelphia, Pa., assignor to F. J. Ryan & Company, Philadelphia, Pa., a Corporation of Delaware. Filed June 4, 1926. Serial No. 113,634. 11 Claims. (Cl. 263—43.)

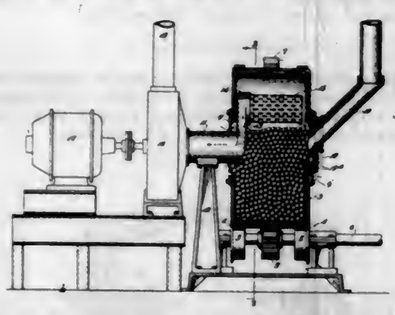


1. In a furnace of the character described, a casing forming a heating chamber, a heat distributing chamber within said casing having upper and lower heat vents communicating with the heating chamber, means for supplying heat to said distributing chamber and movable means located at the outlet of the upper heat vent for adjusting the size of the upper heat vent.

---

1,690,711. ARTICLE SUPPORT. EDWARD C. BLODGETT, Kirksville, Mo. Filed Aug. 19, 1927. Serial No. 214,106. 1 Claim. (Cl. 211—123.)

As a new product of manufacture, an article support of the class described, comprising a sectional body, one section being provided with suspension elements, brackets adjustably connected with said one section, abutments carried by said brackets, said other section being in the form of a substantially U-shaped frame, the arms of which are adapted to straddle the longitudinal edge portions

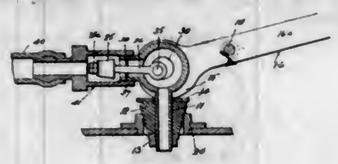


of said first-named section, and a bight portion being swingable over one end of said first-named section, a stop carried by said first named section, a plate also carried

by the bight portion of said swingable section, a resilient catch carried by said plate, and abutments also carried by said plate.

---

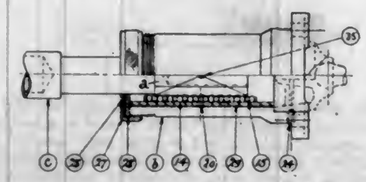
1,690,712. PULVERIZING MILL. LOUIS C. BONNOT, Louisville, Ohio, assignor to The Bonnot Company, Canton, Ohio, a Corporation of Ohio. Filed May 23, 1925. Serial No. 32,347. 2 Claims. (Cl. 83—9.)



1. A pulverizing mill including a rotary drum with a central opening in each end thereof, grinding media as balls, filling substantially half the cavity thereof, feed means for delivering raw material into the drum through one end opening thereof, and suction exhaust means including a collecting receptacle extending longitudinally and substantially across the upper region of the drum and a radially extending flat hollow support adjacent the other end of the drum providing communication from the collecting receptacle through the other central end opening for withdrawing dust from the upper region of the drum through the other end opening thereof, there being air inlet ports in the ends around the feed and exhaust means, and the middle region of the drum being without impediment for the free movement of the grinding media therethrough.

---

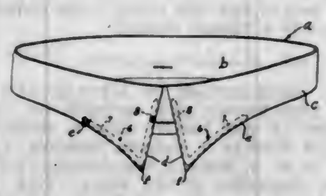
1,690,713. PRESSURE-TEST APPARATUS. WILLIS J. BOYLE, Jr., Los Angeles, Calif., assignor to Boyle Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 25, 1927. Serial No. 186,312. 3 Claims. (Cl. 284—17.)



1. In a pressure testing device, the combination of a hollow body having a pressure inlet opening and a pressure outlet opening, an external and expansible gasket associated with one opening and adapted to be inserted in an aperture of the article to be tested, a valve associated with the other opening, an operating handle mounted on

the body, and connective means whereby movement of the operating handle simultaneously expands said gasket tightly in such aperture and opens said valve.

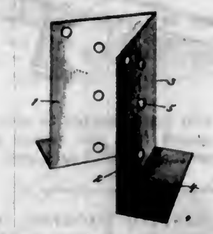
---



1,690,714. SLIP JOINT. EDWARD I. BRADDOCK, Cleveland, Ohio; Robert H. Montgomery executor of said Braddock, deceased. Filed Mar. 28, 1924. Serial No. 702,626. 3 Claims. (Cl. 64—89.)

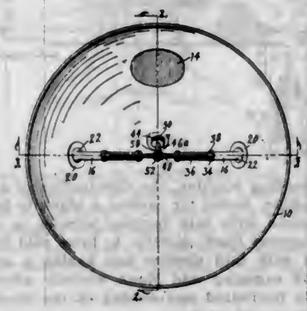
1. A slip joint comprising a shaft having a male member provided with a plurality of substantially flat longitudinally extended wearing surfaces, a female member co-operating wtih said male member and having substantially flat wearing surfaces on its interior extended longitudinally thereof and co-operating with tne flat wearing surfaces of the male member, and antifriction units insertible into and removable from said female member and interposed between and engaging said opposed wearing surfaces and comprising a plurality of antifriction devices and substantially flat cages by which said antifriction devices are carried and retained in operative relation, said cages comprising members connected together and between which said antifriction devices are located and having openings through which said antifriction devices project.

---



1,690,715. COLLAR ATTACHMENT. CHARLES BRENESSEL, Los Angeles, Calif. Filed Sept. 12, 1927. Serial No. 218,899. Renewed Sept. 17, 1928. 1 Claim. (Cl. 2—132.)

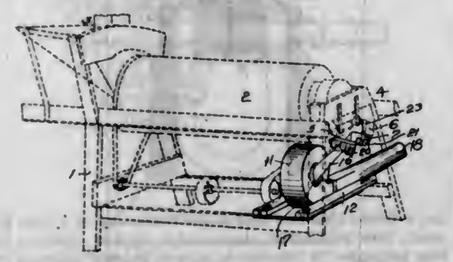
A collar attachment of the character described comprising two connected stiff legs forming a V-shaped body, the body forming at the juncture of said legs a pointed penetrating member and the legs forming at their free ends other pointed penetrating members, and the penetrating members terminated at their bases by shoulders.



1,690,716. PLANT PROTECTOR. NICHOLAS M. BRISBOIS, Stockton, Calif., assignor to National Paper Products Company, San Francisco, Calif., a Corporation of California. Filed Aug. 3, 1926. Serial No. 126,788. 2 Claims. (Cl. 47—30.)

1. A plant protector comprising a pair of heavy paper wings connected for relative pivotal movement along one side edge of each wing, and anchor flaps connected to the bottom edges of the wings.

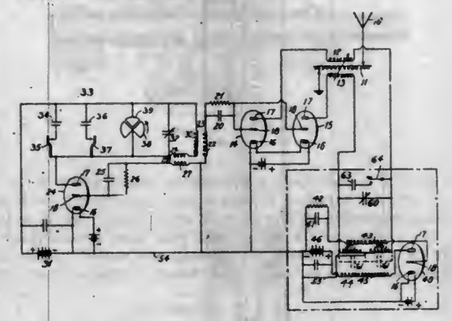
---



1,690,717. THERAPEUTIC LAMP. LLOYD BROWN, Des Moines, Iowa. Filed Aug. 18, 1927. Serial No. 213,787. 5 Claims. (Cl. 174—177.)

1. In a lamp of the class described, a support, adapted to serve also as a protective shield, a handle thereon, a pair of carbon holders mounted on the opposite side of said support for adjustably holding carbons at an acute angle to each other and meaus actuatable from a position adjacent to the handle and on the handle side of the support and shield for adjusting said holders toward or from each other.

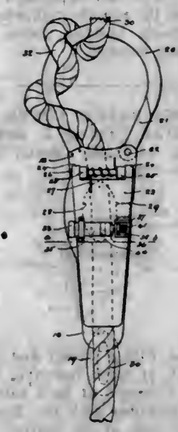
---



1,690,718. SEED-TREATING MACHINE. CLAUDE C. CALKINS, Spokane, Wash. Filed Sept. 12, 1924. Serial No. 737,284. 2 Claims. (Cl. 83—28.)

1. In a seed treating machine having a pair of angularly disposed discharge spouts, the combination of a fan blower and its intake pipe, a pneumatic head having a sleeve telescoping with said pipe, a pair of angularly disposed intake boxes integral with said sleeve and forming part of the hend, said boxes having open inner faces for engagement with the outer walls of said spouts, flanges on said inner faces, and means for attaching said boxes to said spouts.

---

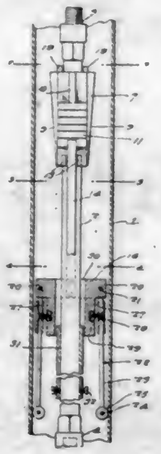


1,690,719. METHOD AND MEANS FOR SECRET RADIO-SIGNALING. EMORY LEON CHAFFEE, Belmont, and ELLISON S. PURINGTON, Boston, Mass., assignors to John Hays Hammond, jr., Gloucester, Mass. Filed Mar. 31, 1922, Serial No. 548,513. Renewed Mar. 16, 1926. 29 Claims. (Cl. 250—10.)

1. The method of producing radiant energy for the transmission of intelligence which comprises generating a pair of alternating currents of unlike frequencies, wobbling said currents similarly so that the frequency difference thereof normally remains substantially constant, and transmitting a message by varying said difference frequency.

---

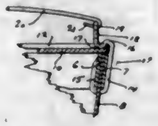
1,690,720. SAFETY BELT. RALPH LE ROY COSBY, Richmond, Va. Filed May 26, 1927. Serial No. 194,403. 2 Claims. (Cl. 227—28.)



1. A safety-belt rope-clamp consisting of a plate adapted to be attached to a belt, and having an opening through which a rope may be passed from the back to the front of the plate, and also having mounted at one edge of it a notched lug; a second plate hinged to the first plate above the opening in the latter and adapted to be clamped down upon the rope passed between the two plates, and having mounted upon it a sliding bar adapted to be slid into engagement with the notched lug on the first plate to hold

the two plates in clamping position on the rope; and means for releasing the sliding bar from engagement with the notched lug to relieve the clamping pressure of the plates upon the rope.

---

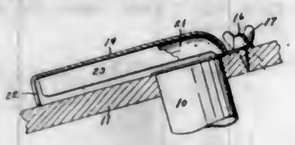


1,690,721. ROD GUIDE AND PROTECTOR. STEPHEN V. DILLON, Tulsa, Okla., assignor to Smith Separator Company, a Corporation of Oklahoma. Filed May 7, 1926. Serial No. 107,478. 3 Claims. (Cl. 255—1.)

1. In combination, a well tube, a pump operating rod reciprocating within the tube, an actuating member detachably mounted on the rod and adapted when the rod is moved in a certain way, to slide downwardly on the rod, a collar in the tube and surrounding the rod, friction means on the collar bearing against the tube for supporting the collar therein, slip links connected to the collar, and slips connected to the links and adapted to be forced against the tube by the actuating member when the latter slides downwardly on the rod, the rod, when the actuating member is in anchored position, being freely slidable through the actuating member.

---

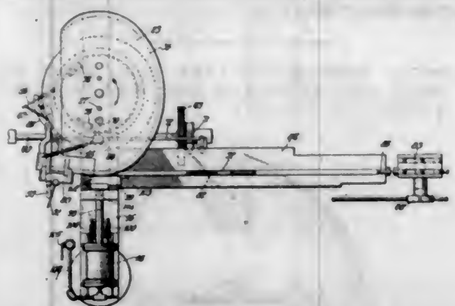
1,690,722. COMBINED BASKET COVER AND HANDLE-FASTENING MEANS. COLON J. DUDLEY, Hamburg, N. Y. Filed Aug. 24, 1926. Serial No. 131,273. 3 Claims. (Cl. 217—125.)



1. The combination with a basket and cover, the cover having a central slat, of cover fastening means, comprising a wire element arranged at each side of the basket, each element being provided with two Z-shaped portions, one arranged on each side of the central slat and engaging the cover, and a handle for connecting the fastening elements together.

---

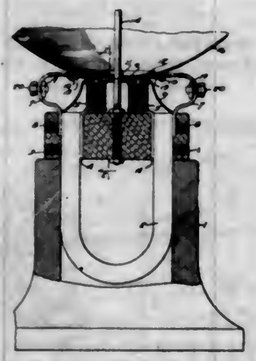
1,690,723. DEFLECTOR FOR MOTOR-VEHICLE HOT-AIR HEATERS. MILTON S. FRANKLE, Des Moines, Iowa. Filed Oct. 7, 1927. Serial No. 224,608. 5 Claims. (Cl. 98—2.)



1. The combination with a motor vehicle having a body member and a heater pipe adapted to discharge heated currents of air therethrough, of a deflector plate arranged substantially parallel with said body member and pivoted on an axis spaced from and substantially parallel with the

axis of said pipe, said plate adapted to be arranged with its body portion spaced from the vehicle body member and extending across the mouth of said pipe.

---

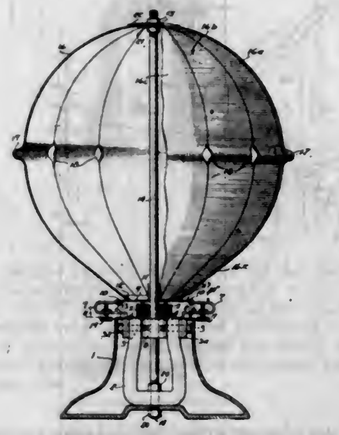


1,690,724. TUBE-BENDING MACHINE. CLARENCE H. FREDERICK, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Feb. 10, 1923. Serial No. 618,313. 9 Claims. (Cl. 153—40.)

8. In a bending machine, the combination of a movable forming member, means for causing a blank to be bent to move in unison with said forming member, a relatively stationary presser block operable to force said blank into engagement with said member and having a soft metal face slidably engaging said blank whereby advancing of the blank is facilitated and scoring of the blank by the presser block is prevented.

---

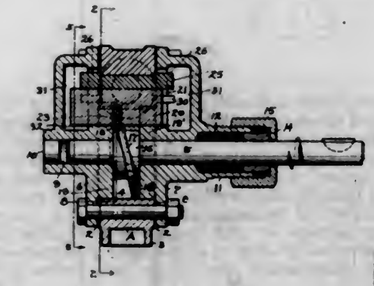
1,690,725. ELECTROMAGNETIC SOUND-REPRODUCING APPARATUS. EMIL F. HOLINGER, New York, N. Y., assignor of one-half to E. Chase Crowley, New York, N. Y. Filed Apr. 23, 1927. Serial No. 185,994. 14 Claims. (Cl. 179—115.)



1. In a sound reproducing device suitable for use in radio apparatus having an electromagnet, the coils of which are adapted to be included in the reproducing circuit,

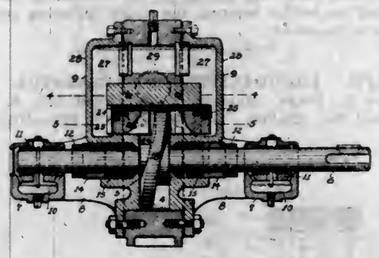
the combination, with the above recited apparatus of a hollow, substantially globular member made of thin, resonant material having an opening in its side, and an armature for said electromagnet fastened to said globular member.

---



1,690,726. SOUND-REPRODUCING DEVICE. EMIL F. HOLINGER, New York, N. Y., assignor of one-half to E. Chase Crowley, New York, N. Y. Filed June 17, 1927. Serial No. 199,504. 20 Claims. (Cl. 179—115.)

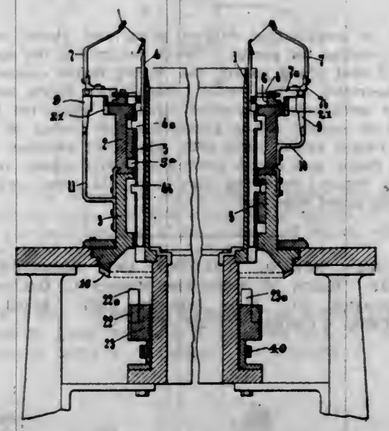
1. A sound reproducing device comprising, in combination, a hollow member of substantially pear shape having one portion in the form of a segment of a sphere, and the rest substantially cone shaped, both made of thin, resonant material, and means for imparting sound vibrations to said member attached to the smaller end thereof.



---

1,690,727. ROTARY PUMP. JOSEPH F. JAWOROWSKI, Cleveland, Ohio, assignor, by mesne assignments, to Joseph F. Jaworowski and Samuel Dettelbach, Cleveland, Ohio. Filed Feb. 13, 1925. Serial No. 8,912. 1 Claim. (Cl. 103—139.)

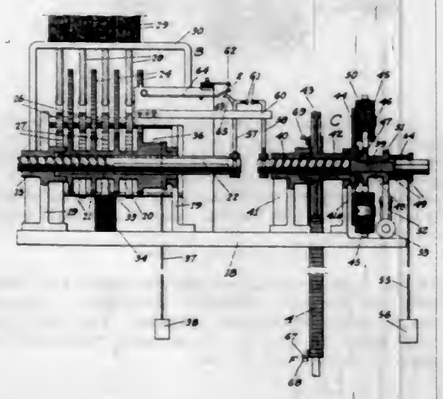
A rotary pump, comprising a body having a round working chamber, a blade transversely slidable of said chamber, a rotary member having an annular rib engaging said blade and dividing said chamber obliquely into separate segmental spaces, and a gib for said blade removably connected to said body.



1,690,728. ROTARY PUMP. JOSEPH F. JAWOROWSKI, Cleveland, Ohio, assignor, by mesne assignments, to Joseph F. Jaworowski and Samuel E. Dettelbach, Cleveland, Ohio. Filed June 16, 1927. Serial No. 199,187. 10 Claims. (Cl. 103—123.)

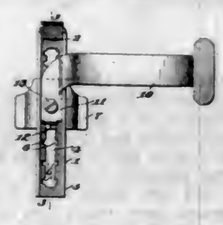
1. A rotary pump, comprising a body having a circular working chamber, a rotor obliquely mounted between the sides of said chamber, a pair of sliding abutment blades engaging said rotor and subdividing said chamber, and a channeled holder for said blades rigidly secured within said body opposite said working chamber removable therefrom.

---



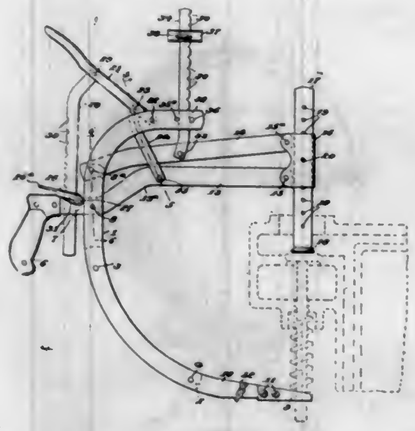
1,690,729. CIRCULAR-KNITTING MACHINE AND THE PRODUCTION OF FABRICS THEREON. THOMAS HENRY JONES, Woodthorpe, England. Filed Nov. 22, 1927, Serial No. 234,961, and in Great Britain Oct. 8, 1926. 8 Claims. (Cl. 66—51.)

1. In a circular knitting machine for simultaneously producing a plurality of flat knit fabrics with selvedge edges, the combination of a stationary cylinder, needles supported by the cylinder and arranged in groups, those of each group serving to knit a complete piece of fabric, such groups being separated from each other by spaces void of needles, and each needle being formed with two butts that are spaced apart, rotary cam carriers supported concentrically with the needle cylinder, means for rotating the cam carriers simultaneously in opposite directions, needle operating cams carried by the carriers for engaging respectively with the separated butts of the needles, the cams being located diametrically opposite each other so they pass one another when opposite the void spaces of the needle cylinder, and fixedly connected with



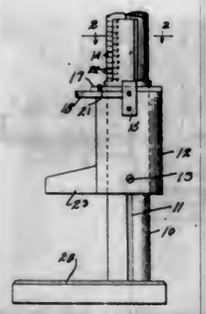
their respective carriers so they move in circular paths only, guides for delivering threads to the needles arranged to move in synchronism with the knitting cams, radially movable sinkers supported above the needle cylinder and each formed with two recesses, a pair of cams rotatable in paths concentric with the needle cylinder for engaging respectively each with one set of the recesses of the sinkers and means for rotating the sinker-operating cams in opposite directions.

1,690,730. LIQUID-DISPENSING APPARATUS. WILLIAM C. JONES, Alameda, Calif. Filed July 6, 1926. Serial No. 120,708. 14 Claims. (Cl. 221—101.)



13. In combination with a pump and power means for operating the pump, a switch controlling the operating of said power means, and circuit means controlling the operation of the switch; said circuit means including a mechanically operated switch, a separated hand operated switch, means preventing the closing of said first named switch until both said other switches have been closed, and means holding said first named switch closed without requiring that both said other switches remain closed together.

1,690,731. SPRING HOLDING AND POSITIONING CLIP. HARRY W. KULP and MARTIN C. DELLINGER, Lancaster, Pa. Filed July 22, 1927. Serial No. 207,691. 6 Claims. (Cl. 29—87.1.)



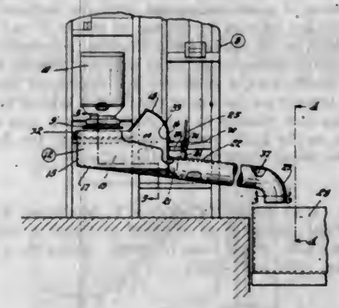
6. An adjustable spring holding and positioning clip consisting of a bifurcated handle having the end portions of its legs offset vertically with respect to said legs, in combination with bars having jaws, and means for adjustably securing the respective offset end portions of said legs to the respective bars in either of two reverse presentations of said offset end portions whereby said handle may extend in either of two different planes with substantially the same relative position of said jaws.

1,690,732. HEAVY-DUTY VALVE-SPRING LIFTER OR COMPRESSOR. HARRY W. KULP and MARTIN C. DELLINGER, Lancaster, Pa. Filed July 22, 1927. Serial No. 207,692. 12 Claims. (Cl. 29—86.3.)

12. A valve-spring lifting tool comprising a frame, a handle secured thereto, a jaw carried by said frame to engage under a valve-spring retaining cup, a foot adapted to rest on a valve head when said jaw is arranged about the stem of said valve under the valve-spring retaining cup thereon, and movable means connecting said frame and foot, in combination with an operating lever pivotally connected to said frame, a short thrust link, having its ends respectively pivotally connected to said means and said lever, and an element connected to said means, movable through said frame and cooperating therewith, and moving with said means and adapted to compress an otherwise free valve-spring.

1,690,733. MICROMETER GAUGE. JOSEPH LAMB, Detroit, Mich. Filed Sept. 28, 1927. Serial No. 222,419. 4 Claims. (Cl. 33—162.)

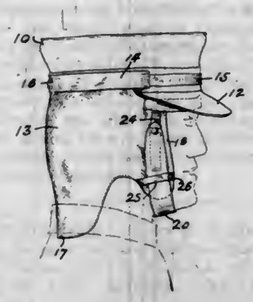
1. In a micrometer gauge, the combination of a main stem having calibrations thereon, a sleeve slidable longitudinally on said main stem having a graduated scale thereon, and a member movable on said sleeve having



graduations on one of its margins any one of which graduations is adapted to be brought into register with one of said calibrations, and said member also having a fixed index thereon adapted to move over said graduated scale.

1,690,734. METHOD OF MAKING STOCKINGS. HARRY C. LANGER, Milwaukee, Wis. Filed Oct. 17, 1925. Serial No. 63,063. 5 Claims. (Cl. 66—186.)

1. The method of knitting a blank for full-fashioned stocking comprising knitting the leg portion to the instep, knitting a central body tab and a pair of heel tabs, burying the central body tab beneath the knock-over bits and knitting a pair of foot tabs, raising the buried central body tab, and knitting straight across the central body tab and the foot tabs.

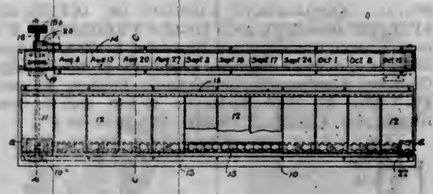


1,690,735. MILK-DUMPING DEVICE. HARRY D. LATHROP, Chicago, Ill. Filed Oct. 13, 1924. Serial No. 743,315. 6 Claims. (Cl. 221—69.)

1. The herein described milk dumping device including a hopper having downwardly and inwardly sloping bottom walls and a splash-preventing hood having an upwardly directed wall with a downward bend, a dumping platform above the hopper, a conduit leading outwardly from the hopper to weighing tanks disposed below the hopper, a spout swingably connected to the conduit whereby milk from the hopper may be directed into a particular weighing tank, means to drain spilled milk and means to receive said spilled milk, substantially as described.

1,690,736. CAP. JOSEPH F. LEICHT, Milwaukee, Wis. Filed Apr. 29, 1927. Serial No. 187,456. 2 Claims. (Cl. 2—208.)

1. A detachable protector for a cap, such protector comprising an elastic strap for attaching the same to the cap and a depending skirt portion adapted to be inserted inside of the coat collar of the wearer, and enclose the ears, sides of the head and back of the neck, and having one side edge of the protector extended so as to pass under



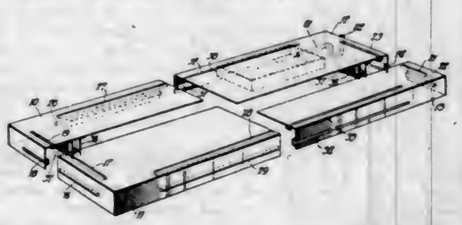
the chin, with means for attaching the extended end to the other side of the protector, and a brow band disposed under the visor of the cap and connecting the side edges of the protector across the forehead of the wearer.

1,690,737. STITCH-DOWN SHOE. ERWIN B. LOEWENBACH, Milwaukee, Wis. Filed Aug. 21, 1926. Serial No. 130,706. 6 Claims. (Cl. 36—16.)

1. A stitch down shoe comprising an upper, an inner sole and an outer sole, and a stay strip secured to the upper on the inner side of the instep and drawn across the bottom of the inner sole and secured in place.

1,690,738. SCHEDULE-CHECKING APPARATUS. HARRY B. LONG, Paterson, N. J. Filed Aug. 27, 1927. Serial No. 215,771. 8 Claims. (Cl. 40—28.)

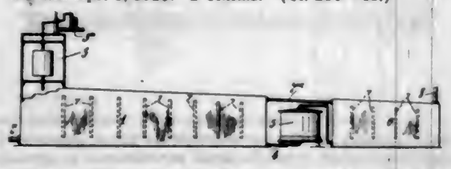
1. In a schedule checking apparatus, the combination of a stationary holder for schedule cards; a support; a row of holders for schedule cards, movable and removably mounted on the support; and means for guiding the movable holders along the support toward the stationary holder.



1,690,739. LIGHT LOCK FOR PHOTOGRAPHIC FILM STRIPS. GUNNE LOWKRANTZ, Binghamton, N. Y., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Feb. 18, 1927. Serial No. 169,378. 10 Claims. (Cl. 95—9.)

1. In combination with a strip of photographic film, a leader strip attached to an end thereof, said leader strip lying in substantially the same horizontal plane of said film strip and having its side edges at points intersecting the extended vertical planes of said film strip.

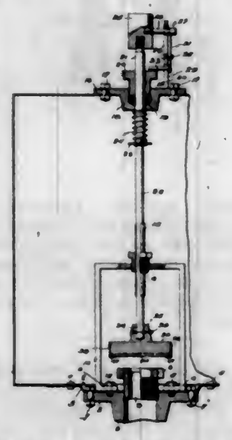
---



1,690,740. ADJUSTABLE RADIATOR COVER. MICHAEL LUERY, Chicago, Ill. Filed Aug. 1, 1927. Serial No. 209,741. 9 Claims. (Cl. 237—79.)

1. An adjustable radiator cover comprising four corner sections of self supporting material, each section slidable with respect to the other to modify the size of said cover transversely or longitudinally.

---



1,690,741. SEPARATING LIQUIDS OF DIFFERENT SPECIFIC GRAVITY AND MEANS THEREFOR. WILLIAM GEORGE GORDON PIRIE LUMSDEN, London, England, assignor to Rodway Stephens, Liquidator of The Pirbright Company Limited (in liquidation), London, England. Filed Mar. 31, 1926, Serial No. 98,840, and in Great Britain Apr. 8, 1925. 2 Claims. (Cl. 210—43.)

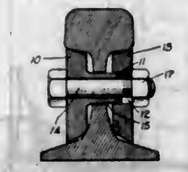
1. A system for separating liquids of different gravity, comprising a horizontally elongated separating chamber in which as the mixture flows therethrough the greater part of the lighter liquid rises, a collecting-compartment for said lighter liquid, a discharge valve in said collecting-compartment, a coalescor into which the contaminated heavier liquid enters when discharged from said separating chamber, and in which the very small particles of the lighter liquid coalesce to form drops, a second separating chamber receiving the flow from said coalescor, and means between the first and second separating chambers to allow the lighter liquid from said second chamber to pass to the collecting compartment in said first chamber.

---

1,690,742. LOCOMOTIVE-TENDER TANK VALVE. ORVILLE S. MATTHEWS, Parsons, Kans., assignor of one-third to Leslie E. Lamm, Parsons, Kans. Filed Oct. 15, 1927. Serial No. 226,445. 2 Claims. (Cl. 137—21.)

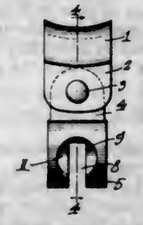
1. In a device of the class described, a tank having a seat in its bottom, a guide supported near the bottom of the tank, a plunger slidable in the top of the tank and in the guide, a valve on the plunger and adapted to cooperate with the seat, spring means cooperating with the plunger to close the valve on the seat, a guide bracket, means for mounting the guide bracket on the top of the tank, a lateral finger on the plunger and slidable in the guide bracket, and a lever fulcrumed on the guide bracket and engaging the finger to operate the plunger and to open the valve.

---



1,690,743. GAS BURNER. JOHN T. MCCOURT, Los Angeles, Calif., assignor of one-half to Ralph I. Guy, Los Angeles, Calif. Filed June 10, 1926. Serial No. 115,052. 2 Claims. (Cl. 158—109.)

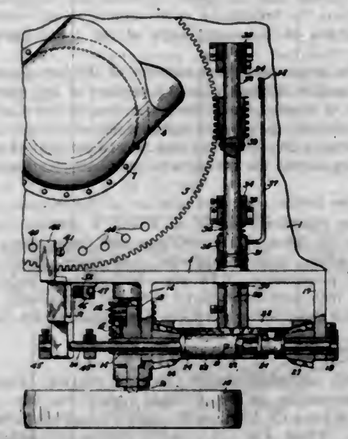
1. A gas burner comprising a body member having a cylindrical air chamber therein, an air inlet thereto, a cylindrical cap detachably held on said body member and provided with a frusto-conical end portion and a central opening therein, a plurality of internally formed spiral ribs on said frusto-conical portion, an end closure in the rear wall of said body detachably held therein, a gas supply tube detachably held on said closure and provided with a nozzle centrally positioned in said air chamber, said gas supply tube having an intermediate expansion chamber rearwardly of said nozzle, and a gas inlet for supplying gas to expansion chamber.



1,690,744. FISHPLATE. MICHAEL W. P. MCNAMARA, Chicago, Ill. Filed Aug. 5, 1927. Serial No. 210,741. 5 Claims. (Cl. 238—184.)

2. A male fish plate member having a plurality of integral bolt receiving tapered bosses; said male fish plate member being adapted to register and co-act wedgingly with a female fish plate member.

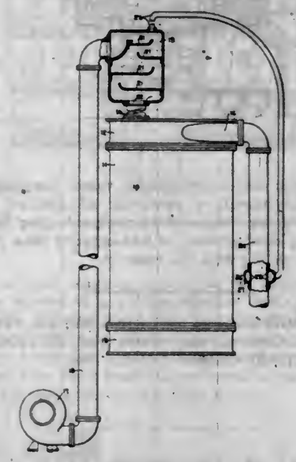
---



1,690,745. CHOKER HOOK. OLE MICKELSON, Hoquiam, Wash. Filed Aug. 17, 1927. Serial No. 213,607. 5 Claims. (Cl. 24—123.)

1. A choker hook including a tubular body open at opposite ends and having a line receiving slot in the wall thereof between the ends extending through more than 180°, one end of the slot being enlarged for the reception of the knob of a line.

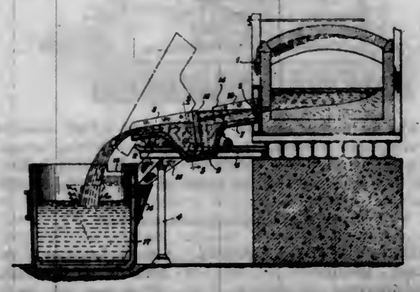
---



1,690,746. REVERSING-GEARING MECHANISM FOR STRAW STACKERS. SYDNEY G. MITCHINSON, Massillon, Ohio. Filed May 22, 1922. Serial No. 562,643. 2 Claims. (Cl. 74—50.)

1. In a reversing gearing for a straw tube or the like having a wheel forming the pivotal support thereof, a bracket plate mounted adjacent to said wheel, a drive shaft journaled in said plate, a worm upon the drive shaft, a beveled gear operatively connected to said wheel and journaled in the bracket plate, spaced bearing arms upon the bracket plate, a tubular shaft located at right angles to the axis of said beveled gear, and journaled in said bearing arms, a worm wheel upon said tubular shaft meshing with said worm, a pair of beveled pinions loosely mounted upon said tubular shaft and meshing with said beveled gear, a solid shaft slidably mounted within the tubular shaft, said tubular shaft being slotted, a double clutch member slidably mounted upon the tubular shaft, a radial pin connecting the solid shaft and double clutch member, the tubular shaft being thus continuously driven, in one direction, spaced collars upon the solid shaft, a spring toggle trip lever arranged to engage each of said collars, pins upon the wheel for alternately throwing the trip lever into engagement with each collar for sliding the solid shaft in opposite directions to move the double clutch member into engagement with each of the beveled pinions.

---

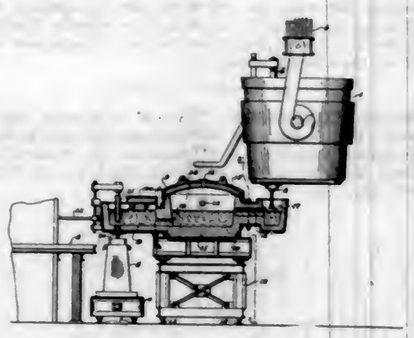


1,690,747. CONDENSER. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1927. Serial No. 177,714. 13 Claims. (Cl. 257—24.)

1. In a power installation, the combination of a surface condenser, an intake conduit and a discharge conduit therefor, means for removing gaseous media from the intake conduit, and means for entraining such gaseous media in fluid passing through the discharge conduit.

---

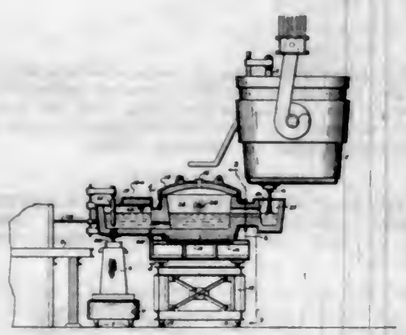
1,690,748. SLAG AND GAS ELIMINATOR FOR MOLTEN STEEL. FREDELLIA H. MOYER, Canton, Ohio. Filed July 24, 1926. Serial No. 124,609. 1 Claim. (Cl. 266—37.)



In combination with a steel melting furnace having a pouring opening, rails located adjacent to the pouring opening, a tapping receptacle adapted to receive molten metal

from the furnace, a well intermediate the ends of the receptacle, a dam in the well terminating at a point spaced from the bottom of the well, and rollers on the receptacle for engagement with the rails.

---

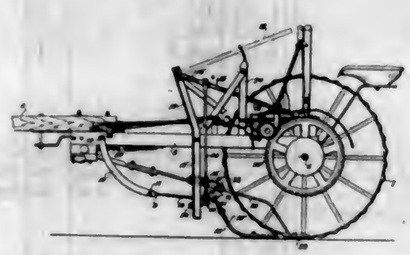


1,690,749. STEEL-POURING DEVICE. FREDELLIA H. MOYER, Canton, Ohio. Filed Aug. 17, 1926. Serial No. 129,806. 12 Claims. (Cl. 22—79.)

1. A pouring device including a vessel comprising a receiving compartment, a reservoir of greater capacity when the receiving compartment communicating therewith, and a pouring compartment of less capacity than the reservoir communicating with the reservoir.

---

1,690,750. METHOD OF POURING STEEL. FREDELLIA H. MOYER, Canton, Ohio. Filed Aug. 20, 1926. Serial No. 130,517. 17 Claims. (Cl. 22—209.)



1. The method of pouring molten metal which consists in pouring and receiving the metal in an oxidizing atmosphere, de-gasifying the metal in a non-oxidizing atmosphere, and then teeming the metal in an oxidizing atmosphere.

---

1,690,751. COTTON CHOPPER. JOSEPH L. PARKS, deceased, Henderson, N. C., by John L. Parks, jr., administrator, Henderson, N. C. Filed Apr. 20, 1928. Serial No. 271,541. 2 Claims. (Cl. 97—18.)

1. A cotton chopper comprising a wheel frame, a trailing frame pivotally connected at its forward end to the wheel frame for vertical movements, depth regulating shoes carried by the trailing frame at the rear of the machine, an elongated arm connected by a universal joint at its forward end with the forward end of the wheel frame, a

chopping blade secured to and trailing at the rear end of said arm, means for oscillating the chopping blade transversely, and means co-ordinating the vertical movements of the chopping blade with the vertical movements of the trailing frame.

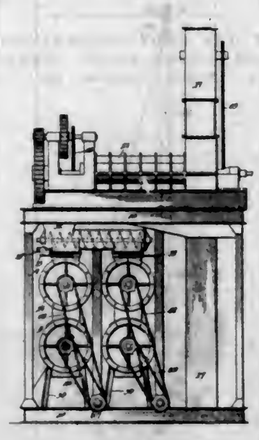
---

1,690,752. PHOSPHORUS COMPOUND FROM ANIMAL PROTEIDS AND PROCESS FOR THE MANUFACTURE THEREOF. SWIGEL POSTERNAK, Chene-Bougeries, near Geneva, Switzerland, assignor to The Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed Mar. 21, 1927, Serial No. 177,220, and in Switzerland Mar. 31, 1926. 10 Claims. (Cl. 167—7.)

1. A process for obtaining mixtures of the nuclei containing phosphorus and iron of the proteids contained in egg yolk by first subjecting the defatted egg yolk in the presence of a mineral acid to pepsin digestion, arresting this digestion at a desired period of time by materially diminishing the acidity of the mixture, filtering the precipitate thus produced and subjecting it to trypsin digestion in feebly alkaline medium, then acidifying the digestion liquor thus obtained, filtering and isolating from the filtrate by treatment with soluble metal compounds the mixture of the metal salts of the three phosphorus nuclei.

8. The herein described mixture of the two phosphorus nuclei $\alpha$ and $\beta$ obtained from the proteids of egg yolk, which mixture, in form of the calcium salt, constitutes a yellowish white, tasteless powder containing about 11 per cent of phosphorus, 1.25 per cent of iron and 10 per cent of calcium, and being useful for therapeutic purposes, for instance as a tonic.

10. The herein described mixture of the calcium salts of the three phosphorus nuclei $\alpha$, $\beta$ and $\gamma$ obtained from the mixture, in form of the calcium salt, constitutes a yellowish white, tasteless powder containing about 11 per cent of phosphorus, 1.25 per cent of iron and 10 per cent of iron and about 9–10 per cent of calcium, and is useful for therapeutic purposes, for instance as a tonic.



---

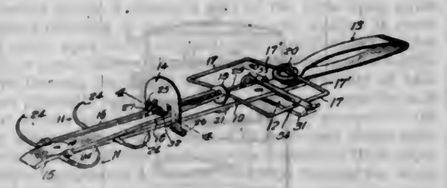
1,690,753. COMBINATION COOKER DRIER. FREDERICK P. RENNEBURG, Baltimore, Md., assignor to Edw. Renneburg & Sons Co., Baltimore, Md., a Corporation of Delaware. Filed Apr. 17, 1926. Serial No. 102,738. 5 Claims. (Cl. 34—7.)

1. In an apparatus of the class described, a base, a cooker and hopper mounted at one side thereof, an elevator mounted on said base and communicating with said cooker and in alignment therewith, a press adjacent said cooker and at an angle thereto, said press being mounted in elevated position on said base, and a drier mounted on the

opposite side of said base from said cooker and elevator, and communicating with said press, means whereby the cooker and elevator structure are spaced from said drier

and additional drying members may be mounted upon the base within said space and in communication with said press.

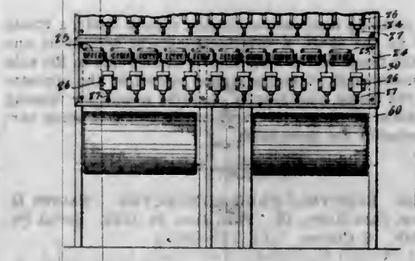
---



1,690,754. REMOVABLE FOOT FOR A SUPPORTING LEG. AARON E. ROSENTHAL, Chicago, Ill., assignor to Beacon Steel Furniture Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1927. Serial No. 163,993. 4 Claims. (Cl. 45—137.)

3. A foot for a hollow supporting leg, comprising a cap with a slot in its top, a block of pliable material having a head clamped in the inturned edges of said cap, and a shank consisting of a strap of resilient material having toe means and a bent over portion at its middle which is mounted in said cap over said head, said shank having spaced arm extending from said bent-over part through said slot and forming a bulging part at the top for resiliently and removably mounting it in the leg.

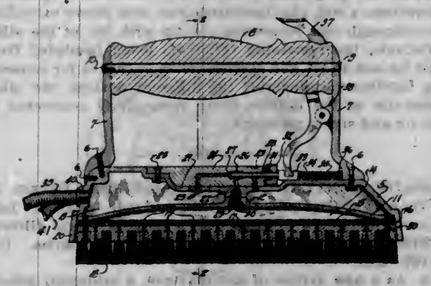
---



1,690,755. ANIMAL TRAP. FRED J. RUFLE, Lander County, Nev. Filed May 9, 1927. Serial No. 190,007. 2 Claims. (Cl. 43—91.)

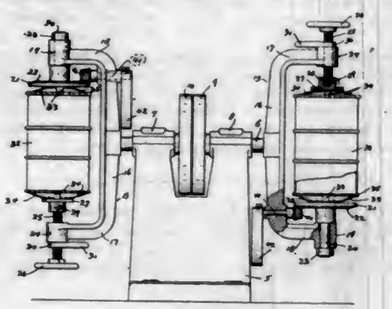
1. A device of the character described comprising a longitudinally extending bar provided with ears on its forward end and a pair of forwardly extending lugs on the rear end thereof, a pair of downwardly and diverging rods having jaws on their forward ends and relatively large loop portions on the rear ends thereof said rods being pivotally mounted in the ears and lugs carried by said longitudinally extending bar, a pivotally mounted rod located intermediate said rods for carrying the jaws and provided with a loop portion on its forward end a backwardly bent portion on the rear end thereof, a pivotally mounted latch piece adapted for engagement with said backwardly bent end, a swinging latch plate arranged to cooperate with said hook end, and a spring located adjacent to said loop ends, normally tending to close the jaws.

---



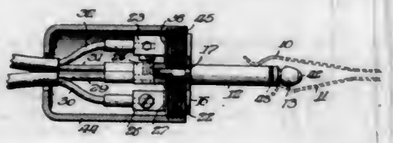
1,690,756. FRUIT-COUNTING APPARATUS. FRED STEBLER, Riverside, Calif., assignor to Stebler-Parker Co., Riverside, Calif., a Corporation of California. Filed Feb. 2, 1925. Serial No. 6,325. 5 Claims. (Cl. 235—98.)

5. In a fruit counting apparatus the combination with counting means of a rotary member having a plurality of pockets for the fruit, the individual pockets being disposed at different points along the rotary member and displaced from each other circumferentially, and means extending over the pockets in the path of the fruit in the pockets for actuating the counting means.



---

1,690,757. BRUSH. JOSEPH C. STEINER, Wauwatosa, and MIKE PETE MIKAS, Milwaukee, Wis. Filed Oct. 20, 1927. Serial No. 227,512. 4 Claims. (Cl. 15—128.)



1. A cleaning device comprising a surface engaging member, an upwardly extending support connected at each end of said surface engaging member, a handle mounted between said supports, means for discharging a fluid below said surface engaging member, a valve seat in connection with said means, a valve needle in connection with said seat, a notched member on the outer end of said valve needle, a spring engaging said notched member, and a lever pivoted to one of the upwardly extending supports and having its lower end engaging the notched member and its upper end adjacent the handle.

1,690,758. DRUM-CLEANING MACHINE. ARTHUR STEVENS, Buffalo, N. Y. Filed Oct. 20, 1927. Serial No. 227,565. 5 Claims. (Cl. 141—6.)

1. A cleaning machine comprising a main shaft, a frame carried by the shaft, a rotating platform carried at one end of the frame and having its axis at an angle to the axis of the main shaft, clamping means carried by the opposite end of the frame, and gravity operated means for causing the rotation of the platform when the frame is being carried around by the main shaft.

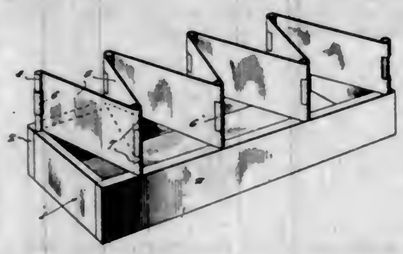
1,690,759. ELECTRIC PLUG CONNECTER. WALTER H. TRIMM, Park Ridge, Ill. Filed June 24, 1922. Serial No. 570,649. 3 Claims. (Cl. 173—334.)

1. A telephone type plug for serially feeding a pair of portable two-wire electric current-responsive devices comprising a disc of insulating material, a sleeve provided with a flange secured to one side of said disc, three connecting members carried by the other side of said disc, one of said members being connected to said sleeve, a tip extending beyond the projecting end of said sleeve and insulated therefrom, a rod, also insulated from said sleeve extending therethrough and connecting the tip with one of the other terminals, the remaining terminals being insulated from said tip and sleeve and serving solely as means for connecting together terminals of the different devices, the other terminals of the devices being respectively connected to the tip and sleeve members.

1,690,760. ENTERIC COATED CAPSULE. ERNEST H. VOLWILER, Highland Park, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1927. Serial No. 159,242. 5 Claims. (Cl. 167—2.)

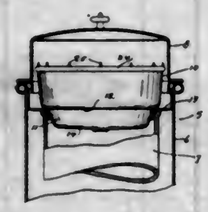
3. As a new article of manufacture, a medicinal gelatin capsule coated with a nitro-cellulose.

5. As a new article of manufacture, a medicinal capsule comprising a gelatin shell filled with a medicine, and a cellulose ester lacquer coating on the outside of said shell.



1,690,761. AGRICULTURAL APPARATUS. HERBERT I. WASHBURN, Magnolia, N. J. Filed July 10, 1926, Serial No. 121,514. Renewed Mar. 8, 1928. 23 Claims. (Cl. 191—12.)

1. In agricultural apparatus of the character described, an independently-movable electrically-propelled tractor element adapted to travel a curvilinear course under guidance of a steering cable with reference to a fixed point in a



field, and independent compensatively tensioned conductors to carry electric current to said tractor element from said fixed point.

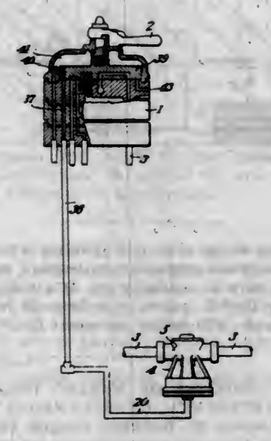
1,690,762. HOG TROUGH. CYRUS WEABER, Pueblo, Colo. Filed May 2, 1927. Serial No. 188,322. 3 Claims. (Cl. 119—61.)

1. A feed trough having opposed walls provided with sockets, posts removably fitted into said sockets and extending upwardly from said walls, and companion leaves extending transversely across said trough in diverging relation to each other and at their ends provided with hinge sleeves fitting upon said posts whereby the leaves and posts may be removed from said trough as a unit and folded into a compact mass.

1,690,763. COFFEE LEACHER. LEO WERTHEIMER, Buffalo, N. Y. Filed Aug. 2, 1927. Serial No. 210,064. 5 Claims. (Cl. 53—3.)

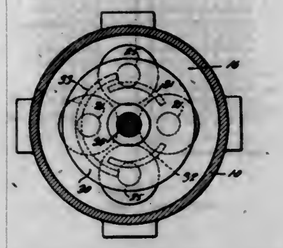
1. A coffee leacher comprising a receptacle having a side wall and a bottom, the bottom being formed with an opening and spaced ridges providing a plurality of passageways for the flow of the coffee to the opening, and a button having a flange supported on the ridges adjacent the opening and having a tapered portion extending downwardly into said opening.

1,690,764. ORNAMENTAL FORM AND METHOD OF MAKING SAME. MORRIS ALTBUCH, Brooklyn, N. Y. Filed Nov. 3, 1927. Serial No. 230,869. 7 Claims. (Cl. 41—10.)



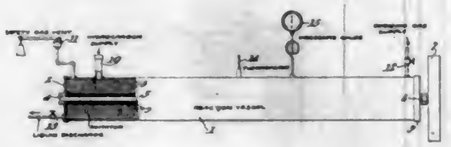
1. An article of manufacture comprising a shell-like structure arranged to simulate the frontal portion of the human head and having a marginal flange arranged at the rear portion for the attachment of decorative material.

1,690,765. CONSTRUCTION OF FLEXIBLE AEROPLANE WINGS WITH VARIABLE PROFILE. UGO ANTONI, Vinreggio, Italy. Filed Dec. 23, 1926, Serial No. 156,741, and in Italy Apr. 23, 1926. 4 Claims. (Cl. 244—12.)



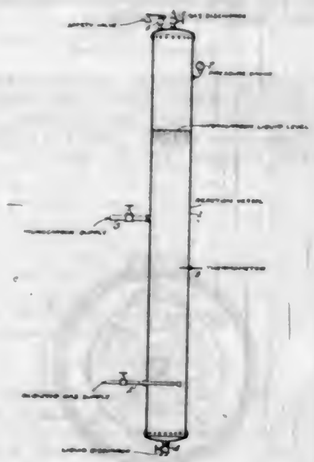
1. A wing for flying machines having a variable profile, comprising a pair of spacedly arranged spars, a plurality of bridges rigidly connected to said spars, a plurality of levers having apertures for the passage of the spars pivotally connected to the underneath side of the front spar, guide members disposed on said front spar and adapted to guide said levers upon their movement, said levers being provided on their upper sides with recesses adapted to receive flexible strips forming the profile of the wing, a plurality of back levers pivotally connected to the rear spar opposite said front levers, and having apertures for the passage of the spar, guides on said spar adapted to guide said levers upon movement thereof, said levers having recesses in their upper sides for the passage of the flexible strips forming the wing, a plurality of sleeve members fixedly mounted on said levers for guiding the flexible strip and having a height proportioned to the profile of the wing, and control means associated with said levers whereby the profile of the wings is controlled by the pilot.

1,690,766. VENT VALVE FOR AIR-BRAKE APPARATUS. WILLIAM ASTLE, Brooklyn, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 5, 1927, Serial No. 159,163. Renewed Apr. 18, 1928. 12 Claims. (Cl. 303—81.)



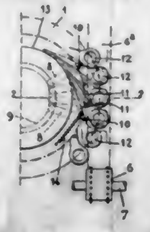
4. An air brake apparatus comprising an engineer's brake valve including a brake valve operating handle; a brake pipe; a brake pipe vent valve; a vent valve operating element, and means operable to move said element to force the vent valve to open position, against the pressure in the brake pipe, only when the brake valve operating handle is in emergency application position.

1,690,767. COMBINED MIXING AND DELIVERY VALVE FOR BATH FIXTURES. LEON BLOCH, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 6, 1926. Serial No. 86,438. 8 Claims. (Cl. 277—20.)



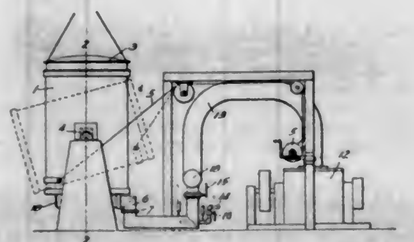
1. In a device of the kind described, a casing having a sub-dividing partition providing a mixing chamber, walls upon the opposite side of said partition providing inlet and delivery compartments, inlet pipes communicating with the inlet compartments, delivery pipes communicating with the delivery compartments, spring pressed valves between the inlet compartments and mixing chamber, spring pressed valves between the mixing chamber and delivery compartments, and a cam disk for actuating said valves as set forth.

1,690,768. OXIDATION OF HYDROCARBONS. ARTHUR W. BURWELL, Chagrin Falls, Ohio, assignor, by direct and mesne assignments, to Alox Chemical Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 13, 1922. Serial No. 588,073. 4 Claims. (Cl. 260—116.)



1. Process which comprises agitating a normally liquid hydrocarbon containing an aliphatic chain, in liquid phase, in contact with an oxidizing gas at a temperature of at least about 100° C. and at a pressure of from about 100 pounds to about 320 pounds per square inch.

1,690,769. PROCESS OF MAKING ORGANIC ACIDS FROM PETROLEUM HYDROCARBONS AND PRODUCT. ARTHUR W. BURWELL, Chagrin Falls, Ohio, assignor, by direct and mesne assignments, to Alox Chemical Corporation, New York, N. Y., a Corporation of New York. Filed May 31, 1923. Serial No. 642,638. 5 Claims. (Cl. 260—116.)

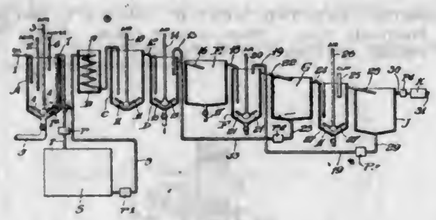


1. Process which comprises contacting an oxidizing gas with a normally liquid petroleum hydrocarbon mixture in liquid phase at a temperature above 100° C. and at a pressure greater than atmospheric pressure but not substantially above about 320 pounds per square inch, producing thereby oxidation products including water-insoluble heavy organic acids which are insoluble in the hydrocarbon mixture, separating the insoluble acids, and thereafter during the further treatment of the hydrocarbon mixture with oxidizing gas separating aqueous liquid therefrom.

1,690,770. CINEMATOGRAPH APPARATUS WITH CONTINUOUSLY-FED FILM. VICTOR CONTINSOUZA and MAURICE COMBES, Paris, France. Filed July 27, 1925. Serial No. 46,459, and in France Oct. 27, 1924. Renewed Dec. 9, 1926. 2 Claims. (Cl. 88—16.8.)

1. A cinematograph apparatus with continuously moving film comprising a rotary member adapted to revolve at a uniform speed on an axis parallel to the optical axis of the apparatus, a series of lenses, mounted for movement substantially toward and away from said axis of rotation on said rotary member, said rotary member being provided with a number of slots, a slider guided in each slot, a lever pivotally mounted upon each slider, a lens carried by each lever, a stationary cam adapted to act upon said sliders and to impart to the same a displacement adapted to give to the center of the corresponding lens a rectilinear path parallel to the axis of the film, and a second stationary cam adapted to act upon the pivotal levers and to displace the same so as to maintain a uniform linear speed for the center of the lens, during the passage thereof through the luminous beam, for the purpose described.

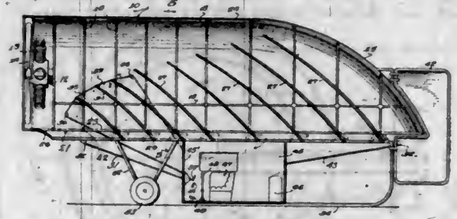
1,690,771. MAGNESIA PRODUCT AND PROCESS OF MAKING THE SAME. THOMAS S. CURTIS, Huntington Park, Calif., assignor, by mesne assignments, to Pacific-Southwest Trust & Savings Bank, trustee, Los Angeles, Calif., a Corporation of California. Filed Apr. 7, 1925. Serial No. 21,348. 12 Claims. (Cl. 23—201.)



1. A magnesia product consisting of magnesia which has been heated sufficiently to convert the same substantially wholly to periclase without fusion thereof.

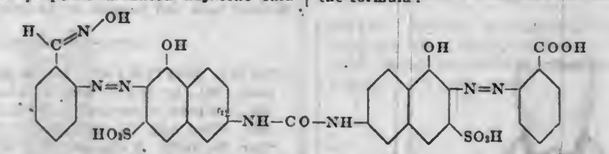
1,690,772. TREATMENT OF MINERAL OILS. THOMAS G. DELBRIDGE and HENRY F. DURE, Philadelphia, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 21, 1925. Serial No. 31,744. 4 Claims. (Cl. 196—147.)

1. The method of decolorizing unrefined hydrocarbon oil, which comprises acid treating the oil, separating from the oil substantially all of the sludge formed, passing air into the acid-treated unneutralized oil while at elevated temperature, to condition the oil for subsequent clay treatment, thereafter adding finely divided clay to the unneu-



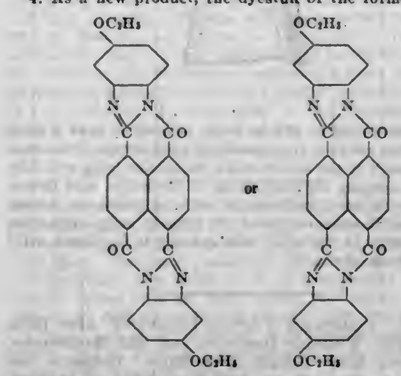
tralized oil, and intimately commingling air with the mixture of oil and clay while at substantially elevated temperature below 212° F.

1,690,773. AIRSHIP. ROY G. DONALDSON, Crestline, Ohio. Filed Dec. 4, 1926. Serial No. 152,702. 10 Claims. (Cl. 244—18.)



1. An aircraft comprising a tunnel having an opening in its forward end, a propeller mounted adjacent said opening to impel air rearwardly into said tunnel, said tunnel having a horizontally elongated bottom opening substantially throughout its length for the discharge of air

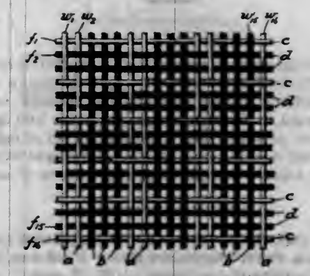
from said tunnel, and means for distributing air from said tunnel substantially throughout the area of said bottom opening for discharge therethrough.



1,690,774. AZO DYESTUFF. WALTER DUISBERG, Leverkusen, near Cologne, and WINFRID HENTRICH and LUDWIG ZEH, Wiesdorf, near Cologne, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1925, Serial No. 74,163, and in Germany Dec. 19, 1924. 5 Claims. (Cl. 260—85.)

5. An azo dyestuff having in the form of the free acid the formula:

1,690,775. VAT DYESTUFFS DERIVED FROM 1, 4, 5, 8-NAPHTHALENE TETRACARBOXYLIC ACID AND AROMATIC ORTHO-NITRO-AMINES AND PROCESS OF PREPARING THE SAME. WILHELM ECKERT, Hochst-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1927, Serial No. 164,126, and in Germany Jan. 29, 1926. 4 Claims. (Cl. 260—44.)

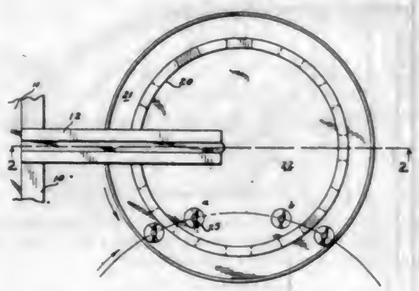


4. As a new product, the dyestuff of the formula:

which forms a brown powder and gives a vat of an olive-green color with an intense red fluorescence dyeing cotton on exposure to the air reddish-brown tints.

1,690,776. WOVEN MATERIAL. FREDERICK R. ELSTON, Philadelphia, Pa., assignor to Benjamin F. Miller, Philadelphia, Pa. Filed Feb. 13, 1928. Serial No. 253,969. 1 Claim. (Cl. 139—383.)

A woven fabric comprising a set of threads consisting of successive groups each of which consists of two threads of one color and three of another color, and a second set of threads interwoven with the first set and consisting of successive groups each of which consists of one



thread of one color and two of another color, the weave consisting of a repeat of weave of sixteen threads in each direction whereby a pattern having a mottled appearance is produced.

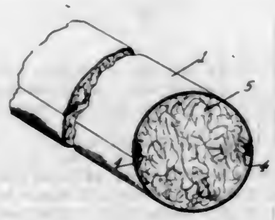
1,690,777. GLASS-DELIVERY APPARATUS. MEYER M. EPPSTEIN, Charleston, W. Va., assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 24, 1926. Serial No. 131,183. 19 Claims. (Cl. 49—56.)

1. A revolving tank to contain molten glass, including, a compartment from which charges are gathered, a com-

partment surrounding the first named compartment to receive portions of glass severed from charges gathered in

the inner compartment, and means for causing a reheating and transferring of the chilled portions from the outer to the inner compartment.

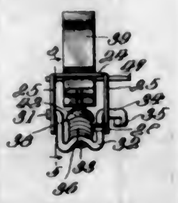
---



1,690,778. DOLL. GLADYS C. FORD, Brooklyn, N. Y. Filed Oct. 14, 1926. Serial No. 141,614. 1 Claim. (Cl. 46—40.)

A doll combination comprising a stuffed form having attaching buttons mounted on its rear surface, a cover for the form having a rear side opening through which the form is passed to position within the cover and said cover being further provided with a companion set of buttonholes adjacent said opening and positioned to have overlapping relation to receive therethrough the buttons of said form.

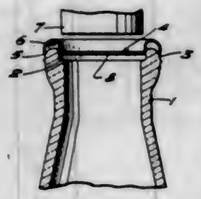
---



1,690,779. METHOD OF MAKING SAUSAGE CASINGS. FREDERICK FREY, Cincinnati, Ohio. Filed Jan. 22, 1927. Serial No. 162,902. 4 Claims. (Cl. 17—45.)

1. The process of making sausage casings which consists in taking a double ply layer of hog bung extension material for each of the walls of a casing, and stitching the double ply layers together adjacent their edges, and reinforcing the stitches with a strip extending in alignment with the line of stitches.

---



1,690,780. ELECTRIC SWITCH. ARTHUR C. GAYNOR, Stratford, Conn. Filed Aug. 2, 1926. Serial No. 126,530. 10 Claims. (Cl. 200—67.)

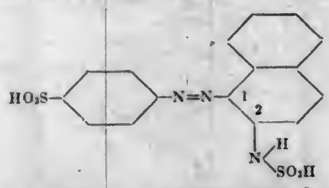
1. In a snap switch, the combination of a bracket, a wire crank journaled thereon, one end of said crank being doubled back upon itself, operating means including a spring for imparting an oscillatory movement to said crank, and a contact blade having a slot receiving said doubled back end portion of the crank.

---

1,690,781. BOTTLE CAP. DAVID GENESE, deceased, Baltimore, Md., by Norris Genese, administrator, Baltimore, Md., assignor of one-half to William H. Orem, Baltimore, Md. Filed Aug. 18, 1926. Serial No. 130,070. Renewed Mar. 30, 1928. 2 Claims. (Cl. 215—38.)

1. A bottle cap of fibrous stock molded to have a disk-like portion adapted frictionally to lock within the rabbet at the mouth of the bottle, and a flange overlying and frictionally engaging the pouring lip of the bottle, said fibrous stock having been impregnated with a substance having the essential characteristics of boracic acid, enhancing the elasticity of the stock and causing it to shrink after removal from the mold.

---



1,690,782. COMPLEX COPPER-AMMINE AZO DYESTUFFS. WINFRIED HENTRICH and MAX HARDTMANN, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 9, 1926, Serial No. 153,723, and in Germany Dec. 12, 1925. 6 Claims. (Cl. 260—12.)

1. In a process of producing a complex cupri-ammine-azo dyestuff the step comprising coupling diazotized ortho-amino-benzoic acid with the mono-azo dyestuff obtained from diazotized 3-amino-benzaldehyde and 5-5'-dihydroxy-2-2'-dinaphthylurea-7-7'-disulfonic acid and simultaneously reacting thereon with tetrammine-cupri sulfate in the presence of sodium carbonate.

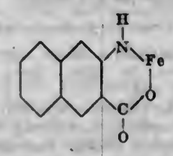
1,690,783. PROCESS OF PRODUCING AZO DYESTUFFS. KARL HEUSNER and MAX SIMON, Leverkusen, near Cologne-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 7, 1927, Serial No. 197,220, and in Germany Apr. 6, 1925. 2 Claims. (Cl. 260—90.)

2. As a new product, the monoazo dyestuff having in its free state most probably the formula:

said dyestuff, in dry powdered form, being a brick-red powder dyeing wool an orange color.

---

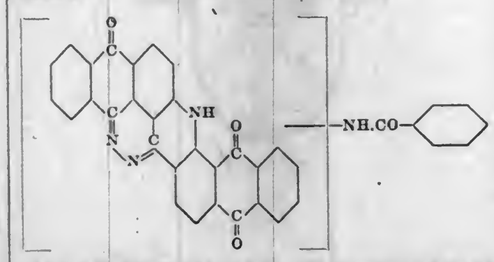
1,690,784. MOLDING MACHINE FOR BUTTER, MARGARINE, AND THE LIKE. WILHELM HILGERS, Duesseldorf, Germany. Filed July 18, 1927. Serial No. 206,666. 1 Claim. (Cl. 31—14.)



A machine for molding or shaping butter, margarine, and the like, comprising in combination, two conical worm screws so arranged relatively to one another that their axes converge towards their smaller ends, and said worm screws being spaced from each other and symmetrically arranged, a casing enclosing said worm screws having an interior chamber converging in the direction the worm screws converge, a mouth piece on said casing adjacent to the small end of the chamber, said mouth piece having an extrusion opening of a width and height substantially that of the corresponding dimension of the combined worm screws, and means for rotating the worm screws simultaneously in opposite directions.

---

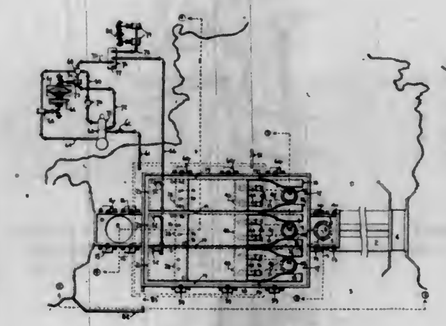
1,690,785. PROCESS OF PREPARING 2-AMINONAPHTHALENE-3-CARBOXYLIC ACID. ERNST HOTZ, Hattersheim-on-the-Main, and VALENTIN LANZ, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 16, 1927, Serial No. 240,627, and in Germany Dec. 17, 1926. 13 Claims. (Cl. 260—109.)



1. The process of preparing 2-aminonaphthalene-3-carboxylic acid by producing the insoluble complex iron compound of the probable formula:

and decomposing this compound, so as to form 2-aminonaphthalene-3-carboxylic acid.

1,690,786. VAT DYESTUFFS OF THE PYRIDAZINE-ANTHRAQUINONE SERIES. ALBERT JOB, Elberfeld, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1927, Serial No. 213,697, and in Germany Aug. 25, 1926. 4 Claims. (Cl. 260—37.)

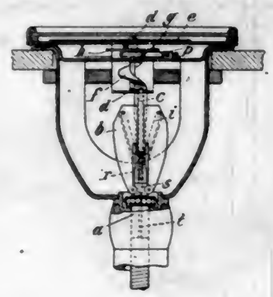


1. As new products the compounds of the general formula:

wherein the aromatic nuclei may be substituted, said products forming in the dry state dark colored crystals, soluble in concentrated sulfuric acid with a red-violet coloration, dyeing cotton from the vat green fast shades and being obtainable by causing a benzoylaminodiphthaloylacridone to be acted upon by hydrazine.

---

1,690,787. TIDAL HYDRAULIC AIR COMPRESSOR. HERBERT M. KNIGHT, Montclair, N. J. Filed Oct. 7, 1921, Serial No. 506,006. Renewed Apr. 3, 1928. 11 Claims. (Cl. 230—106.)

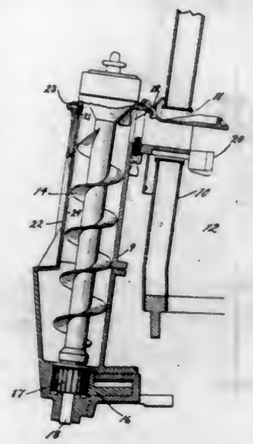


1. In a tidal hydraulic air compressor, a fore-bay basin, a tail-race basin, a down-take shaft located in said fore-bay basin, an uptake shaft located in said tail-race basin, a head-piece supported upon and located above the water in said fore-bay basin, means for elevating water from said fore-bay basin, means connecting said water elevating means and said head-piece, means connecting said head-piece and said down-take shaft and means connecting said down-take shaft and said uptake shaft.

---

1,690,788. SPEEDOMETER. JOHANN KRAUSCHITZKI, Coburg, Germany, assignor to Metallwerk Max Brose & Co., Coburg, Germany, a Corporation of Germany. Filed Apr. 30, 1926, Serial No. 105,885, and in Germany Aug. 1, 1925. 2 Claims. (Cl. 264—15.)

1. In a speedometer, a driven shaft carrying fly weights pivotally connected by rods, a sliding pin sitting with its lower end on the joint connecting the rods of the fly weights said sliding pin being pushed by said joint, a

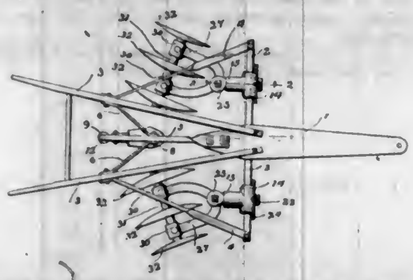


spring to hold the said joint pressed against the sliding pin, a pointer spindle carrying a screwthread arranged laterally and parallel to the driven shaft and rotated by

direct pressure of said pushed pin against the screwthread's surface, a spring on said pointer spindle for returning the pointer to the zero position.

---

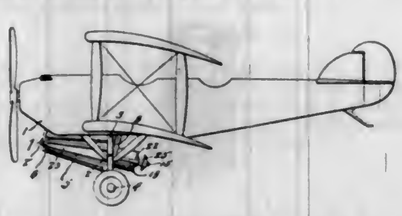
1,690,789. ELEVATOR CASING. NATHAN M. LOWER and PAUL ALLISON KETCHPEL, Pittsburgh, Pa., assignors, by mesne assignments, to The Standard Stoker Company Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1925. Serial No. 10,994. 1 Claim. (Cl. 198—15.)



In a stoker for locomotives and the like, an elevator casing circular in cross section and having a continuous smooth inner peripheral surface for a major portion of its circumference, said casing having a relatively narrow elongated opening extending longitudinally thereof, and a removable closure for said opening having a rib at each edge thereof extending longitudinally of said closure and projecting inwardly beyond the inner surface of said casing when said closure is in position thereon for preventing rotation of fuel within said casing.

---

1,690,790. CULTIVATOR. PERRIN N. MOODY, Gilliam, Mo. Filed July 7, 1926. Serial No. 120,990. 1 Claim. (Cl. 97—54.)



A cultivator comprising a beam, cross bars projecting from opposite sides of the beam, an arched shank projecting rearwardly from the beam and having a shovel at its lower rear end, handle members extended upwardly and rearwardly from the rear end of the beam, braces between the outer ends of the cross bars, and the respective handle members, other braces between the handle members and the said arched shank, heads slidable on the cross bars, shafts mounted in the heads and pivotally adjustable

therein, yokes pivoted to the shafts, and gangs of soil-engaging elements carried by the yokes and disposed upon opposite sides of the shank and adapted to coact with the shovel thereof.

---

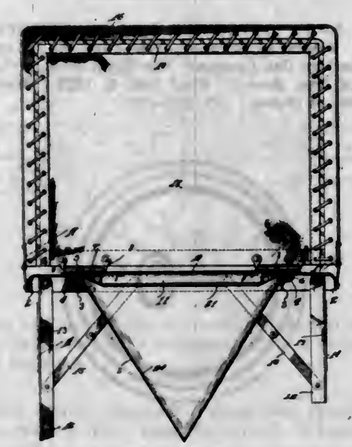
1,690,791. BOMBER ATTACHMENT FOR AEROPLANES WITH GAS BOMBS. ARCHIE F. NAIR and HOBERT A. NAIR, Glendale, Calif. Filed July 30, 1927. Serial No. 209,596. 4 Claims. (Cl. 244—1.)

1. In a bomber attachment for aircraft, the combination of a bomb holding frame open at one end, means for rigidly attaching such frame to an aeroplane, a pivotally mounted bomb-engaging member arranged to discharge the bomb longitudinally of the frame from the open end thereof, and a manually operated lever operatively connected with said bomb-engaging member.

---

1,690,792. ROOF. RICHARD C. NEPTUNE, Indianapolis, Ind. Filed Jan. 12, 1926. Serial No. 80,791. 4 Claims. (Cl. 108—7.)

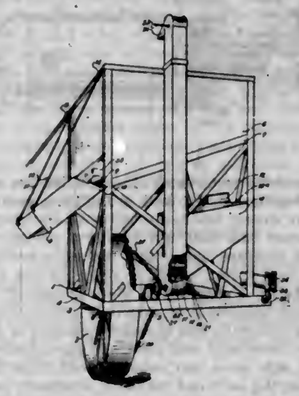
1. In a roof, the combination of strips having a felt body, and a granular surfacing, said surfacing being removed at the edges to form selvedges, said strips laid so as to overlap at the selvedges and nailed to the roof deck through the selvedges, and sealing strips secured over the selvedges, said strips also being formed of a felt body with granular surfacing thereon but having an overall thickness substantially the same as the thickness of the granular surfacing on the felt bodies.



---

1,690,793. COMMODE. MOSE OPPENHEIM, Pueblo, Colo. Filed Nov. 26, 1926. Serial No. 150,978. 2 Claims. (Cl. 4—134.)

1. A device of the character specified comprising a seat member having an opening and having the portion bordering upon the opening turned downwardly, said downturned portion having an intermediate depression, a receptacle disposed within the opening in the seat member and

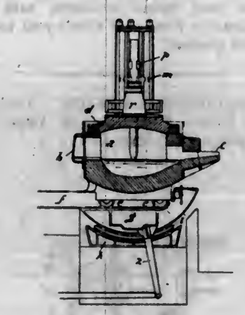


having a reenforcement around its upper edge seating in the depression in the downturned portion of the seat member, and a companion member adapted to be supported upon the seat member and having an opening opposite the opening of the seat member, the portion of said member

bordering upon said opening being downturned to extend within the receptacle, the outer margin of said member being downturned to bear upon the seat member, and the intermediate portion being flat and bearing upon the reenforcement of the receptacle to retain the same in the depression.

---

1,690,794. GRAIN-RECEIVING ATTACHMENT FOR COMBINED HARVESTERS AND THRASHERS. WILLIAM F. RESCHKE, Wichita, Kans. Filed Aug. 2, 1926. Serial No. 126,701. 2 Claims. (Cl. 214—83.)

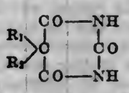


1. An attachment for combined harvesters and thrashers comprising a frame, means for attaching the frame to a combined harvester and thrasher, a single wheel supporting the frame, a grain receiving tank carried by the frame, a grain delivery tank above the first named tank also supported by the frame, and a conveyer for delivering grain from the receiving tank to the delivery tank.

---

1,690,795. ELECTRIC FURNACE. GUIDO SAGRAMOSO, Milan, Italy. Filed May 19, 1924, Serial No. 714,480, and in Italy May 28, 1923. 1 Claim. (Cl. 266—15.)

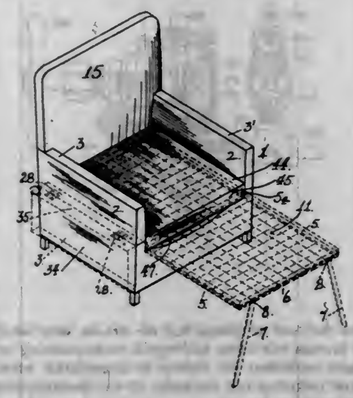
An electric furnace, a support therefor, a pair of vertical standards mounted on said support, a crossbeam, adjustably mounted on said standards, an electrode secured to said crossbeam and movable therewith, a double walled jacket secured to said beam and surrounding said electrode, a double walled bell adapted to be supported by said furnace surrounding said jacket and within which



said jacket is adapted to slide, and releasable means to connect said bell with said beam whereby said electrode, said jacket and said beam can be elevated with respect to said furnace.

---

1,690,796. PHARMACEUTICAL COMPOUND. WERNER SCHULEMANN, Vohwinkel, and KURT MEISENBURG, Elberfeld, Germany, assignors, by mesne assignments, to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 20, 1925, Serial No. 10,657, and in Germany Mar. 21, 1924. 4 Claims. (Cl. 260—33.)

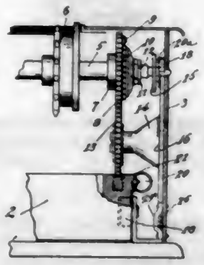


1. The herein described new unsymmetrically disubstituted barbituric acids of the general formula:

where $R_1$ is an unsaturated alicyclic nucleus and $R_2$ is a saturated or unsaturated alkyl residue, which are generally whitish crystalline products being easily soluble in a dilute solution of sodium carbonate and soluble with difficulty in benzene and water; and being valuable hypnotics, substantially as described.

---

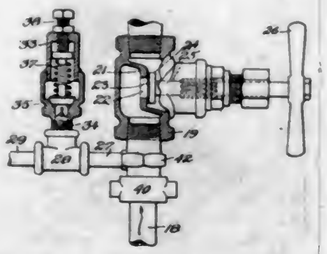
1,690,797. CONVERTIBLE CHAIR AND BED. MARION SCHWAB, San Francisco, Calif. Filed Apr. 12, 1927. Serial No. 183,088. 5 Claims. (Cl. 155—45.)



1. A convertible chair and bed comprising a fixed seat portion; a forward extension having side frame members pivotally connected with said seat portion and adapted to

be folded back thereover; a resilient integrated metallic bed fabric extending from the rear of said seat portion to the front of said extension and adapted for folding therewith; and a transversely resilient reinforcing member extending between said frame members, said reinforcing member being separate from said fabric and positioned adjacent to the fold thereof.

---



1,690,798. MANIFOLDING DEVICE. JOHN Q. SHERMAN, Dayton, Ohio. Filed Jan. 20, 1923. Serial No. 613,842. 5 Claims. (Cl. 235—4.)

1. In a manifolding device, the combination of a housing, a paper feeding mechanism for feeding form strips therein, a cash drawer therein, and driving connection between the cash drawer and the feeding mechanism, whereby movement of the cash drawer moves the said mechanism, a stop for the paper feeding mechanism operative to release said mechanism for definitely limited movements only, said driving connection between the drawer and feeding mechanism having a frictional element.

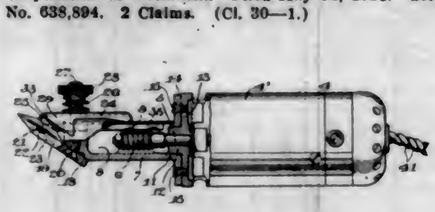
---

1,690,799. METHOD OF AND MEANS FOR REDUCING THE VISCOSITY OF LIQUIDS. EDWARD A. SNOW, Reading, Mass. Filed Apr. 4, 1927. Serial No. 180,980. 9 Claims. (Cl. 99—2.)

2. The method of preparing ice cream mix which consists in forcing the same through a homogenizing valve by a pressure sufficient to secure homogenizing effects and thereafter reducing the viscosity of the homogenizing mix by passing the same through a constriction under a pressure less than the homogenizing pressure.

5. The combination with a pressure pump; a homogenizing valve whose inlet is connected with the outlet of said pump; a conduit connected with the outlet of said homogenizing valve and a liquid viscosity reducing constriction in said conduit which creates a non-homogenizing back pressure less than the homogenizing pressure of said pump.

---

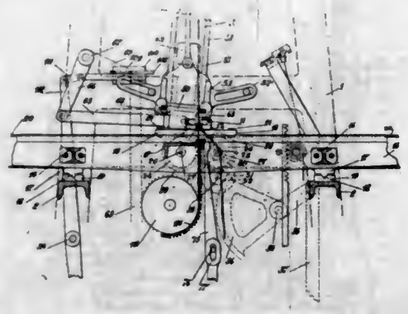


1,690,800. ATTACHING KEY TO KEY-OPENING CAN. JAMES A. STEWART, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1922. Serial No. 533,688. 4 Claims. (Cl. 220—52.)

1. A key-opening can and a key therefor, said key being attached to said can by interfused portions of the key and of the can respectively.

---

1,690,801. CLIPPER. HUBERT VAN BEEK, Racine, Wis., assignor to Racine Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed May 14, 1923. Serial No. 638,894. 2 Claims. (Cl. 30—1.)

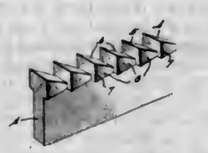


1. In a motor-driven clipper, the combination of a clipper casing having an end wall including a central aperture, a motor casing having an end wall abutting against said first-named end wall and having a projecting shaft entering said aperture, one of said end walls having a central alining boss fitting within a recess in the other end wall, there being a plurality of slots in one of said end walls disposed substantially arcuately about the axis of said abutting end walls and threaded openings in the other end wall in register with said slots, and headed screws passing through said slots and entering said threaded openings for clamping said end walls in abutment, said slots each having an enlarged end portion for permitting free passage of said headed screws therethrough after relative rotation of said end walls about their axis, and at least one of said slots having at its other end a countersunk portion receiving the head of the cooperating screw for locking said end walls against relative rotation when said screw is threaded in place.

---

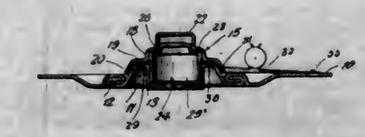
1,690,802. POWER LOOM FOR THE MANUFACTURE OF PILE FABRICS. PAUL VENAIL, Paris, France. Filed July 14, 1925, Serial No. 43,613, and in France Aug. 4, 1924. 10 Claims. (Cl. 139—5.)

1. A loom for the manufacture of pile fabrics, comprising a warp selecting reed, tuft-inserting means for winding tuft-yarn around warp threads, said tuft-yarn inserting means being adapted to form a plurality of knots from a single length of yarn, a guide on which said reed is



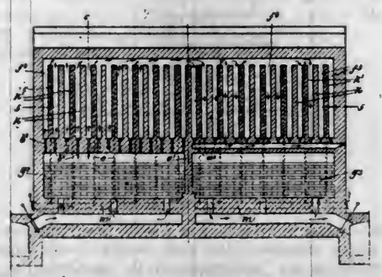
adapted to slide towards and from the yarn-tuft inserting means, said guide being oscillatable about a pivot at one end of the guide.

---



1,690,803. SAW. GEORGE R. VANDER WEE, Detroit, Mich. Filed May 10, 1923. Serial No. 637,957. 2 Claims. (Cl. 143—133.)

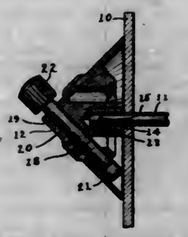
1. A saw formed from a blank having a thickened edge portion providing laterally extending ribs at each side of the blank along the edge thereof, edge cutting teeth formed in said thickened edge transversely thereof, each tooth having a cutting edge extending the full width of said thickened edge, and side clearance teeth formed in said laterally extending ribs with cutting edges extending inwardly of the blank across said ribs and forming a continuation of the cutting edges of the transverse teeth at each end thereof, said transverse teeth being inclined rearwardly in the direction of cutting movement of the saw, from said cutting edges, the faces of each lateral tooth converging rearwardly in the direction of cutting movement.



---

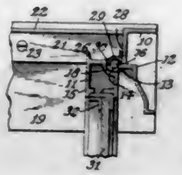
1,690,804. CLOSURE. FRANK G. WIKSTROM, Brooklyn, N. Y., assignor to Hadwik Mfg. Co. Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed Mar. 31, 1927, Serial No. 179,733. Divided and this application filed Jan. 13, 1928. Serial No. 246,438. 4 Claims. (Cl. 220—39.)

1. A closure comprising a sheet metal top member having an upwardly projecting wrench-receiving central portion, and an outwardly extending gasket-supporting portion; and a sheet metal bottom member having an externally threaded cylindrical portion and an upwardly extending central portion adapted to enter the upwardly projecting wrench-receiving portion of said top member; said top and bottom members being welded together.



1,690,805. REGENERATIVE COKE OVEN. GUSTAV OTTO WOLTERS, Villigst, near Schwerte, Germany. Filed Sept. 10, 1926, Serial No. 134,613, and in Germany Mar. 14, 1925. 2 Claims. (Cl. 202—9.)

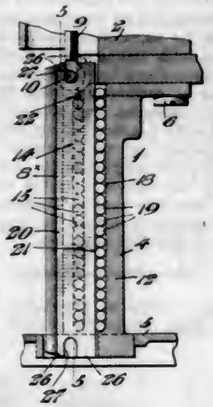
1. In a coke oven, a horizontally elongated coking chamber, heating chambers juxtaposed to the opposite sides of the coking chamber arranged with partitions extending transversely to said coking chamber and upward from the bottom to adjacent the top of each of the heating chambers separating each of said chambers into flues communicating with each other at the tops of the partitions, regenerators arranged below and parallel to the coking chamber, fuel inlets to the bottoms of the flues, primary air passages connecting the regenerators with the bottoms of the flues for supplying air from said regenerators to the heating chambers for supporting combustion of fuel therein and arranged with means for controlling flow of air through the regenerators to the heating chambers and flow of products of combustion from the heating chambers through said passages, and secondary air inlet passages connected with a source of air supply and extending vertically through the walls between the regenerators and through alternate partitions in each of the heating chambers and having outlets from the tops of said alternate partitions into the heating chambers for delivering a secondary air supply to the heating chambers at a point remote from the bottoms of said flues.



---

1,690,806. DIAL. OLAF A. ANDERSON, Hamilton, Ohio. Filed July 13, 1922. Serial No. 574,836. 4 Claims. (Cl. 74—7.)

1. In a device of the class described, the combination of a rotatable dial of substantially conical form, a member relative to which said rotatable dial moves, and a shaft carried by said dial and arranged at an angle to the axis thereof, said shaft projecting at one end exteriorly of said dial and having its other end in engagement with said member whereby micrometer adjustments of the dial may be made by rotating the shaft.

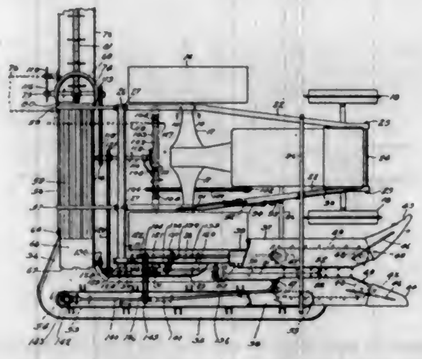


1,690,807. WINDOW. JOHN ANTAL, Brooklyn, N. Y. Filed Oct. 25, 1927. Serial No. 228,521. 10 Claims. (Cl. 189—69.)

1. In a window, a frame and a sash, the frame having a semicircular extension, the sash having means engaging said extension for imparting pivotal movement to said sash when it is moved outwardly, and a stop member on the window frame to prevent the disengagement of the means on the sash from said extension when they are facing the open side of said semicircle.

---

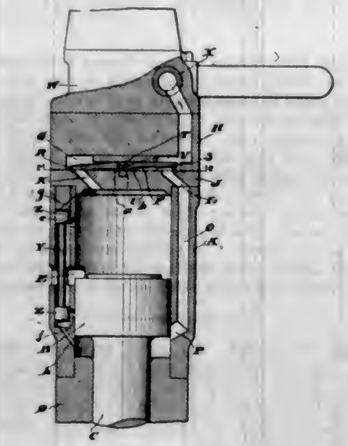
1,690,808. CLOTH-CUTTING MACHINE. ISAAC APPELBAUM, Brooklyn, N. Y. Filed Feb. 4, 1928. Serial No. 251,790. 4 Claims. (Cl. 164—75.)



1. In a device of the character stated, a blade guiding column, a blade mounted to reciprocate therein, oppositely located vertically disposed ball races on each side of said blade, balls therein, and contacting with said blade, a roller chamber in the back of said column, and vertically disposed rollers in said roller chamber, contacting with the rear edge of said blade.

---

1,690,809. POWER-DRIVEN CORN HARVESTER. THEODES V. BARNARD, Schaller, Iowa, and RAY MACKEY, LEONARD MACKEY, and LELAND MACKEY, Ipswich, S. Dak. Filed Sept. 28, 1925. Serial No. 59,075. 10 Claims. (Cl. 56—18.)

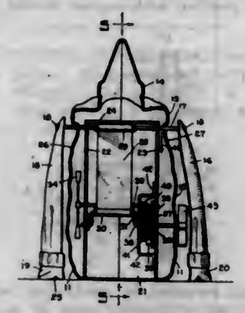


1. In a corn harvesting attachment for a tractor having rear traction wheels, a rear axle housing, and a radiator shell having side openings, a pair of side frame rails secured together at their rear ends and adapted to be extended over and secured, intermediate their ends, to the tractor rear axle housing, inwardly extending blocks carried by the forward ends of the rails, adapted to be received in said openings, a means to secure the forward portions of the rails in positions gripping the sides

of the radiator shell, with the said blocks extending into the openings therein, and picking and husking mechanism supported from the rear portions of the rails.

---

1,690,810. SHIFTING FULCRUM VALVE FOR ROCK DRILLS. LEWIS C. BAYLES and FRED M. SLATER, Easton, Pa., assignors to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 27, 1925. Serial No. 33,119. 2 Claims. (Cl. 121—22.)



1. A fluid actuated rock drill, comprising a cylinder and reciprocating piston, a cylinder exhaust port, a valve chest having a flat valve seat, a fluid actuated oscillating distributing valve in the form of a thin plate formed with a flattened central median portion and oppositely extending surfaces tapered with respect to said median portion, whereby the edges of said median portion form two fulcra for the valve.

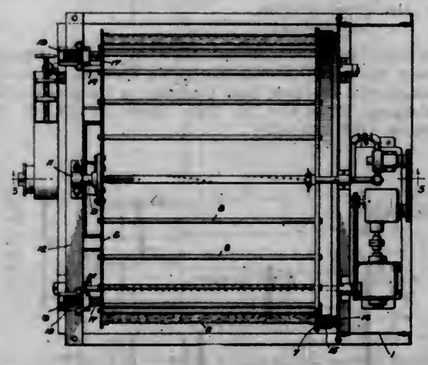
---

1,690,811. ANIMATED TOY. HAROLD F. BARTLEY, New York, N. Y. Filed July 23, 1926. Serial No. 124,339. 8 Claims. (Cl. 46—40.)

3. In a toy, a body portion, a member for elevating said body portion and disposed on said portion to be reciprocated vertically in a path at one side of the center of gravity of said body portion, oppositely disposed arm portions suspended from said member for free swinging movement relative to said body portion, said arm portions

having an area of contact with a floor or other support to sustain the toy in equilibrium, and motive means for reciprocating said member.

---

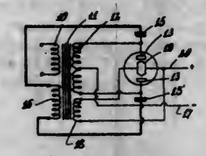


1,690,812. FILE. CHARLES E. BERTELS, Long Beach, Calif., assignor of one-half to John P. Benning, Trucksville, Pa. Filed Oct. 8, 1927. Serial No. 224,980. 1 Claim. (Cl. 29—79.)

A file comprising a pair of handles and a flexible band connecting the same, said flexible band being composed of sections each comprising a plurality of flat leaves having file teeth upon at least one face thereof, said leaves being spaced from one another transversely of the sections, the leaves of one section being interdigitated with the leaves of the adjacent sections and pins extended through the interdigitated portions of the leaves to pivotally connect the same and maintain the leaves in assembled relation.

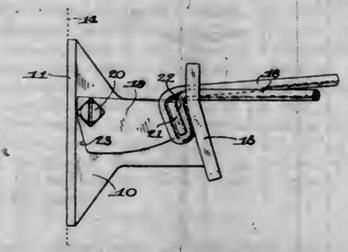
---

1,690,813. AIR FILTER. HANS E. BIRKHOLZ, Chicago, Ill., assignor to National Air Filter Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1926. Serial No. 137,537. 6 Claims. (Cl. 183—9.)



5. In an air filter, a filter drum, an arbor in the center of one end thereof for supporting said end of said drum, a bearing support for said arbor, a gear ring mounted on the outside of the other end of said drum, a pair of rotatable supports journaled one at each side of and below the center of gravity of said drum for supporting said end of said drum, gear teeth on one of said rotatable supports for meshing with said ring gear, and means for driving said toothed rotatable support for driving said drum.

---

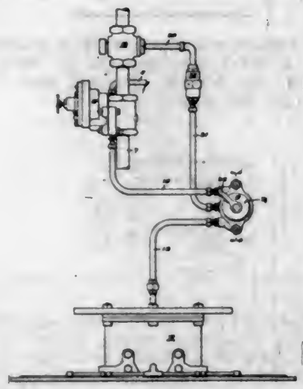


1,690,814. POWER-SUPPLY UNIT FOR RADIO SETS. FRANCIS DE WILLY, New York, N. Y. Filed July 2, 1926, Serial No. 120,029. Renewed Sept. 27, 1928. 1 Claim. (Cl. 175—363.)

In a device of the class described, the combination with a core having a primary winding adapted to be connected to a source of electrical power, a secondary winding on the primary winding, and shunted across the plates of a rectifying tube, of a circuit shunted across the plates of the rectifying tube, the said circuit including condensers and a shielded coil, and the said shielding coil being placed between the said primary and secondary windings.

---

1,690,815. CLOTHESLINE CLAMP. HARRY F. DRAKE, Milwaukee, Wis. Filed Sept. 24, 1926. Serial No. 137,490. 7 Claims. (Cl. 24—133.)

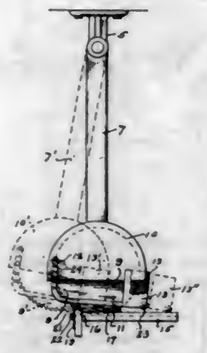


1. A line clamp, comprising a bracket having a base flange adapted to be secured to a support and having a laterally projecting forward portion forming a line-clamping surface at its rear face, and a dog pivotally mounted on said bracket adjacent said base flange and having a forward clamping face co-operating with said laterally projecting portion to clamp a line therebetween on the upward movement of said dog, said dog having a part engageable with said base flange for limiting its downward movement and permitting said line to lift said dog into clamping position.

---

1,690,816. TRAIN-CONTROL-RESTORING APPARATUS. HOWARD S. FOLKER, Mill Valley, Calif., assignor to National Safety Appliance Company, Reno, Nev., a Corporation of Nevada. Filed Feb. 8, 1927. Serial No. 166,646. 26 Claims. (Cl. 303—18.)

5. In combination with a pneumatic brake control system having a brake pipe adapted to be vented to apply the brakes and an engineer's brake valve communicating with said brake pipe, an automatic brake-application mechanism for venting said brake pipe, means for automatically controlling said mechanism in response to a track condition, penalty restoring means including a member movable to restore said mechanism to normal non-venting condition after said mechanism has been automatically actuated to vent the brake pipe, said penalty means serving to retain said mechanism in venting condition until movement of said member has been com-

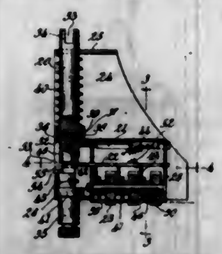


pleted, means for rendering said engineer's brake valve inoperative, and interlocking means for rendering said mechanism inoperable to vent the brake pipe after the

engineer's brake valve has been rendered inoperative and an incomplete movement of said movable member has been effected.

---

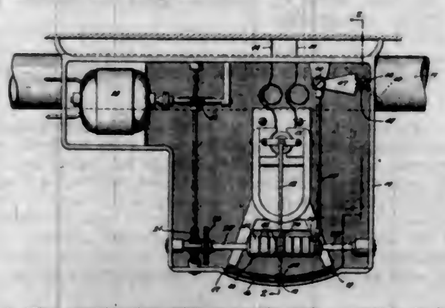
1,690,817. SAW GUARD. HARRY A. HALL, Newcastle, Ind., assignor to The Hoosier Manufacturing Company, Newcastle, Ind., a Corporation of Indiana. Filed July 26, 1927. Serial No. 208,564. 4 Claims. (Cl. 143—159.)



1. The combination with a swinging circular saw and a table over which the saw swings, of a hood fixed over the upper portion of the saw to swing with the saw, a second movable hood substantially U-shaped resting on the table telescoping over and around the forward end of the fixed hood, and an arm attached to each side of the movable hood, each of said arms passing backwardly along the saw in relatively close proximity to the table and thence upwardly to be pivotally attached to the fixed hood back of the axis of the saw.

---

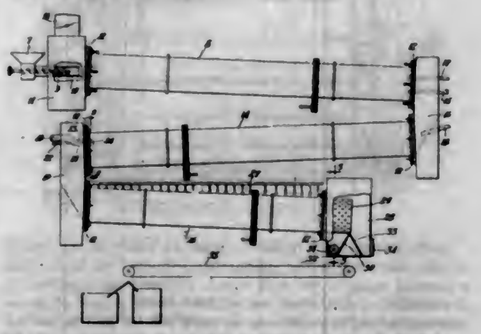
1,690,818. LOCK. ALEXANDER G. HATCH, Farmington, Conn., assignor to The Sesamee Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 4, 1926. Serial No. 152,536. 9 Claims. (Cl. 70—53.)



1. A lock comprising a bolt-controlling element oppositely movable from an effective to an ineffective position, and vice versa, a holding means whereby said element may be maintained in its effective position but from which it may be detached as a result of a releasing movement of said element differing from its movement towards and away from its effective position, and a permutation mechanism including a locking element and a plurality of variably settable elements having movement-obstructing portions whereby said locking element may be held by said settable elements either in a position such as to obstruct such releasing movement of said bolt-controlling element or in a non-obstructive position with respect thereto, the settable

elements of said permutation mechanism being settable in a predetermined relationship such as to permit free movement of said locking element from either of said positions to the other.

---

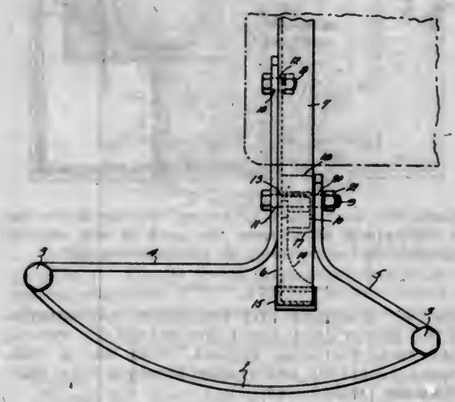


1,690,819. REGULATING APPARATUS. WILLIAM MCMEEN HEPBURN, New York, N. Y., assignor to The Surface Combustion Co. Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1924. Serial No. 716,619. 13 Claims. (Cl. 236—70.)

1. The combination with a needle and a member to be controlled in accordance with a change in position of the needle from a given neutral point, of means for temporarily returning the needle to said given position after a change from that position, and means actuated by said means for imparting movements to the controlled member proportional to the change of position of the needle from said given position.

---

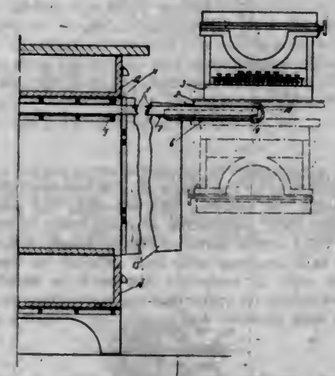
1,690,820. REDUCTION OF METALS FROM ORES. JOHN WILLIAM HORNSEY, Norton by Sheffield, England, assignor to Granular Iron Company, a Corporation of Michigan. Filed Nov. 25, 1925. Serial No. 71,442. 3 Claims. (Cl. 263—32.)



3. Apparatus for the solid reduction of ores including a rotating cylinder member, a casing member for an end

thereof, and a seal therebetween including a flexible diaphragm carried by one member, and annular shoe carried by the other member and slidably engaging the first member.

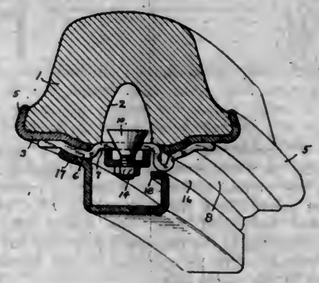
---



1,690,821. BUMPER-ATTACHING MEANS. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 14, 1927. Serial No. 161,208. 16 Claims. (Cl. 293—55.)

12. The combination with a channel shaped vehicle member and a support arm to be supported from a surface within said channel member, of a bearing plate positioned between said surface and a surface of said support arm and having end portions adapted to bear upon one of said surfaces and an intermediate portion adapted to bear upon the other surface.

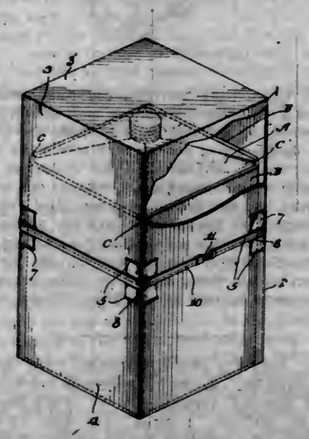
---



1,690,822. DEVICE FOR THE ERECTION AND KEEPING OF TYPEWRITERS. KARL ALBIN ABRAHAM JOHANSSON, Stockholm, Sweden. Filed Oct. 25, 1927, Serial No. 228,602, and in Sweden Nov. 28, 1925. 3 Claims. (Cl. 312—28.)

1. A device for bringing a typewriter or like machine into a position suitable for use from a more or less concealed position within a table or the like, comprising a movable support to which the bottom of the machine may be secured, coaxial rollers on the support positioned substantially beneath the center of gravity of the machine, a flat member slidable into and out of the table, guide strips for the rollers, each said strip having one end secured to the under side of the flat member at a distance from the outer edge thereof and having its other end curved upward around said outer edge and secured to the upper side of the flat member, whereby the movable support and machine attached thereto may be moved forward and backward on the guide strips and turned up into operative position when the rollers are in engagement with the upwardly curved ends of the guide strips.

---

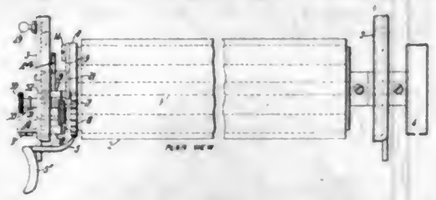


1,690,823. CUSHION-TIRE STRUCTURE. FRED R. KLAUS and FRANK H. MEYER, Warren, Ohio, assignors to The American Welding and Manufacturing Company, a Corporation of Ohio. Filed May 19, 1924. Serial No. 714,205. 3 Claims. (Cl. 301—19.)

2. The combination with a cushion tire having an inner, circumferential recess and rigid base rings secured thereto on opposite sides of the recess, of a transversely split, supporting ring having a locking engagement with the inner sides of the base rings, a bolt having a wedge-shaped head disposed between the ends of the ring at the split and extending into the recess, a channel-shaped bridge plate extending across the split on the inner side of the ring and having an opening through which the bolt extends, and a nut on the bolt adapted to be tightened against the inner side of the plate.

---

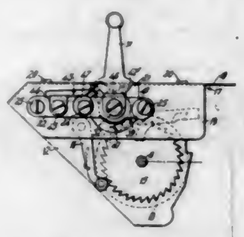
1,690,824. CONTAINER. MATHIAS R. KONDOLF, Cynwyd, Pa., assignor to Boxboard Products Company, Philadelphia, Pa., a Corporation of Delaware. Filed Mar. 27, 1925. Serial No. 18,748. 9 Claims. (Cl. 206—46.)



3. A container comprising a hollow receptacle and a closure therefor, corner engaging clips having angularly disposed body walls and flanges turned over from the end

of and extending transversely to said body walls and engaging said members and a band which when taut prevents dislodgment of said clips and when slack permits ready disengagement thereof.

---

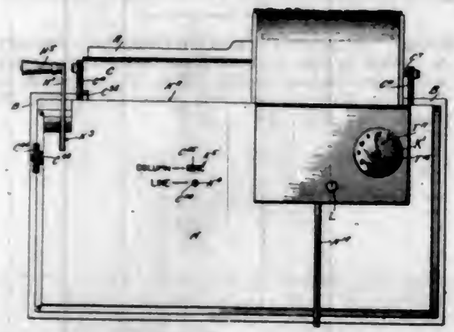


1,690,825. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 21, 1924. Serial No. 721,398. 18 Claims. (Cl. 197—121.)

1. In a typewriting machine having a platen and a platen-axle, the combination with a line-spacing mechanism to drive the platen, including a toothed ratchet-wheel, a line-space pawl, and a line-space lever, of a lever of the first order fulcrumed upon the platen-axle, one arm thereof connected to the line-space pawl and the other arm thereof connected to be operated by the line-space lever forwardly of the platen-axle.

---

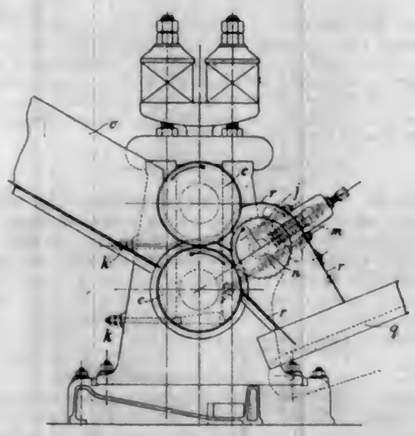
1,690,826. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1924. Serial No. 745,299. 20 Claims. (Cl. 197—121.)



1. In a typewriting machine, the combination with a platen and a revoluble line-spacing mechanism, including a notched-wheel, of a fractional line-space mechanism comprising a double-acting spring, a pivoted lever movable in either direction by said spring, a pair of dogs or teeth rigid with said lever and spaced apart, so that one or the other engages with the notched-wheel when the lever is thrown in one direction or the other to turn the platen forwardly or backwardly through a fraction of a regular line-space, and adjustable stop means for limiting the throw of said lever in either direction, said lever being pressed against said stop means by said spring when thrown in either direction.

---

1,690,827. DEVICE FOR CHECKING THE OPERATION OF VEHICLES. RALPH H. MATTHIESSEN and WILLIAM BARTON EDDISON, Irvington, N. Y. Filed Dec. 11, 1922. Serial No. 606,046. 1 Claim. (Cl. 161—15.)

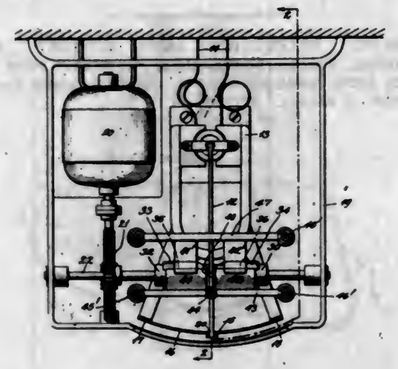


In a device for checking the operation of vehicles, the combination of a train of numbered wheels, a clutch, a clock movement arranged to drive said train through said clutch, a member moved by the travel of the vehicle at a speed proportional to the speed of such travel, a speed limiting device cooperating with said member, and means for opening said clutch when the speed of said member

exceeds that permitted by the speed limiting device and for closing said clutch when the speed of said member falls below that permitted by the speed limiting device.

---

1,690,828. MACHINE FOR CRUSHING AND SHREDDING SUGAR CANE AND LIKE MATERIAL. FRANCIS MAXWELL, Wallington, England. Filed Mar. 9, 1923, Serial No. 623,847, and in Great Britain Mar. 14, 1922. 3 Claims. (Cl. 100—47.)

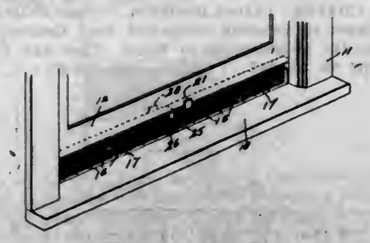


1. In combination in apparatus for crushing and shredding sugar cane or the like, a pair of cooperating crushing rolls, means for applying and adjusting the pressure between said rolls, cooperating crushing teeth on the surface of said rolls, and a shredder roll disposed at the delivery side of said crushing rolls and adjacent to one of said crushing rolls to cooperate therewith in shredding the cane, and means for regulating and controlling the pressure between said shredder and cooperating crushing roll.

---

1,690,829. REGULATING APPARATUS. DANTE VICTOR MAZZOCCO, New York, N. Y., assignor to The Surface Combustion Co. Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1924. Serial No. 716,618. 12 Claims. (Cl. 236—70.)

1. The combination with a movable needle and a member to be controlled in accordance with the position of the needle, of means located at one side of the normal path of movement of the needle and adapted to engage a side of the needle at intervals and at each such engagement to remain in contact with the needle for a time proportional to the extent of the displacement of the needle from a given



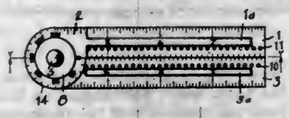
point at the moment of that engagement, and means for causing movement of the controlled member during the time that the engaging means is in contact with the needle.

---

1,690,830. WINDOW VENTILATOR. ALLEN A. MILLER, Chicago, Ill. Filed Apr. 6, 1928. Serial No. 267,817. 1 Claim. (Cl. 98—90.)

In a window ventilator having a plurality of sections, said sections including side walls, inter-locking means between the adjacent sections comprising a U-shaped plate mounted upon one section and engaging the adjacent walls of said sections, a bolt projecting from said U-shaped plate, and a plate mounted upon the other section, said latter plate having a recess for receiving said bolt.

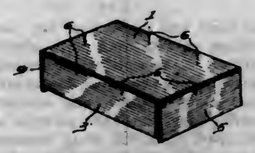
---



1,690,831. ELECTRIC HEATING AND SURFACE-FINISHING DEVICE. MANUEL NIETO, Brooklyn, N. Y., assignor of one-fourth to Francisco Lopez, New York. Filed Feb. 25, 1928. Serial No. 256,835. 4 Claims. (Cl. 219—31.)

2. A device of the class described, comprising a plaster engaging member of hollow construction, a winding backing member supporting a winding, engaged therein, a shell attached to the plaster engaging member, a stem connected with the shell, and handling means connected with the stem, the winding backing member being arranged for sliding within the shell, and screws rotatively connected with the winding backing member, and threadedly engaging the shell, as a means for adjusting the position of the winding relative to the plaster engaging member.

---

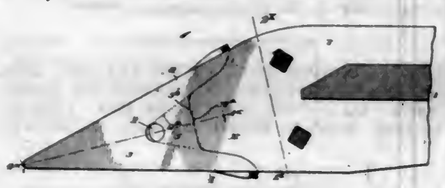


1,690,832. COMBINATION PAPER-CUTTING TOOL, RULE, AND DRAFTING AND MEASURING INSTRUMENT. IRA J. OWEN, Grand Rapids, Mich. Filed Nov. 24, 1924. Serial No. 751,993. 2 Claims. (Cl. 33—118.)

1. In a combination tool, a ruler made up of symmetrical pivoted halves with hinge disk superposed one upon the other, the main one being offset to form a shoulder for locating the pivoted member, the same being provided with graduations, a shouldered pivot rivet for retaining the parts in position, a concavo-convex spring washer under the head of the pivot to hold the parts yieldingly and in frictional contact with each other, the said rivet having a projecting surface-engaging pivot point, and a series of staggered perforations on the said members for the receipt of a pencil point for drafting purposes, all coacting substantially as described for the purpose specified.

---

1,690,833. PROCESS OF MAKING BOXES. CHARLES S. PRICE, Bethlehem, Pa., assignor to L. F. Grammes & Sons, Inc., a Corporation of Maryland. Filed Feb. 5, 1926. Serial No. 86,254. 2 Claims. (Cl. 144—309.)

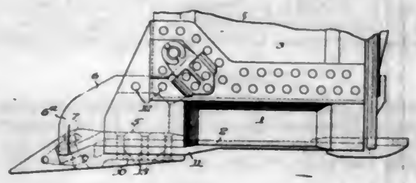


1. The process of making boxes which consists in nailing the bottom to the sides and ends while such parts are separate from each other and held in the positions which they occupy in the finished box, and thereby forming a preliminary assembly, and withdrawing such preliminary assembly from the holding means, whereby to permit such assembly to be handled as a unit and shifted to convenient position for further operation without necessitating the shifting of such holding means.

---

1,690,834. REPLACEABLE-POINT EXCAVATOR TOOTH. THOMAS RATKOWSKI, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed July 23, 1927. Serial No. 207,854. 2 Claims. (Cl. 37—142.)

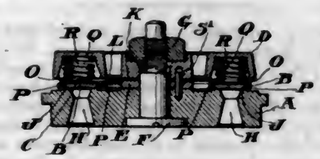
1. A replaceable point excavator tooth, comprising a base and a point adapted to be assembled with and disassembled from the base substantially in the direction of the longitudinal axis of the tooth; said point being constructed with a pair of divergent jaws and with integral lateral webs uniting said jaws and forming therewith a nose-receiving pocket, and with longitudinally extending clamping tangs terminating in base-abutting ends rearwardly remote from said pocket; said base comprising upper and lower tang-receiving recesses leaving a vertically reduced longitudinal base extension between them, and terminating at their rear ends in tang-receiving undercuts having faces



with which the tangs abut, inclined in the direction to press the tangs toward the bottoms of the recesses, means being provided for forcing the tangs rearwardly upon the base, cheeks on the base confining the tangs laterally and

terminating forwardly in abutments positioned to receive the webs of the point, and a nose projecting from the base extension beyond the abutments of the cheeks and entering the pocket of the point.

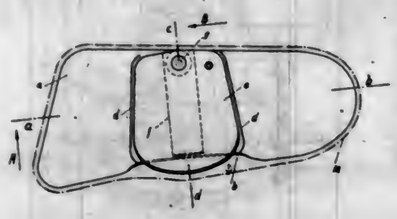
---



1,690,835. EXCAVATOR LIP WITH INTEGRAL TEETH. THOMAS RATKOWSKI, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed July 23, 1927. Serial No. 207,855. 7 Claims. (Cl. 37—141.)

1. An integral tooth and lip member for excavating implements, comprising an attaching plate adapted to overlie the inner surface of the wall of the implement, tooth members integral with and extending downwardly and forwardly from said plate member, and attaching shanks extending rearwardly from the lower portions of the tooth members, spaced apart from the plate members to leave a wall-receiving recess between said plate and said attaching shanks; said recess admitting the wall of the implement in a plane which is above the center of mass of the tooth members and their attaching shanks.

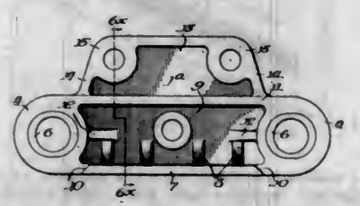
---



1,690,836. PLATE VALVE. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 29, 1926. Serial No. 119,353. 1 Claim. (Cl. 251—119.)

An improvement in plate valves for compressors comprising a valve seat, a plate valve in the form of a flat ring adapted to super-impose and to cover the port area on the said valve seat, notches in the edge of said plate valve, a valve guide having a flat upper surface and radial arms having arcuate extensions for normally holding said plate valve against its seat, and ears formed on the extremities of said extensions for forming loose continual engagement with the said notches in the plate valve, a stop plate, pockets in said stop plate, and springs in said pockets bearing upon the extremities of the said guide plate and indirectly upon the said plate valve.

---



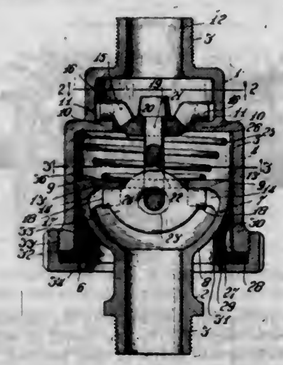
1,690,837. INSERTABLE ARCH SUPPORT. IGNAZ REHLE, Frankfort-on-the-Main, Germany. Filed Dec. 22, 1926, Serial No. 156,310, and in Germany Feb. 23, 1926. 2 Claims. (Cl. 36—71.)

1. An arch support including a main plate curved longitudinally and provided with a side flap and transversely extending stiffening ribs at the front and rear edges of the middle portion of the plate, a transversely extending plate secured to said first mentioned plate above said middle portion, and a spring between said plates for yieldingly supporting said transversely extending plate.

---

1,690,838. INSIDE AND OUTSIDE LINK FOR CONVEYER CHAINS. CLAUDE ROBBECK, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 7, 1926. Serial No. 100,247. 7 Claims. (Cl. 74—32.)

1. A chain comprising articulated inside and outside links; an outside link comprising a pair of web-members in spaced parallel planes, constructed with articulating ends; an inside link comprising a single web-member in a plane intermediate of the planes of the outside link members and constructed with articulating ends fitting between the articulating ends of the outside link; the outside link members providing a broad stabilizing base through which the link rests upon bearing surfaces which the chain encounters in use; and the inside link single web-member being constructed with broad lateral flanges in a plane perpendicular to the plane of its web, providing a stabilizing base of substantially the same width as the base provided by the members of the outside link.



---

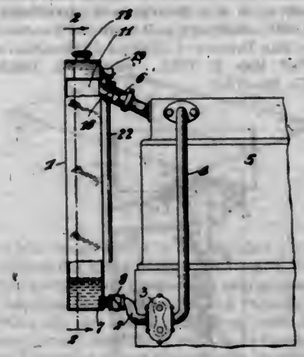
1,690,839. FLEXIBLE PIPE JOINT. EDWARD N. ROTH, Chicago, Ill., assignor to Roth Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1926. Serial No. 89,984. 17 Claims. (Cl. 285—93.)

1. A flexible pipe joint, comprising a socket member and a member with an enlarged head which is housed within the socket, sealing means carried at the open end of the socket member and engaging behind the enlarged head, means projecting outwardly from the head and engaging

the inner walls of the socket for centering the head within the socket, and articulating means for preventing withdrawal of the head from the socket, the centering means and

articulating means supporting the head independently of the sealing means, but permitting universal swinging movement of the head in the socket.

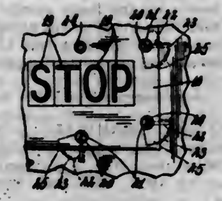
---



1,690,840. TELEPHONE AND THE LIKE. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 3, 1925, Serial No. 464, and in Great Britain Jan. 5, 1924. 11 Claims. (Cl. 179—115.)

1. In an acoustic device an annular diaphragm, elastic material supporting said diaphragm, supporting means to which said elastic material is secured, actuating means for actuating said diaphragm, and means connecting said actuating means to said diaphragm at the mean portion thereof.

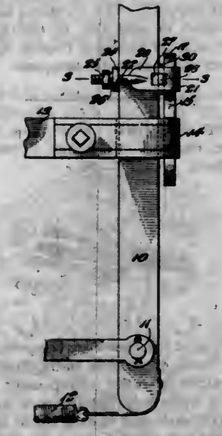
---



1,690,841. COOLING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Nov. 27, 1925. Serial No. 71,597. 4 Claims. (Cl. 123—174.)

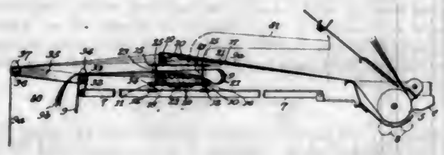
1. An internal combustion engine force-feed cooling system of the type which includes a water container, a supply pipe leading from the container to the engine water jacket, said system designed and operating to cause boiling of the water in the jacket, an outlet pipe for the escape of hot fluid from the jacket and heat-radiating means affording a plurality of separate flow-paths above the water container, said paths cross-communicating only through their lower portions, certain of said paths being interposed between said water container and a low resistance outlet for escape to the outer air of steam, air or water from the system, and others of said flow-paths having their upper ends serially connected to the outlet from the water jacket.

---



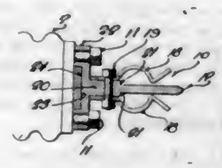
1,690,842. INLAID STREET DIRECTIONAL AND INSTRUCTION SIGN. ALFRED P. SANNA, New York, N. Y. Filed Sept. 3, 1927. Serial No. 217,350. 4 Claims. (Cl. 94—1.5.)

1. A street or road comprising a base, covering material thereon, removable patches with instructions inlaid in the covering material, the tops of the patches being flush with the surface of the covering material and means for latching the patches in place, the patches being reversible so that the bottoms may be placed upwards to disclose other instructions on said bottom.



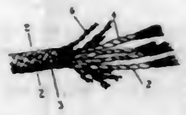
---

1,690,843. PICKER-STICK CLAMP. JAMES J. SMITH, Glenside, Pa. Filed May 6, 1927. Serial No. 189,404. 1 Claim. (Cl. 139—154.)



A picker stick clamping device comprising a hanger provided with oppositely disposed notches to receive a hold up strap, an extension at one end of said hanger, a clevis clamp arranged to fit about said extension and a juxtaposed picker stick, said clamp having slots formed in its legs to overlap both said stick and said extension in assembled condition, a plate arranged between said extension and stick and having tongues respectively slidably mounted in said slots, and clamping devices for rigidly holding said clevis clamping said stick, said extension and said plate together.

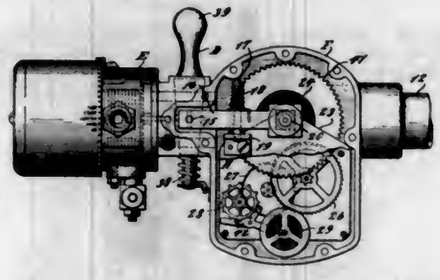
1,690,844. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 12, 1926. Serial No. 108,451. 13 Claims. (Cl. 197—126.)



1. In a typewriting machine of the class described, a set of relatively separable carbon-carriers arranged one over the other, and means on the lower carrier for supporting the upper one, said supporting means being provided with extensions to engage the upper carrier to permit tilting movement thereof on said supporting means.

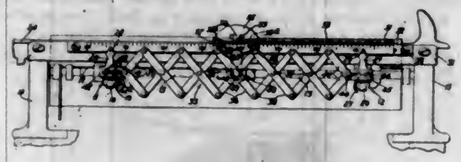
1,690,845. CONTACT TERMINAL. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 12, 1925. Serial No. 62,021. 5 Claims. (Cl. 200—166.)

1. In a device of the character described, a support, a contact member, means securing the contact member to the support, there being a slot in the contact member on its face engaging the support, and a terminal tongue of the desired length secured in said slot in electrical connection with the contact member and held therein by the means securing the contact member to the support.



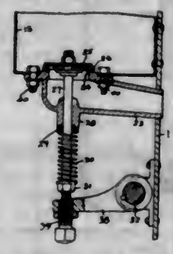
1,690,846. ROPE OR CORD. CLAUDE A. TURNER, Sherbrooke, Quebec, Canada. Filed Apr. 7, 1926. Serial No. 100,243. 1 Claim. (Cl. 96—26.)

A rope consisting of a fibrous core composed of a plurality of separate and distinct strands individually twisted and disposed in straight parallel engagement and in close contact forming a unitary untwisted core, and a cover embracing the unitary core and consisting of braided strands in spiral arrangement around the core and extending in the same spiral direction as the twisted individual strands of the core, and at a wider angle to the said strands of the core.



1,690,847. CONTROL MECHANISM. WILLARD I. TWOMBLY, New York, N. Y., assignor, by mesne assignments, to The Wilcolater Company, Newark, N. J., a Corporation of Delaware. Filed June 6, 1922. Serial No. 566,424. 2 Claims. (Cl. 161—9.)

1. In combination, a device biased to closed position for admitting fuel to a fuel-consuming element, a threaded shaft rotatable freely in one direction and biased to rotate in the opposite direction, clockwork mechanism for restraining the rotation of said shaft in response to its bias-



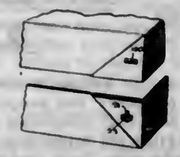
ing force, a traveller nut coacting with the threads on said shaft, and means controlled by the travel of said nut on its shaft for locking said device in open position.

1,690,848. TYPEWRITING MACHINE. BENJAMIN F. BARKER, El Paso, Tex., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,635. 18 Claims. (Cl. 197—194.)

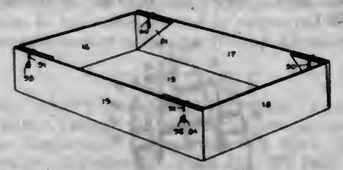
1. In a typewriting machine, the combination with a traveling carriage, a letter-space scale for indicating the position of the carriage, and right and left adjustable margin-stops to limit the travel of the carriage, of a rod on which the margin-stops are slidingly mounted, a center-indicating telltale, means detachably connecting the telltale to the margin-stops for adjustment thereby, and a resilient supporting sleeve connected to the telltale and slidingly mounted on the rod, said sleeve having an opening in one of its sides to enable it to be removed from the rod and to be snapped into position to slidingly embrace the rod.

1,690,849. CONCRETE-MIXER WATER CONTROL. ORSON C. BARRYMORE and REGINALD A. DADDISMAN, San Francisco, Calif., assignors to Barrymore Concrete Mixer Corporation, San Francisco, Calif., a Corporation of California. Filed May 3, 1927. Serial No. 188,591. 7 Claims. (Cl. 83—73.)

1. A concrete mixer comprising a mixing trough, an elevated water tank secured to the trough, and a discharge nozzle leading from the tank through an opening in the trough for admission of water thereto, a valve seat on said nozzle, a valve on said seat provided with a stem extending through an opening in said nozzle, and means for operating said stem and its valve.

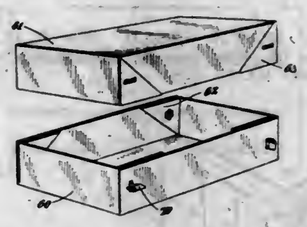


1,690,850. PACKAGE CLOSURE. MARCUS B. BEHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 1, 1924. Serial No. 753,858. 7 Claims. (Cl. 229—46.)



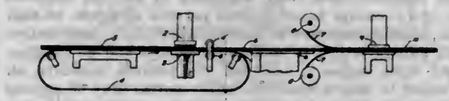
7. The combination with a closed container, of a fastening device for retaining it closed and unopenable except by mutilation of the container or the device, said device comprising a tie member extending at least partially around the container and unseverable except by mutilation thereof, the opposite ends of said member extending into the interior of the container at spaced points on the container and provided with enlarged locking elements permanently preventing withdrawal of said ends.

1,690,851. PACKAGE AND CLOSURE THEREFOR. MARCUS B. BEHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 27, 1925. Serial No. 18,775. 12 Claims. (Cl. 229—46.)



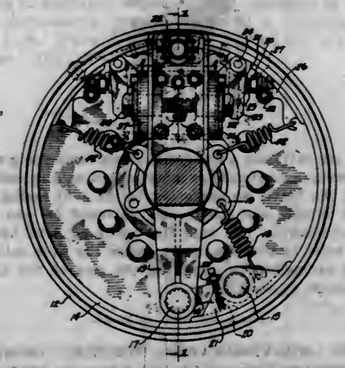
1. A box construction comprising a knock-down body, fastening means for retaining the body in set-up condition, said means comprising rotatable studs designed to pass through certain portions of the body and to retain the body set up after rotation thereof, and a closure provided with slots which are engageable over said studs only after the latter have been so rotated.

1,690,852. PACKAGE AND CLOSURE THEREFOR. MARCUS B. BEHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 6, 1925. Serial No. 21,060. 11 Claims. (Cl. 229—46.)



1. In a box construction, a box member formed by folding an integral flat blank along predetermined lines, whereby multiply portions are produced, a complementary closure member adapted to telescope the box member, and means for retaining the box member in set-up condition and also to lock said closure member thereto, said means comprising a resilient U-shaped element removably clampable over the edges of said portions to retain said plies in superposition and having a head adapted to engage the closure member, said U-shaped element serving as the sole means for retaining said plies in superposition.

1,690,853. PACKAGING. MARCUS B. BEHRMAN, New York, N. Y., assignor to The Lox Seal Corporation, New York, N. Y., a Corporation of New York. Filed July 6, 1925. Serial No. 41,512. 3 Claims. (Cl. 229—47.)

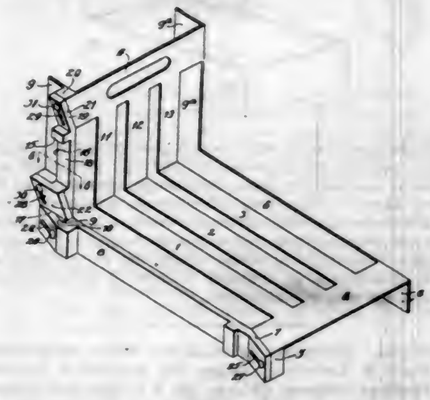


1. In combination with a box part comprising superposed portions, of means for holding said superposed portions in associated relation, said means comprising an element adapted to be passed through the superposed layers and when rotated with reference thereto, to hold said layers against disassociation, and means for locking said member against removal, said means comprising an abutment on said element and an abutment member to be irremovably associated with said abutment.

1,690,854. METHOD OF MAKING FELT PRODUCTS. PERCY R. BETTISON, Chicago, Ill., assignor to Tanners' Products Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 12, 1926. Serial No. 101,540. 3 Claims. (Cl. 28—4.)

1. The method of forming a punch-felted body which consists in carrying the felt bats through a needle punching loom on a continuously moving endless conveyor to which parts of the felt are punched and thereafter cutting the sheet of punched felt from said conveyor.

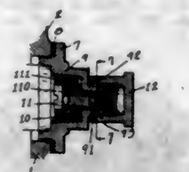
1,690,855. BRAKE. NIELS A. CHRISTENSEN, Cleveland, Ohio. Filed Mar. 29, 1926. Serial No. 98,230. 2 Claims. (Cl. 188—106.)



1. In a vehicle brake mechanism, the combination with a rotatable brake drum, a brake support, a brake associated with said support and engageable with the interior surface of said drum, a manually operable oscillatory expander journalled on said support and engageable with an end of the brake to move it into braking engagement with said drum, a fluid-pressure-operated motor mounted on said support and provided with a thrust member, guide and

thrust connections between said thrust member and brake adjacent the end thereof, said guide and thrust connections serving to keep said brake in alined position relative to said expander and drum.

---



1,690,856. MORTAR SHIELD. NILS E. CLEMENTSON, Chicago, Ill. Filed June 29, 1927. Serial No. 202,402. 3 Claims. (Cl. 72—128.)

1. A mortar shield consisting of a horizontal and a vertical member respectively consisting of parallel elements and end elements joined to said parallel elements, to hold said parallel elements in spaced relation, in combination with flanges joined to said end elements and at substantially right angles to said end and parallel elements, all arranged to obtain spaces in which mortar may be applied to determined faces of blocks which are being built into a wall.

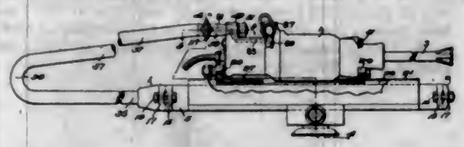
---

1,690,857. PISTON PUMP. ROLAND J. FAIRCHILD, Kalamazoo, Mich., assignor to National Water Lift Company, Kalamazoo, Mich. Filed Nov. 19, 1925. Serial No. 70,056. 2 Claims. (Cl. 251—122.)

1. An air valve for a hydraulic pump comprising a cylindrical casing, a hydraulic packing within said cylinder constituting the valve, an extension to the said casing, screw threaded outside and inside and flattened on one side, a screw flattened on one side for retaining said hydraulic packing valve in position, and a screw cap over said screw threaded extension for adjusting the size of the aperture therethrough, as described.

---

1,690,858. SHAVING-PAPER HOLDER. CHARLES R. FLEISCHMANN, Chicago, Ill. Filed Sept. 22, 1926. Serial No. 136,909. 3 Claims. (Cl. 242—55.5.)



1. A shaving paper holder consisting of a supporting member adapted to be vertically mounted and having a transversely disposed and forwardly and downwardly inclined portion, a ball-like holder for a roll of paper pivotally mounted at its upper portion on the upper part of said member and having its free ends inwardly extended, a core with a central opening relatively larger than said inwardly extended ends located between and eccentrically on said inturned ends for receiving a paper ribbon roll wound thereon and which turns therewith and is adapted to bear against

a portion of the vertical and a part of the inclined part of the supporting member, whereby rebounding of the paper ribbon will be prevented.

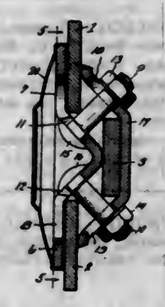
---

1,690,859. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass. Filed Aug. 10, 1921. Serial No. 491,136. 19 Claims. (Cl. 121—9.)

1. A hammer rock drill having, in combination, a supporting fixture, a percussive tool carrying a drill steel, feeding means for said steel comprising a relatively thin walled tube constituting the barrel of a feed cylinder, a piston in said cylinder operatively connected to said percussive tool for moving the latter relative to said cylinder, means slidably supporting said percussive tool on said cylinder and slidably supporting said cylinder on said fixture comprising four spaced ways extending longitudinally of said cylinder parallel to the axial line thereof, said ways formed of relatively thin sheet metal parts having portions conforming to the surface of said tube and welded thereto and portions extending away from the surface of said tube for connecting the percussive tool to said cylinder and said cylinder to said fixture.

---

1,690,860. DEVICE FOR PLAYING MUSICAL INSTRUMENTS. GUILLERMO GONZALEZ, Johnstown, Pa. Filed Apr. 22, 1926. Serial No. 103,749. 5 Claims. (Cl. 84—322.)



1. In a device of the class described, finger tips comprising hollow substantially cylindrical members having a closed end adapted to be disposed over the ends of adjacent

fingers of a hand, attaching members comprising strips of flexible material attached at their forward ends to adjacent sides of adjacent finger tips and adapted to be disposed longitudinally of adjacent fingers, and ring members disposed over adjacent strips of said attaching member and adapted to be disposed around the fingers between the joints thereof for retaining said strips adjacent the sides of said fingers.

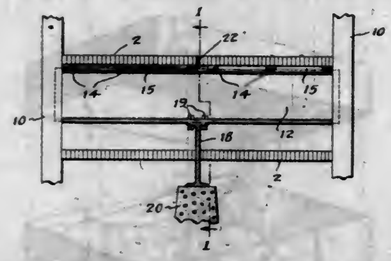
---

1,690,861. CENTER CLAMP. HERBERT S. JANDUS, Detroit, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 17, 1927. Serial No. 161,506. 24 Claims. (Cl. 293—55.)

1. A clamp for spaced impact bars and the rear bar of an automobile bumper consisting of a front plate adapted to bear upon the front surfaces of the impact bars and having a rearwardly extending portion adapted to pass between the impact bars and bear upon the rear bar, a rear plate adapted to bear upon the rear surface of an impact bar and upon the rear surface of the rear bar, and means for drawing the two plates together.

---

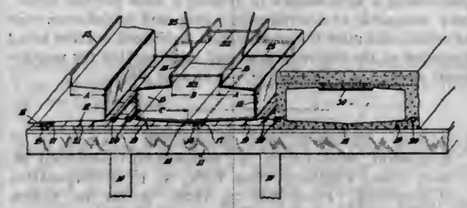
1,690,862. SAXOPHONE. ALFRED J. JOHNSON, Grand Rapids, Mich., assignor to J. W. York & Sons, Grand Rapids, Mich. Filed Jan. 3, 1925. Serial No. 363. 6 Claims. (Cl. 84—385.)



1. In a saxophone or similar instrument, a tone hole structure comprising the combination with the body provided with a perforation at the side, of a tubular socket section secured to said body and surrounding said perforations and suitably soldered thereto, and a ductile noncorrosive metal lining member with an expended projecting flange within the instrument and its outer end spun to conform to the socket section to retain the same and form a smooth contact surface for the pad, as specified.

---

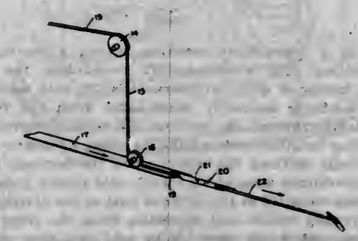
1,690,863. TRAVELING-GRATE STOKER. LOUIS WILLIAM KLEIN, Chicago, Ill., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 27, 1925. Serial No. 4,991. 2 Claims. (Cl. 110—40.)



1. A stoker of the class described having, in combination, an endless traveling grate divided longitudinally into two sections arranged side by side and spaced a slight distance apart so as to form a fuel supporting and propelling surface substantially continuous throughout its width, a supporting structure to prevent sagging of the upper run of the grate arranged between the upper and lower runs of the grate and over which the upper run passes, an I-beam extending longitudinally of the grate with its web extending through the space between the lower runs of said sections and upon which said supporting structure is mounted, means for closing the space between the upper runs of said sections throughout substantially the length

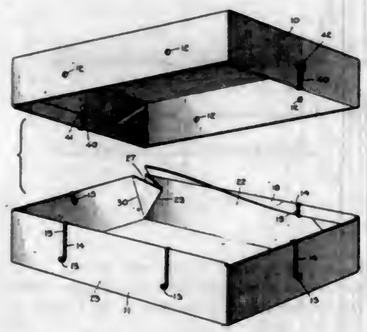
thereof, and pillars upon which said I-beam is mounted, the space between said sections being only sufficient to permit the sections to clear the web of the I-beam.

---



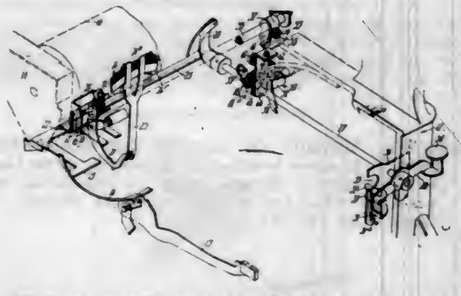
1,690,864. CONCRETE-MOLDING APPARATUS. WILLIAM KLEITZ, Albany, N. Y. Filed Sept. 3, 1927. Serial No. 217,324. 6 Claims. (Cl. 25—131.5.)

1. Apparatus of the character described comprising a pair of similarly shaped sections having sloping bottoms, vertical risers and sloping tops having a portion thereof, extending at an angle from the remainder thereof and means for spacing said sections whereby the bottoms thereof overlap each other.



---

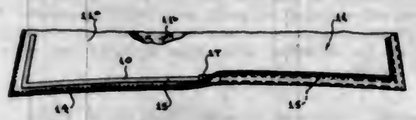
1,690,865. METHOD OF MAKING TIE ELEMENTS. HENRY E. KONDOLF, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 4, 1926. Serial No. 133,680. 7 Claims. (Cl. 153—1.5.)



1. In a method of making tie elements of the character described, the steps which comprise guiding a midportion of a continuous tie into adjacent position with respect to the end of a continuous strip, severing said end along a line forming an acute angle with the longitudinal axis of the strip and associating it with said midportion to form a sheath for the latter, and then advancing both the tie and the strip to bring another midportion of the tie into similar adjacence with respect to the newly produced end of the strip.

1,690,866. PILFERPROOF BOX. JOSEPH KRAMER, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 26, 1925. Serial No. 18,558. 7 Claims. (Cl. 229—46.)

3. In a box construction, a box member formed by folding an integral blank along predetermined lines, whereby multi-ply portions are produced, said portions presenting an upper folded-over edge and a resilient clip element for retaining said member in set-up condition, said element comprising a wire shaped to provide a hook portion removably clampable at desired points over said folded-over edge to retain said plies in superposition, said hook portion being provided at its end with a second hook portion for engagement about the free edge of one of said plies.



1,690,867. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 22, 1925. Serial No. 45,204. 14 Claims. (Cl. 197—157.)

12. In a typewriting machine having a carriage, the combination with a ribbon-shift mechanism, the ribbon having bands of different characteristics, said mechanism being normally manually controllable from the front of the machine through the medium of a rockable switch-shaft extending longitudinally of the machine, of means for automatically shifting the ribbon when the carriage reaches a predetermined zone of its travel, said means including a cam-piece mounted at the forward part of the carriage so as to be readily visible and accessible from the front of the machine, and means operated by said cam-piece and connected to said switch-shaft for rocking the latter to bring another of said bands into operative position.

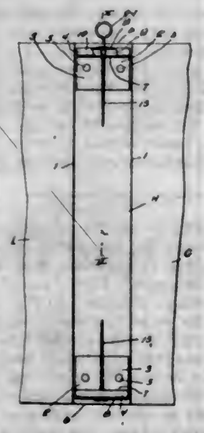
1,690,868. COLLAR. WILLIAM J. LA ROSE, North Troy, N. Y. Filed May 24, 1927. Serial No. 193,797. 1 Claim. (Cl. 2—132.)

The method of constructing a double fold soft collar which consists in providing a duality of plies for the outer fold, stitching said plies together at the ends and one side edge, applying a stiffener along the stitched edges but inset from the same, folding the stitched edges over the stiffener and securing them to the body portion

of the plies, and finally turning the plies inside out to dispose the stiffener at the bottom and front edges of the fold.

1,690,869. HÆMOSTATIC. FREDERICK MARTINEZ and ADOLFO GÓMEZ, New York, N. Y. Filed Aug. 10, 1926. Serial No. 128,516. 6 Claims. (Cl. 167—7.)

1. A medicinal preparation comprising the medicinally active content of the fibres of the outside of the fruit of the *Cocos nucifera*.

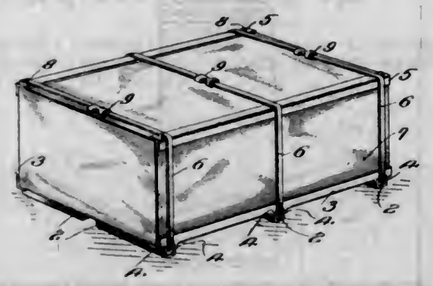


6. A hæmostatic comprising an aqueous extract of the fibers of the outside of the fruit of the *Cocos nucifera*.

1,690,870. STRINGED MUSICAL INSTRUMENT. CHARLES H. MERRITT, Bellingham, Wash. Filed Oct. 9, 1926. Serial No. 140,471. 9 Claims. (Cl. 81—269.)

1. The combination, in a stringed musical instrument, of a head comprising a rim and a membrane, a neck supported between its ends in said head for free vibration relative thereto, vibratory strings, a nut on the outer end of said neck forming a bearing for one end of said strings, their other end being secured to said rim, a bridge interposed between said strings and said membrane, and means operatively connected with said pivoted neck for transmitting its vibrations to the membrane.

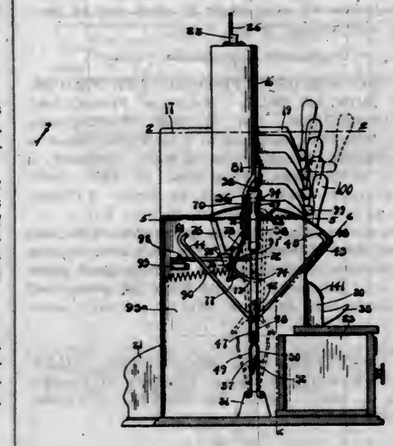
1,690,871. TEMPORARY BINDER. MAX MEYERSON, New York, N. Y. Filed June 9, 1926. Serial No. 114,843. 5 Claims. (Cl. 129—40.)



3. A temporary binder comprising a back portion, a pair of holders connected with the back portion adjacent opposite ends thereof, retaining members carried by said holders, one of said holders having an opening therethrough in the direction of the length of the back portion, and the retaining member of said holder extending through said opening, said retaining member comprising a pair of spring arms connected together at their entering end and said retaining member having a shoulder thereon for engaging a part of the holder to hold the retaining member in retaining position.

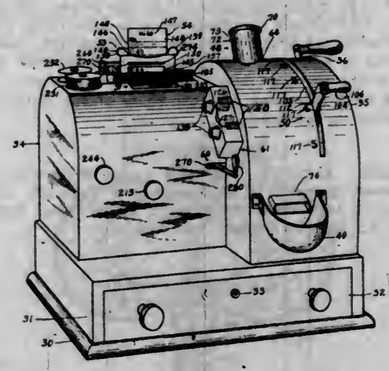
1,690,872. NITROGLYCERIN DYNAMITE. THOMAS O'HERN, Kew Gardens, N. Y., assignor to Arthur T. O'Hern, Kew Gardens, N. Y. Filed Apr. 2, 1926. Serial No. 99,404. 2 Claims. (Cl. 52—11.)

1. A sixty percent nitroglycerin dynamite containing sixty-four parts by weight of sodium nitrate, thirty parts by weight of infusorial earth, twenty parts by weight of comminuted wood product, three parts by weight of potassium nitrate, three parts by weight of ground magnesium carbonate, and one hundred eighty parts by weight of nitroglycerin.



1,690,873. PACKAGING DEVICE FOR METAL SHEETS. JAMES H. O'NEIL, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 9, 1926. Serial No. 128,147. 1 Claim. (Cl. 206—60.)

Packaging devices for metal sheets comprising a supporting means having legs permanently attached thereto and transportable with the package, angle members independent of the supporting means and forming therewith a supporting base on which the metal sheets may be stacked with said angle members disposed at the sides and with one portion of the members extending along the side face of the stack and the other portion beneath the stack, spaced lugs formed on the said angle members adapted to lie on opposite sides of the legs for preventing the angle members from moving endwise of the base, and baling means adapted to pass about the stacked sheets for securing the sheets to the base.



1,690,874. ISSUING AND RECORDING TRADE-CHECK-CREDIT MACHINE. WILEY W. OSBORNE, Cincinnati, Ohio, assignor, by direct and mesne assignments, to The Osborne Credit Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 10, 1920, Serial No. 395,220. Renewed Aug. 8, 1928. 9 Claims. (Cl. 234—1.)

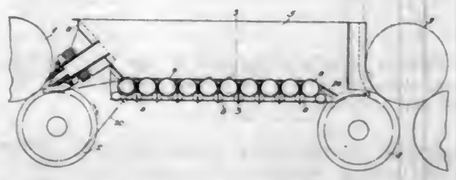
1. In a trade-check issuing register, a card receptacle adapted to receive two record cards oppositely faced, a set of type bars mounted in back of said receptacle, a set of type bars mounted in front of said receptacle corresponding to said set of type bars mounted in back of said receptacle forming pairs with like type characters facing said card receptacle, depending prongs for said type bars, a spring functioned operating mechanism

adapted to swing said type bars on their pivot, bringing type characters toward one another, and means to operate said type bars.

1,690,875. TRADE-CHECK CREDIT MACHINE. WILEY W. OSBORNE, Cincinnati, Ohio, assignor to The Osborne Credit Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 4, 1922. Serial No. 579,628. 8 Claims. (Cl. 133—4.)

1. In a trade check credit machine, trade check storing means for carrying a supply of trade checks representing like units of value, trade check ejecting mechanism capable of ejecting from said storing means one or more checks representing, respectively, one of said units of value or various multiples thereof, and comprising a rockable shaft, a ratchet wheel journaled freely thereon, a lever fixed to said shaft adjacent said ratchet wheel, a pawl pivotally mounted on said lever adapted for normal engagement with said ratchet wheel to rotate the latter to a varying degree, a rotatable shaft, a crank on

said shaft, a slide operable below said storing means for ejecting checks therefrom, a mechanical connection between said slide and said crank, and gearing between said ratchet wheel and said rotatable shaft whereby varying degrees of rotation of said ratchet wheel causes one or more revolutions of said crank to eject one or more checks from said storing means.



---

1,690,876. PROCESS OF IMPROVING THE PROPERTIES OF MONTAN WAX. WILHELM PUNGS, Ludwigshafen-on-the-Rhine, and MICHAEL JAHRSTORFER, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Sept. 10, 1927, Serial No. 218,853, and in Germany Sept. 13, 1926. 3 Claims. (Cl. 196—21.)

1. The process of improving the properties of Montan wax which consists in treating Montan wax with chromic acid in the presence of glacial acetic acid and small quantities of an acid substance selected from the group consisting of sulfuric acid and acid salts of polybasic acids.

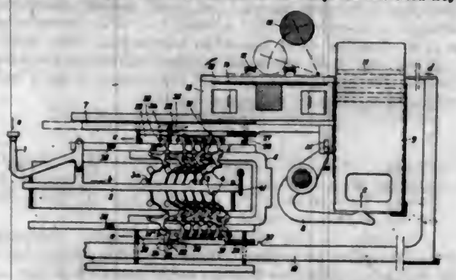
---

1,690,877. CONVEYER FOR SUGAR-CANE MILLS. WILLIAM A. RAMSAY, Honolulu, Territory of Hawaii. Filed Dec. 2, 1927. Serial No. 237,299. 6 Claims. (Cl. 198—127.)

6. A conveyer comprising a plurality of conveyer rollers, mounted on anti-friction bearings and arranged in parallelism in a train, a partition extending upwardly between each adjacent pair of conveyer rollers, a platform carried by the upper partition and located in a plane immediately below the plane of the top of said conveyer rollers, each of said partitions being provided with a slot immediately below said platform, a friction roller loosely mounted in said slot, and having operative contact with each of the conveyer rollers adjacent said partition, and means for driving any conveyer roller of the train, substantially as described.

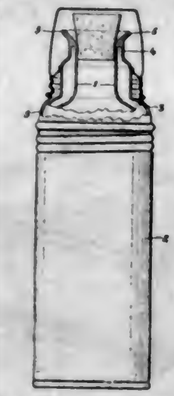
---

1,690,878. AIRSHIP. VINCENT CRANE RICHMOND and GEORGE HERBERT SCOTT, Cardington, England. Filed Dec. 15, 1927, Serial No. 240,303, and in Great Britain Oct. 12, 1926. 9 Claims. (Cl. 244—3.)



1. In an airship embodying a hull framework and a cover fabric stretched thereover, means for tautening the cover fabric, said means acting to force the cover fabric in a direction transverse to its surface relative to the hull framework.

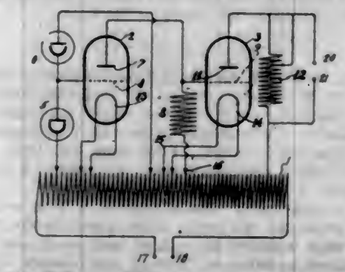
---



1,690,879. LINE-PRINTING TYPEWRITER OR THE LIKE MACHINE. WERNER SCHÄFFER, Laupen, near Bern, Switzerland, assignor to Chocolat Tobler Holding Co. Aktiengesellschaft, Schaffhausen, Switzerland, a Firm. Filed May 4, 1926, Serial No. 106,668, and in Germany May 6, 1925. 35 Claims. (Cl. 101—93.)

1. In a machine of the character described, a plurality of rows of abutments arranged substantially parallel to each other, a keyboard for selecting an abutment in each said rows according to the depression of the keys of the said keyboard, a common carrier for said rows, movable in the direction of a row and a plurality of members each adapted to be engaged by a selected abutment.

---

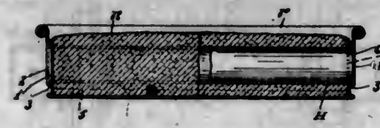


1,690,880. VACUUM-JACKETED VESSEL. OTTO TRAUGOTT KARL SCHMIDT, Altenfeld, Germany. Filed Dec. 7, 1926, Serial No. 153,161, and in Germany Mar. 23, 1926. 1 Claim. (Cl. 215—13.)

A vacuum bottle, comprising a double walled glass vessel having a neck provided with a filling opening, the outer wall of said neck being reduced in diameter adjacent said filling opening and the inner wall of said neck merging with the reduced portion of said outer wall at said filling opening to form a lip of substantially the same diameter as the unreduced portion of said outer wall.

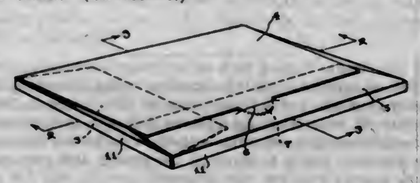
---

1,690,881. CIRCUIT FOR AMPLIFYING DIRECT OR ALTERNATING CURRENTS BY VACUUM TUBES. GÜNTHER THILO, Friedenau, near Berlin, Germany, assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1924, Serial No. 757,885, and in Germany Jan. 5, 1923. 8 Claims. (Cl. 179—171.)



1. A circuit for amplifying electric current, comprising a potentiometer having its terminals connected to the opposite leads of a supply circuit, vacuum tubes, each having an anode, a cathode, and a grid, the anode of one tube being united to the grid of another of said tubes, and connections between the tubes and the potentiometer at such points that the voltage on said last-named grid due to anode current is compensated.

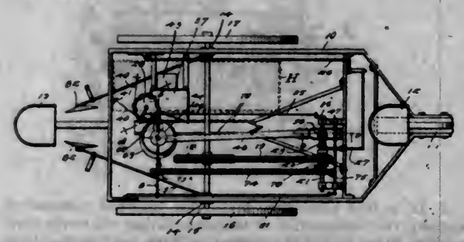
---



1,690,882. ART OF BAKING. CHARLES WEAR, Waltham, Mass., assignor of one-half to Joseph Pollak. Filed Nov. 21, 1927. Serial No. 234,683. 6 Claims. (Cl. 107—54.)

1. In the method of baking an article in the form of a roll or loaf having formed therein during the process of baking a longitudinally extending opening adapted to receive an edible filling, as a Frankfort, the steps which consist in forming a piece of dough around a core, in removably supporting such core with the adhering dough thereon within a baking pan, and in such relation to the pan walls as to allow the cores and dough adhering thereon to rise vertically away from the pan bottom in a straight line upward lifting movement when exposed to baking heat, in exposing the same to baking heat whereby to bake the roll or loaf both inside and out, in removing the core with the baked roll or loaf thereon from the pan, and in finally withdrawing the core from the baked roll or loaf.

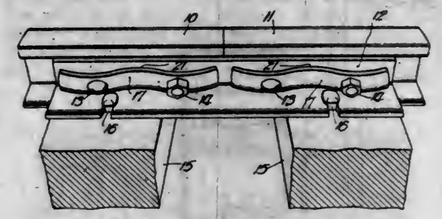
---



1,690,883. HOSIERY CARTON. WALTER R. ZIEGLER, Riverside, N. J. Filed Aug. 23, 1927. Serial No. 214,927. 1 Claim. (Cl. 206—7.)

A hosiery carton comprising a bottom portion, end sections and side sections, an upper flap element extending from a side section, a tab member projecting therefrom, a plurality of intermediate flap portions foldably connected to the end and side sections, one of the intermediate flap elements having a slot for receiving the tab, another intermediate flap element being formed approximately of the same size as the upper flap and having a slot therein for receiving the hosiery in folded relationship thereon.

---



1,690,884. PLANTER. HERBERT B. BONEBRIGHT, Chinook, Mont. Filed Mar. 26, 1927. Serial No. 178,728. 13 Claims. (Cl. 140—57.)

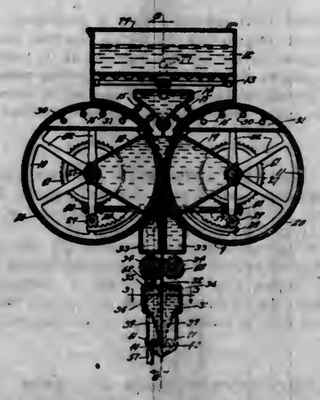
1. In a potato planter, means for dividing the potatoes into sections comprising a plurality of knives and means for successively positioning the knives for the cutting operation and means for disinfecting each knife after the cutting operation.

---

1,690,885. RAIL JOINT. BYRON M. CHENEY, Chicago, Ill. Filed Apr. 20, 1927. Serial No. 185,097. 14 Claims. (Cl. 238—259.)

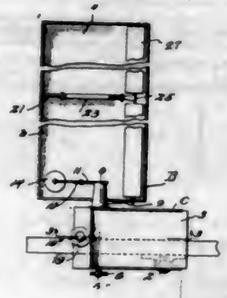
1. A rail joint spring for application to a bolt secured rail joint, said spring comprising a section of sheet like spring material shaped to be tensioned by the bolts, and means for preventing the tensioning of such spring beyond the elastic limit thereof.

---



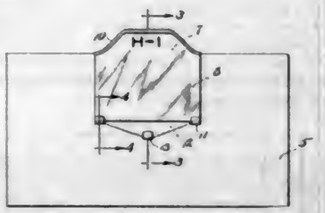
1,690,886. SNOW SCRAPER. PETER A. CROMBIE, Jr., Thompsonville, Conn. Filed Dec. 2, 1927. Serial No. 237,181. 6 Claims. (Cl. 37—42.)

1. A snow scraper comprising runners, a blade pivotally mounted between said runners, and a pusher having parts pivotally connected with said blade, and parts unconnected with but adapted to receive and support said blade below its pivotal connections with said runners, when the blade is in operative position.



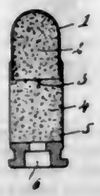
---

1,690,887. PROCESS AND MACHINE FOR THE MANUFACTURE OF STORAGE-BATTERY PLATES. JASPER N. DAVIS, Denver, Colo. Filed June 5, 1926. Serial No. 113,879. 5 Claims. (Cl. 207—14.)



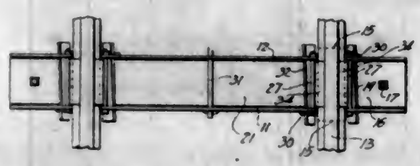
1. A machine for forming a continuous casting from molten metal comprising two co-acting series of traveling molds arranged to receive said metal between them and form sides for a traveling mold; tapered projections on the molds of one series adapted to alternately project between similar projections on the molds of the other series to form a perforated casting having alternately tapering perforations.

1,690,888. INK-SUPPLYING MEANS FOR PRINTING PRESSES. ARTHUR S. J. DAWE, Baltimore, Md. Filed Oct. 5, 1927. Serial No. 224,156. 3 Claims. (Cl. 101—210.)



1. The combination with a printing press including an ink fountain and a ductor roller for feeding ink from said fountain, of an ink reservoir supported above the fountain, said reservoir having an outlet to permit ink to flow into the fountain, a valve controlling said outlet, and a float in the fountain connected to said valve.

1,690,889. INDEX GUIDE CARD. GEORGE H. DAWSON, Boston, Mass., assignor to Service Bureau, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1927. Serial No. 178,615. 7 Claims. (Cl. 129—16.8.)

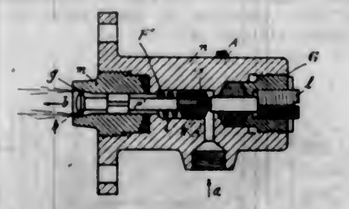


1. An index card provided with a projecting tab and having a metal reinforcing plate upon the rear face of the card, said plate having integral tongues at its bottom edge adapted to fasten through the card at points remote from the upper margin of the card, and having an intermediate portion extending downwardly below said tongues.

1,690,890. BLANK CARTRIDGE. MAURICE DE GEYNST, Forest-Brussels, and IVAN LEPAGE, Dieghem, Belgium. Filed Nov. 30, 1927, Serial No. 236,724, and in Belgium Nov. 30, 1926. 3 Claims. (Cl. 102—12.)

1. A blank cartridge for firearms comprising a cartridge case, a dummy bullet secured in the front of said case, a charge disposed within said case of two or more explosives of different degrees of inflammability whereby an interval is obtained between the time of explosion of the portions of the charge which results in a re-coil which effects the automatic ejection of the empty case.

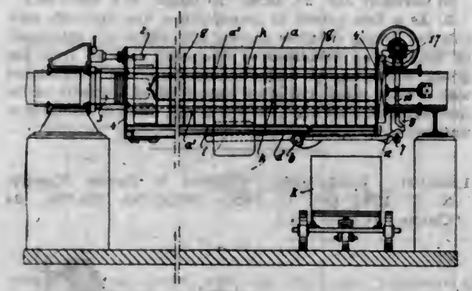
1,690,891. RAILROAD TIE. THOMAS DE LA MARE, Salt Lake City, Utah. Filed Nov. 3, 1925. Serial No. 66,559. 5 Claims. (Cl. 238—63.)



1. A tie comprising a channel body member and wedge operated clamping means for securing rails thereto, said clamping means extending continuously from inside of one rail to inside of the other rail, and from each rail outwardly beyond said wedge.

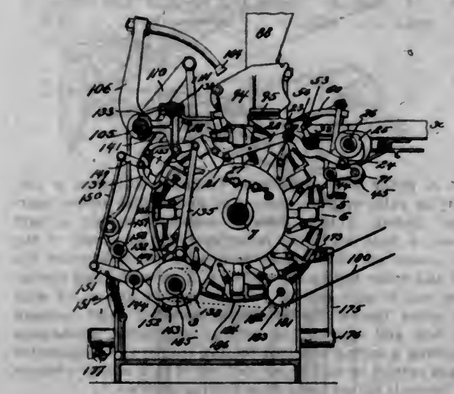
1,690,892. CAN CLOSURE. JOHN CLEAVER DIAMENT, Bridgeton, N. J. Filed Aug. 2, 1926. Serial No. 126,601. 1 Claim. (Cl. 220—82.)

A can closure formed with an opening therein, a portion of the closure adjacent the opening being depressed inwardly from the normal outer face of the closure to form a relatively wide inwardly directed and upwardly inclined seat surrounding the opening, a gasket received on the seat, a transparent insert received on the gasket, and a portion of the closure adjacent the depressed portion and the periphery of the insert being depressed over the outer face of the insert to force the insert into tight engagement with the gasket and to compress the gasket into tight engagement with the seat.



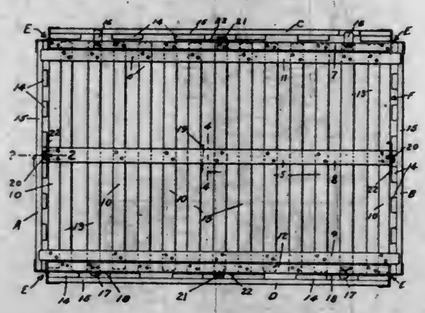
1,690,893. INJECTION NOZZLE. HERMANN DORNER, Hanover, Germany. Filed July 27, 1925, Serial No. 46,383, and in Germany Apr. 3, 1924. 6 Claims. (Cl. 299—133.)

1. In a fuel admission device for internal combustion engines, the combination of two cooperating relatively movable members together adapted to form an annular line contact and means for effecting a high resistant pressure against the movement of one of said members away from the other said means being substantially inactive when said members are in position of closest approach.



1,690,894. PRESS FOR TREATING BOARDS OF ALKALI CELLULOSE AND THE LIKE. WILHELM DÜTZMANN, Neustadt-on-the-Haardt, Germany. Filed Feb. 27, 1926, Serial No. 91,161, and in Germany Jan. 2, 1926. 3 Claims. (Cl. 260—10.)

1. Horizontal press for treating articles in alkalies and acids having corrosive properties, more especially boards of alkali cellulose for the manufacture of artificial silk comprising in combination with a horizontal press cylinder, pistonrod and pressing head, a water-tight steeping trough receiving the pressing head and pistonrod, the latter passing water-tight, through the corresponding front wall of the trough, the opposite stationary front wall of the latter receiving the full pressure of the pressing head, a perforated intermediate bottom within the trough, a discharging opening provided for in the bottom of the trough, a shutting flap adapted to close tight to liquid the said opening, intermediate metal sheets for separating and supporting the different boards, guiding bars for the intermediate sheets and means for tightening the flap, substantially as described.



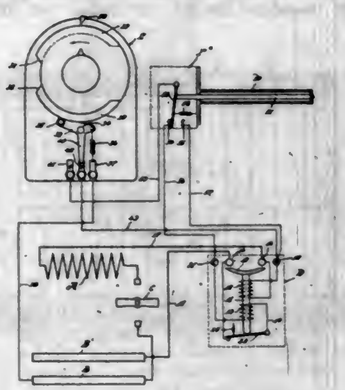
1,690,895. PACKAGING MACHINE. LOUIS FISCHER, Philadelphia, Pa., assignor to Wright's Automatic Tobacco Packing Machine Company, Durham, N. C., a Corporation of West Virginia. Filed Feb. 2, 1927. Serial No. 165,410. 21 Claims. (Cl. 93—7.)

1. In a packing machine, the combination of a mold, means for feeding a wrapper into a position adjacent to the mold, means to receive the wrapper from the feeding means and operative to further feed and thus register it relatively to the mold, and means operative upon the registered wrapper to introduce it into the mold.

1,690,896. CRATE. CORNELL FLAGSTAD, Minneapolis, Minn., assignor of ninety-five per cent to The Folding Crate and Box Co., a Corporation of Minnesota, and five per cent to Oscar A. Flagstad, Minneapolis, Minn. Original application filed Nov. 26, 1923, Serial No. 677,175. Divided and this application filed May 9, 1927. Serial No. 189,807. 10 Claims. (Cl. 217—56.)

1. The combination with a crate, of a cover therefor adapted to be sprung in respect to its normal position of rest on the box and having fasteners rigidly secured thereto for interlocking engagement with side sections of the crate, said fasteners being arranged to be held in interlocking engagement by the spring tension of the cover.

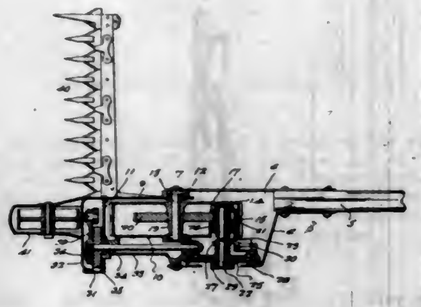
1,690,897. CARRIER FOR BRAIDING MACHINES. CHARLES HAGGERTY, Pawtucket, R. I., assignor to New England Butt Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 9, 1928. Serial No. 252,960. 6 Claims. (Cl. 96—15.)



1. A carrier for braiding machines having a package spindle, a weight guide standard, a tension weight slidable on the standard, a rod carried by the weight, a spring coiled about the rod to act upon the weight, and a feed control latch operated by the movement of said weight.

1,690,898. TIME AND TEMPERATURE CONTROL OF HEATING ELEMENTS. GEORGE HEGEMAN HART, West Hartford, Conn. Filed Mar. 4, 1927. Serial No. 172,662. 6 Claims. (Cl. 219—20.)

4. In combination, a circuit including a heating element, a magnetic device having a main switch interposed in said circuit and having an opening coil in series with said switch, said device also having an auxiliary switch controlled by said main switch and a closing coil in series with said auxiliary switch, a timing mechanism having a

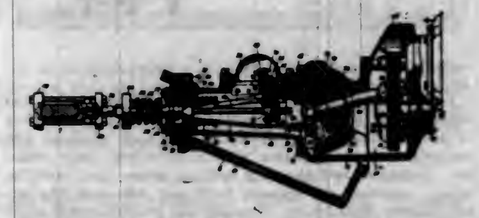


switch, a thermostatic device having a switch, and electrical connections between said time switch and opening coil independent of said thermostatic switch, between said

time switch and thermostatic switch, between said thermostatic switch and said opening coil, and between said thermostatic switch and said closing coil.

---

1,690,899. LAWN MOWER. JOHN FRED HAWKINS, Pawhuska, Okla. Filed Feb. 5, 1926. Serial No. 86,210. 1 Claim. (Cl. 56—271.)

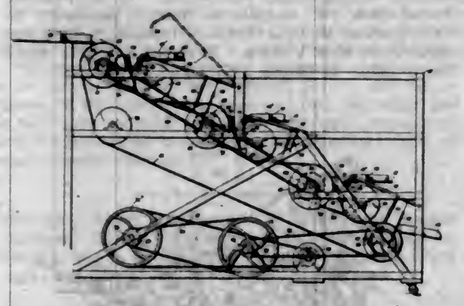


In a lawn mower of the character described, a gear casing comprising a central housing, a sub-housing at the rear of the central housing, and a front housing forwardly of the central housing, a traction wheel mounted within the central housing and projecting therethrough at the lower side for contact with the ground, and comprising a peripheral rim into which the subhousing extends, a gear carried by the traction wheel within the rim thereof, a transverse shaft mounted within said sub-housing, a gear upon one end of this shaft in mesh with the first mentioned gear, a gear upon the opposite end of said shaft, a horizontal shaft housing upon one side of the central housing and forming part of the gear casing, a horizontal shaft within said horizontal shaft housing, a gear upon the rear end of the shaft in mesh with the gear upon the last mentioned end of the shaft within said sub-housing, a sickle bar unit mounted upon the front end of the gear casing, and driving connections between the front end of the horizotal shaft and the cutter bar of said sickle unit.

1,690,900. MANUFACTURE OF AZO DYESTUFFS. KARL HOLZACH, Ludwigshafen-on-the-Rhine, and RICHARD MEYERGR, Heidelberg, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 3, 1927, Serial No. 158,819, and in Germany Jan. 23, 1926. 2 Claims. (Cl. 260—86.)

2. As a new article of manufacture, azo dyestuffs suitable for dyeing cellulose acetate silk which are obtainable by coupling an unsulfonated compound selected from the group consisting of hydroxy-quinolines and pyrazolones with a diazo compound of an unsulfonated aromatic amine containing at least one aldehyde group, and are insoluble in water.

---



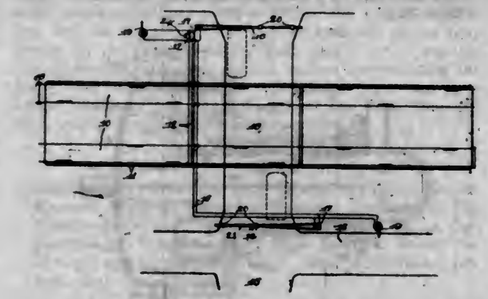
1,690,901. VIBRATOR. ULYSSES S. JAMES, Newark, N. J. Filed Dec. 14, 1926. Serial No. 154,760. 24 Claims. (Cl. 74—14.)

1. A vibrator comprising a vibratory element, a member having a gyratory motion in an orbit around the axis of vibration of said element and means operative by said gyratory motion to vibrate said element.

---

1,690,902. AUTOMATIC PAPER-FOLDING MACHINE. WILLIAM J. JEFFRIES and SCOTT W. GIBBONS, Portland, Oreg. Filed Dec. 5, 1927. Serial No. 237,837. 4 Claims. (Cl. 270—81.)

1. A paper folding machine including a frame, a plurality of pairs of paper delivering and folding rollers journaled therein, a belt operably connected to all of said rollers, a final delivering roller operably connected to the belt, means operably connected to said rollers whereby the belt and other rollers are operated, a paper folding mechanism, one to each pair of rollers, operably associated with one roller thereof for delivering a folded sheet between the belt and one of the rollers, said latter mechanism including a spring-actuated folding frame, and cooperative means carried by said frame and one of said rollers whereby the frame is moved away from folding position.



---

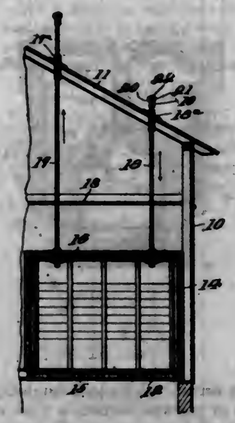
1,690,903. SYSTEM FOR PROTECTING HIGHWAY CROSSINGS AT THE RIGHT OF WAY OF RAILWAYS. PAUL J. KAVENEY, Bloomington, Ill. Filed Oct. 1, 1924. Serial No. 740,961. 1 Claim. (Cl. 246—125.)

An improved system of protecting a crossing over a railway right of way in a case where there are highways

on opposite sides and paralleling the right of way and a highway crossing said right of way, comprising crossing gates movable across and away from the latter highway,

semaphores associated with the other two highways at some distance from the crossing, and train-controlled circuits for operating said gates and highway semaphores.

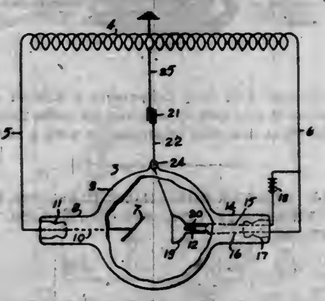
---



1,690,904. CUTTER OR KNIFE FOR MEAT-GRINDING MACHINES. CHARLES A. LAEMMEL, Brooklyn, N. Y., assignor to Atlantic Service Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 227,486. 4 Claims. (Cl. 146—189.)

1. A cutter for a meat grinder comprising a spider, said spider comprising a shaft and the spider arms in fixed relation with the shaft, outwardly extending pins on the spider, a knife provided with holes to fit on the pins of the spider and said knife being quickly detachable from the spider.

---



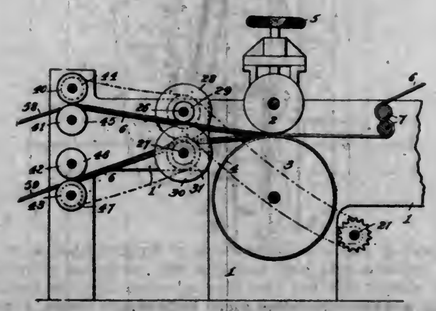
1,690,905. VENTILATING SYSTEM. FRANCIS E. MCDEVITT and HORACE A. COLBURN, Rutland, Vt. Filed Mar. 27, 1926. Serial No. 97,955. 4 Claims. (Cl. 98—35.)

1. In a ventilating system for a humid apartment, inlet and outlet pipes opening into said apartment cooled directly by ice exposed in the air in said apartment at the ceiling, said pipes extending upwardly and opening to the atmosphere, said outlet pipe having a greater length exposed to the atmosphere below its upper opening than has said inlet pipe.

---

1,690,906. X-RAY APPARATUS. MONTFORD MORRISON, New York, N. Y. Filed Dec. 1, 1921. Serial No. 519,155. 6 Claims. (Cl. 250—84.)

1. An electron discharge device comprising an anode and a cathode, a source of alternating current connected to said anode and cathode, and means disposed between said cathode and anode and connected to said source of alternating current for maintaining a negative electrostatic field adjacent said cathode.



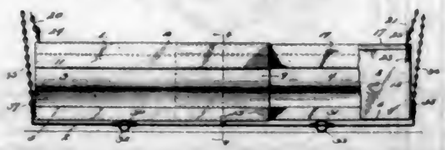
---

1,690,907. PROCESS OF FLOTATION CONCENTRATION. ROBERT E. PHELAN and SHERWIN P. LOWE, Denver, Colo., assignors to R. H. Channing, jr., Agent, Denver, Colo. Filed Oct. 18, 1927. Serial No. 227,048. 4 Claims. (Cl. 209—166.)

1. In a froth flotation process, the method of separating micaceous and talcky minerals from the concentrates comprising the addition of starch to the ore pulp and making the pulp non-alkaline to prevent the said minerals from entering the froth, and then subjecting the ore pulp to froth flotation.

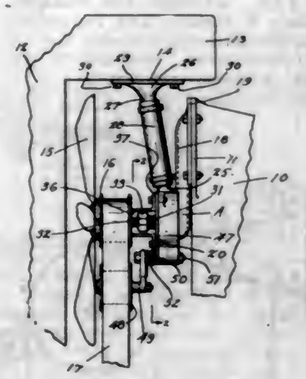
---

1,690,908. MACHINE FOR FORMING SHINGLES. FREDERICK W. PRESTON, York, Pa., assignor to Keystone Roofing Manufacturing Company, York, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1927. Serial No. 174,226. 8 Claims. (Cl. 164—28.)



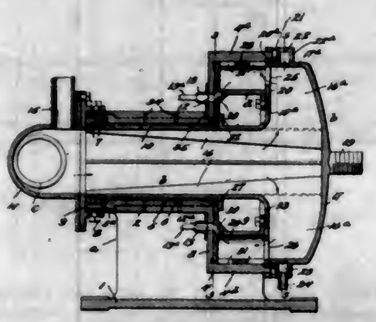
6. An attachment for a machine, wherein material is cut on longitudinal lines to form a plurality of rows and on transverse lines to divide the rows into a plurality of members, said attachment being movable as a unit relative to the machine and including means for positioning the rows in different planes, and means for separating the members in each row at the transverse cuts.

1,690,909. TUBULAR FIBROUS WALL PLUG. JOHN JOSEPH RAWLINGS, South Kensington, London, England, assignor of one-half to The Rawlplug Company Limited, London, England. Filed Mar. 26, 1926, Serial No. 97,801, and in Great Britain Mar. 28, 1925. 4 Claims. (Cl. 72—105.)



1. A tubular wall plug comprising a number of twisted fibrous strands laid side by side and an inner tubular lining of fibrous sheet material impregnated with a lubricant.

1,690,910. FLOWER BOX. HARRY D. SHAPIRO, Newburgh, N. Y. Filed Oct. 29, 1927. Serial No. 229,660. 3 Claims. (Cl. 47—36.)

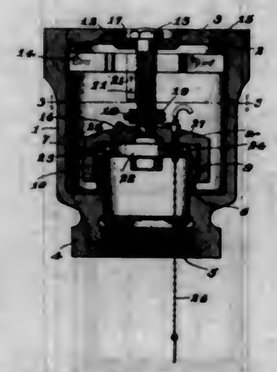


1. An adjustable window box comprising telescoping sections, clamping means for said sections, each section having apertures in the bottom portion thereof, the apertures of one section registrable with the apertures of the other, the said apertures permitting passage of said clamping means, said apertures also functioning as drains for said window box, and a drain tray for said window box.

1,690,911. WATER-CIRCULATING PUMP FOR MOTORS. CHARLES H. SHIRK, St. Paul, Minn. Filed May 18, 1923. Serial No. 639,879. 3 Claims. (Cl. 103—103.)

2. A water circulating pump including, a casing, a detachable cover for said pump, a shaft extending through said cover, a pump member secured to one end of said shaft, a pulley member secured to the other end of said shaft, a stuffing box mounted upon said cover, a bracket secured to said cover interposed between said pulley and said cover, and a long bearing supported solely by said bracket to support said shaft virtually entirely separate from said casing.

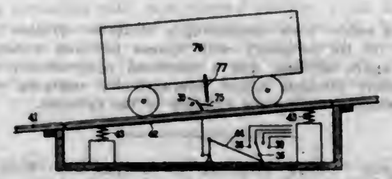
1,690,912. HYDROAIR COMPRESSOR. WILLIAM S. SULLIVAN, Washington, D. C., assignor of forty-five per cent to James G. Cumming, Washington, D. C. Filed July 30, 1927. Serial No. 209,572. 8 Claims. (Cl. 230—75.)



1. An air compressor comprising a rotor having a head adapted to contain liquid, a chamber carried by said head, means for admitting air to the chamber, means for confining the air therein, means for admitting liquid from the head into the chamber to compress the air, means for releasing the compressed air, and means for expelling the liquid centrifugally from the chamber.

1,690,913. MANUFACTURE OF VAT DYESTUFFS OF THE ANTHRAQUINONE-ACRIDONE SERIES. OSKAR UNGER, Ludwigshafen-on-the-Rhine, and GEORG BÖHNER, Friedrichsfeld, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1926, Serial No. 144,169, and in Germany Oct. 29, 1925. 3 Claims. (Cl. 260—37.)

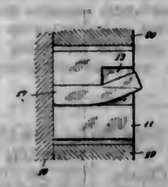
1. The process of preparing vat dyestuffs of the anthraquinone series which consists in heating a 1-chlor-anthraquinone-2-carboxylic acid and an arylamine in an inert organic solvent until the formation of dyestuff has taken place.



1,690,914. FLUSH-SURFACE FILL DEVICE. ARTHUR THOMAS WAKEFIELD, Baltimore, Md., assignor to American Oil Company, Baltimore, Md. Filed Feb. 14, 1927. Serial No. 168,160. 4 Claims. (Cl. 220—86.)

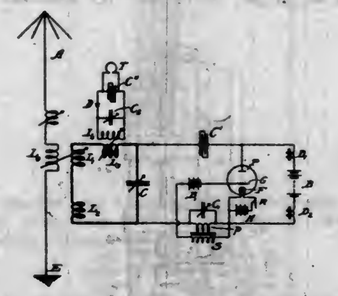
1. In a flush surface fill device comprising a casing having open ends at top and bottom, a flush cap for the top opening, a threaded portion at the bottom opening for connecting with a fill pipe of a storage tank, a threaded lock bar and bolt slidably arranged in the flush cap, means for bringing the flush cap under tension in closed relationship at the top opening comprising an inwardly extending shoulder portion of the casing, lug portions extending downwardly from the shoulder against which the ends of the lock bar are adapted to bind, an upwardly open ended extending portion within the casing delivering into the fill pipe of the storage tank for giving easy access on the removal of the flush cap, a sleeve cap for the upwardly extending portion, means for bringing the sleeve cap into interlocked relationship with the open ended upwardly extending portion at the same time the flush cap is being brought under tension.

1,690,915. APPARATUS FOR TRANSMITTING SIGNS. KARL E. WENZEL, Hamborn, Germany, assignor to The Hannauer Car Retarder Company, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1926, Serial No. 113,029, and in Germany June 5, 1925. 13 Claims. (Cl. 104—26.)



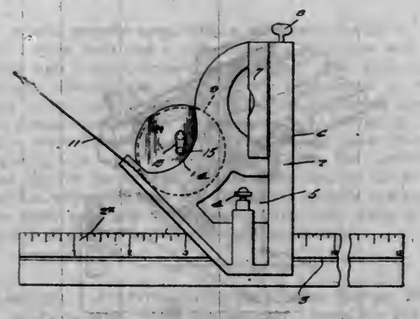
10. In apparatus for weighing cars the combination with a weighing platform, an electric circuit having a plurality of branches and including two switches, one of said switches arranged at the point of branching and adapted to be closed through one or another of said branches by the movement of the platform under the weight of the car, the other switch, arranged in the unbranched portion of the circuit, adapted to be closed by the movement of the car over the platform, and registering means including an electro-magnet arranged in each branch of said circuit.

1,690,916. METHOD OF REDUCING OXIDES TO METALLIC FORM. SIGUARD WESTBERG, Pittsburgh, Pa. Filed July 16, 1925. Serial No. 44,109. 2 Claims. (Cl. 75—17.)



1. The method of reducing oxides or oxide ores to metallic form which consists in bringing together such oxides or ores and carbonaceous material in the presence of sufficient heat to effect a reaction therebetween and in converting the carbon monoxide formed during such reaction into hydrogen or a hydrogenous gas and in introducing such gas or hydrogen into the reaction zone.

1,690,917. METHOD OF MAKING COMMUTATOR SEGMENTS AND THE LIKE. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 7, 1926. Serial No. 107,382. 6 Claims. (Cl. 78—81.)

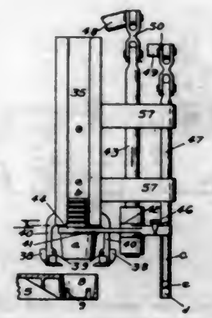


1. A method of producing an article of manufacture, consisting in applying pressure to the sides of a bar whereby one portion of the bar is caused to flow and lie at an angle to the remainder of the bar and then upsetting the bar by applying pressure to the angular portion in a direction axially of the said remainder of the bar.

1,690,918. TONE RECEIVER FOR UNDAMPED OSCILLATIONS. JONATHAN ZENNECK, Munich, Germany, and ERNST KNOPP, New York, N. Y. Filed Apr. 28, 1923. Serial No. 635,311. 1 Claim. (Cl. 250—20.)

In an arrangement for receiving and detecting undamped high frequency oscillations, the combination of a receiving circuit for receiving said undamped high frequency oscillations, a local high frequency oscillating circuit associated therewith, and a local low frequency impulse generator circuit coupled with said local high frequency oscillating circuit, and a detector circuit suitably connected to receive the resulting oscillations produced in said local high frequency oscillating circuit and including an aural receiver for producing audible tones from the received high frequency current and the adjacent harmonics of the superimposed low frequency current.

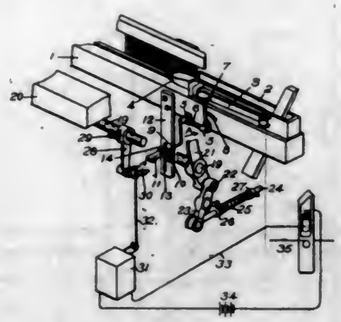
1,690,919. MEASURING DEVICE. DANIEL E. BAINE, Stockton, Calif. Filed June 1, 1927. Serial No. 195,704. 2 Claims. (Cl. 33—174.)



1. A body adapted to be attached to a rule to extend laterally therefrom and having a side edge disposed to extend at right angles to said rule and also having another edge extending at an oblique angle to the first mentioned edge and having a tape guide, said body having means for holding the casing of a tape measure, said means being in the form of a pocket having one of its side walls cut away and its other side wall provided with a transverse threaded aperture, in combination with a tape measure casing disposed in said pocket and having a tape threaded through said guide and also having rotary means at one side of its casing for the retraction

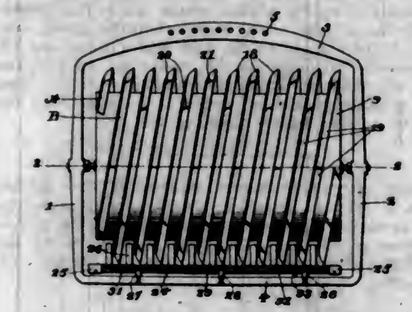
of the tape, and a screw mounted in the said threaded aperture of the pocket wall and adapted to be set against the tape measure casing for the fastening of said casing in the body.

---



1,690,920. CUP-DEPOSITING MECHANISM FOR UNIT-MEASURING MACHINES. CHRISTIAN N. BERGMANN, Pittsburgh, Pa.; ELMER Z. TAYLOR, Newark, N. J.; and CYRUS TAYLOR, Hartford, Conn., assignors to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 2, 1925. Serial No. 41,105. 15 Claims. (Cl. 312—44.)

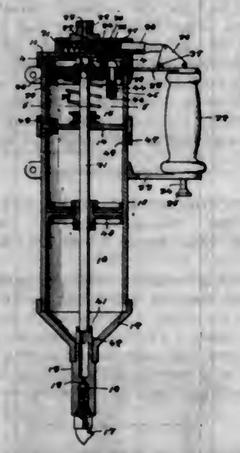
1. Mechanism for separating the lowermost one from a nested series of receptacles consisting of a pair of vertically and laterally movable gripping jaws, means for closing the jaws to embrace a lowermost receptacle, means for opening the jaws to release said receptacle, and means for moving the jaws to position to embrace an adjacent receptacle and move it and superimposed receptacles upwardly.



---

1,690,921. WARP STOP MOTION FOR LOOMS. HUDGER BRUNEAU, Woonsocket, R. I., assignor to Rhode Island Warp Stop Equipment Company, Pawtucket, R. I. Filed Dec. 31, 1923. Serial No. 683,669. 11 Claims. (Cl. 139—341.)

1. In a stopping device for a loom, the combination with the loom handle, reciprocating lay and binder carried by the lay, stop motion dagger normally at inactive position, means connecting the stop motion dagger with the loom handle and means to shift the stop motion dagger from inactive position to active position, of a shiftable bunter carried by the lay with its extremity moving at some times in path away from the dagger in any position of the latter, and means thru which the binder acts to shift the bunter into a path of travel where its extremity will encounter the dagger when the latter is in active position.



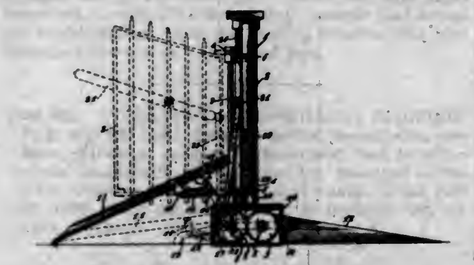
1,690,922. ROTARY SPIRAL PLOW. CONRAD M. BRACK, Great Bend, Kans. Filed Nov. 12, 1927. Serial No. 232,887. 4 Claims. (Cl. 97—222.)

1. A rotary plow comprising a rotatable cylinder provided on its periphery with spaced helically arranged plow share sections, and a combined reciprocatory and oscillatory cleaning means intermittently engaging with said sections during the rotation of the cylinder.

---

1,690,923. PUMP. CHANCEY W. BUTLER and WILLARD A. SLOPER, Independence, Oreg., assignors of one-third to Chester O. Sloper, Independence, Oreg. Filed Dec. 14, 1925. Serial No. 75,402. 6 Claims. (Cl. 221—47.3.)

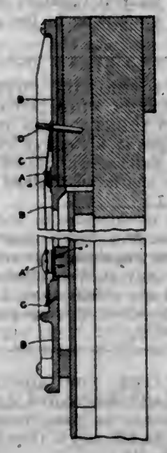
1. A lubricating pump of the character described comprising a cylinder divided into an air chamber and a lubricant chamber, a nipple communicating with the last named chamber, an air actuated piston including a piston rod slidable within said nipple and serving as a plunger to force the lubricant therefrom, a valve controlling admittance of air under pressure into said air chamber, a normally seated check valve in said nipple, and means actuated by said air for filling said nipple with lubricant during the return of said piston rod to its normal position.



---

1,690,924. GATE-OPERATING MEANS. ROBERT J. CLARK, Whitmans, W. Va. Filed May 23, 1928. Serial No. 280,060. 4 Claims. (Cl. 30—18.)

1. In combination with a pair of hinged barriers, a pair of horizontally arranged shafts, gears connecting the shafts with the hinged parts of the barriers for turning

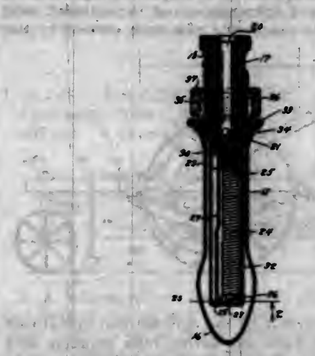


the barriers on the hinges when the shafts are turned, gears connecting the two shafts together, an arm on each shaft, a channel member arranged on each side of the road and the other on the opposite side thereof, a slotted

arm connected with each channel member, a pin in each of the first mentioned arms engaging the slot in each second arm whereby, when a vehicle passes over each channel member, the slotted arms, engaging the pin on the first arm, will cause said first arm to rock the shaft to open the gates and lower the other channel member.

---

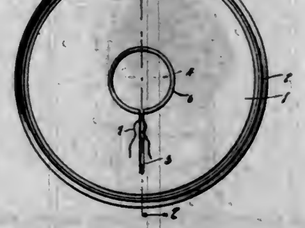
1,690,925. PIANOFORTE. ROBERT HENRY COLLEN, East Ham, England, assignor of one-half to John Broadwood & Sons Limited, London, England. Filed Nov. 29, 1926, Serial No. 151,438, and in Great Britain Jan. 4, 1926. 2 Claims. (Cl. 84—212.)



1. A bearing block comprising a base, two upstanding pieces disposed longitudinally of said base and two pins passing transversely through and projecting beyond the outer sides of said upstanding pieces, in combination with a third pin passing transversely through and projecting beyond the sides of one upstanding piece and a short pin in alignment with said third pin, passing transversely through the other upstanding piece and projecting from its outer side only.

---

1,690,926. ELECTRIC THERAPEUTIC APPLIANCE. JOHN H. DEQUER, Los Angeles, Calif. Filed July 26, 1926. Serial No. 125,048. 3 Claims. (Cl. 174—89.)



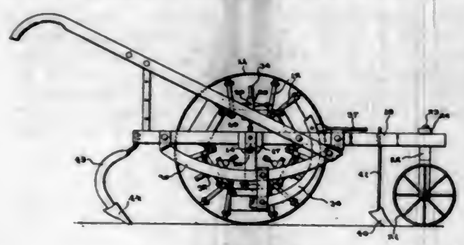
1. An internal applicator, of the character disclosed, comprising an outer casing, shaped for appropriate insertion within a desired orifice of the body, an elongated iron core extending longitudinally within said casing, an insulated heating coil encompassing said core, within said casing, and adapted to be energized by an alternating

electric current, and a springy vibrator extending longitudinally along said coil and core, which vibrator is magnetically actuated thereby.

---

1,690,927. SANITARY HAIR RECEIVER. CATHERINE R. DICKERSON, Chicago, Ill. Filed Aug. 18, 1927. Serial No. 213,903. 1 Claim. (Cl. 2—50.)

A hair receiver comprising a receptacle having an elastic bottom wall and a comparatively rigid side wall, the side wall being provided at its lower edge with an inwardly directed and comparatively rigid flange to which the bottom wall is secured, the bottom wall being adapted to assume and remain in a substantially horizontal position when in place and provided with a neck receiving opening and with a slot extending from the opening to the edge of the flange, a split tube secured to the bottom wall in alinement with the wall of the opening and having its ends arranged in alinement with the walls of the slot, and a draw string arranged in the tube.

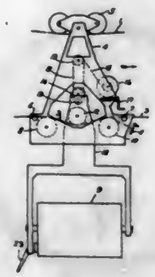


---

1,690,928. COTTON CHOPPER. ELIB REAVES FILES, Baldwyn, Miss. Filed Dec. 20, 1927. Serial No. 241,324. 3 Claims. (Cl. 97—19.)

1. A cotton chopper comprising a cylinder, a frame in which the cylinder is rotatably mounted, the cylinder comprising a body element and circular runners in surrounding relation to the same and constituting supporting means for the frame, hoes mounted betwen the runners and the body element for movement transversely of the cylinder, and cooperative frame-carried and cylinder-carried elements for actuating the hoes upon rotation of the cylinder.

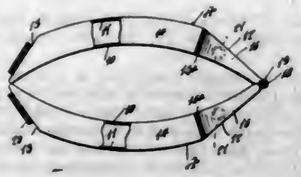
3. A cotton chopper comprising a cylinder, a frame in which the cylinder is rotatably mounted, the cylinder comprising a body element and circular runners in surrounding relation to the same and constituting supporting means



for the frame, hoes mounted between the runners and the body element for movement transversely of the cylinder, cooperative frame-carried and cylinder-carried elements for actuating the hoes upon rotation of the cylinder, said cooperative elements comprising cam rails carried by the

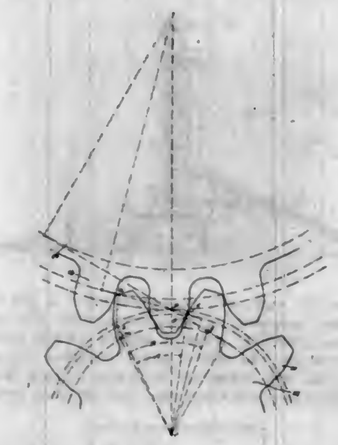
frame, and levers carried by the cylinder and operatively connected with the hoes and having rolls engaging said cam rails, the levers being provided with springs for moving them in the opposite direction from that in which they are moved by the cam rails.

---



1,690,929. CABLEWAY. CHARLES FISHER, Kumardhubi, British India. Filed Aug. 11, 1926. Serial No. 128,681. 8 Claims. (Cl. 212—71.)

1. A cableway system having in combination, a continuous rail, a transmission rope traveling contiguous to said rail, a load carrying means, a carriage adapted to travel upon said rail for supporting said load carrying means, means for transferring said load carrying means with its load from said rail to said rope and means for giving slack to the rope for permitting the bucket to descend from said carriage.



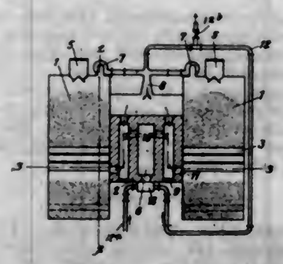
---

1,690,930. TRIPURPOSE BOTTLE. GROVES C. FOARDS, Atlanta, Ga. Filed Apr. 26, 1928. Serial No. 273,040. 6 Claims. (Cl. 128—258.)

1. A hygienic water bottle, comprising a plurality of sections, said sections being tapered at one end and formed arcuate in shape for engagement with the body, and means detachably and hingedly connecting said sections, said sections when separated being adapted for individual use.

1,690,931. GEAR TEETH. SIGARD A. S. HAMMAR, Bethlehem, Pa., assignor to Hammar Co. Inc., Brooklyn, N. Y., a Corporation of Delaware. Filed Oct. 1, 1927. Serial No. 223,881. 7 Claims. (Cl. 74—41.)

1. Gear teeth having contours consisting of two or more involute arcs conforming to different pressure angles, the involute arcs being connected by means of sections of tooth contour which do not necessarily impart rotation, the position of the involute arc being such that the root thickness is smaller than the root thickness of a tooth formed by one involute arc conforming to the greatest pressure angle.



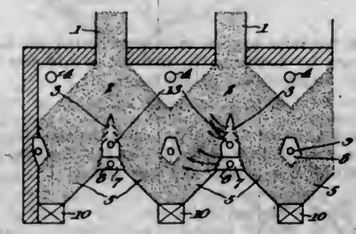
---

1,690,932. MANUFACTURE OF PHYSIOLOGICALLY-ACTIVE SUBSTANCES FROM OVARIES, CORPUS LUTEUM, AND PLACENTA. MAX HARTMANN, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Apr. 14, 1924. Serial No. 706,593, and in Switzerland May 8, 1923. 1 Claim. (Cl. 167—7.)

A process for the manufacture in highly concentrated form of the hormones from female internal secretory organs which comprises dissolving the animal tissue in a volatile organic fat solvent, precipitating the phosphatides, separating out the phosphatides, and then subjecting the filtrate to the action of temperatures ranging between −50° to −70° C.

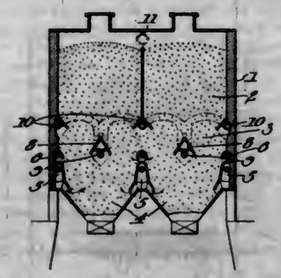
---

1,690,933. APPARATUS FOR DISTILLING SOLID COMBUSTIBLE CARBONACEOUS MATERIAL. OTTO HUBMANN, Frankfort-on-the-Main, Germany. Filed Oct. 8, 1925, Serial No. 61,342, and in Germany Nov. 4, 1924. 2 Claims. (Cl. 202—14.)



1. An apparatus for distilling solid combustible carbonaceous material which comprises a shaft-like heating chamber for containing said solid material, a conduit extending into said chamber provided with means for introducing hot gases into said material, a furnace, a wall common to said heating chamber and said furnace having an interspace formed therein and ports leading from the furnace to the interspace and from the interspace into said passage, and an additional port opening into said interspace and connected to the heating chamber, and means for introducing gas from the heating chamber into said interspace through said additional port.

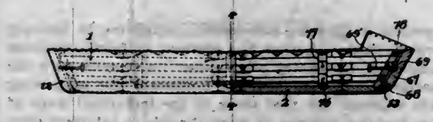
---



1,690,934. APPARATUS FOR DISTILLING COMBUSTIBLE MATERIALS. OTTO HUBMANN, Frankfort-on-the-Main, Germany, assignor to Metallbank und Metallurgische Gesellschaft Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 12, 1926, Serial No. 121,967, and in Germany Oct. 23, 1924. 3 Claims. (Cl. 202—14.)

1. Apparatus for distilling solid carbonaceous material comprising a shaft-like still having an uninterrupted upper portion, means for introducing the material at the top and withdrawing it from the bottom of the shaft, means for introducing hot distilling gas including inlet means located within the shaft below said upper portion and spaced from the wall of said shaft, means for introducing cooling gas including inlet means located within the shaft below the first named inlet means and likewise spaced from the wall of the shaft, gas outlet means located near the top of the shaft, and additional gas outlet means located near the side walls at substantially the level of the inlet means for cooling gas, substantially as shown and described.

---



1,690,935. PROCESS AND APPARATUS FOR DISTILLATION OF COMBUSTIBLE MATERIALS. OTTO HUBMANN, Frankfort-on-the-Main, Germany, assignor to Metallbank & Metallurgische Gesellshaft Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Dec. 7, 1926, Serial No. 153,180, and in Germany Dec. 18, 1925. 5 Claims. (Cl. 202—14.)

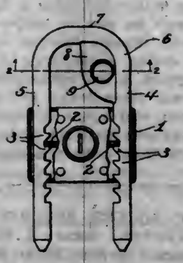
1. Process for the continuous distillation of high-ash solid carbonaceous material containing a volatile portion and a combustible solid portion by contact with hot gases which consists in passing a charge of such material downwardly and in continuous flow successively through a distillation zone, a reaction zone, and a residue-cooling zone, introducing oxygen-free gases into a cooling zone and thereby heating them, introducing oxygen containing gases into the reaction zone whereby combustion or reaction occurs with the distilled material which still contains combustible material, sucking out and mixing the hot gases from both zones, and passing them into the distillation zone, where distillation of the charge is effected.

---

1,690,936. COLLAPSIBLE BOAT. EERO V. LANGEN, Fitchburg, Mass. Filed Feb. 27, 1928. Serial No. 257,414. 4 Claims. (Cl. 9—2.)

1. A collapsible boat comprising a framing formed of a keel member formed of a series of hinged sections, a series of rib members seated in the keel member and formed of a series of hinged sections, a series of side members seating in the keel and rib members and formed of a series of hinged sections, means for detachably connecting said sections together, a flexible body portion formed of impervious material, and means for detachably securing said body portion against the sides, ends and at the ends of the top of said frame.

---

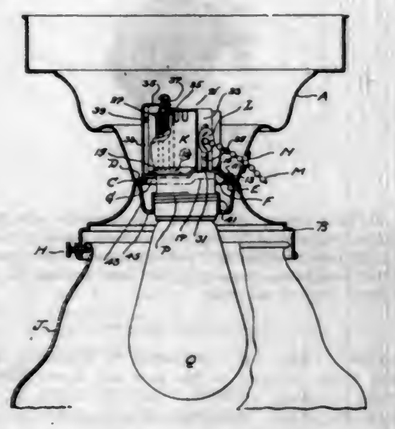


1,690,937. HAIR-WAVING DEVICE. ALBERT JULIUS LARM, Hagerstown, Md. Filed May 3, 1928. Serial No. 274,865. 2 Claims. (Cl. 132—40.)

1. In hair waving apparatus, a foraminous tube having a longitudinally straight side and a clamp removably straddling said side having substantially straight jaws pivoted together and means for urging the jaws toward the inner and outer faces of said side.

---

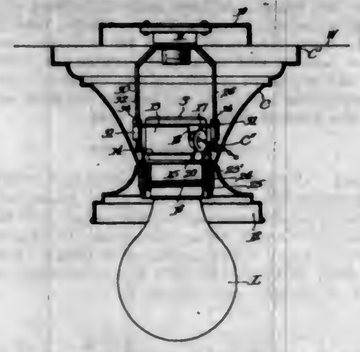
1,690,938. PADLOCK. MAXWELL C. MAXWELL, Stamford, Conn., assignor to The Yale and Towne Manufacturing Company, Stamford, Conn. Filed Oct. 20, 1925. Serial No. 63,627. 6 Claims. (Cl. 70—108.)



1. A shackle for a lock provided in a corner portion formed by a leg and a cross member with an inwardly projecting member lying within the lines of the shackle and permanently united with the leg and cross member.

1,690,939. PILE FABRIC. FERDINAND W. MOSTERTZ, Philadelphia, Pa. Filed Dec. 10, 1924. Serial No. 755,051. 1 Claim. (Cl. 139—397.)

A method of forming pile fabrics, consisting in weaving interconnectingly together two sections of fabric, weaving a plurality of temporary pile supporting threads with the two sections and positioning the temporary pile supporting threads adjacent the rear faces of the individual webs of fabrics, weaving a series of warp threads to interlace filler threads in each web, then loop over the pile supporting threads at the rear of the opposite web, then return to the filler threads of the first web with which they interlace for a predetermined distance, and again looping said warp threads over said pile supporting threads, forming a series of loops in each of said fabric sections, paralleling and aligning the series of loops, laterally positioning the loops, and finally withdrawing said pile supporting threads to permit separating of said sections of fabric.

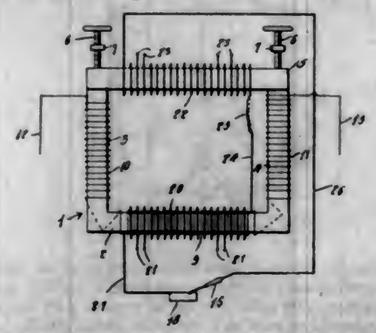


1,690,940. LAMP-SOCKET-SECURING MEANS FOR ELECTRIC FIXTURES. HENRY E. NICKERSON, Bridgeport, Conn., assignor, by mesne assignments, to Weber Electric Company, Schenectady, N. Y., a Corporation of New York. Filed July 26, 1926. Serial No. 124,960. 7 Claims. (Cl. 240—78.)

1. In a lighting fixture including a flange-like support, the combination with an electric lamp-socket including a casing having screw threads thereon, of a member separate from said casing constituting a holder therefor seated on said support, a nut independent of said socket engageable with said threads and provided with a part abutting the support, and means coacting with said member arranged to take over a portion of the socket to retain the interior thereof from being displaced.

1,690,941. LAMP-SOCKET-SECURING MEANS FOR ELECTRIC FIXTURES. HENRY E. NICKERSON, Bridgeport, Conn., assignor to The Weber Electric Company, Schenectady, N. Y. Filed Oct. 10, 1927. Serial No. 225,380. 9 Claims. (Cl. 240—85.)

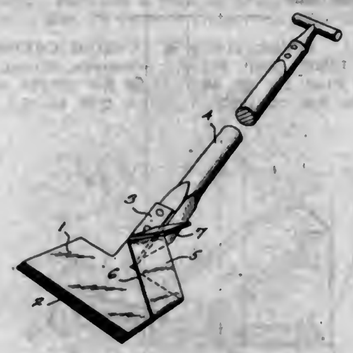
1. An electric fixture comprising a bracket adapted to be secured to an outlet stud and having an arm adapted to extend away from said stud, an annulus adapted to receive therein and seat an electric lamp socket having a shell, means on said annulus adapted to engage the socket and



restrain the same against movement out of the annulus, and means for mounting the annulus on said arm for adjustment longitudinally of the same.

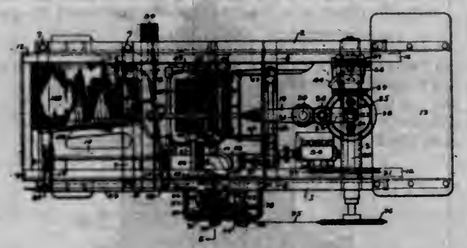
1,690,942. OBSTETRICAL INSTRUMENT. EDWIN ODELL, Central City, Nebr. Filed Feb. 3, 1928. Serial No. 251,676. 9 Claims. (Cl. 128—361.)

1. In an obstetrical instrument, a pair of separable handle members arranged in opposed relation and having oppositely curved arms at one end, a flexible loop adjustable between the arms and slidably connected therewith, and means associated with the handle members for maintaining tension on the loop.



1,690,943. VARIABLE-VOLTAGE TRANSFORMER FOR ELECTRIC-ARC CUTTING AND WELDING APPARATUS. FREDERICK C. OWEN, Fayetteville, N. C. Filed Sept. 22, 1927. Serial No. 221,291. 6 Claims. (Cl. 171—119.)

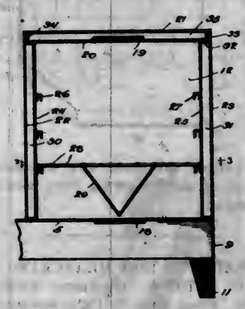
1. A transformer comprising a core embodying relatively adjustable portions, a primary winding arranged on one of said portions, and a secondary winding arranged on both of said portions.



1,690,944. LAWN-TRIMMING TOOL. GEORGE H. PETERSON, Orange, Calif. Filed May 16, 1927. Serial No. 191,822. 1 Claim. (Cl. 97—227.)

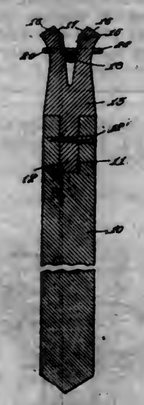
A tool of the class described comprising a flat main blade having a front cutting edge and an upwardly and outwardly extending strap at its rear edge, a handle connected with said strap, a side blade of less width than the main blade connected with the rear part of one side edge of the main blade and extending upwardly at an acute angle therefrom, said side blade having a front cutting edge and a rightangular extension formed on the upper end of the side blade forming a guiding member.

1,690,945. BOOK-BACK-GLUING MACHINE. JOHN J. PLEGER, Chicago, Ill. Filed Apr. 5, 1927. Serial No. 181,053. 24 Claims. (Cl. 91—51.)



1. In a book back gluing machine, the combination with a reciprocatory carriage for the books, of a rotary adhesive applicator element positioned adjacent the path of said carriage, mechanism for rotating the applicator, means movable with the carriage for actuating said rotating mechanism, and means for rendering said actuating means effective in one directional movement of the carriage only.

8. In a book back gluing machine, the combination with a movable carriage for the books, of a rotary adhesive applicator mounted adjacent the path of said carriage and adapted to engage the books in the latter as the carriage advances, mechanism for normally rotating the applicator, and automatic means for increasing the speed of rotation of the applicator while in contact with the said books.

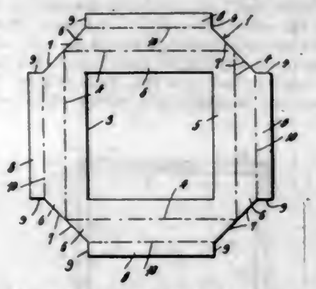


1,690,946. ELECTRIC RANGE. CHARLES R. PORTER, Rome, Ga. Filed Feb. 10, 1927. Serial No. 167,174. 1 Claim. (Cl. 126—275.)

An oven structure for electric stoves comprising a base plate, a rear wall, a front door, outer side walls erected on the base plate and being in the same vertical plane from top to bottom, inner side walls set upon the base inwardly from the outer side walls and having out-turned shoulders at their upper ends spaced below the upper ends of the outer side walls, said shoulders extending over to the outer side walls, said inner side walls also having up-turned flanges at the outer edges of the shoulders extending in contact with the uppermost portions of the outer side walls, said shoulders terminating at their upper ends flush with the upper edges of the outer side walls, a lower top plate seated upon said shoulders and having up-turned flanges

extending within and in contact with the first mentioned flanges and having the upper ends thereof terminating flush with the upper ends of the first mentioned flanges and outer side walls, an upper top plate spaced above the lower top plate and seated upon the upper edges of the flanges and outer side walls and secured thereto, said outer side walls having at their forward edges inwardly bent front panels spanning the space between the inner and outer side walls, said panels having inturned flanges embracing the inner faces of the inner side walls.

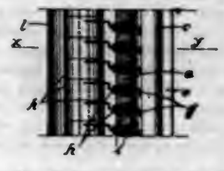
1,690,947. WASH-LINE-SUPPORTING POLE. JOHN RAUHOFER, Bethlehem, Pa. Filed Dec. 10, 1926. Serial No. 153,913. 2 Claims. (Cl. 68—12.)



2. A device of the class described, comprising a pole, one end of the pole having a longitudinal slot, a slotted ring loosely surrounding the slotted portion of the pole, and means for retaining the ring on the pole.

1,690,948. HOT-AIR REGISTER. MORGAN M. ROTH, Sunbury, Pa., assignor to Charles J. Reitz, Sunbury, Pa. Filed Apr. 5, 1928. Serial No. 267,610. 1 Claim. (Cl. 98—114.)

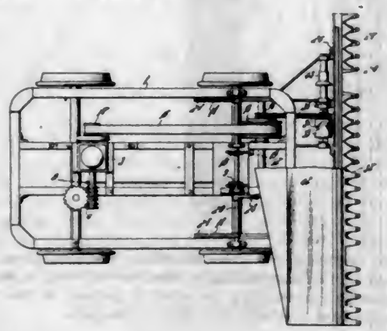
A casing for hot air registers for furnaces and the like, formed from a blank of sheet metal having a square open-



ing therein, certain edges of said blank formed by cutting on lines forming right angles with continuations of diag-

onals of the opening aforesaid and extensions on said blank at the ends of said edges on lines parallel with the sides of said opening.

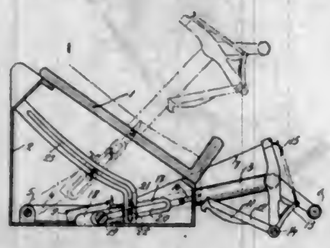
---



1,690,949. APPARATUS FOR MEASURING THE RATE OF FLOW OF FLUIDS. GIUSEPPE SACCO ALBANESE, Paris, France. Filed June 7, 1924, Serial No. 718,580, and in France June 9, 1923. 2 Claims. (Cl. 201—57.)

1. A tubular rheostat comprising a block having a groove therein adapted to receive a body of mercury and provided with holes leading through the block at spaced points along the inner wall of the groove, a plate secured against the block for closing said groove, contact studs carried by the block in said holes and projecting at one end into the groove for contact with the mercury, packings carried by the block in said holes about said studs for sealing the same in the block, and resistance coils connected to said contact studs.

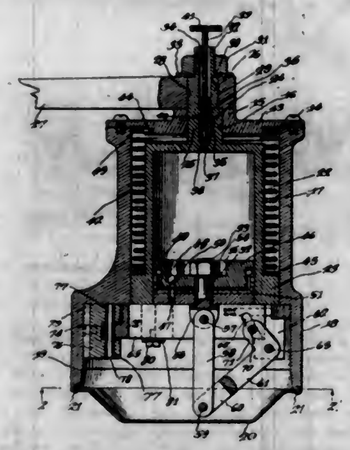
---



1,690,950. MOWER. MARIANO SALAS, Canlubang, Laguna, P. I. Filed July 30, 1924. Serial No. 729,157. 2 Claims. (Cl. 56—232.)

1. A mowing apparatus, comprising a truck having its wheels arranged to engage the rails of a track, a frame pivoted at the front of the truck and extending downwardly, a supporting bar at the front of the frame, formed in sections, with one section between the rails and the others at the outer sides of the rails, cutting means carried by each section of the bar, rollers on the frame for engaging the rails, a motor on the truck, means for propelling the truck from the motor, means for actuating the cutting means from the motor and manually operated means for tilting the frame.

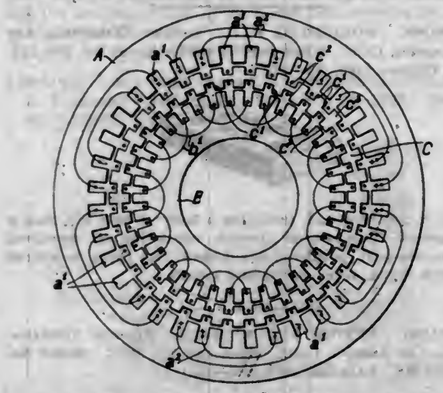
---



1,690,951. APPARATUS FOR CUTTING CHEESE OR THE LIKE. EMIL FREDRIK SCHEDWIN, Kiruna, Sweden. Filed Apr. 26, 1927, Serial No. 186,779, and in Sweden Feb. 11, 1927. 7 Claims. (Cl. 31—5.)

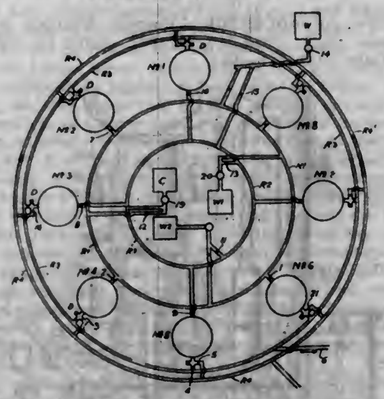
1. In a cutting apparatus for cheese and the like, a member mounted to swing up and down, a cutting wire carried by the member, a cutter movably mounted on the member below the wire with its edges coinciding with the said wire, and means for operating the cutter on the downward movement of the member to cut through the underside of the cheese, whereby the cutting wire is relieved of strain.

---



1,690,952. DOORCHECK. JOHN C. SCHMIDT, Chicago, and WILLIAM EICHHOLZ, Cicero, Ill. Filed May 18, 1927. Serial No. 192,406. 4 Claims. (Cl. 16—70.)

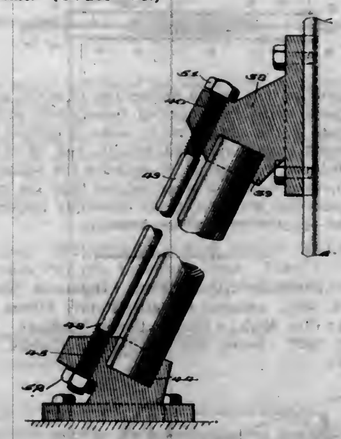
1. A door check including a housing having a bore formed therein and comprising a base provided with a hollow interior, said bore excentrically opening into the interior of said base, a cylinder rotatably arranged in the bore, a spring member embracing the cylinder and having one end portion connected thereto and an opposite end portion connected to the housing, means for imparting opening movement of a door to said cylinder, a piston movable in the cylinder, a brake shoe rotatably arranged in the interior of said base and having wiping engagement with respect to the interior wall of the base, a push bar having connection with said brake shoe, and means operable by movement of said cylinder for moving the piston in one direction in the cylinder for urging said push bar to actuate said brake shoe for braking engagement with respect to said base.



1,690,953. ALTERNATING-CURRENT INDUCTION MOTOR. LUDWIG SCHÖN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 2, 1926, Serial No. 139,164, and in Germany Mar. 13, 1924. 1 Claim. (Cl. 172—280.)

An alternating current induction motor comprising a stator, a rotor and an auxiliary rotor arranged between the stator and rotor and consisting of a drum having an iron shell provided on its inner and outer side with slots, a stator winding and a rotor winding one of said windings being connected to a source of alternating current, a short circuit armature winding carried by the auxiliary rotor, and an exciting winding arranged in the inner and outer slots of said iron shell in such a manner that in the central portion of said shell corresponding points which are distant from each other by the distance of adjacent poles have the same magnetic potential, the magnetic flux generated by said exciting winding passing through the stator, the auxiliary rotor and the rotor in a path traversing the auxiliary rotor in radial direction.

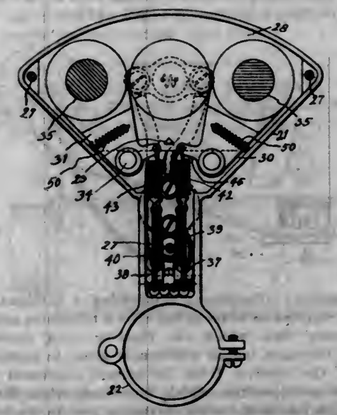
---



1,690,954. PROCESS FOR THE EXTRACTION OF CELLULOSE OR PAPER PULP FROM FIBROUS VEGETABLE MATTER CONTAINING THE SAME. EDMONDSON SPENCER, Calcutta, British India. Filed Feb. 10, 1928, Serial No. 253,309, and in British India Jan. 20, 1927. 2 Claims. (Cl. 92—7.)

1. A process for the extraction of cellulose from materials containing the same, comprising, providing a plurality of digesters, charging the digesters with cellulose material to be extracted, introducing digesting liquor into one of the digesters and thereby dissolving at least a part of the soluble matter in the material, removing the resulting liquor and subsequently introducing liquor of greater concentration and of higher temperature and under greater steam pressure into that digester, and continuing such processes utilizing liquors of greater concentration, heat and pressure at each stage, effecting the removal of the digesting liquor from one such digester and its introduction into the next digester in sequence by blowing down the liquor by means of the steam, and utilizing the partially spent liquor from each stage in similar extractions of the less extracted materials in another digester, whereby the most extractive liquor is applied to the material most completely extracted.

---

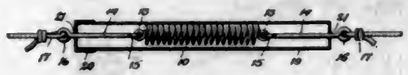


1,690,955. PUMPING RIG. GILBERT STOUFFLET, Corsicana, Tex. Filed Oct. 19, 1925. Serial No. 63,465. 4 Claims. (Cl. 189—16.)

1. In a rig of the character described, a post, means for supporting the lower end of the post, bracing means for the post including a bracket fixed to the post, a bracket fixed to the foundation of the rig, said brackets having inclined lugs formed with aligned sockets and openings, the end walls of the sockets being opposed, a rigid bar having its end portions fitted in the sockets, against the end walls of the socket, and a tensioning rod extending through the openings in the lugs and connected with the lugs.

---

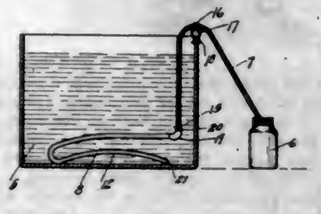
1,690,956. GEAR-SHIFT INDICATOR. TOKUSABURO TOKUHISA, Hollywood, Calif. Filed Sept. 28, 1927. Serial No. 222,538. 7 Claims. (Cl. 116—124.)



1. In a signal device, the combination with a housing, and a cover for the housing having a transparent aperture therein, of shafts disposed within the housing, oscillatable

signal arms operatively mounted on the shafts and adapted to register with the aperture, and normally in an inoperative position relative to the aperture, a stop element to limit the movement of the signal arms when acuated to operative position, springs arranged to retract the signal arms to inoperative position, and means for actuating the signal arms to operative position.

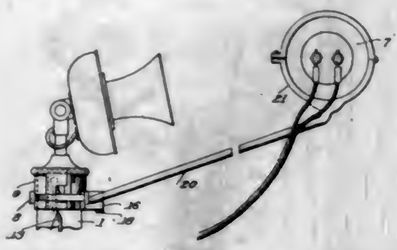
---



1,690,957. TENSIONING DEVICE FOR CLOTHESLINES. VINCENT P. TOMMINS, Jersey City, N. J. Filed May 31, 1927. Serial No. 195,450. 3 Claims. (Cl. 267—74.)

1. The combination with a clothesline, of a coil spring, whose opposite ends are connected respectively with the opposite ends of the clothesline to make it endless to be passed around spaced anchored pulleys, and to take up slack, a sectional housing which encloses the spring, the spring in normal condition being shorter than the casing, portions connected with the spring extending respectively through the opposite ends of the housing.

---



1,690,958. HOUSEHOLD FILTER. HENRY A. VALLEE, Bay City, Mich., assignor to Vallee Rotary Filters Company, Bay City, Mich., a Corporation of Michigan. Filed Jan. 17, 1927. Serial No. 161,545. 5 Claims. (Cl. 210—94.)

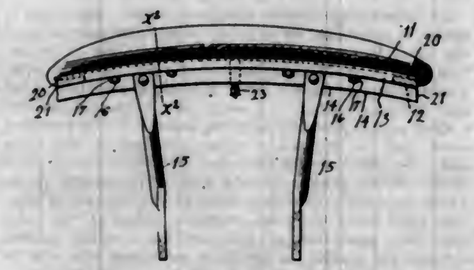
1. A filter comprising a perforated folded rigid screen, the lower fold being bowed and spaced from the upper fold.

---

1,690,959. TELEPHONE EQUIPMENT. NORMAN C. WEBSTER, Greensboro Bend, Vt. Filed Oct. 10, 1924. Serial No. 742,905. 1 Claim. (Cl. 179—147.)

A telephone attachment comprising a sectional casing member adapted to be mounted upon a telephone and having an opening thru which the receiver hook extends, the opening having a length sufficiently great to permit movement of the receiver from its normal depressed position to its elevated position which it assumes when the instrument is in use, said casing having a slot in its bottom, a latch pivoted at its upper end within the casing and having its lower end extending thru the slot and constituting a finger piece, said latch having a square shoulder thereon normally engaging over the hook and further having an inclined surface above said shoulder leading thereto, and a spring within the casing engaging the latch and normally urging it into receiver hook engaging position.

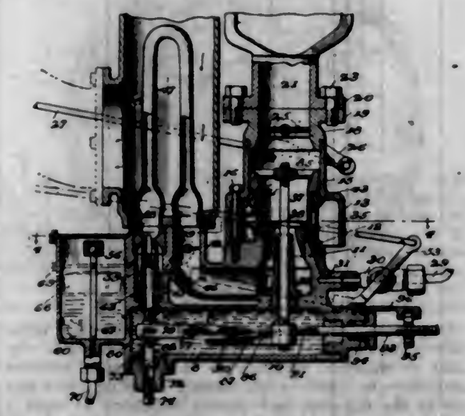
---



1,690,960. POLISHING PAD. SABURO YAMANAKA, Los Angeles, Calif. Filed July 7, 1927. Serial No. 204,125. 3 Claims. (Cl. 51—279.)

2. A polishing pad, including a body of hair felt, and a compound incorporated therein, consisting of powdered horn, one part, powdered squid shell, two parts, powdered pumice stone, seven parts, and gelatin.

---

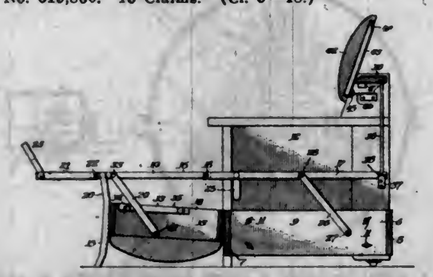


1,690,961. AUTOMOBILE BUMPER. GENGIRO YOSHINAGA, Los Angeles, Calif. Filed Jan. 13, 1927. Serial No. 160,888. 3 Claims. (Cl. 293—55.)

1. In an automobile bumper, outer and inner clamp members, supporting brackets extending from the inner clamp member, means for drawing the clamp members together, a flexible fabric tube mounted on the outer face of the outer clamp member and having its extremities inserted between the clamp members, and an inflatable tube mounted within the flexible fabric tube.

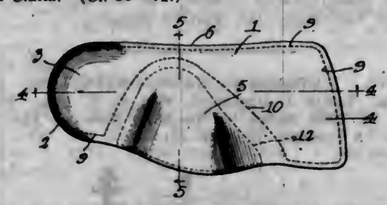
---

1,690,962. CARBURETOR. HERBERT WILLIAM ALLEN, Fresno, Calif. Filed Jan. 25, 1922. Serial No. 531,799. 1 Claim. (Cl. 261—15.)



A carbureter comprising a liquid fuel spray nozzle, a heating tube having an expanded end in communication with the spray nozzle, a choke tube having one end in communication with the remaining end of the heating tube and its other end in communication with the outlet of the carburetor, said heating tube having the opposite end thereof expanded for a portion of its length, said heating tube being U-shaped and of restricted diameter throughout the greater portion of its length and between the expanded ends thereof.

---

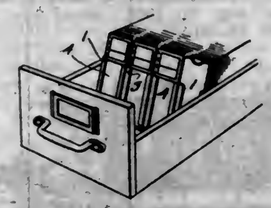


1,690,963. SOFA BED. ALFRED E. ANDERSON and CHARLES A. FORSBERG, Rockford, Ill. Filed Feb. 17, 1923. Serial No. 619,866. 15 Claims. (Cl. 5—48.)

1. In a sofa bed, the combination with a main frame, of an invertible seat hinged therein, legs secured to the seat and having portions projecting above it when it is inverted, and a bed bottom foldable in the frame and comprising sections one of which is supported by and engaged between but not attached to the projecting portions of said legs.

---

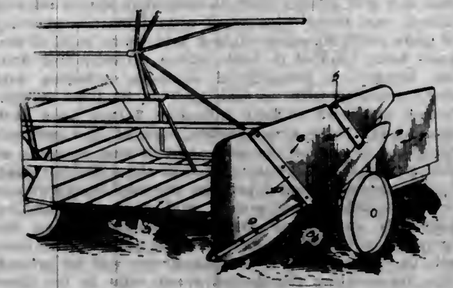
1,690,964. ARCH SUPPORT. THOMAS K. BALASKAS, Lexington, Nebr. Filed Oct. 27, 1927. Serial No. 229,075. 1 Claim. (Cl. 36—71.)



An arch support including a top piece of sole leather, a bottom piece coextensive therewith of soft leather, a cushioning layer interposed between and coextensive with the top and bottom pieces, said top piece having its heel portion hollowed to provide a heel receiving recess, there being an arch supporting portion between the heel and toe portions of the top piece, said arch supporting portion being extended from one side to a point close to the opposite side of the top piece, there being a row of stitches extending through the top, bottom, and intermediate pieces along one side thereof, along the ends, and along the inner portions of the arch supporting portion, the intermediate piece being connected to the bottom surface of the arch supporting portion, there being a pocket beneath the arch supporting portion of the top piece between the intermediate piece and the bottom piece, and an arch consisting of superposed layers of leather skived to proper shape removably seated in the pocket beneath the intermediate cushioning strip, the entire arch support being free of metal.

---

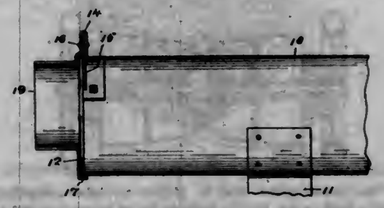
1,690,965. SLIDE HOLDER. JAMES HOWARD BROWN, Baltimore, Md. Filed July 16, 1926. Serial No. 122,956. 1 Claim. (Cl. 129—16.7.)



A slide holder of the character described comprising a sheet metal plate having spaced pairs of outstruck guideways thereon arranged in parallel relation, each pair of guideways being adapted to have a flat article slidably engaged therein, one edge of the plate at the ends of all the guideways being formed with an outstanding continuous stop flange adapted for engagement by the flat articles for limiting the movement thereof, the opposite edge portion of the plate being slit at intervals to form tab-like extensions opposite the spaces between the pairs of guideways, the extensions being bent somewhat out of the plane

of the major portion of the sheet and engageable with the rear sides of the flat articles for urging them against the overhanging portions of the guideways and thereby preventing looseness, the ends of said extensions being notched out for the accommodation of the operator's fingers whereby they may conveniently grasp the end of the flat article within each pair of guideways.

---

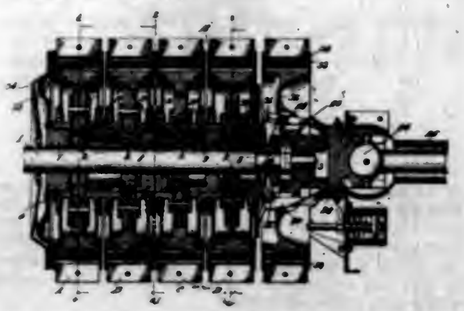


1,690,966. WINDSHIELD FOR GRAIN HARVESTERS. GEORGE CHANEY, Doniphan, Nebr. Filed July 18, 1925. Serial No. 44,578. 4 Claims. (Cl. 56—190.)

1. In a grain harvester and binder having a cutter bar, an elevator and a dividing board, the combination of a windshield composed of a plurality of members, one of which is adapted to be mounted on and to extend in advance of the dividing board and at right angles to the cutter bar in a substantially vertical plane, and another member extending in rear of said dividing board and having means for connection therewith.

---

1,690,967. AUTOMATIC DOOR FOR MAIL BOXES. WINFRED L. COBB, Jefferson, Oreg. Filed May 13, 1927. Serial No. 191,159. 5 Claims. (Cl. 232—17.)



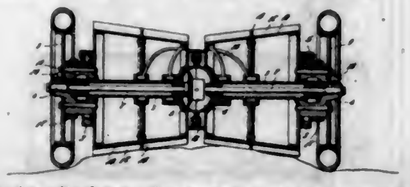
1. In combination with a receptacle having an opening at one end, a disk-like closure for said receptacle, a flange at one marginal edge of the closure, means to hingedly support the disk-like closure for swinging movement across the opening to open and close the receptacle

and to permit the flange to be brought into position to provide a guide at the receptacle opening and a stop to locate the flange in guiding position when the receptacle is open.

---

1,690,968. TRANSMISSION. JOSEPH J. COLE, Faber, Va. Filed Aug. 31, 1926. Serial No. 132,754. 1 Claim. (Cl. 74—34.)

A transmission for conveying selectively with predetermined speed ratio, movement from a driving shaft to a driven shaft comprising driving pinions fixedly arranged upon the driving shaft in spaced longitudinal relation for rotation therewith, a sleeve encircling said driving members and said driving shaft in concentric spaced relation thereto, said sleeve being keyed to said shaft, a plurality of gears rotatably mounted upon said sleeve, each of said gears being adapted to mesh with a corresponding driving member, a plurality of members encircling said sleeve provided with an orbit gear on its inner circumference and with radially extending flanges upon each edge of the outer circumference, each of said members encircling a pair of the gears and driving members so that said gear will be in mesh with the said orbit gear, friction means arranged between the said flanges on the outer circumference of each of said members, means for selectively contracting said friction means upon the outer circumference of said member whereby the same will be held stationary and the sleeve, will be rotated, thus transmitting the desired speed ratio to the drive shaft.

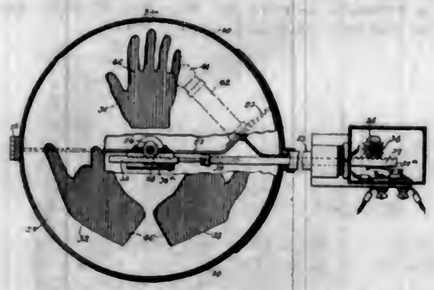


---

1,690,969. TREATMENT OF HIDES AND SKINS. HARRY DODGE, Danvers, Mass. Filed Nov. 28, 1927. Serial No. 236,381. 1 Claim. (Cl. 149—5.)

In the treating of dried hides and skins the subjecting them for a suitable period to a bath consisting of water, nitre, bicarbonate of soda and formaldehyde.

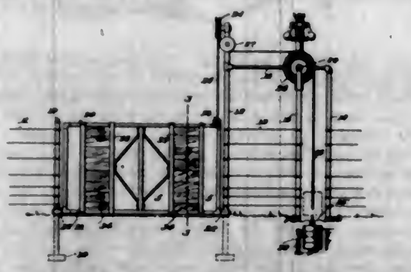
---



1,690,970. TRACTION DEVICE FOR VEHICLES. EMIL W. EHLERT, Thorp, Wis. Filed June 1, 1927. Serial No. 195,736. 3 Claims. (Cl. 180—6.)

1. An attachment for a motor vehicle comprising a frame adapted to be connected to the rear part of the chassis of a motor vehicle, hubs rotatably mounted in the side members of the frame, hollow axles having their inner ends forming a differential housing with their outer ends rotatably supporting the hubs, a shaft in each housing, differential means connecting the inner ends of the shafts together, means for fastening the outer end of each shaft to a hub, a wheel connected with each hub, a drum rotatably mounted on each hollow axle and connected with a hub and means for connecting the differential means with the power plant of the vehicle.

---

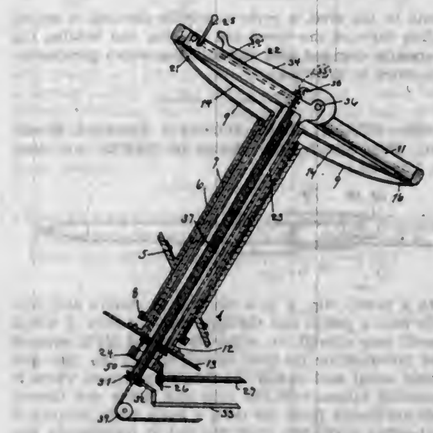


1,690,971. TRAFFIC SIGNAL. JUDSON B. FREIDAH, New York, N. Y. Filed Oct. 24, 1925. Serial No. 64,688. 1 Claim. (Cl. 116—47.)

A signal including a casing having windows at opposite sides thereof, a strap supported within the casing with its longitudinal edges equi-distantly spaced from such sides, signal disks rotatable in the casing upon opposite sides of the strap, a rotatable toothed element supported by the strap and having its ends fixed to the disks, the strap serving to retain the disks in spaced parallel relation, a channel-shaped member supported from the under face of the strap and extending longitudinally thereof, a rack bar slidable in the channel-shaped member and engaging the rotatable element to rotate the disks, and a spring interposed between the rack bar and bottom wall of the channel-shaped member and resiliently holding the rack bar against the rotatable element.

---

1,690,972. AUTOMATIC GATE-CONTROLLING DEVICE. LOUIE J. GEORGINO, Wishek, N. Dak. Filed Jan. 31, 1927. Serial No. 164,967. Renewed Apr. 17, 1928. 3 Claims. (Cl. 39—5.)

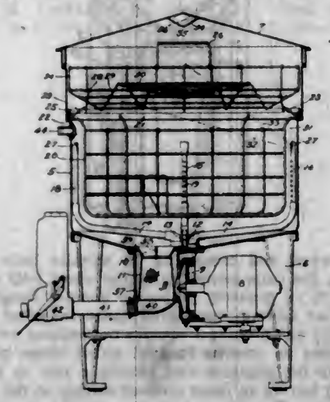


1. The combination with a gate mounted for movement about a horizontal axis, to open and closed position, of flexible means connected with the gate at its upper portion, a device for placing tension on the flexible means, a governor controlled brake, a drum over which the flexible means passes, and means for operating the governor by the movement of the drum in one direction.

---

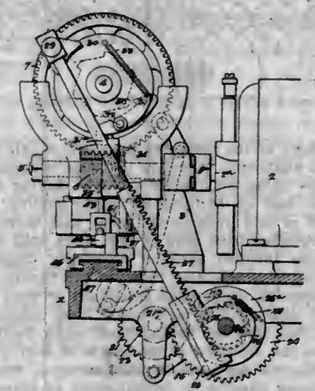
1,690,973. VEHICLE-CONTROLLING MEANS. DOC E. GORDON and GILBERT S. FRAZER, Oakland, Calif. Filed Mar. 5, 1927. Serial No. 173,172. 1 Claim. (Cl. 74—39.)

In a transmission control means, the combination with a steering column having a steering wheel mounted thereon, a tubular support positioned within said steering column, said support having a ring mounted thereon, said ring being concentric with said steering wheel, a selector column concentrically positioned within said support and having a gear secured to its lower extremity, said gear being capable of transmitting rotary motion to a gear shift mechanism at a remote point, a selector bar supported in said steering column and adapted to move over said ring, said ring having notches formed therein for the purpose of designating fixed points for the movement of said selector bar, a gear engaging member



pivotally supported in said selector bar and adapted to be rotated, a disc mounted in said selector bar, a cam surface formed in said disc, a tubular column concentrically positioned within said steering column, and adapted to be reciprocated through the action of said cam engaging a pin secured in said last mentioned column and means secured to the lower extremity of said last mentioned column for transmitting reciprocating motion to a remote point.

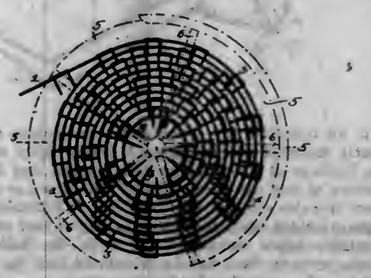
---



1,690,974. WASHING MACHINE. GEORGE EDGAR HAZARD and HARRY F. BOE, Rochester, N. Y. Filed Feb. 2, 1922. Serial No. 533,678. 4 Claims. (Cl. 141—9.)

1. A washing-machine comprising: a casing open at the top; a revoluble spray-device consisting of a body rotatably mounted at the bottom of the casing, and spray-pipes radiating from said body and extending first outwardly, near the bottom of the casing, and then upwardly near its walls, the spray-pipes being provided with inwardly-directed openings in their upright portions and with upwardly directed openings at their upper ends; a lower basket-like work-support suspended from the casing above the upper ends of the spray-pipes but depending into the space about which they revolve; and a second basket-like work-support removably supported above the lower work-support, in position to receive the spray from the upper ends of the spray-pipes.

---

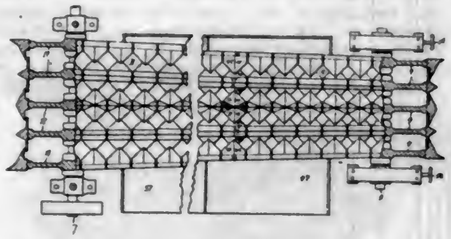


1,690,975. STOPPING AND STARTING MECHANISM FOR TICKETING MACHINES. GEORGE W. HENRY, Jr., Philadelphia, Pa., assignor to Soabar Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Dec. 15, 1923, Serial No. 680,885. Divided and this application filed Jan. 26, 1926. Serial No. 83,865. 3 Claims. (Cl. 192—139.)

1. The combination of a driving shaft; a worm thereon; a cam shaft; a worm wheel loose thereon; a ratchet wheel on the worm wheel; a disk on the cam shaft; a pawl pivotally mounted on the disk; a longitudinal shaft; a pinion loose on the shaft; a pawl connecting the pinion with the shaft; a bearing on the shaft; and a rack bar, pivoted to the disk on the cam shaft, arranged to slide in the bearing, said bar having teeth meshing with the teeth of the gear wheel loose on the longitudinal shaft.

---

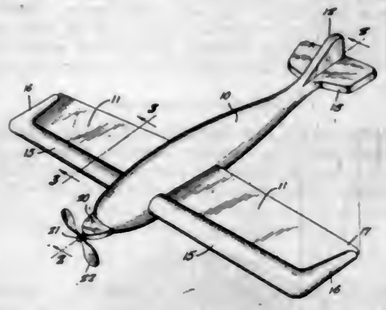
1,690,976. ROLL PIN TICKET. GEORGE W. HENRY, Jr., Philadelphia, Pa., assignor to Soabar Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 5, 1926. Serial No. 106,941. 1 Claim. (Cl. 40—25.)



A coiled tag strip composed of a series of connected tag sections, each tag section having a pin secured thereto and projecting perpendicularly from one face thereof immediately adjacent one longitudinal edge of the strip, said coiled strip being helically wound about a given axis with the said longitudinal edge in each convolution of the helix being axially displaced with respect to the next adjacent convolution, and the said pins in each convolution extending under the longitudinal edge of the said adjacent

convolution, whereby the radial spacing of the adjacent convolutions of said helix is less than the distance from the face of the strip to the points of the pins which extend perpendicular thereto.

---



1,690,977. GRADER. FRANK R. HOOD, Stockton, Calif. Filed May 25, 1927. Serial No. 194,163. 1 Claim. (Cl. 209—84.)

In a grader of the character described, a pair of diverging chains adapted to travel in the same horizontal plane, said chains being constructed of links having a vertical outer wall and an inclined surface extending from the outer wall of said links to the inner wall thereof, a projection extending from each of said links, said extensions each having inclined surfaces diagonally disposed with relation to the direction of travel of the chains, a central chain comprising under links positioned between said first mentioned links, each of said under links comprising two relatively flat surfaces having their edges inclined with relation to the direction of movement of said chains and carrying thereon upwardly inclined surfaces, said inclined surfaces being parallel to the direction of travel of said chains.

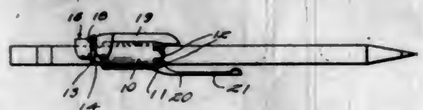
---

1,690,978. TOY MONOPLANE. LILLIAN JATUNN, Troy, Mont. Filed July 22, 1927. Serial No. 207,756. 3 Claims. (Cl. 46—50.)

1. An inflatable toy comprising a monoplane formed of elastic material and including a hollow body simulating the fuselage of a monoplane with vertical and horizontal rudders at one end thereof, sheet rubber wings extending from opposite sides of the body, hollow inflatable leading edges provided upon the wings to stiffen said edges, said inflatable edges communicating with the hollow body, means whereby fluid may be introduced into the body and wings and a propeller for the monoplane.

---

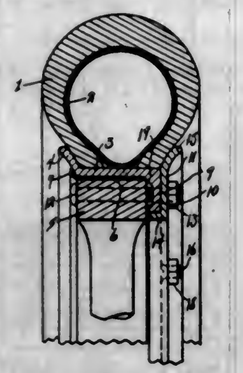
1,690,979. RAIL ANCHOR. ERNEST N. JOHNSON, Winnipeg, Manitoba, Canada. Filed Mar. 28, 1927. Serial No. 179,083. 3 Claims. (Cl. 238—304.)



1. The combination with the base of a rail, a tie plate supporting the same, said plate being provided with a stop shoulder engaging one edge of the rail base, of an upstanding stud permanently attached to the plate and positioned somewhat back from the other edge of the rail base, a dog pivotally mounted on the stud and presenting a toothed face engageable with the latter edge of the rail and formed

eccentric to the stud, a cover overlying the dog, a spring extending between the cover and the dog and holding the dog normally engaged with the rail base and a pin fastening the cover to the stud.

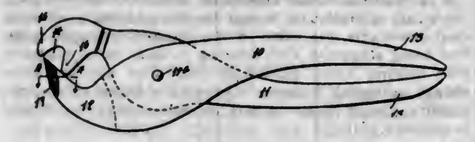
---



1,690,980. PENCIL CLIP. HARLEY S. JOHNSON, Erwin, Tenn. Filed Apr. 7, 1927. Serial No. 181,826. 4 Claims. (Cl. 120—84.)

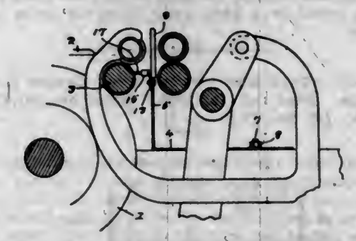
1. In a pencil clip, a tube adapted to receive and frictionally hold a pencil and through opposite ends of which the pencil may extend, an arcuately curved blade support pivoted intermediate its ends to one end of the tube and swingable about said end of the tube to positions where it substantially aligns with the tube and either end thereof extends outwardly from the tube, a knife blade secured to and extending outwardly from one end of the support and means for frictionally holding the support in either of said positions.

---



1,690,981. VEHICLE WHEEL RIM. WILLIAM A. JONES, Fort Worth, Tex., assignor to National Vehicle Rim Corporation. Filed Apr. 11, 1925. Serial No. 22,445. 2 Claims. (Cl. 301—19.)

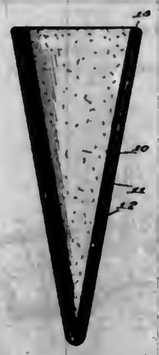
1. A wheel rim comprising an annular body or ring engaging the outer periphery of the wheel felly and provided with an inwardly projecting annular flange having an annular laterally projecting flange engaging the side of the felly and forming a vacancy for wedging action, said ring having an annular inclined radial flange projecting outwardly for engaging and holding a tire on the ring, said body having an inner inclined surface at the juncture of said inwardly projecting flange, a band attached to the felly and provided with an outwardly projecting inclined flange for co-operating with said inclined surface of said body, a detachable rim member engaging said inwardly projecting flange and having a lateral flange engaging the inner periphery of sad first named flange, and bolts for locking said rim member to the wheel felly and to said inwardly projecting flange and for causing a tightening of said co-operating inclined members.



1,690,982. CAN OPENER. LOUIS KOSSUTH and CHARLES LANZA, Garfield, N. J. Filed Sept. 22, 1927. Serial No. 221,268. 1 Claim. (Cl. 81—3.1.)

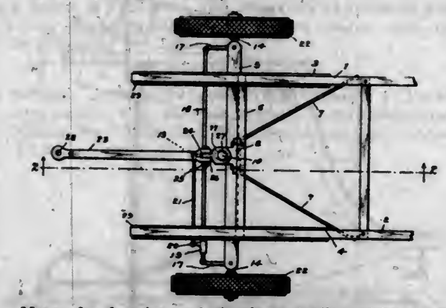
A tool of the class described comprising relatively movable levers, one of said levers being bifurcated, the corresponding portion of the other lever being concave for the purpose specified, the bifurcation providing lugs on opposite sides thereof, the outermost lug being convex on its inner surface and the innermost lug being concave on its inner surface.

---



1,690,983. ATTACHMENT FOR COMBING MACHINES. ALFRED P. LAFLAM, Burlington, Vt. Filed June 10, 1927. Serial No. 197,907. 8 Claims. (Cl. 19—118.)

1. In a comber and in combination with the detaching rolls thereof, a support comprising a rightangular member having its horizontal arm adjustably but rigidly secured on the frame of the comber, a holder removably and vertically adjustably secured on the vertical part of the support, and a leather strip designed to be received in and supported by the holder and engaging one of the said rolls.



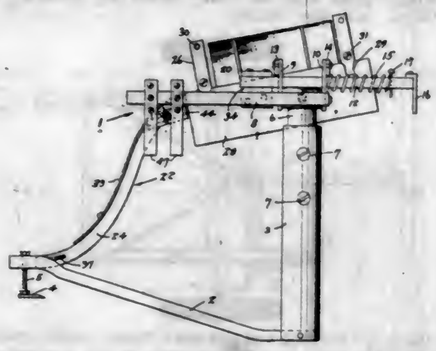
---

1,690,984. ICE-CREAM CONE. FRED W. LANE and KENNETH M. ANDERSON, Oakland, Calif. Filed Aug. 21, 1925. Serial No. 51,654. 2 Claims. (Cl. 99—11.)

1. An ice cream cone having inner and outer walls of edible baked material, the inner wall being provided at its upper open end with an outstanding annular flange, said flange of the inner wall engaging the upper edge of the outer wall and serving to support the walls in spaced apart relation, and a confection filling in the said space between the walls said flange closing the space between the walls and protecting the confection filling.

1,690,985. APPARATUS FOR DRAWING AND STEERING TRAILER VEHICLES. VICTOR K. LIPP, Seattle, Wash. Filed July 26, 1927. Serial No. 208,556. 1 Claim. (Cl. 280—33.55.)

Means for drawing and steering a trailer vehicle having longitudinal frame members, steering wheels mounted on spindles having lever arms attached thereto, said arms being connected by a tie rod, comprising a block positioned centrally between the frame members and in the same plane therewith, a shaft mounted perpendicularly in the block, a lever arm secured perpendicularly to one end of the shaft, a shaft rod pivotally connected to said lever arm and the tie rod and a tongue member attached to the shaft and extending therefrom in the plane of the frame members for drawing the vehicle and controlling through said shaft the steering wheels, whereby the load of the vehicle is transmitted through said tongue in the plane of said frame of the vehicle.

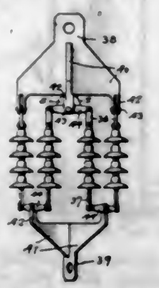


---

1,690,986. HEATING DEVICE. BARNETT WRIGHT MACY, Jacksonville, Fla., assignor to The Commercial Clearing Corporation, Jacksonville, Fla., a Corporation of Florida. Filed Sept. 21, 1927. Serial No. 221,112. 1 Claim. (Cl. 219—38.)

A device of the character described comprising a hermetically sealed cylinder filled with oil, a sleeve formed of insulating material mounted axially on the cylinder, an electric resistance wire in the form of a spiral coil and composed of two sections arranged on the sleeve, one section being spirally wound around the sleeve in one direction, a second section being wound spirally around the sleeve in an opposite direction to the winding of the first mentioned section, means for connecting the free ends of the sections with a source of current, a thermostat located in the path of oil, and means for interpolating the thermostat between the source of current and the free end of the coil.

1,690,987. NAIL SETTER. EDWARD F. MALOUF, Marysville, Calif. Filed Feb. 12, 1927. Serial No. 167,743. 11 Claims. (Cl. 1—47.)

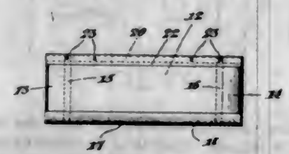


1. In a nail setter adapted for setting nails at predetermined spots, a frame; a receptacle slidably mounted on the frame and adapted to receive nails therein; conveying means connected with the receptacle for leading the nails therefrom; and means adapted to engage the frame and to be actuated thereby when the receptacle is slidably moved for releasably holding a nail in the conveying means while the nail is set

1,690,988. MOTOR FUEL. SAMUEL P. MARLEY, Pittsburgh, and WILLIAM A. GRUSE, Wilkinsburg, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Aug. 25, 1924. Serial No. 734,120. 5 Claims. (Cl. 44—9.)

1. As a new composition of matter, gasoline containing in saturated solution a plurality of detonation precluding hydrocarbon derivative compounds each having a solubility in gasoline of the order of not more than 0.5 per cent and each of the respective hydrocarbon derivative compounds present imparting to the gasoline detonation precluding properties.

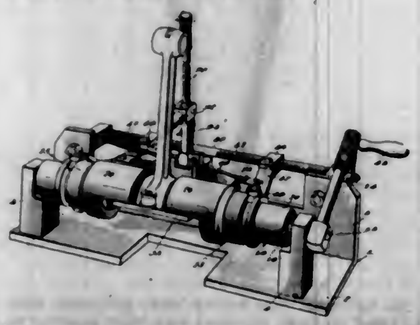
1,690,989. MULTIPLE-STRING INSULATOR SUSPENSION. RICHARD H. MARVIN, East Liverpool, Ohio, assignor to The R. Thomas & Sons Company, East Liverpool, Ohio, a Corporation of Ohio. Filed May 24, 1926. Serial No. 111,418. 4 Claims. (Cl. 173—318.)



1. A multiple string suspension insulator unit comprising a pair of spaced hangers, a series of balance levers pivoted on the respective hangers, the axes of the levers on one hanger being staggered with respect to the axes of the levers on the other hanger, in combination with a series of insulator strings connecting said hangers, adjacent strings being connected at one end to the opposite ends of a lever pivoted on one hanger, while the other ends of said strings are connected to adjacent levers pivoted on the other hanger, to afford a flexible interconnection between the several strings operative to evenly distribute between the said strings the mechanical stresses imposed upon the group.

4. A multiple string suspension insulator unit comprising a pair of multi-arm hanger members having a common suspension axis, the arms of the respective hanger members being staggered with relation to each other, together with balance levers carried by said arms and insulator strings extending between the balance levers of the respective hanger members and interconnecting the levers in sequence.

1,690,990. PROCESS OF MAKING ALUMINUM CHLORIDE. ALMER M. MCAFEE and GERALD I. ROBERTS, Port Arthur, Tex., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Sept. 26, 1927. Serial No. 222,108. 12 Claims. (Cl. 23—95.)

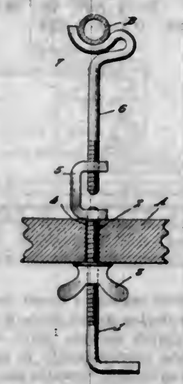


11. In the manufacture of aluminum chloride the process which comprises establishing a mass of aluminous material and carbon in a reaction chamber, grading the mass so that it is denser at the walls of the chamber than at other points, and passing a mixture of chlorin and combustion supporting gas under aluminum chloride producing conditions through the mass so that the gases preferentially travel in a path away from the walls of the chamber.

1,690,991. STAIR RUG. FRED ORANGE, Ottawa, Ontario, Canada. Filed Oct. 11, 1926. Serial No. 141,016. 1 Claim. (Cl. 20—79.)

A flexibly reinforced carpet for stairs, floors and the like, comprising in combination a rug section adapted to fit the steps of stairs and to extend over the edge thereof, flexible metallic strips secured on the under side of said section at each side and adapted to be bent to form a resilient gripping portion for the edge of the step and when unbent to retain the edges and corners of the section flat, a metallic edging for the strip and an auxiliary reinforcing cross strip for the section.

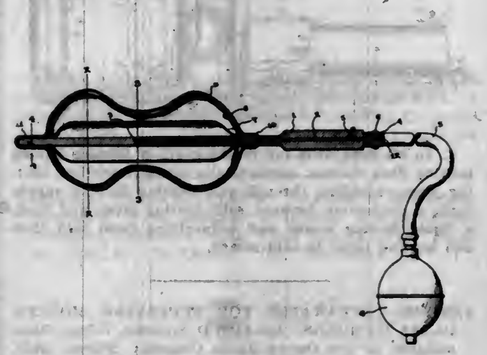
1,690,992. BABBITTING MACHINE. THOMAS H. ORR, Okmulgee, Okla. Filed May 15, 1926. Serial No. 109,379. 17 Claims. (Cl. 22—123.)



8. A machine for rebabbitting bearings comprising a mandrel having an opening adapted to be centrally disposed with the bearing to be rebabitted, heads slidably mounted on the mandrel and having elements engageable with the ends of the bearing to be rebabbitted, means for shifting the heads back and forth on the mandrel and

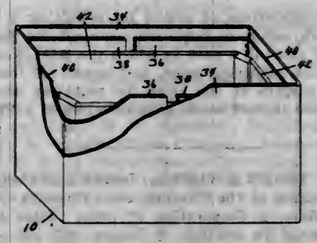
comprising a rotatable shaft having oppositely threaded portions, nuts engaged with the threaded portions, levers pivotally connected to the nuts and having operative connection with the heads, and means connected with the intermediate portions of the levers for shifting the same about the nuts as fulcrums.

1,690,993. SCREED CHAIR. LE ROY R. OWEN and OWEN E. WHITEMAN, South Bend, Ind. Filed July 30, 1927. Serial No. 209,573. 2 Claims. (Cl. 72—122.)



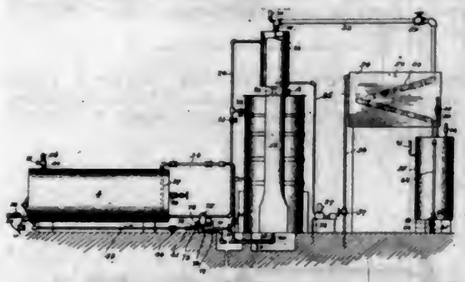
2. Screed supporting means comprising a screw threaded member having a handle thereon, with its threaded portion adapted to be passed through a hole in a form, a central member having upper and lower threaded holes therein, the lower hole receiving the threaded portion of said member when said central member rests upon the form, a nut on the threaded part of the member for engaging the lower face of the form, with the central member engaging the upper face thereof and a screed supporting member having its lower end threaded to engage the upper threaded hole in the central member.

1,690,994. ELECTRIC HEATER. DALTON U. POWELL, Woodsfield, Ohio, assignor of one-third to Samuel K. Frank and one-third to Ray L. Davis, Wheeling, W. Va. Filed Oct. 10, 1927. Serial No. 225,854. 5 Claims. (Cl. 219—19.)



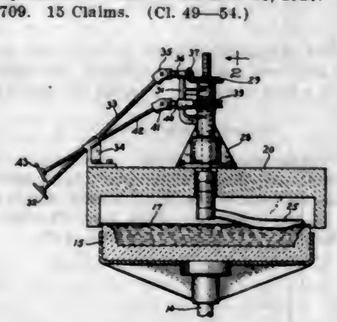
5. An electric heater comprising a tube closed at its lower end and internally threaded at its upper end, a tubular cylindrical body having its lower end threaded into the upper end of said tube, the upper end of said body being split and tapered for contraction tightly around a current conducting cable, a nut threaded on said split tapered end for contracting said end, cable-engaging packing means in said body, and means for compressing said packing means to cause tight contact thereof with the body and cable.

1,690,995. ANORECTAL DILATOR. NORMAN F. PRATT, Jacksonville, Fla., assignor to Monte Lloyd Corporation, Miami, Fla. Filed Dec. 28, 1927. Serial No. 243,190. 7 Claims. (Cl. 128—344.)



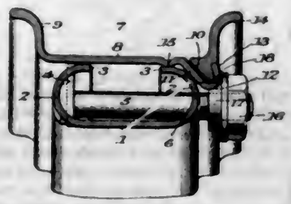
1. A dilator comprising a core, an expansible member mounted on said core, means for expanding said expansible member, and means comprising a casing for limiting said expansion.

1,690,996. ELECTRIC SWITCH. CHESTER D. AINSWORTH, Wollaston, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1927. Serial No. 221,071. 12 Claims. (Cl. 200—150.)



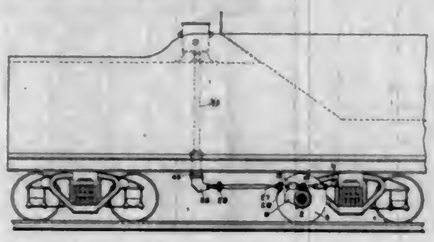
1. An electrical apparatus having a current conducting component and a member normally disposed in the magnetic field of said component and liable to be heated by the alternating magnetic flux surrounding said component, and means interposed between said member and said current carrying component characterized by shielding said member against the magnetic flux surrounding said current conducting component, said shielding means being further characterized by having hysteresis and eddy current losses which are materially less than the corresponding losses of said member.

1,690,997. APPARATUS FOR TREATING OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed July 9, 1917. Serial No. 179,388. 2 Claims. (Cl. 196—108.)



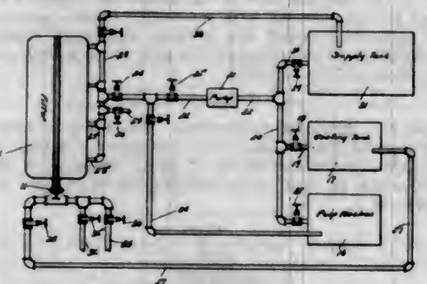
1. In an apparatus for cracking oil, a furnace having heating flues therein, substantially straight vertical heating pipes extending through said heating flues, a supply tank, a connection between said heating pipes and tank, a liquid forcing means and connections from said tank and heating pipes to said means.

1,690,998. APPARATUS FOR SUPPLYING MOLTEN GLASS TO MOLDS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 16, 1927. Serial No. 175,709. 15 Claims. (Cl. 49—54.)



1. The combination of means for supplying a body of molten glass, means to cause movement of the glass past a gathering point in a path by which the glass is again returned to the gathering point, and means for forcing beneath the surface of the glass for reheating reassimilation, portions thereof which have been chilled at the gathering point.

1,690,999. VEHICLE WHEEL. JOSEPH G. SWAIN, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 11, 1922. Serial No. 606,035. 4 Claims. (Cl. 301—18.)

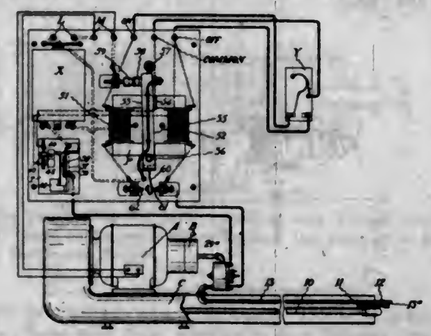


1. A vehicle wheel comprising, in combination, a hollow metal felloe having rounded side walls and a cylindrical periphery, a removable tire supporting rim provided with an oblique edge flange for engaging one side wall of the felloe with a wedging action when said rim is moved laterally of the felloe in one direction, said flange having spaced notches therein, and means for forcing the rim laterally of the felloe and engaging the notches to prevent relative turning movement of the rim and felloe.

1,691,000. GOVERNOR TRANSMISSION FOR TRAIN-CONTROL SYSTEMS. HERBERT B. TAYLOR, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Nov. 26, 1926. Serial No. 150,839. 12 Claims. (Cl. 105—119.)

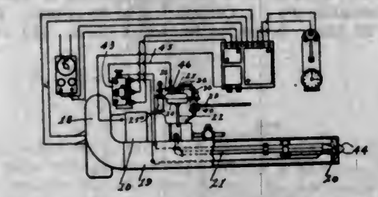
1. In a train control system, a speed responsive device, drive means for the device driven from a railway vehicle axle, a disconnect clutch for the drive means, an electric switch controlling energy supply to the train control system, and a single manually operable means for simultaneously disconnecting the clutch and opening the switch.

1,691,001. PROCESS FOR FILTERING ELEMENTS. HENRY A. VALLES, Bay City, Mich. Filed May 19, 1922. Serial No. 562,257. 3 Claims. (Cl. 210—199.)

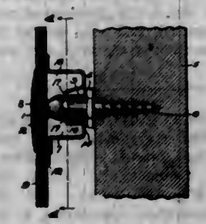


1. A process for filtering which consists in circulating a mixture of pulp and liquid through a rotating filtering element to form on the filtering element a uniform coating of pulp to provide a filter mat for said element, filtering juices under pressure through the filtering element after the formation of the filter mat until the latter becomes clogged, reversing the flow of the juices to remove the juices in the filter and return the said juices to the source of supply, removing the pulp from the clogged filtering element, washing the pulp after such removal, and finally recoating the filtering element with the washed pulp by circulating a mixture of the same and liquid through the filtering element.

1,691,002. SAFETY CONTROL MECHANISM FOR FUEL-FEEDING DEVICES. WALTER W. WILLIAMS, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a Corporation of Illinois. Filed Aug. 31, 1923, Serial No. 660,314. Renewed Jan. 20, 1926. 9 Claims. (Cl. 158—28.)



3. The combination with a fuel burning device comprising, electrically operated means for projecting air and fuel into a zone of ignition, a combustion chamber, and a safety device including a switch member adapted to stop the burner upon failure of combustion, a heat responsive means removed from the combustion chamber connected with said switch adapted to prevent operation of the switch

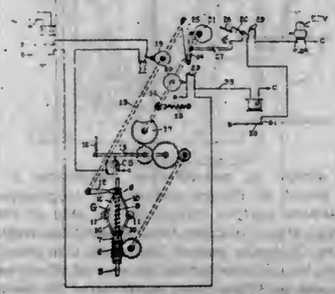


member when combustion occurs, and means for transmitting heat from the combustion chamber to the heat responsive means, said transmitting means being rendered operative solely by the activity of the electrically operated means.

1,691,003. IGNITION DEVICE FOR LIQUID-FUEL BURNERS. WALTER W. WILLIAMS, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a Corporation of Illinois. Filed Dec. 1, 1924. Serial No. 753,167. 2 Claims. (Cl. 158—28.)

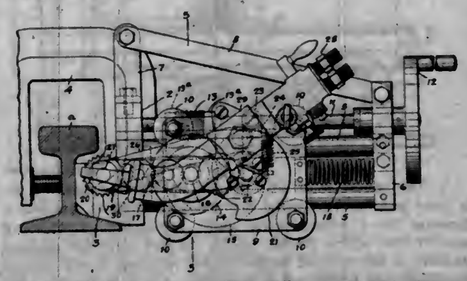
1. In an electrically-operated liquid fuel burner including a motor for supplying liquid fuel to the burner nozzle, electrically-actuated ignition means adjacent the burner nozzle, an auxiliary gas supply connected to the liquid fuel supply means, means for simultaneously operating the fuel supply motor and ignition means and causing said fuel supply means to deliver the auxiliary gas to the burner nozzle whereupon it is ignited by the ignition means, and means actuated by the accumulated pressure created within the fuel supply means after initial operation to cut off the auxiliary gas supply and discontinue the operation of the ignition means.

1,691,004. SEPARABLE FASTENER. SOLON D. BOYNTON, Boston, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924, Serial No. 757,153. Renewed May 31, 1928. 7 Claims. (Cl. 24—216.)



6. A socket for a separable fastener including a casing having a base portion secured to a suitable support, a wall extending from said base in a direction away from the support, a web extending inwardly from the outer end of said wall to provide a stud-receiving aperture, resilient portions of substantial length extending from said web toward said base and surrounding the stud-receiving aperture and jaw portions presented by the free ends of said resilient portions for engaging the neck of a stud.

1,691,005. FIBER INSULATOR AND METHOD OF MAKING THE SAME. EDMUND BURKE, Portland, Me., assignor to Brown Company, Portland, Me., a Corporation of Maine. Filed Sept. 11, 1925. Serial No. 55,851. 3 Claims. (Cl. 18—47.5.)

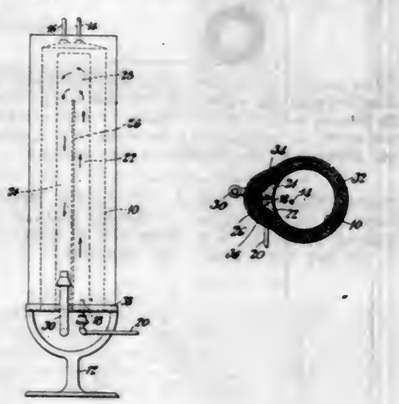


1. The method of making petticoat insulators which consists in preparing a blank of wet laid fibrous stock, in rough shaping said blank while moist, in drying the rough shaped blank, in impregnating the blank with a dielectric thermo-plastic and die finishing under pressure.

1,691,006. TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed July 25, 1924. Serial No. 728,186. 12 Claims. (Cl. 246—182.)

1. In an automatic train control system, vehicle carried brake control apparatus including a restrictive speed device imposing a restrictive brake control in response to unfavorable traffic conditions ahead, means for driving elements of said restrictive speed device in accordance with the motion of the vehicle, means for imposing a brake application if said driving means stops, and further means speed initiated and operated in accordance with the train, for preventing said brake application if said driving means has stopped because of a lack of motion of the vehicle.

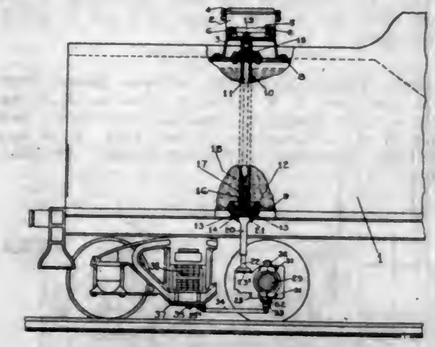
1,691,007. TORCH MACHINE. JOHN J. CROWE, Westfield, and JOHN H. W. BEDEROW, Secaucus, N. J., assignors to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 23, 1927. Serial No. 193,708. 17 Claims. (Cl. 266—23.)



1. An apparatus for cutting rails or entrant shapes, comprising a frame, a center, means carrying said center from said frame so that said center will travel in a path

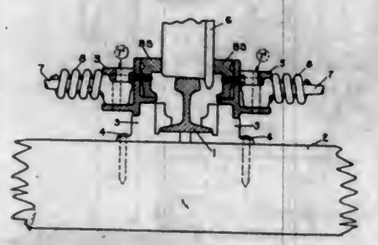
of irregularly changing direction appropriate to the entrant contour, jet-delivering means carried by said center, means for continuously moving said center along said path and thereby moving said jet-delivering means, and means for turning said jet-delivering means about said center in the same plane of movement.

---



1,691,008. GAS WATER HEATER. ROBERT G. GRISWOLD, Westfield, N. J., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 4, 1925. Serial No. 73,167. 2 Claims. (Cl. 122—19.)

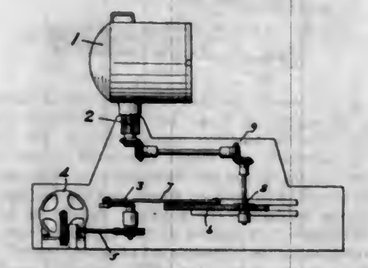
1. An article of manufacture comprising a heat-insulating jacket of fibrous material, a longitudinally extending salient portion formed in one side of the jacket and grooved along its inner face, a partition dividing said portion for the major part of its length into two channels which are in communication at one of their ends, the channels and partition being constructed of fire-resistant material.



---

1,691,009. TRAIN CONTROL. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Apr. 28, 1924. Serial No. 709,469. 5 Claims. (Cl. 105—119.)

1. The combination of a tender having the usual tank, a tube passing vertically through said tank to provide a passage for a transmission shaft, a housing surrounding one of the axles of the tender having suitable gearing therein, a ball shaped socket in said housing, a ball shaped socket at the lower end of said tube, and a telescopic tube having ball shaped ends connecting said housing and tube.



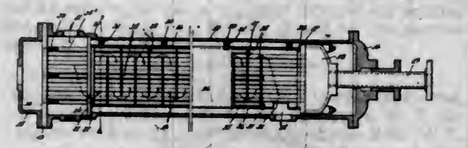
1,691,010. BRAKE SHOE FOR CAR RETARDERS. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Oct. 10, 1927. Serial No. 225,301. 6 Claims. (Cl. 188—250.)

5. A car retarder brake shoe, comprising, a rolled steel section having a relatively narrow body, a friction head projecting inwardly from one end of the body, a support toe projecting inwardly from the other end of the body, and grooved out portions in the outer face of said brake shoe.

---

1,691,011. BEACON. EDWARD W. JACKSON, Philadelphia, Pa., assignor to B. B. T. Corporation of America, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 29, 1926. Serial No. 84,540. 1 Claim. (Cl. 240—49.)

A beacon comprising a revoluble searchlight of which the beam is constantly swept over the entire field of approach, a rack and pinion mechanism for oscillating it, a crank mechanism for reciprocating the rack, a normally centered element connected with and movable in respect to the rack and to which the connecting rod of the crank mechanism is connected, and stop means for augmenting the dwell in the motion of the rack bar near the ends of the strokes.



---

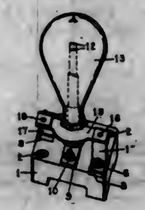
1,691,012. HEAT-EXCHANGE APPARATUS. GEORGE T. JACOCKS, West Hartford, Conn., assignor to The Whitlock Coil Pipe Company, West Hartford, Conn., a Corporation of Connecticut. Filed Dec. 10, 1926. Serial No. 153,858. 5 Claims. (Cl. 257—219.)

1. In a heat exchange apparatus, a pair of spaced sheets having on their opposed faces circular flanges, tubes extending through said sheets, a plurality of baffles between said sheets and through which said tubes extend,

the perimeters of said baffles being in alignment with one another and in alignment with said flanges, and a shell comprising a sheet of metal wound about said

baffles and having its ends encircling said flanges, said shell being contracted tightly against the perimeters of said baffles and flanges.

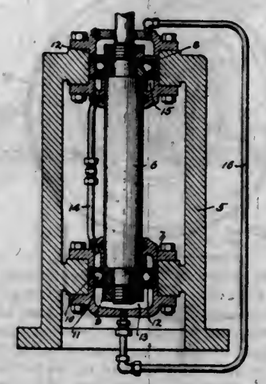
---



1,691,013. SEPARABLE FASTENER. ALFRED F. JOHNSON, Somerville, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924. Serial No. 757,150. 15 Claims. (Cl. 24—216.)

1. A socket for a three-side lock fastener including a front plate located upon that side of a socket-carrying fabric opposite the side from which the stud enters the socket, neck-engaging jaws integral with and formed from said front plate and a back plate located upon the opposite side of the fabric from said front plate, said back plate presenting a stud-receiving aperture therethrough having a wall closely embracing the shank of a stud at three sides to oppose relative tipping movement between the stud and socket at three sides thereof, while extended at the fourth side to permit separation of the stud and socket by relative tipping movement.

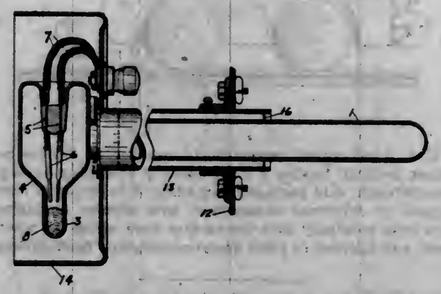
---



1,691,014. REBASING LAMPS. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed July 28, 1922. Serial No. 578,148. 10 Claims. (Cl. 176—32.)

1. In a light unit, the combination with a commercial incandescent lamp having a conducting base, a center contact and a concentrated filament, of a strap of metal rigidly fastened to the base of said lamp so as to have a predetermined relation with said filament, and a support comprising an insulating base, a pair of supports on said base for engaging the ends of said strap to support it in a predetermined manner, and a spring contact adapted to engage the center contact of said lamp.

---

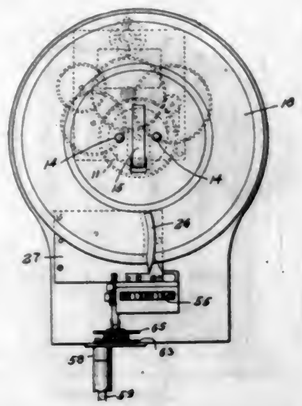


1,691,015. LUBRICATING MEANS FOR ANTIFRICTION BEARINGS. FAYETTE LEISTER, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 11, 1926. Serial No. 154,115. 3 Claims. (Cl. 308—187.)

1. In a device of the character described, inner and outer raceway members, antifriction bearing members interposed therebetween, a retainer member for said antifriction bearing members, said retainer member having pumping means embodied therein whereby upon rotation of said retainer member lubricant will be pumped to the anti-friction bearing members and axially through said bearing.

---

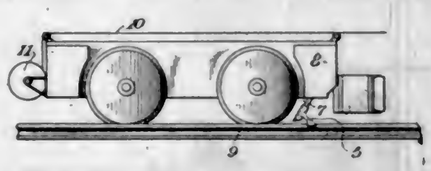
1,691,016. TEMPERATURE-CONTROL SWITCH. IRA E. MCCABE, Chicago, and RAYMOND W. ARMSTRONG, Wilmette, Ill.; said Armstrong assignor to The Arcless Contact Company, a Corporation of Illinois. Filed Apr. 10, 1926. Serial No. 101,040. 3 Claims. (Cl. 200—141.)



1. A switch device comprising a sealed glass receptacle containing a gas; said receptacle consisting of a long horizontal hollow stem terminating in a conduit bent downwardly and then upwardly to form an elbow, and a bulb beyond the elbow; a quantity of mercury in said elbow

sufficient to form a seal when it is at its natural level; and a contact means in said bulb located so as to be out of engagement with the mercury when the latter is at the aforesaid level; there being a small well in the bottom of said bulb, in position to permit a ready transfer of mercury between the same and the elbow upon tilting the device.

---

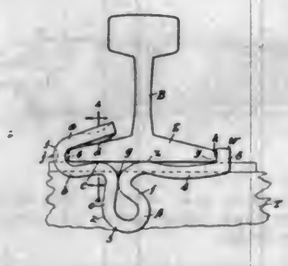


1,691,017. RECORDING METER. PAUL RICHERT, New York, N. Y., assignor to Pittsburgh Taximeter Company, a Corporation of Pennsylvania. Filed Dec. 18, 1923. Serial No. 681,373. 9 Claims. (Cl. 234—1.)

1. In a device of the character described, a perforator adapted to form a series of perforations in a recording chart, a pivoted perforator projector provided with a sliding contact plate and means for oscillating said projector so as to bring said plate into contact with and actuate said perforator.

---

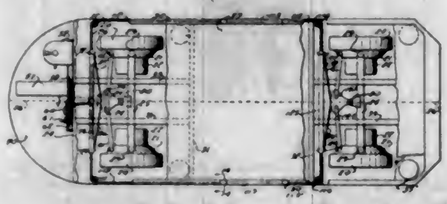
1,691,018. WHEEL GUARD. CHARLES A. SCOTT, Rome, N. Y., assignor, by mesne assignments, to General Cable Corporation, New York, N. Y., a Corporation of New Jersey. Filed June 30, 1927. Serial No. 202,476. 5 Claims. (Cl. 293—58.)



1. A wheel guard comprising a member of flexible resilient material having a longitudinally extending passage therethrough, said passage being adapted to receive a fixed support in frictional engagement, said member extending into close proximity with the surface upon which the wheel rests, and adapted to yield upon encountering fixed objects.

---

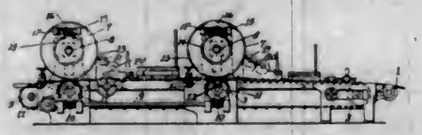
1,691,019. RAIL ANCHOR. CHARLES B. SHEPHERD, New York, N. Y., assignor to Willard Reid, Scarsdale, N. Y. Filed Dec. 7, 1927. Serial No. 238,342. 22 Claims. (Cl. 238—330.)



22. A traction rail anchor comprising an elongated body member formed at one end into an open loop and its other end formed into an upstanding lip, the intermediate portion of said member being formed into a depending loop having the outer ends of its leg portions contacting only

at a point below the plane of said body member, the inner face of said body member being raised at points adjacent said loop and said lip.

---

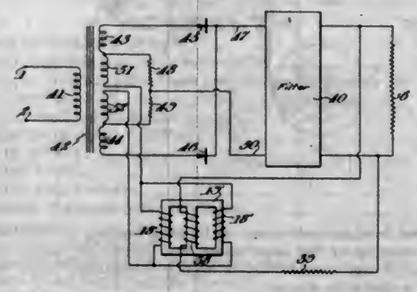


1,691,020. STEERING GEAR. WILLARD C. BRINTON, New York, N. Y., assignor to Terminal Engineering Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 17, 1921, Serial No. 522,987. Renewed Apr. 2, 1928. 30 Claims. (Cl. 280—91.)

1. In a vehicle steering gear, a pair of wheels having their planes normally substantially parallel, an arc shaped member comprising a segment of a sheave having a pair of grooves therein, a pair of ropes secured to said member and adapted to bear in the grooves of the sheave and to cause rotation of the member, and links operatively connecting said member with each of the wheels, each link being secured to the member at points on radii at angles on opposite sides of the axis of said member whereby movement of said rope causes unlike adjustments of the planes of said wheels.

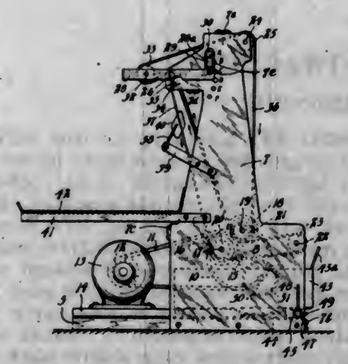
---

1,691,021. MACHINE FOR PRINTING RUGS. JOHN B. CAMPBELL, Salem, N. J., assignor, by mesne assignments, to Carthage Mills Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed June 11, 1926. Serial No. 115,399. 1 Claim. (Cl. 101—181.)



A flooring printing machine comprising a flat bed, spiked bands moving on both sides of the bed to carry a piece of flooring to be printed through the machine, a plurality of printing cylinders, said cylinders being of a size to retain circular printing plates thereon cut to form the respective color imprints of a complete unit design of a piece of flooring, tympan rollers located below the color imprinting lines of the rollers, and means for applying flooring paint to the plates at a point adjacent the printing line, so as to avoid flow thereof, as and for the purpose described.

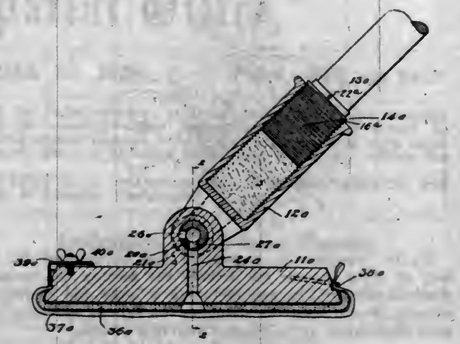
---



1,691,022. VOLTAGE REGULATOR. GEORGE B. CROUSE, Woodcliff, and JACOB L. JATLOW, Elizabeth, N. J., assignors to Conner Crouse Corporation, New York, N. Y., a Corporation of New York. Original application filed Sept. 8, 1926, Serial No. 134,249. Divided and this application filed Sept. 15, 1926. Serial No. 135,693. 11 Claims. (Cl. 175—363.)

1. A voltage regulator for an electrical system of the type including a source of energy, a load line and a resistance of substantially constant value, serially arranged in a circuit, said regulator comprising an additional circuit shunted across said resistance for applying thereto a regulating voltage, and means in said additional circuit so coupled to said series circuit that the voltage of said additional circuit is dependent upon the voltage across the load.

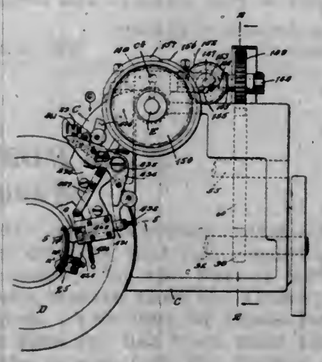
---



1,691,023. PRINT-FLATTENING DEVICE. GLEN M. DYE, Minneapolis, Minn. Filed Dec. 30, 1925. Serial No. 78,337. 22 Claims. (Cl. 92—70.)

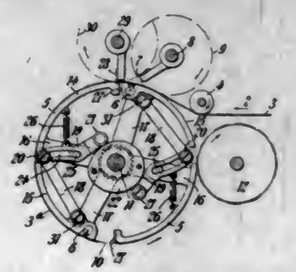
1. A print flattening device having in combination, means for moistening a print, and means for flattening said print while moistened.

---



1,691,024. WAX-DISTRIBUTING FLOOR POLISHER. EDNA B. GEDGE, Los Angeles, Calif., assignor to Peerless Products Company, a Corporation of California. Filed Dec. 8, 1925. Serial No. 74,083. 3 Claims. (Cl. 91—39.)

1. In a floor waxer, a fabric-carrying weight having a substantially flat bottom; a wax container pivotally connected with said weight; a handle secured to said wax container and provided with means for ejecting wax therefrom; and means permitting a flow of wax directly from said wax container to and through said weight, said container is pivotally connected with said weight by means of interfitting parts having conical surfaces.

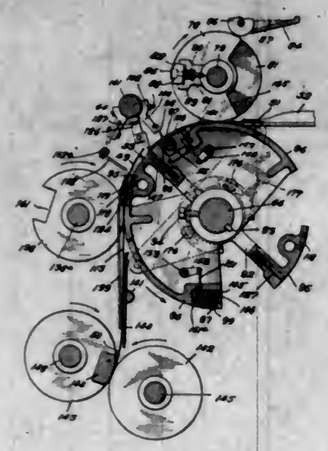


---

1,691,025. CIRCULAR-KNITTING MACHINE. ALBERT E. PAGE, Brooklyn, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Apr. 7, 1925. Serial No. 21,393. 7 Claims. (Cl. 66—40.)

1. In a circular knitting machine a circumferentially free horizontal pattern means mounted on a vertical axis above the bedplate of the machine, in combination with means below the bedplate revolving said pattern means continuously in timed relation to the knitting head at angular and circumferential speed differing from those of the knitting head.

1,691,026. VARIABLE-FEED MECHANISM. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 1, 1921, Serial No. 457,734. Renewed Aug. 18, 1925. 19 Claims. (Cl. 164—67.)



10. In combination, a positive feed mechanism for a web of paper, means for driving the feeding mechanism continuously, and means including a lever and a device to operate said lever for changing the rate of operation of said mechanism at particular intervals of time.

---

1,691,027. ENVELOPE MACHINE. ABRAHAM NOVICK, Flushing, N. Y., assignor to F. L. Smithe Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 27, 1924. Serial No. 740,170. 14 Claims. (Cl. 164—67.)

2. The combination of mechanism operating at a predetermined, uniform speed to feed a web at a given rate of speed, a second mechanism capable of feeding said web at a different rate of speed, means to change the web from the control of the first feeding mechanism to the control of the

second feeding mechanism while both feeding mechanisms are running at the same speed, and means to change the speed of the second named feeding mechanism after the web is under its control.

Patents Nos. 1,691,028 to 1,691,911.

# THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 376—No. 2. TUESDAY, NOVEMBER 13, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## Applications—Final Action Thereon.

ORDER No. 3,084.

One of the best ways to expedite our work is to take such action as will conclude the prosecution of an application as speedily as possible, for once the prosecution is closed that case is "water over the dam."

It has been the uniform practice of this Office for years to allow an application forthwith when it is known to be in condition for issue. This is good business, and should be followed in every application where, from the record, which of course should be complete as to the applicant's reasons for allowance, or from the Examiner's knowledge of the case, he has reached the conclusion that the case should be either allowed or finally rejected. In other words, if an Examiner has a case which he is satisfied is in condition for allowance, or which he is satisfied will have to be finally rejected, he should give such action forthwith instead of making the case await its turn.

This will not only expedite business but will avoid the necessity at a later date of again reviewing the case or having it studied *de novo* by a new assistant in the event that the assistant who formerly had the case has left the Office.

This practice should be followed in every case where it is possible.

Whenever an Examiner tenders his resignation, the Principal should see that the assistant spends his remaining time as far as possible in winding up the old complicated cases or those with involved records and getting as many of his amended cases as possible ready for final disposition.

THOMAS E. ROBERTSON,
OCTOBER 29, 1928. *Commissioner.*

## NOTICE.

### WITHDRAWING CASES FROM ISSUE.

### RECORDING ASSIGNMENTS.

**The job of printing the Official Gazette with approximately 1,200 original cuts each week and of issuing over 1,200 patents, designs, and trade-marks each Tuesday, is so stupendous that it has been necessary for the Patent Office to rigidly enforce Rules 165 and 188 in order to make certain that the Gazette and patents will be issued on the day they are dated. The first of these rules is against withdrawing a case from issue after the final fee has been paid and the other makes it necessary for an assignment to "be recorded in the Patent Office at a date not later than the day on which the final fee is paid." Every now and then a request is made for the Office to make exceptions to one or the other of these rules. Therefore this notice is published so that those doing business with this Office may know that these rules are of necessity being rigidly enforced and that no exceptions can be made to them.**

**Oct. 18, 1928.**

**THOMAS E. ROBERTSON,**
**Commissioner.**

## Condition of Applications Under Examination at Close of Business November 2, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 110,930; Trade-Mark Division, 1,889. Oldest new case, Jan. 4, 1928; oldest amended, Jan. 10, 1928. The dates given are 1928 except where † indicates 1927.)

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Court of Appeals of the District of Columbia.

IN RE FOLTZ.

*No. 2,068. Decided June 4, 1928.*

PATENTABILITY—FURNACES.

**Claims for a furnace which differs from the prior art in that applicant employs a separate combustion chamber and does not use superheated steam *Held* patentable, since no one "can assume that Burckhardt's device would be operative without the superheated steam, and no one can assume that appellant's device would be operative without the combustion chamber."**

APPEAL from the Commissioner of Patents. Reversed.

*Mr. C. T. Brown* for Foltz.

*Mr. T. A. Hostetler* for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents rejecting appellant's claims for an invention relating to furnaces. The invention is fairly disclosed in the following claims:

1. A furnace comprising surrounding walls forming fire-box, ashpit and combustion chamber, and an unbroken continuous air conduit incased in one of the walls of said combustion chamber, said air conduit horisontally disposed and having an inlet located below the grate toward the front thereof and having an outlet located above the grate toward the front of the fire-box.

3. A furnace comprising surrounding walls forming a fire-box, ashpit and combustion chamber, and unbroken continuous U-shaped air conduits in the lateral sides of the floor of said combustion chamber, and having lateral branches passing through the bridge wall and in and along the side walls of the furnace adjacent the fire-box, these branches having inlets located in the ashpit towards the front thereof and outlets located in the fire-box towards the front thereof *and outlets located in the firebox towards the front thereof.*

6. A furnace comprising surrounding walls forming ash-pits, fire-box and combustion chamber, and an unbroken continuous U-shaped air conduit incased in one of the walls of said combustion chamber, said air conduit being horisontally disposed and having an inlet located below the grate toward the front thereof and having an outlet located above the grate toward the front of the fire-box, said air conduit being constructed to accommodate the said furnace automatically with any system of draft by delivering over the top of the fire therein a quantity of highly preheated air commensurate with the quantity of fuel distributed over the grate therein, together with the rate of the combustion of said fuel and the temperature of said furnace.

The claims were rejected upon a single reference: a patent to one Burckhardt, No 6,503, June 5, 1849.

The subject matter of the application is described by appellant as follows:

> This invention relates to a furnace of that general class where at least a part of the air supplied to the fuel is preheated. The purposes of the invention are to provide a practical design for use in connection with steam boilers and for rendering a furnace more efficient for heating the boiler, and incidentally preventing loss of fuel in the products of combustion.

In the operation of appellant's device, air is admitted in the ash-pit beneath the grate and passes through openings into a conduit located in the walls of the fire-box. It then passes through conduits located in the floor of what is described as the combustion chamber and then passes through conduits located in the walls of the fire-box, from which the air is discharged, through openings into the forward end of the fire-box above the grate.

Burckhardt, after describing the air flues as represented in his drawing, describes his device as follows:

> These flues open into the space below the grate, • • • thence they extend back a sufficient distance in the direction of the smoke flue, and on each side thereof, inclining upward till they nearly reach the level of the bottom of the flue, thence they cross over under the smoke flue to opposite sides, and thence return back to a point nearly over the commencement, and open into the fire chamber over the fuel, • • • through an oblong expanded orifice • • •; by this arrangement a current of air is kept up from the space below the grate through an extended tube, where it is heated to a certain degree; and then discharged into the gases arising from the fuel, and that created by the decomposed steam, and thereby a perfect combustion is produced. • • • The contraction of the flue under the boiler, and shaping it to the figure of the lower part of the boiler, adds greatly to the economy of the fuel, while the perfect combustion by the employment of the decomposed steam, and atmospheric air above the fuel, in the manner set forth, greatly increases the heating capacity and decreases the gases which are to be carried off by the smoke pipe.

The distinction between appellant's device and that of Burckhardt consists in two important features which seem to have been ignored by the Patent Office; namely, the existence in appellant's device of a separate combustion chamber, and obtaining the result by heated air without the addition of superheated steam, an element relied upon in the Burckhardt patent. The object of the combustion chamber in appellant's invention is apparent, since the great heat obtained in the chamber coacts with the air flowing through the conduit, resulting in raising the air to a sufficient temperature when brought in contact with the fuel gases to accomplish combustion without the use of superheated steam, as in the Burckhardt device.

When the tribunals of the Patent Office undertake to declare the Burckhardt invention operative without the use of superheated steam, and in the absence of appellant's combustion chamber, they are reading into Burckhardt's patent something not to be found therein, and something not assumed even by the inventor. No one can assume that Burckhardt's device would be operative without the superheated steam, and no one can assume that appellant's device would be operative without the combustion chamber, consequently the devices in their operative functions are distinctly different, and it is fair to assume that as appellant has devised something not disclosed in the Patent Office by anyone else, during the period of 70 years, since the date of the Burckhardt patent, that his invention marks an advance in the art that is entitled to recognition.

We do not agree with the statement in the brief of the learned counsel for the Commissioner that—

> "concisely stated, appellant takes air from beneath the grate, conducts it through conduits in the hot walls of the furnace back to the fire-box above the grate, where it is delivered in a preheated condition, and that is exactly what Burckhardt does. Burckhardt, in addition, has a system of spraying steam into the smoke flue, but that has nothing to do with the preheating of the air."

The difficulty with this statement is that appellant's device is aimed entirely at so preheating the air as to produce the result which Burckhardt attains by the addition of spraying steam into the smoke flue. Again the object of each is attained by

an entirely different method; and again counsel overlooks the additional combustion chamber in appellant's device, which is absolutely essential in accomplishing the result which he seeks to obtain.

We search the Burckhardt patent in vain to find any disclosure or suggestion of a substitute for superheated steam, or any claim that his invention would be operative with the superheated steam eliminated. On the contrary, we search appellants's specification and claims in vain in our effort to find any suggestion or disclosure whereby his invention would be operative with the addition of superheated steam. By the extra combustion chamber he does disclose a means by which the superheated steam may be eliminated.

We are clearly of the opinion that the claims of the appellant should be allowed, and if amendment of the claims as suggested, be found necessary, such amendment, if pertinent to the original disclosure, should be permitted.

The decision of the Commissioner is reversed.

## Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

923,799, 935,612, C. W. Saalburg, Picture, filed Sept. 28, 1928, D. C., S. D. Ohio, W. Div., Doc. E 558, *Van Dyck Gravure Co.* v. *The Enquirer.*

935,612. (See 923,799.)

942,699. (See 1,019,406.)

1,001,887, J. A. Rathbone, Molding machine; 1,666,577, F. E. McCabe, same, filed July 16, 1928, D. C., E. D. Pa., Doc. 4451, *The Rathbone Machine Co.* v. *The Tabor Mfg. Co.*

1,019,406, L. H. Backeland, Composite cardboard; 942,699, same, Resinous body and method of producing same, D. C., S. D. N. Y., Doc. E 39/289, *Bakelite Corp.* v. *Carboloid Products Corp.* Consent decree sustaining patents and adjudging infringement (notice dated Sept. 21, 1928).

1,041,585, S. Borton, Sewing machine, appeal filed Sept. 22, 1928, C. C. A., 2d Cir., *Wilcox & Gibbs Sewing Machine Co.* v. *Union Special Machine Co.*

1,048,819, C. Fayer, Alternating-current rectifier; 1,266,931, same, Polarity-indicating mechanism for X-ray apparatus; 1,409,439, same, X-ray machine; 1,371,404, R. H. Wappler, High-potential electric machine, D. C., S. D. N. Y., Doc. E 39/182, *Wappler Electric Co., Inc.*, v. *Bronx Hospital Co., Inc.* Suit discontinued as to 1,048,819, 1,266,931 and 1,409,439; continued as to 1,371,404 (notice dated Sept. 20, 1928).

1,056,498, C. C. Buckels, Outlet-box support, filed Sept. 24, 1928, D. C., N. D. Ohio, E. Div., Doc. 2671, *Roach-Appleton Mfg. Co.* v. *Hub-Way Mfg. Co.*

1,080,630, E. V. Hartford, Antivibration device for vehicles, D. C. Del., Doc. E 623, *E. V. Hartford, Inc.*, v. *Lincoln Products Co.* Consent decree holding patent valid and infringed Sept. 20, 1928.

1,114,299, L. Severus, Electric-light fixture, appeal filed Sept. 26, 1928, C. C. A., 2d Cir., Doc. 10172, *C. H. Jockmus* v. *E. Leviton et al.*

1,125,476, G. Claude, System of illuminating by luminescent tubes; 1,191,495, same, Method for separating neon from gases with which it is mixed, D. C., N. D. Calif. (San Francisco), Doc. 1809, *Electrical Products Corp.* v. *Standard Electric Sign Co.* Complaint dismissed as to Patent 1,191,495; Patent 1,125,476 held valid Sept. 19, 1928.

1,184,804, E. M. White, Splash trough; 1,224,694, same, Lubricating system for internal-combustion engines; 1,238,233, same, Lubrication control for internal-combustion engines; 1,241,589, same, Interceptor for splash-lubrication crank cases; 1,256,754, same, Splash oiling system, filed Sept. 25, 1928, D. C., S. D. Calif. (Los Angeles), Doc. E O-44-J, *E. M. White* v. *The Studebaker Corp. et al.*

1,191,495. (See 1,125,476.)

1,212,840, F. J. Straub, Building block and method of making same, C. C. A., 3d Cir., Doc. 3776, *Crozier-Straub, Inc., et al.* v. *T. Graham et al.* Doc. 3777, *Crozier-Straub, Inc., et al.* v. *J. Melmond et al.* Doc. 3778, *Crozier-Straub, Inc., et al.* v. *E. G. Deemer.* Patent held valid and infringed Sept. 26, 1928, in each of the above cases.

1,214,168, Johnson & Benson, Edible container; Des. 67,018, J. Denaro, same, filed Sept. 27, 1928, D. C., E. D. Pa., Doc. 4581, *American Pastry Products Corp.* v. *Philadelphia Ice Cream Cone Machinery Co.*

1,224,694. (See 1,184,804.)

1,236,770, R. W. Scott, Striping attachment for knitting machine, filed July 25, 1928, D. C., E. D. Pa., Doc. 4575, *Scott & Williams, Inc.*, v. *Reading Automatic Machine Co. et al.*

1,238,233. (See 1,184,804.)

1,241,589. (See 1,184,804.)

1,256,754. (See 1,184,804.)

1,263,355, P. Artigue, Means for producing animated shadowgrafs, D. C., S. D. Calif. (Los Angeles), Doc. E K-54-M, *P. Artigue* v. *Fox Film Corp. et al.* Dismissed without prejudice July 16, 1928. Same, filed Sept. 25, 1928, D. C., S. D. Calif. (Los Angeles), Doc. O-43-M, *P. Artigue* v. *H. L. Jones.*

1,266,931. (See 1,048,819.)

1,307,733, A. V. Gullborg, Lubricating apparatus; 1,307,734, same, Lubricating means, D. C., N. D. Ohio, E. Div., Doc. 2377, *The Bassick Mfg. Co.* v. *The Wellach Bros. Co.* Patents held infringed (notice dated Sept. 27, 1928).

1,307,734. (See 1,307,733.)

1,307,734, A. V. Gullborg, Lubricating means; 1,401,765, E. W. Davis, Lubricating systems; Re. 14,667, F. D. Winkley, same; 1,459,662, C. W. Mansell, same, D. C., N. D. Ohio, E. Div., Doc. 1275, *The Bassick Mfg. Co.* v. *Peerless Automatic Machine Co.* Claim 12 of Re. 14,667, and claims 1, 2, 4, 7, 8 and 15 of 1,307,734 held valid and infringed, claim 12 of 1,307,734 and claims 8 and 9 of 1,459,662 held invalid and claim 6 of Re. 14,667 held valid but not infringed (notice dated Sept. 29, 1928).

1,371,404. (See 1,048,819.)

1,391,750, R. C. Montgomery, Straw hat, D. C., S. D. N. Y., Doc. E 46/224, *Knox Hat Co., Inc.*, v. *Wallkill Hat Works, Inc.* Consent decree sustaining patent and adjudging infringement (notice dated Sept. 21, 1928).

1,395,362, 1,576,225, 1,576,226, 1,622,846, C. F. Rubeam, Vehicle wheel, filed Sept. 27, 1928, D. C., E. D. Mich., S. Div., Doc. 2907, *Rubeam Corp. et al.* v. *General Motors Corp. et al.*

1,401,765. (See 1,307,734.)

1,408,106, H. McCabe, Flanging machine, D. C., S. D. Calif. (Los Angeles), Doc. J-98-M, *H. McCabe* v. *G. Darby (Darby Boiler Works) et al.* Dismissed for want of prosecution July 16, 1928.

1,409,439. (See 1,048,819.)

1,418,162. (See Des. 48,248.)

1,432,259. (See Re. 15,129.)

1,434,998. (See Des. 48,248.)

1,447,001, F. J. Winchell, Shank reenforce, D. C. Mass., Doc. E 2544, *J. L. Shevenell et al.* v. *G. J. Kelly, Inc.* Dismissed July 27, 1927.

1,447,090, J. E. Langsdorf, Necktie, filed Sept. 27, 1928, D. C., S. D. N. Y., Doc. E 46/362, *Frano-Strohmenger & Cowan, Inc.*, v. *W. Kornberg et al.*

1,456,528, H. D. Arnold, Electric discharge device; 1,459,412, A. McNicolson, Thermionic translating device; Re. 15,278, I. Langmuir, Electron-discharge apparatus, D. C., S. D. N. Y., Doc. E 44/332, *Radio Corp. of America et al.* v. *Tectron Radio Corp.* Patents held valid and infringed Sept. 21, 1928.

1,459,412. (See 1,456,528.)

1,459,662. (See 1,307,734.)

1,463,589. (See Des. 48,248.)

1,474,003, H. R. Ricardi, Internal-combustion engine, filed Sept. 24, 1928, D. C., S. D. N. Y., Doc. E 46/352, *Waukesha Motor Co.* v. *Mack Trucks, Inc., et al.*

1,487,189, 1,534,621, L. J. Wahl, Clipper, filed Sept. 24, 1928, D. C., E. D. Wis. (Milwaukee), Doc. 2405, *L. J. Wahl* v. *Allover Mfg. Co.*

1,508,757, F. I. Alexander, Device for torpedoing wells, filed Sept. 18, 1928, D. C., S. D. Calif. (Los Angeles), Doc. E O-41-J, *The F. Alexander Corp.* v. *M. A. Pryor (Pryor Well Shooting Co.).*

1,509,418, A. E. Cofrin, Method of making crepe paper, D. C., E. D. Wis. (Milwaukee), Doc. 2015, *Fort Howard Paper Co.* v. *Hoberg Paper & Fibre Co.* Consent decree for plaintiff Sept. 26, 1928.

1,523,964, H. Horig, Signaling apparatus; 1,602,114, Kazenmaier & Haehnle, Signaling instrument of power vehicles; 1,603,073, Delmer & Durst, Electromagnetic sounding device, D. C., S. D. Ind. (Indianapolis), Doc. 1045, *General Motors Corp. et al.* v. *The Gibson Co.* Plaintiff dismisses suit without prejudice as to 1,603,073 Sept. 25, 1928.

1,527,395, 1,527,396, 1,589,718, A. E. Ridderstrom, Folding machine and method, appeal filed Sept. 24, 1928, C. C. A., 1st Cir., Doc. 2289, *Beacon Folding Machine Co.* v. *Rotary Machine Co. et al.*

1,527,396. (See 1,527,395.)

1,527,509, 1,562,878, N. T. Ewer, Foam stabiliser; 1,591,401, W. Palmer, Method of and apparatus for extinguishing fires, filed July 16, 1928, D. C., E. D. Pa., Doc. 4553, *Amdyco Corp.* v. *E. M. Urquhart et al.*

1,534,621. (See 1,487,189.)

1,547,623, E. L. Smalley, Electric furnace, filed Sept. 18, 1928, D. C. Del., Doc. E 694, *Heat Duty Electric Co.* v. *Ryan, Bosley & Co.*

1,547,853, E. A. Wheeler, Road planer and grader, D. C., S. D. Calif. (Los Angeles), Doc. E J-45-M, *E. A. Wheeler* v. *O. Davis et al.* Dismissed July 17, 1928.

1,562,878. (See 1,527,509.)

1,576,225. (See 1,395,362.)

1,576,226. (See 1,395,362.)

1,589,718. (See 1,527,395.)

1,591,401. (See 1,527,509.)

1,593,302, E. B. Hiatt, Basket liner; 1,603,693, same, Ring packing lid, D. C., S. D. N. Y., Doc. E 40/18, *Carpenter-Hiatt Sales Co.* v. *F. A. Read, Inc.* Patent 1,593,302 held valid and infringed, bill dismissed as to 1,603,693, Sept. 28, 1928.

1,602,114. (See 1,523,964.)

1,603,073. (See 1,523,964.)

1,603,207, T. Huston, Paper bag and seal, filed Sept. 25, 1928, D. C., N. D. Tex. (Fort Worth), Doc. E 555, *T. Huston Peanut Co.* v. *E. T. Keel.*

1,603,693. (See 1,593,302.)

1,607,086, H. B. Kinnear, Alloy steel and method of producing same, filed Aug. 20, 1928, D. C., E. D. Pa., Doc. 4595, *The Marion Steam Shovel Co.* v. *Birdsboro Steel Foundry & Machine Co.*

1,611,466, Lewis & Murray, Steaming tube for hair waving, appeal filed Sept. 25, 1928, C. C. A., 8th Cir. (St. Louis), Doc. 8345, *The S. Le Mur Co.* v. *W. G. Shelton Co.*

1,622,846. (See 1,395,362.)

1,622,994, H. Culp, Steamboat construction, filed Sept. 26, 1928, D. C., N. D. Ohio, E. Div., Doc. 2622, *H. Culp* v. *The Marquette & Bessemer Dock & Navigation Co. et al.*

1,634,790, Minaeff & Sachs, Art of mothproofing; 1,634,794, same, Mothproofed article; 1,634,791, M. G. Minaeff, Mothproofing composition, filed July 24, 1928, D. C., E. D. Pa., Doc. 4578, *The Larvex Corp.* v. *Tinolen Co. of America, Inc., et al.*

1,634,791. (See 1,634,790.)

1,634,794. (See 1,634,790.)

1,640,262, A. Migliaccio, Electrical flag, filed Sept. 22, 1928, D. C., S. D. N. Y., Doc. E 46/342, *A. Migliaccio* v. *Societa San Gennaro et al.*

1,647,046, W. G. Kendall, Vanity case and ejector therefor, filed Sept. 22, 1928, D. C., S. D. N. Y., Doc. E 46/341, *W. G. Kendall* v. *H. Rubinstein.*

1,649,310, E. A. Joline, Flexible shaft; 1,671,951, R. C. Angell, Strand twisting and coiling mechanism, filed Sept. 18, 1928, D. C. Del., Doc. E 693, *The S. S. White Dental Mfg. Co.* v. *General Motors Corp.*

1,651,193, A. R. Chisholm, Vanity case, filed Sept. 28, 1928, D. C., S. D. N. Y., Doc. E 46/363, *A. R. Chisholm* v. *C. W. McCutchen & Co., Inc.*

1,666,577. (See 1,001,887.)

1,668,490, C. S. Caesar, Heating apparatus for automotive vehicles, filed Aug. 23, 1928, D. C. Minn., 4th Div., Doc. E 1037, *Tropic-Aire, Inc.*, v. *F. H. Jumper et al.*

1,671,951. (See 1,649,310.)

1,673,727, Des. 74,248, L. V. Aronson, Cigar lighter, filed Aug. 24, 1928, D. C., E. D. Pa., Doc. 4601, *Art Metal Works, Inc.*, v. *C. F. Rumpp & Sons, Inc.*

1,684,801, L. A. Nemcovsky, Typewriting machine, filed Sept. 21, 1928, D. C., S. D. N. Y., Doc. E 46/340, *Sun Typewriter Co.* v. *L. C. Smith et al.*

Re. 14,667. (See 1,307,734.)

Re. 15,129, 1,432,259, J. J. Richards, Reserve provider for fuel tanks, filed Oct. 2, 1928, D. C., S. D. N. Y., Doc. E 46/393, *T. A. Kelly* v. *Pierce-Arrow Sales Corp.*

Re. 15,278. (See 1,456,528.)

Des. 48,248, W. E. Hosch, Housing for measuring and computing machines; 1,434,998, same, Cloth measuring and computing machine; 1,463,589, J. T. Pedersen, Process of adjusting measuring machines; 1,418,162, same, Fabric-measuring chart and roller therefor, C. C. A., 8th Cir. (St. Louis), Doc. 7986, *Grand Rapids Show Case Co.* v. *Measure-graph Co.* Reversed Sept. 14, 1928.

Des. 67,018. (See 1,214,168.)

Des. 71,767, F. Schmidt, Goblets or the like, D. C., S. D. N. Y., Doc. E 46/80, *F. C. Reimer Co., Inc.*, v. *J. Hirsch et al (Hirsch-Malgood Co.).* Consent order of discontinuance Sept. 25, 1928.

Des. 72,681, I. Rosenblatt, Chandelier, filed Sept. 20, 1928, D. C., S. D. N. Y., Doc. E 46/328, *Globe Lighting Fixture Mfg. Co.* v. *Apex Chandelier Co., Inc., et al.*

Des. 74,248. (See 1,673,727.)

Des. 74,452, J. B. Salterini, Lamp finial; Des. 74,628, same, Bridge lamp, filed Sept. 28, 1928, D. C., S. D. N. Y., Doc. E 46/375, *J. B. Salaterini* v. *The Wrought Iron Craftsmen Co., Inc.*

Des. 74,628. (See Des. 74,452.)

Des. 75,959, J. D. Gaudio, Chandelier; Des. 76,125, same, Lighting-fixture arm; Des. 76,126, same, Lighting-fixture brace, filed Sept. 20, 1928, D. C., S. D. N. Y., Doc. E 46/327, *Modern Lighting Fixture Co., Inc.*, v. *Keystone Mfg. Corp.*

Des. 76,125. (See Des. 75,959.)

Des. 76,126. (See Des. 75,959.)

## Adjudicated Patents.

(D. C. Del.) Gibson patent, No. 1,166,758, for balancing heat input and output in automatic furnace regulation, claims 1 and 2 *Held* not infringed. *Gibson v. Smoot Engineering Corporation*, 28 F. (2d) 123.

(D. C. Del.) Gibson patent, No. 1,167,343, relating to automatic regulation in steam furnaces, claims 4–10, 11, 14, 15 *Held* not infringed and claims 1, 12, 13, 16 *Held* valid and infringed. *Id.*

(D. C. Del.) Herr patent, No. 1,375,250, for automatic stoker control for steam furnaces, claims 3, 4, 6, 7, 8, 9 *Held* invalid or, if valid, not infringed. *Id.*

(C. C. A. Mo.) Hennefer patent, No. 1,447,982, for improvements in stock-marking devices, *Held* valid. *Jensen-Salsbery Laboratories v. Salt Lake Stamp Co.*, 28 F. (2d) 90.

(D. C. Del.) Gibson patent, No. 1,522,877, relating to means for regulating pressure in automatic furnace regulation, claims 9–14, 16–19 *Held* valid and infringed. *Gibson v. Smoot Engineering Corporation*, 28 F. (2d) 123.

(D. C. Del.) Gibson patent No. 1,537,044, relating to automatic regulation in steam furnaces, claims 23, 27, 30, 38, 53 *Held* not infringed and claims 19, 22, 52, 56, 59 *Held* infringed. *Id.*

(D. C. Del.) Gibson patent, No. 1,582,648, concerning means for regulating pressure in automatic furnace regulation, claims 10–16 *Held* valid and infringed. *Id.*

## Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,452,214, F. H. Nicholson, Railway traffic controlling apparatus, decided October 1, 1928, claims 1, 2, 3, 4, 7, 8, 10, 12, 19, 24, 26, and 27.

Pat. 1,555,059, E. Jacobsen, Automatic telephone system, decided October 6, 1928, claim 3.

Pat. 1,625,593, L. H. Cross, Tire cover, decided October 6, 1928, claim 1.

Pat. 1,663,518, J. Ledwinka, Pressed-metal vehicle door, decided October 1, 1928, claim 9.

Pat. 1,663,521, J. Ledwinka, Pressed-metal vehicle door, decided October 1, 1928, claims 1 and 3.

A final decision in interference has been rendered against the following trade-mark:

T. M. 189,190, Bread, Union Baking Company, Incorporated, Vancouver, Wash. Registered September 16, 1924. Decided September 25, 1928.

## Disclaimers.

1,441,672.—*James R. Ellis*, Chevy Chase, D. C. REFRIGERATED CONTAINER. Patent dated January 9, 1923. Disclaimer filed October 28, 1928, by the assignee, *The Liquid Carbonic Corporation.*

Hereby disclaims the combination of elements recited in claim 1 of said Letters Patent except when used for the storing of ice cream, or the like, in the "can" and the dispensing of the same therefrom, to effect the maintaining of the ice cream in frozen condition and of more nearly uniform hardness throughout the body thereof than in the case of those refrigerating structures wherein the refrigerant surrounds the bottom of the can; and further disclaims the combinations of elements recited in claims 1, 7, 8, 9 and 10 except in a structure wherein the bottom of the refrigerant container is positioned a substantial distance above the bottom of the can and when the "refrigerant" used is, as described in the specification, of a character commonly used for the preservation of ice cream and of a temperature below that at which the mixed ingredients comprising ice cream, or the like, congeal.

1,504,693.—*Harvey B. Lindsay*, Oakland, Calif. REFRIGERATOR. Patent dated August 12, 1924. Disclaimer filed October 29, 1928, by the assignee, *Dry Zero Corporation.*

Hereby disclaims any combinations of the elements recited in the claims of said Letters Patent, except when combined with a can of the type illustrated such as is commonly employed for containing ice cream, or the like, said can being located within the "receptacle" and extending below the level of the "tank," and except when combined with a refrigerant (recited in certain of the claims as a cooling medium) located in the "tank" and, as described in the specification, of a character commonly used for the preservation of ice cream and of a temperature below that at which the mixed ingredients comprising ice cream, or the like, congeal.

## Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Oct. 19, 1928.*

*United States Compound Company, its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of United States Compound Company, of 1436 Seneca St., Buffalo, N. Y., No. 89,162, dated November 12, 1912, and the notice of such proceeding sent by registered mail to the said United States Compound Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said United States Compound Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 19, 1928.*

*Murray Wire Co., its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of Murray Wire Co., of Newark, N. J., No. 94,658, dated December 23, 1913, and the notice of such proceeding sent by registered mail to the said Murray Wire Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless the said Murray Wire Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

U. S. PATENT OFFICE, *Washington, Oct. 16, 1928.*

*The Cafico Chemical Company Inc., its assigns or legal representatives take notice:*

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of The Cafico Chemical Company Inc., of 154 Pearl Street, Pittsburgh, Pa., No. 158,911, dated September 19, 1922, and the notice of such proceeding sent by registered mail to the said The Cafico Chemical Company Inc. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Cafico Chemical Company Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
*First Assistant Commissioner.*

# TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 13, 1928.

[VOL. 376. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

**BOYEMACO**

For Golf Clubs.
Claims use since July 5, 1928.

Ser. No. 270,350. PLAYGOLF, INC., Cleveland, Ohio. Filed July 30, 1928.

Playgolf Junior

For Parlor or Indoor Golf Games.
Claims use since Sept. 1, 1927.

Ser. No. 272,031. HUNT, HELM, FERRIS & CO., Harvard, Ill. Filed Sept. 7, 1928.

Airplane

The word "Airplane" is disclaimed apart from the mark shown on the drawing.
For Airplane Swings for Children.
Claims use since Nov. 1, 1927.

Ser. No. 272,990. CARVEL H. LANGE, New York, N. Y. Filed Sept. 26, 1928.

**ROULETTE GOLF**

No claim is made to the word "Golf."
For Golf Game Consisting of a Suitably Subdivided Target Adapted to be Placed Upon the Floor or Ground.
Claims use since Sept. 18, 1928.

Ser. No. 273,235. HUSTLER TOY CORPORATION, Sterling, Ill. Filed Oct. 2, 1928.

**QUESTOR**

For Question and Answer Game.
Claims use since July 17, 1928.

## CLASS 23.

### Cutlery, Machinery, and Tools, and Parts Thereof.

Ser. No. 217,644. THE SPEEDAUMATIC COMPANY, Chicago, Ill. Filed July 20, 1925.

Speedaumat

For Printing Plates for Addressing and Similar Machinery, Embossing Machines, Addressing Machines, Mailing Machines, and Galley Trays.
Claims use since 1919.

Ser. No. 258,185. MASKIN- OCH BROBYGGNADS AKTIEBOLAGET, Helsingfors, Finland. Filed Nov. 29, 1927.

NEW PRIMA

For Dairy Machinery—viz, Cream Separators and Churns.
Claims use since Jan. 25, 1926.

Ser. No. 261,365. KINFOLKS INCORPORATED, Little Valley, N. Y. Filed Feb. 8, 1928.

SHAVRITE WITH SAFETY

No claim is made to the words "With Safety" apart from their showing in the drawing.
For Razors and Hand Knives of Base Metal.
Claims use since Dec. 5, 1927.

Ser. No. 264,242. R. H. MACY & CO., INC., New York, N. Y. Filed Apr. 3, 1928.

Supre-Macy

For Lawn Mowers.
Claims use since Mar. 1, 1927.

Ser. No. 264,424. CONVEYOR SALES COMPANY, INC., New York, N. Y. Filed Apr. 6, 1928.

OSCO

For Reciprocating Conveyors, Conveyor Drives, Troughs, Loading and Discharging Attachments, Rollers, and Cradles.
Claims use since Jan. 14, 1928.

Ser. No. 264,623. WHISK RAZOR CORPORATION, Buffalo, N. Y. Filed Apr. 9, 1928.

The WHISKETEER Electric Safety Razor

No claim is made to the use of the words "Electric Safety Razor" nor to the representation of the goods except in combination with the mark as shown.
For Electric Razors and Razor Blades.
Claims use since Mar. 31, 1928.

Ser. No. 268,688. W. T. GRANT COMPANY, doing business as Crucible Knife Co., Lynn, Mass., and New York, N. Y. Filed June 26, 1928.

CRUCIBLE KNIFE CO.

For Pen Knives.
Claims use since November, 1926.

Ser. No. 269,643. DRIVER-HARRIS COMPANY, Harrison, N. J. Filed July 16, 1928.

**PREMIER**

For Diamond Dies and Composition Wire Dies.
Claims use since May 31, 1928.

Ser. No. 271,367. CYRIL L. TITTEMORE, doing business as C. L. Tittemore Company, San Francisco, Calif. Filed Aug. 21, 1928.

**AIRMODE**

For Spraying Equipment for Applying Liquid Veneer and Paint.
Claims use since Feb. 5, 1928.

Ser. No. 271,527. YATES-AMERICAN MACHINE COMPANY, Beloit, Wis. Filed Aug. 24, 1928.

TRIPLE C KNIVES

The word "Knives" is disclaimed apart from the mark as shown.
For Knives for Woodworking Machines.
Claims use since Aug. 16, 1928.

Ser. No. 271,626. RUD. SACK, Leipzig, Germany. Filed Aug. 27, 1928.

RSP

For Agricultural Implements—Namely, Plows, Harrows, Rollers, Sowing Machines of All Kinds, Hoeing and Heaping Implements, and Potato-Picking Plows.
Claims use since 1888.

Ser. No. 272,437. SKELTON SHOVEL CO., INC., Dunkirk, N. Y. Filed Sept. 14, 1928.

FLEXTEEL

For Shovels and Spades.
Claims use since Dec. 1, 1927.

Ser. No. 272,637. AMERICAN CAR AND FOUNDRY MOTORS COMPANY, New York, N. Y. Filed Sept. 19, 1928.

acf

For Internal-Combustion Engines.
Claims use since January, 1927.

Ser. No. 272,885. JOHN HANLEY, Detroit, Mich. Filed Sept. 24, 1928.

WHIRLGAS

For Fuel Mixers.
Claims use since Sept. 17, 1928.

Ser. No. 273,161. FRANK PROKOP, Milwaukee, Wis. Filed Sept. 29, 1928.

For Wrenches.
Claims use since Sept. 15, 1927.

Ser. No. 273,223. J. HENRY C. BOIG, Muskogee, Okla. Filed Oct. 2, 1928.

For Blade Holder for Use in Stropping Safety-Razor Blades.
Claims use since May 1, 1927.

## CLASS 24.

### Laundry Appliances and Machines.

Ser. No. 255,277. THE TEXAS LAUNDRY MACHINERY COMPANY, INC., San Antonio, Tex. Filed Sept. 26, 1927. Under 10-year proviso.

MANDRY

For Laundry Washing Machines.
Claims use since 1873.

Ser. No. 255,278. THE TEXAS LAUNDRY MACHINERY COMPANY, INC., San Antonio, Tex. Filed Sept. 26, 1927.

TEX-LA-MA CO.

For Laundry Washing Machines.
Claims use since Jan. 1, 1924.

## CLASS 25.

### Locks and Safes.

Ser. No. 272,276. IN-A-WALL SAFE COMPANY, INC., Los Angeles, Calif. Filed Sept. 12, 1928.

The representation of the "Safe" is disclaimed apart from the mark as shown.
For Safes.
Claims use since Apr. 28, 1928.

## CLASS 26.

### Measuring and Scientific Appliances.

Ser. No. 260,891. KALLE & CO. AKTIENGESELLSCHAFT, Wiesbaden-Biebrich, Germany. Filed Jan. 30, 1928.

Ozalid

For Light-Sensitive Copying and Photographic Papers.
Claims use since Mar. 19, 1923.

## CLASS 27.

### Horological Instruments.

Ser. No. 267,378. L. MONNIER & CIE., La Chaux-De-Fonds, Switzerland. Filed June 2, 1928.

Monyco

For Watches and Watch Materials—Namely, Dials, Hands, and Other Parts of Watches.
Claims use since 1919.

Ser. No. 271,564. PARK WATCH IMPORT CO., INC., Buffalo, N. Y. Filed Aug. 25, 1928.

IVY

For Watches.
Claims use since July 15, 1928.

## CLASS 29.

### Brooms, Brushes, and Dusters.

Ser. No. 270,768. NIEL HANDEST, doing business as Handest Specialty Co., New York, N. Y. Filed Aug. 8, 1928.

The words "Hand-I-Est Products" are disclaimed apart from the other features of the mark shown.
For Ready-Cut Cleaning, Dusting, and Polishing Cloths, Not Especially Treated, and Shoe Polishers.
Claims use since Sept. 12, 1922.

Ser. No. 272,260. DELCO-REMY CORPORATION, Anderson, Ind., and Dayton, Ohio. Filed Sept. 12, 1928.

Delco-Remy

No claim is made to the exclusive use of the surname "Remy" separate and apart from the mark in its entirety as it appears in drawing.
For Windshield Wipers.
Claims use since June 9, 1928.

## CLASS 31.

### Filters and Refrigerators.

Ser. No. 272,350. RHINELANDER REFRIGERATOR CO., Rhinelander, Wis. Filed Sept. 18, 1928.

For Refrigerators.
Claims use since July 24, 1928.

Ser. No. 272,352. RHINELANDER REFRIGERATOR CO., Rhinelander, Wis. Filed Sept. 13, 1928.

No claim is made to the word "Coldayr" apart from the mark shown in the drawing.
For Refrigerators.
Claims use since July 24, 1928.

## CLASS 32.

### Furniture and Upholstery.

Ser. No. 271,448. MCLEOD FURNITURE COMPANY, Laurel, Miss. Filed Aug. 28, 1928.

Laurite

For Tables, Library Desks, Home Desks, Office Desks, Office Chairs, and Home Chairs.
Claims use since May 30, 1928.

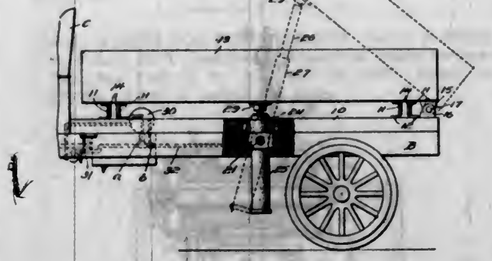
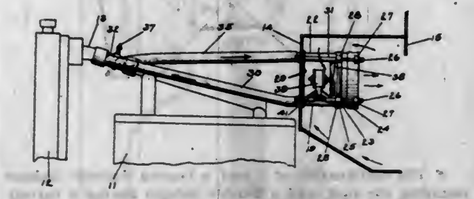
# REISSUES



## NOVEMBER 13, 1928.

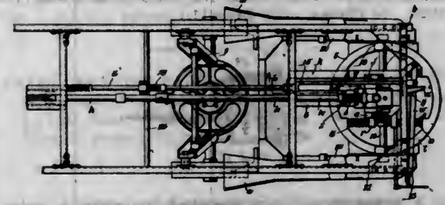
17,129. MARCEL HAIR WAVER. ELNORA E. BALDWIN, Denver, Colo. Filed Apr. 30, 1928. Serial No. 274,082. Original No. 1,627,590, dated May 10, 1927, Serial No. 108,901, filed May 13, 1926. 8 Claims. (Cl. 132—40.)

1. A hair waver comprising a body member having a plurality of arms en masse extending outwardly on opposite sides thereof and spaced apart, the arms intermediate the extremities of the device being each provided with a plurality of distinct relatively small perforations formed in the masse material of the arms to facilitate the drying of the hair when the device is applied.



17,130. TILTING MECHANISM FOR DUMPING BODIES. GEORGE W. BERRY, deceased, Kane, Pa., by The U. S. Hoist & Body Company, assignee, Youngstown, Ohio. Filed Feb. 10, 1928. Serial No. 253,493. Original No. 1,392,107, dated Sept. 27, 1921, Serial No. 371,045, filed Apr. 3, 1920. 13 Claims. (Cl. 298—22.)

1. The combination with a supporting frame, of a tilting body, changeable connections between the frame and body for selective side or end tilting of the latter, jacks disposed intermediate the ends of said frame and spaced apart and removed from and at opposite sides of the longitudinal center of the frame, a swivel connection between each of the jacks and the body, and supports for the jacks to permit lateral and longitudinal swinging movements thereof.

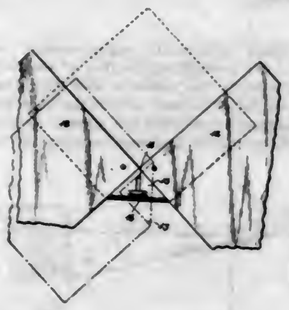


17,131. HEATING APPARATUS FOR AUTOMOTIVE VEHICLES. ORVILLE S. CAESAR, Chicago, Ill., assignor to Tropic-Aire, Incorporated, Minneapolis, Minn., a Corporation of Delaware. Filed Aug. 23, 1928. Serial No. 301,665. Original No. 1,668,490, dated May 1, 1928, Serial No. 166,544, filed Feb. 7, 1927. 13 Claims. (Cl. 237—12.3.)

1. A hot-liquid heating system for motor-driven vehicles comprising an engine circulating-liquid cooling system including an engine cooling-medium jacket and radiator, a valve positioned between the engine cooling-medium jacket and radiator for controlling the flow of the cooling-medium from the jacket to the radiator and its return, a liquid-heated air-heater positioned within the body of the vehicle and in communication with the engine circulating liquid-cooling system, means disposed between the liquid-heated

air-heater and an engine-containing chamber to prevent passage of noxious gases and fumes from the engine-containing chamber into the space containing the liquid-heated air-heater, and a fan within the space containing the liquid-heated air-heater for circulating heated air within the vehicle body.

17,132. SEMITRAILER. CHARLES H. LAND, Jr., Detroit, Mich., assignor to Fruehauf Trailer Company, Detroit, Mich., a Corporation of Michigan. Filed July 21, 1926. Serial No. 124,080. Original No. 1,568,560, dated Jan. 5, 1926, Serial No. 691,342, filed Feb. 8, 1924. 65 Claims. (Cl. 280—33.1.)



1. In a truck and a semi-trailer, the combination of a truck provided with inclined tracks at the back, a semi-trailer frame, rollers supported on the trailer frame adapted to run up the tracks, lock bars on the truck having rollers at the ends, and U brackets depending from the trailer frame arranged to engage the rollers on the ends of the locking bars to slightly raise the trailer with respect to the truck when the truck backs clear into the trailer for the purpose of causing the rollers to clear the track.

34. In a truck and a semi-trailer, the combination of a truck, a trailer, a coupling member provided with two parts which have relative movement and which are connected one to the truck and one to the trailer, an override brake in the trailer arranged to engage against the coupling part attached to the truck when the trailer tends to override the truck whereby the coupling parts separate and apply the brakes.

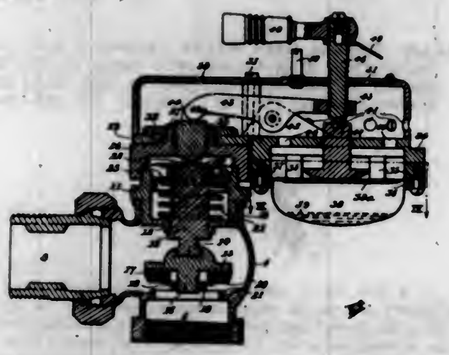
53. A combined vehicle of the character described comprising, in combination, a tractor, a trailer, a carriage mounted on the trailer to move back and forth during coupling and uncoupling respectively, and coupling means means on said carriage operable automatically during coupling and uncoupling respectively to connect and disconnect said tractor and said carriage.

17,133. SHINGLE LOCK. FELIX E. LIETZ, Buffalo, N. Y., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1927. Serial No. 228,087. Original No. 1,583,254, dated May 4, 1926, Serial No. 76,166, filed Dec. 18, 1925. 2 Claims. (Cl. 108—33.)

2. The combination of a roof, a headed fastener element engaging the roof, and a flexible shingle having a turned-under lower corner provided with a slot interlocking with said fastener when the shingle is in a predetermined position and is moved inwardly relative to the roof, said slot provided by the lower corner of the shingle and fastener being adapted to be brought into interlocking engagement upon a turning movement of the shingle relative to the fastener, the body of the shingle overlying and concealing the fastener and slot.

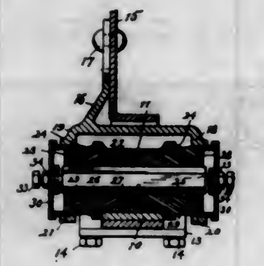
---

17,134. SOCKET FOR CURTAIN FASTENERS. JOHN VODICKA, deceased, Chicago, Ill., by Cinch Manufacturing Corporation, assignee, Chicago, Ill. Filed Dec. 22, 1927. Serial No. 241,985. Original No. 1,567,348, dated Dec. 29, 1925, Serial No. 686,586, filed Jan. 16, 1924. 14 Claims. (Cl. 24—211.)



5. A socket of the class described comprising a casing or cup having a flange at one end, a stud-receiving aperture at the same end as the flange, an attaching screw having a head and a shank and means securing said screw head to the other end of the cup.

---



17,135. AUTOMATIC HEAT-CONTROLLING REGULATOR. JAMES J. LAWLER, Mount Vernon, N. Y., assignor to Direct-Control Valve Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1927. Serial No. 222,394. Original No. 1,555,592, dated Sept. 29, 1925, Serial No. 747,264, filed Nov. 1, 1924. 9 Claims. (Cl. 236—42.)

1. In a device of the type described, a valve casing, a cage mounted in said casing, a reciprocating valve carried by the cage, a spring in the cage for opening the valve, a cap mounted on the cage, a tubular stem carried by the cap in axial alignment with the valve, an actuator freely mounted in the bore of said stem, a laterally projecting housing connected to said stem for angular adjustment in respect to the casing, an expansion chamber depending from the housing, a centrally pivoted lever mounted in the housing and engaging the actuator at one end, and adjustable means connecting the expansion chamber and the remaining end of the lever for varying the distance said valve may open and for causing expansion of the chamber to operate said lever for closing said valve.

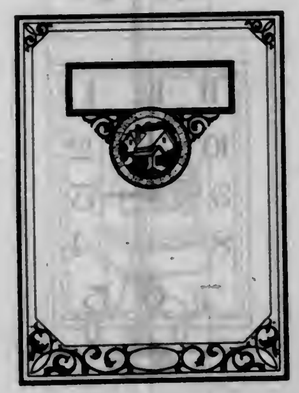
---

17,136. PIVOTAL CONNECTION. HOWARD C. HARRIS, Akron, Ohio. Filed Sept. 4, 1928. Serial No. 305,120. Original No. 1,624,239, dated Apr. 12, 1927, Serial No. No. 102,435, filed Apr. 16, 1926. 14 Claims. (Cl. 267—54.)

1. In pivotal connections, the combination of a bracket having spaced arms provided with aligned bores, a member which is arranged between said arms and has a bore that is coaxial with the bores in said arms, a pintle extending through said bores, a rubber bushing between said pintle and said member and through which the member and pintle are connected, axially movable members fitting the bores in said arms and non-rotatably connected with said pintle, and means whereby said axially movable members are moved to compress said rubber bushing axially and non-rotatably secured to said arms.

# DESIGNS

## NOVEMBER 13, 1928.



76,846. GLOBE FOR LIGHTING FIXTURES. HARRY RAY ARTHUR, St. Louis, Mo., assignor to The Edwin F. Guth Company, St. Louis, Mo., a Corporation of Missouri. Filed July 28, 1926. Serial No. 18,504. Term of patent 14 years.

The ornamental design for a textile fabric as shown.

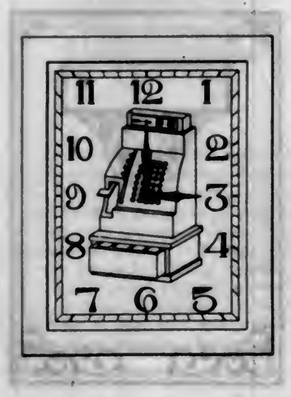
76,851. CAMPAIGN BUTTON OR THE LIKE. SAMUEL S. BLOOM, New York, N. Y. Filed Aug. 7, 1928. Serial No. 27,735. Term of patent 3½ years.

The ornamental design for a campaign button or the like as shown.

76,852. GOBLET. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Aug. 17, 1928. Serial No. 27,870. Term of patent 14 years.



The ornamental design for a goblet, as shown.

76,853. CONTAINER FOR A VACUUM FLASK OR THE LIKE. JOSEPH COHEN, Taunton, Mass. Filed Feb. 9, 1928. Serial No. 25,333. Term of patent 7 years.

The ornamental design for a container for a vacuum flask or the like, as shown.

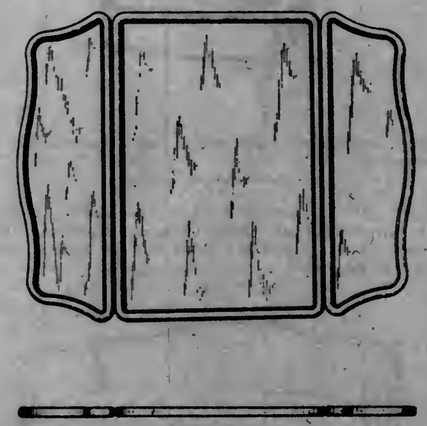
76,854. WATCH DIAL. HARRY I. CRAMER, Dayton, Ohio, assignor to The Sterling Jewelry Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 18, 1928. Serial No. 24,913. Term of patent 7 years.

The ornamental design for a watch dial, as shown.

76,855. HANDLE FOR SCREW DRIVER OR SIMILAR ARTICLE. GEORGE J. CROSSMAN, Jr., Newark, N. J., assignor to Compo-Site, Inc., Newark, N. J., a Corporation of New Jersey. Filed Aug. 27, 1927. Serial No. 23,225. Term of patent 14 years.

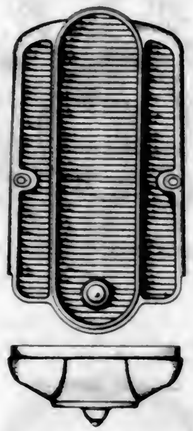
The ornamental design for a handle for screw driver or similar article, as shown.

76,856. DISPLAY STAND. CARMELO T. D'ANGELO, Buffalo, N. Y. Filed May 31, 1927. Serial No. 22,247. Term of patent 3½ years.



The ornamental design for a display stand as shown.

76,857. BRACELET. DMITRI DUBASSOFF, Philadelphia, Pa. Filed Mar. 10, 1927. Serial No. 21,081. Term of patent 3½ years.



The ornamental design for a bracelet, as shown.

76,858. TABLE TOP OR ARTICLE OF SIMILAR NATURE. BRAINERD DYER, Hudson, Ohio, assignor to Vitreous Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 19, 1927. Serial No. 24,540. Term of patent 14 years.

The ornamental design for a table top or article of similar nature substantially as shown.

76,859. RADIATOR. HARLEY J. EARL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 18, 1928. Serial No. 27,884. Term of patent 14 years.

The ornamental design for a radiator as shown.

76,860. CHAIR. HAROLD P. FARIS, Chicago, Ill., assignor to Kroehler Manufacturing Company, Naperville, Ill., a Corporation of Illinois. Filed Feb. 18, 1928. Serial No. 25,482. Term of patent 3½ years.

The ornamental design for a chair, substantially as shown.

76,861. SOFA. HAROLD P. FARIS, Chicago, Ill., assignor to Kroehler Manufacturing Company, Naperville, Ill., a Corporation of Illinois. Filed Feb. 18, 1928. Serial No. 25,483. Term of patent 3½ years.

The ornamental design for a sofa, substantially as shown.

76,862. SOFA. HAROLD P. FARIS, Chicago, Ill., assignor to Kroehler Manufacturing Company, Naperville, Ill., a Corporation of Illinois. Filed Feb. 18, 1928. Serial No. 25,484. Term of patent 3½ years.

The ornamental design for a sofa, substantially as shown.

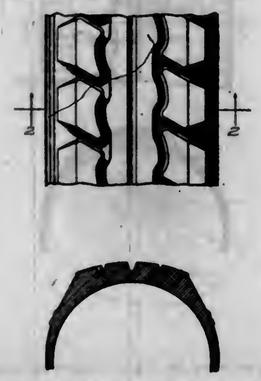
76,863. CHAIR. WILLIAM S. FERRIS, Elkhart, Ind. Filed Sept. 22, 1927. Serial No. 23,514. Term of patent 14 years.

The ornamental design for a chair substantially as shown.

76,864. SUPPORT FOR ELECTRIC PICK-UP. CARL F. GOUDY, Flushing, N. Y., assignor to Pacent Electric Co., Inc., New York, N. Y., a Corporation of New York. Filed July 11, 1928. Serial No. 27,462. Term of patent 3½ years.

The ornamental design for a support for electric pick-up, substantially as shown.

76,865. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. MITCHEL E. HADAD, Brooklyn, N. Y., assignor to Henry Hadad Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1928. Serial No. 25,925. Term of patent 3½ years.

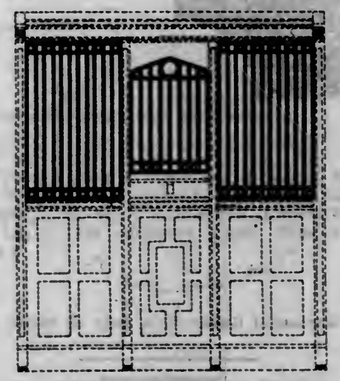


The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

76,866. LANTERN FRAME. HARRY R. HOLDEMAN, Los Angeles, Calif., assignor to J. M. Feldman Co. Inc., Los Angeles, Calif. Filed Feb. 20, 1928. Serial No. 25,493. Term of patent 3½ years.

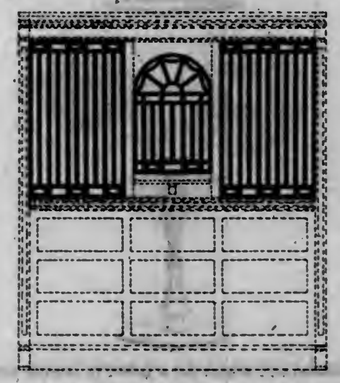
The ornamental design for a lantern frame as shown.

76,867. TIRE. SIGURD HOLM, West Allis, Wis., assignor to The Badger Rubber Works, a Corporation of Wisconsin. Filed Jan. 25, 1928. Serial No. 25,031. Term of patent 14 years.



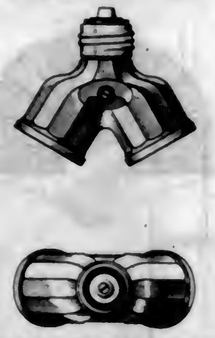
The ornamental design for a tire as shown.

76,868. SIGNAL PANEL FOR AUTOMOTIVE VEHICLE SIGNAL DEVICE. MONVILLE HOLMDAHL, Vallejo, Calif. Filed Jan. 17, 1928. Serial No. 24,907. Term of patent 14 years.



The ornamental design for signal panel for automotive vehicle signal device, as shown.

76,869. GRILLE. WILLIAM T. HORMES, Catonsville, Md. Filed Nov. 22, 1927. Serial No. 24,234. Term of patent 3½ years.



The ornamental design for a grille, as shown.

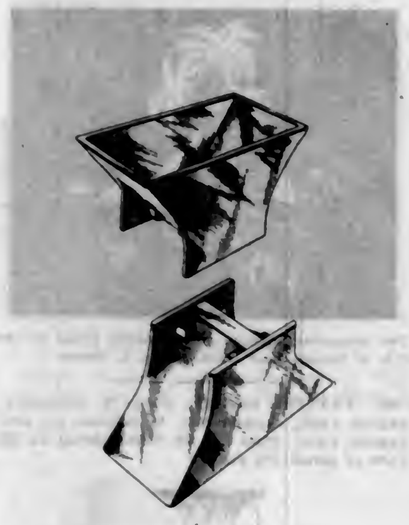
76,870. GRILLE. WILLIAM T. HORMES, Catonsville, Md. Filed Nov. 22, 1927. Serial No. 24,235. Term of patent 3½ years.

The ornamental design for a grille, as shown.

76,871. ELECTRICAL SOCKET. WILLIAM HUPPERT, New York, N. Y. Filed Apr. 28, 1927. Serial No. 21,781. Term of patent 7 years.

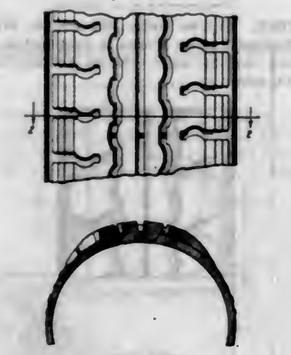
The ornamental design for an electrical socket, as shown.

76,872. DOILY. EDWARD KARFIOL, Brooklyn, N. Y. Filed Feb. 25, 1928. Serial No. 25,580. Term of patent 14 years.



The ornamental design for a doily as shown and described.

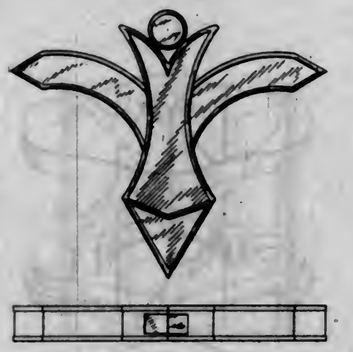
76,873. GOBLET OR SIMILAR ARTICLE. CHARLES R. KEIL, Tiffin, Ohio, assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 17, 1928. Serial No. 27,508. Term of patent 14 years.



The ornamental design for a goblet or similar article, as shown.

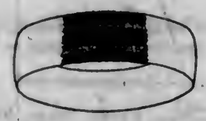
76,874. NAPKIN HOLDER. JAMES W. KING, Saugerties, N. Y., assignor to The Tissue Company, Saugerties, N. Y., a Corporation of New York. Filed Nov. 3, 1924, Serial No. 11,279. Term of patent 14 years.

The ornamental design for a napkin holder, as shown.



76,875. TIRE. JOHN H. KONAREK, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 15, 1927. Serial No. 24,490. Term of patent 14 years.

The ornamental design for a tire, as shown.

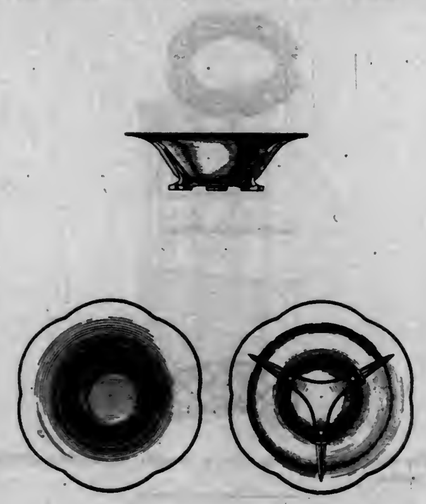


76,876. AUTOMOBILE SIGNAL. JOHN N. KORVALLIS, Los Angeles, Calif. Filed July 30, 1928. Serial No. 27,620. Term of patent 14 years.

The ornamental design for an automobile signal substantially as shown.

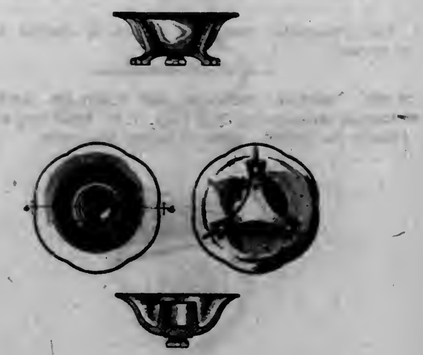
76,877. BRACELET OR SIMILAR ARTICLE. WILHELM KUEHNER, Providence, R. I. Filed May 19, 1928. Serial No. 26,757. Term of patent 7 years.

The ornamental design for a bracelet or similar article, as shown and described.



76,878. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Aug. 3, 1928. Serial No. 27,692. Term of patent 14 years.

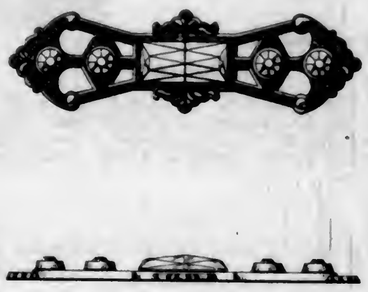
The ornamental design for a bowl, as shown.



76,879. BOWL. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Aug. 3, 1928. Serial No. 27,689. Term of patent 14 years.

The ornamental design for a bowl, as shown.

76,880. CANDLESTICK. WILLIAM H. MAGEE, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed Aug. 3, 1928. Serial No. 27,693. Term of patent 14 years.

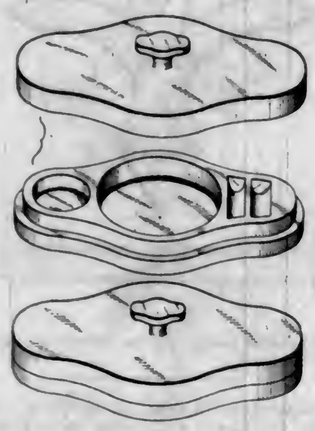


The ornamental design for a candlestick, as shown.

76,881. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed May 12, 1928. Serial No. 26,653. Term of patent 3½ years.

The ornamental design for a brooch, or similar article as shown.

76,882. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed June 29, 1928. Serial No. 27,319. Term of patent 3½ years.



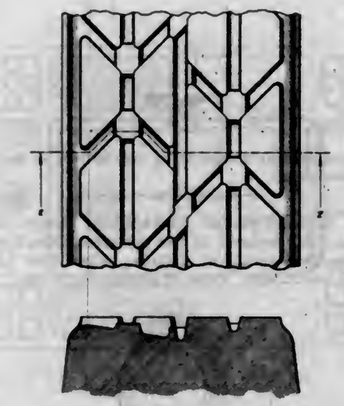
The ornamental design for brooch or similar article, as shown.

76,883. METAL BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed July 5, 1928. Serial No. 27,376. Term of patent 3½ years.

The ornamental design for a metal brooch or similar article, as shown.

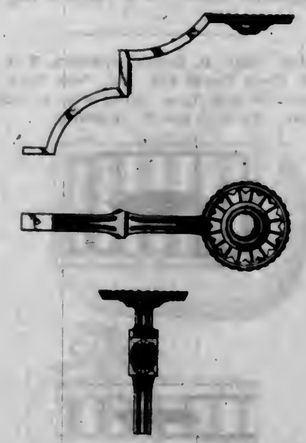
76,884. DRESSING-TABLE RECEPTACLE FOR COSMETICS OR THE LIKE. LAURA L. MILLHINO, New York, N. Y. Filed Feb. 8, 1927. Serial No. 20,593. Term of patent 14 years.

The ornamental design for a dressing-table receptacle for cosmetics or the like, substantially as shown and described.

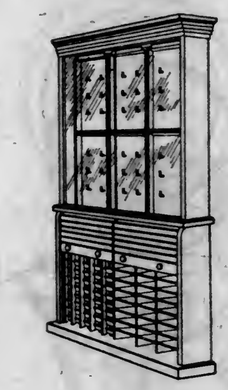


76,885. STOCKING. ERNST OSCAR NEBEL, Philadelphia, Pa., assignor to Oscar Nebel Co., Inc., Hatboro, Pa., a Corporation of Pennsylvania. Filed Dec. 20, 1926. Serial No. 20,096. Term of patent 7 years.

The ornamental design for a stocking substantially as shown.



76,886. TIRE. RALPH H. NESMITH, Grosse Pointe Park, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed July 2, 1928. Serial No. 27,354. Term of patent 14 years.

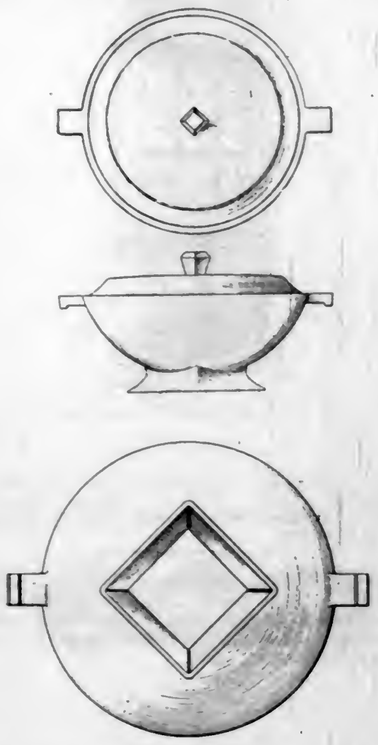


The ornamental design for a tire as shown.

76,887. ARM FOR LIGHTING FIXTURES. BARNET NEWLAND, New York, N. Y. Filed Aug. 17, 1928. Serial No. 27,859. Term of patent 7 years.

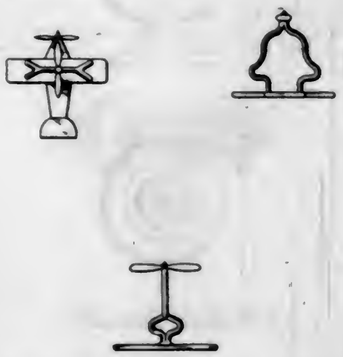
The ornamental design for an arm for lighting fixtures as shown.

76,888. DISPLAY CASE OR SIMILAR ARTICLE. JOSEPH J. NORVELLE, Pittsfield, Mass. Filed Nov. 8, 1927. Serial No. 23,997. Term of patent 14 years.



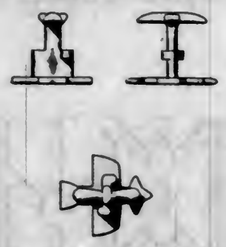
The ornamental design for a display case or similar article as shown.

76,889. SALT OR PEPPER SHAKER. ALFRED F. REILLY, Attleboro, Mass., assignor to Evans Case Company, North Attleboro, Mass., a Corporation of Massachusetts. Filed May 28, 1928. Serial No. 26,887. Term of patent 8½ years.



The ornamental design for a salt or pepper shaker, as shown.

76,890. COVERED DISH OR SIMILAR ARTICLE. EDWARD JOHN RIDGWAY, Hempstead, N. Y., assignor to Meakin & Ridgway, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 15, 1928. Serial No. 27,821. Term of patent 14 years.

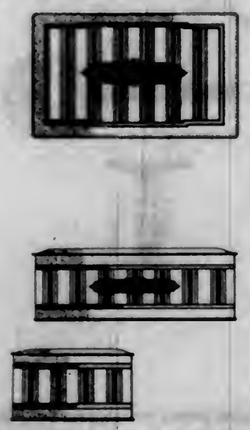


The ornamental design for a covered dish or similar article, as shown.

76,891. CUFF BUTTON OR THE LIKE. FREDERICK CARLYLE RILE, Chicago, Ill. Filed Apr. 13, 1928. Serial No. 26,315. Term of patent 14 years.

The ornamental design for a cuff button or the like, as shown.

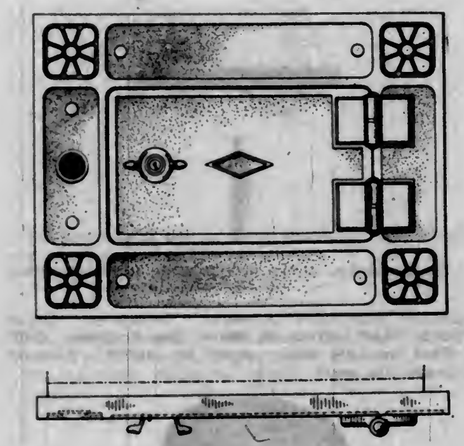
76,892. CUFF BUTTON OR THE LIKE. FREDERICK CARLYLE RILE, Chicago, Ill. Filed May 4, 1928. Serial No. 26,574. Term of patent 14 years.



The ornamental design for a cuff button or the like as shown.

76,893. RADIATOR-CAP ORNAMENT. FELIX RIVANOV, Chicago, Ill., assignor to The Anderson Company, Gary, Ind., a Corporation of Indiana. Filed Feb. 13, 1928. Serial No. 25,421. Term of patent 3½ years.

The ornamental design for a radiator cap ornament as shown.



76,894. BOX. EMIL H. RONAY, Brooklyn, N. Y., assignor to R. M. Haan Candy Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1928. Serial No. 25,194. Term of patent 14 years.

The ornamental design for a box substantially as shown and described.

76,895. NIGHT SAFE DEPOSITORY. HARRY J. ROBINSON, Boston, Mass., assignor to The Mosler Safe Company, Hamilton, Ohio, a Corporation of New York. Filed May 25, 1928. Serial No. 26,862. Term of patent 14 years.

The ornamental design for a night safe depository, as shown.

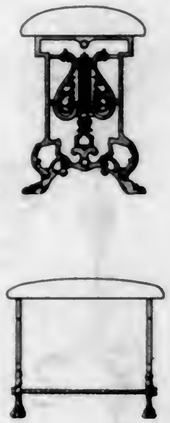
76,896. DRINK STAND. PETER E. RYERSON, Holtville, Calif. Filed Jan. 16, 1928. Serial No. 24,899. Term of patent 14 years.

The ornamental design for a drink stand, as shown.

76,897. TABORET. RICHARD RICHTARIK, Cleveland, Ohio, assignor to The Superior Foundry Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1928. Serial No. 27,059. Term of patent 7 years.

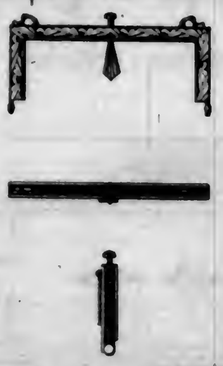
The ornamental design for a taboret as shown and described.

76,898. FLOWER STAND. JOHN B. SALTERINI, New York, N. Y. Filed Feb. 4, 1928. Serial No. 25,199. Term of patent 3½ years.



The ornamental design for a flower stand, as shown.

76,899. FLOWER STAND. JOHN B. SALTERINI, New York, N. Y. Filed Feb. 4, 1928. Serial No. 25,200. Term of patent 3½ years.



The ornamental design for a flower stand as shown.

76,900. BENCH. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 10, 1928. Serial No. 27,786. Term of patent 7 years.

The ornamental design for a bench, as shown.

76,901. HANDBAG FRAME. ABRAHAM SHERMAN, Brooklyn, N. Y. Filed Sept. 4, 1928. Serial No. 28,037. Term of patent 3½ years.

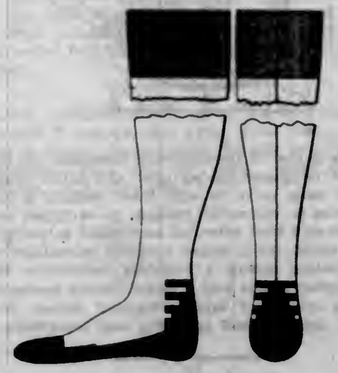
The ornamental design in a handbag frame as shown.

76,902. HAT. IRWIN B. SIMON, San Francisco, Calif. Filed Apr. 19, 1928. Serial No. 26,384. Term of patent 3½ years.

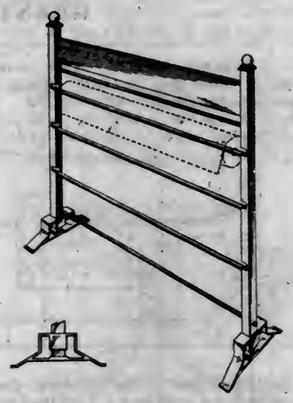
The ornamental design for a hat, as shown.

76,903. COMBINED VALVE HANDLE AND HOUSING. SHERMAN SMITH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,500. Term of patent 14 years.

The ornamental design for a combined valve handle and housing, substantially as shown.



76,904. COMBINED VALVE HANDLE AND HOUSING. SHERMAN SMITH, Pittsburgh, Pa., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Feb. 21, 1928. Serial No. 25,504. Term of patent 14 years.



The ornamental design for a combined valve handle and housing, substantially as shown.

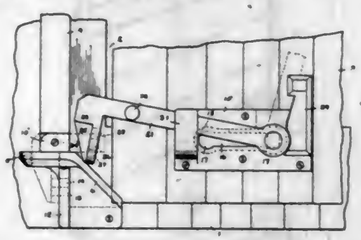
76,905. STOCKING. JAMES A. STRUTHERS, Minneapolis, Minn., assignor to Strutwear Knitting Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 14, 1928. Serial No. 24,875. Term of patent 14 years.

The ornamental design for a stocking substantially as shown.

76,906. SHEET PACKING RACK. JOHN H. VICTOR, Chicago, Ill., assignor to Victor Manufacturing & Gasket Co., a Corporation of Illinois. Filed Mar. 23, 1927. Serial No. 21,283. Term of patent 14 years.

The ornamental design for a sheet packing rack as shown and described.

76,907. SADDLE. ROSCOE F. WARREN, Los Angeles, Calif. Filed Dec. 22, 1927. Serial No. 24,597. Term of patent 14 years.

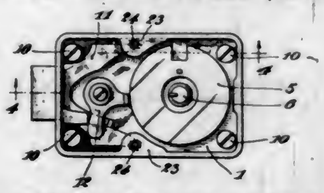


The ornamental design for a saddle, as shown.

# PATENTS

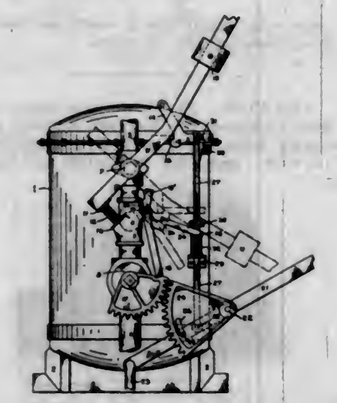
## GRANTED NOVEMBER 13, 1928.

1,691,028. CAR-DOOR LATCH. FRED AXELSON, Northome, Minn. Filed Sept. 26, 1927. Serial No. 222,182. 1 Claim. (Cl. 292—104.)



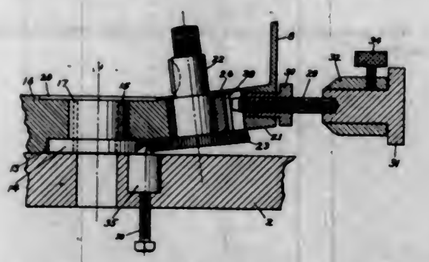
A door holding means of the character described comprising a catch bracket having a hole therein and an inclined face adjacent the hole, said bracket having means for permanent attachment adjacent the door opening, a pivotally mounted dog carried by the door for automatic engagement with the bracket, and means whereby the dog may be adjusted for predetermined spacing of the door ajar.

1,691,029. CONDUCTOR FOR THE TRANSMISSION OF ELECTRICAL ENERGY AND METHOD OF PRODUCING THE SAME. ADOLPH FRANCIS BANDUR, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 22, 1924. Serial No. 708,128. 10 Claims. (Cl. 178—45.)



1. A loaded signalling conductor comprising a central conductor, a coating of material thereon which will act as a separator and which will not be consumed on being subjected to heat treatment, and a magnetic loading material wrapped around said central conductor, said loading material requiring heat treatment to give it a desired electrical characteristic.

1,691,030. PROTECTION DEVICE FOR TUMBLER LOCKS. EDGAR M. BENHAM and WILLIAM T. BENHAM, Norwood, Ohio, assignors to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Jan. 10, 1927. Serial No. 160,036. 6 Claims. (Cl. 70—53.)

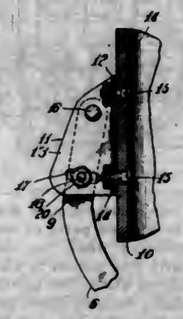


1. The combination with a lock including a bolt bar having a notch, of means, including a plate spring self-engageable in the notch of the bolt bar, for preventing unlocking movement of the bolt bar, and means, including a lock element, for maintaining said plate spring disengaged from the notch of said bolt bar only while said element is in its proper place in the lock assembly.

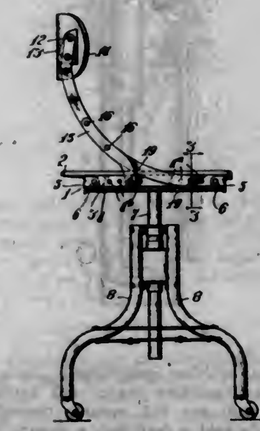
1,691,031. CONTROL MECHANISM FOR CONCRETE-MIXING APPARATUS. HELGE A. BERLE, North Plainfield, N. J., assignor to Ransome Concrete Machinery Company, Plainfield, N. J., a Corporation of New Jersey. Filed Apr. 14, 1928. Serial No. 270,056. 12 Claims. (Cl. 83—73.)

1. In a device of the character described, the combination of a receptacle having inlet and outlet conduits, a normally open valve in said inlet conduit, a normally closed valve in said outlet conduit, an energized actuating means for said inlet valve, an energizable actuating means for said outlet valve, means normally restraining each of said actuating means, a normally inoperative lock for said energized means and a single control mechanism for initiating release of said restraining means, rendering said lock operative and operating said energizable means.

1,691,032. SHEET-METAL-BENDING MACHINE. WILLIAM BITTNER, Brooklyn, N. Y. Filed Dec. 30, 1927. Serial No. 243,574. 14 Claims. (Cl. 153—29.)

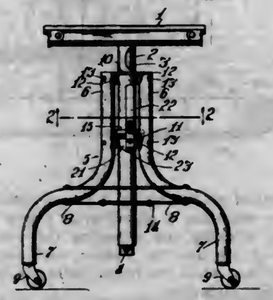


1. In a sheet metal bending machine, at least two rolls spaced apart, means for driving said rolls, means associated with at least one of said rolls for drawing a sheet



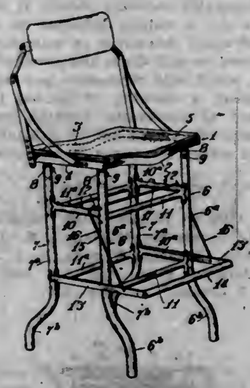
of metal so that a portion passes between said rolls, and a forming device positioned between the peripheries of said rolls and to one side of the line joining their centers, said forming device extending so as to intersect the planes of said rolls and having a face contour which functioning with the rolls, turns the edge of the metal to the desired angle.

1,691,033. CHAIR. ARTHUR J. ADAMS, Bay City, Mich., assignor to William S. Ferris, Elkhart, Ind., trading as Domore Chair Company. Filed July 27, 1925. Serial No. 46,224. 1 Claim. (Cl. 155—160.)



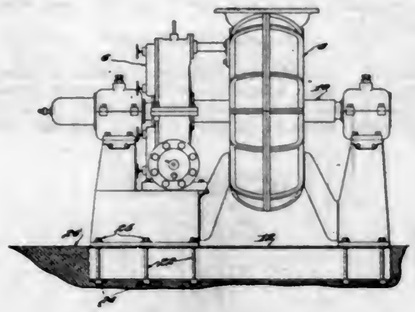
A chair embodying therein, a pair of relatively narrow side arms, a back rest member, brackets fixed on said back rest member and including portions extending at substantially a right angle thereto and wider than said side arms, means providing a pivotal connection between said wider bracket portions and the top ends of said arms, said bracket portions having slots concentric with and below said pivotal connection, and means carried by said arms and extending through said concentric slots for clamping said ends of said arms to said wider bracket portions.

1,691,034. ADJUSTABLE BACK REST FOR CHAIRS. ARTHUR J. ADAMS, Bay City, Mich., assignor to William S. Ferris, Elkhart, Ind., trading as Domore Chair Company. Filed July 27, 1925. Serial No. 46,227. 1 Claim. (Cl. 155—158.)



A chair embodying therein a seat frame including side members having front and rear sets of holes therein, a back rest frame comprising a back rest, side arms fixedly secured to the back rest and brace bars rigidly fixed to said side arms at points between the ends thereof, the bottom ends of the side arms and the brace bars being disposed in the same horizontal plane and fixed relative to each other, the bottom end of each side arm and brace bar being provided with openings adapted to register respectively with predetermined holes of said front and rear sets of holes in the side members of said seat frame and means passing through said registering holes to secure said back rest frame in the desired forward or rearward adjusted position on said seat frame without changing the angularity of the back rest or the side arms relative to each other.

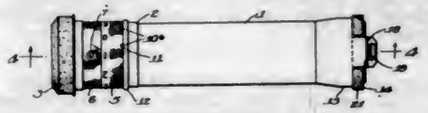
1,691,035. SWIVELING CHAIR. ARTHUR J. ADAMS, Bay City, Mich., assignor to William S. Ferris, Elkhart, Ind., trading as Domore Chair Company. Filed July 27, 1925. Serial No. 46,229. 3 Claims. (Cl. 155—138.)



1. A chair embodying therein, a standard comprising a plurality of legs, top and bottom spiders to which said legs are secured, a seat post, a tube rotatively mounted on said post and passing through said spiders, a binding ring on said bottom spider, means carried by said spider for normally urging it into binding action upon said tube, and means also carried by said spider and adapted to be actuated to engage said ring to release its binding action on the tube.

1,691,036. FOOTREST FOR CHAIRS. ARTHUR J. ADAMS, Bay City, Mich., assignor to William S. Ferris, trading as Domore Chair Company, Elkhart, Ind. Filed July 27, 1925. Serial No. 46,230. 8 Claims. (Cl. 155,172.)

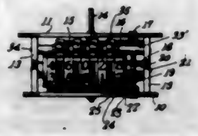
8. In combination with a chair having seat and front and rear pairs of legs, a relatively wide, horizontally disposed foot rest member at the front of the chair, means providing parallelogram supporting members, pivoted at their front ends to the foot rest member and at their rear ends to fixed parts of the chair, and means connecting said supporting members with other fixed parts of the chair for holding said supporting members and the associated foot rest member in the desired adjusted position.



1,691,037. FOUNDATION METHOD. GEORGE W. ALLEN, Hyde Park, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Sept. 18, 1923. Serial No. 663,388. 2 Claims. (Cl. 72—77.)

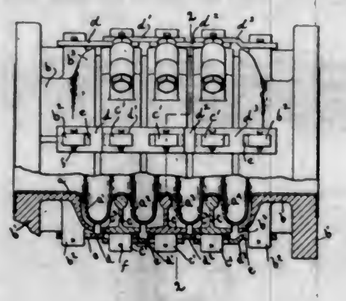
2. A method of setting up a power installation which consists in mounting a plurality of power units upon a metal base, aligning and adjusting the units, and thereafter setting the base in position and pouring concrete around the base while the power units are mounted thereon in proper alignment.

---



1,691,038. PNEUMATIC-TUBE CARRIER. MAURICE ANDERSON, Chicago, Ill. Filed Dec. 15, 1926. Serial No. 155,052. 8 Claims. (Cl. 243—35.)

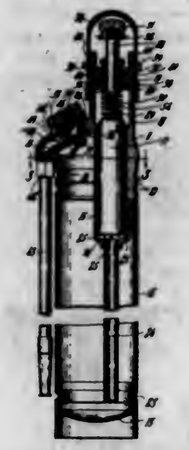
1. A carrier for pneumatic tubes comprising a hollow section, a removable enclosing section at one end thereof comprising a sleeve slidably mounted on said section, a series of indicating characters on said sleeve, a ring rotatably mounted on said sleeve and provided with an opening through which said characters may be made to successively appear, a plurality of notches in the edge of said ring and an automatic, locating member adapted to be automatically moved out of and into said notches responsive to rotary movement of said ring.



---

1,691,039. GEAR TRAIN FOR WATER METERS. ROBERT A. ANDERSON, Montclair, N. J., assignor to Gamon Meter Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 11, 1927. Serial No. 174,606. 2 Claims. (Cl. 64—29.)

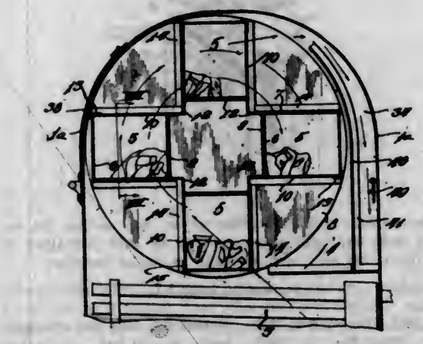
1. Phosphor bronze shafts as used in water meters, and sheaths of non-corrodible material secured on said shafts to form a unit therewith, said sheaths acting as journals for members mounted thereon.



1,691,040. EXPANSION JOINT WITH REGULATING MEANS. ARTHUR C. BADGER, Newton, Mass. Filed Apr. 10, 1922. Serial No. 551,057. 3 Claims. (Cl. 285—90.)

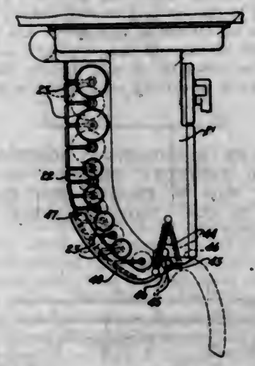
1. An expansion joint comprising a flexible corrugated tube, rings secured to the end parts of said tube, a series of overlapping connecting links, the endmost ones of which are engaged with lost motion to said end rings and all of which have limited ability for movement lengthwise of the joint with respect to each other, and means at the overlaps of adjacent links for engaging the tube between corrugations thereof to limit independent distortion of the separate corrugations.

---



1,691,041. FIRE EXTINGUISHER. ARTHUR C. BADGER, Newton, Mass. Filed Aug. 20, 1925. Serial No. 51,318. 9 Claims. (Cl. 169—31.)

1. A fire extinguisher comprising a casing adapted to hold a fire extinguishing charge and having an inner compartment near one end, opening through such end, and adapted to hold a cartridge, a closure for the open end of said compartment, a plunger movably mounted in said closure and arranged to engage and open said cartridge, and a guard member embracing and crossing the outer end of said plunger, pivoted to the closure at opposite sides of the plunger, and adapted to be turned about its pivots to expose the plunger for application of force to move it inward.

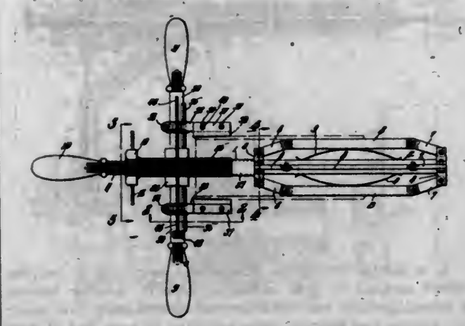


1,691,042. CLOTHES DRIER. DANIEL BELL, Chicago, Ill., assignor to Invincible Laundry Equipment Co., a Corporation of Illinois. Filed Apr. 4, 1927. Serial No. 180,650. 5 Claims. (Cl. 34—5.)

1. In a clothes drying machine, a rotary member having a central closed chamber, and compartments around said closed chamber, and individual clothes holding units removably confined in said compartments.

---

1,691,043. WIRE-DRAWING-GUARD. HARRY BLOUNT, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1927. Serial No. 164,200. 10 Claims. (Cl. 205—25.)

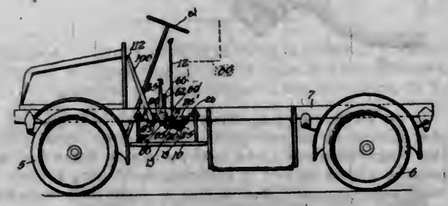


1. In a wire drawing apparatus, a die supporting block a die supported loosely thereon, and a die retaining device comprising means positioned adjacent the block and the die supported thereon for preventing accidental displacement of the die from the block by the action of the wire as it passes through the dies.

---

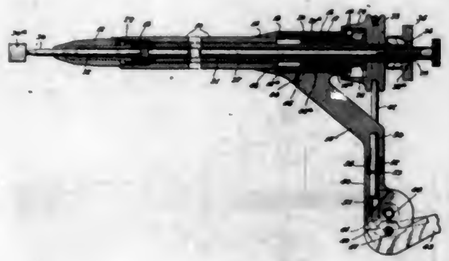
1,691,044. PROCESS OF RENDERING CALCIUM CYANAMIDE FREE FROM DUST. JOSEPH BRESLAUER and EDOUARD DE LUSERNA, Geneva, Switzerland, assignors to Société d'Etudes Chimiques pour l'Industrie, Geneva, Switzerland, a Corporation of Switzerland. Filed Jan. 11, 1927, Serial No. 160,517, and in Switzerland Jan. 22, 1926. 6 Claims. (Cl. 23—248.)

1. A process of producing calcium cyanamide free from dust which comprises treating calcium cyanamide with a molten easily fusible acid salt at a temperature low enough to avoid extensive decomposition of the calcium cyanamide.



1,691,045. DEVICE FOR CUTTING TUBES. EDMUND BURKE and CHARLES QUINCY IVES, Portland, Me., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Oct. 4, 1923. Serial No. 666,462. 3 Claims. (Cl. 82—4.)

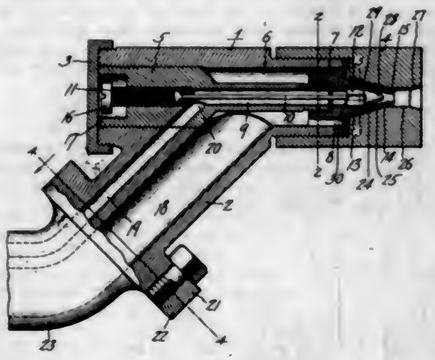
1. A device of the class described comprising a member having a portion of its length threaded, an internally threaded block engageable with the threads of said member and operatively rotatable on both its threaded and unthreaded portions to advance or not to advance along said member while operating on the work according as the block is rotated on the threaded or unthreaded portion of the member, bars extending from said block, a tool carrier adjustable axially of each bar, and means for attaching said member axially of a tube to be operated upon by tools held by said carriers.



---

1,691,046. VEHICLE CONTROL. JOHN G. CARROLL, Chicago, Ill., assignor to Walker Vehicle Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1924. Serial No. 707,555. 13 Claims. (Cl. 180—77.)

1. In a motor vehicle, the combination of a running board at one side of the vehicle, a driver's seat, a driving motor, a controller therefor, said controller including a controller drum and a drum shaft, a controller lever mounted adjacent the running board and operable therefrom, meshing gear means connecting the controller lever and the drum shaft to turn said shaft by means of the lever, a transverse brake shaft, a service brake pedal on said shaft adjacent the driver's seat, and a service brake operating member mounted on said shaft adjacent the running board and operable therefrom.

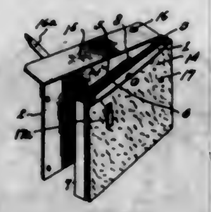


1,691,047. HANDPIECE. HERMAN E. S. CHAYES and AUGUST P. JURGENSEN, New York, N. Y., assignors to Chayes Dental Instrument Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 30, 1925. Serial No. 65,716. 2 Claims. (Cl. 32—15.)

1. A dental handpiece comprising a casing, a bearing sleeve secured to said casing, a bracket member having a barrel portion surrounding and spaced from said bearing sleeve, and bearing rings mounted in each end of said barrel portion and contacting with said bearing sleeve.

---

1,691,048. STEAM ATOMIZING OIL BURNER. LOUIS G. DE KERMOR, Edmonton, Alberta, Canada, assignor to Delway Heaters, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 18, 1927. Serial No. 213,721. 2 Claims. (Cl. 158—75.)



1. An oil burner comprising a tubular body portion, a plug having an oil passage and a forwardly reduced portion cooperating with said body portion to define a steam passage, a block carried by said plug and having a series of longitudinal grooves and having a forwardly extending conoidal portion, a nozzle carried by said body portion and having a central opening spaced from but conforming to the contour of said conoidal portion and a valve operating in said oil passage and presenting a series of longitudinal clearances opening toward the central opening of said nozzle.

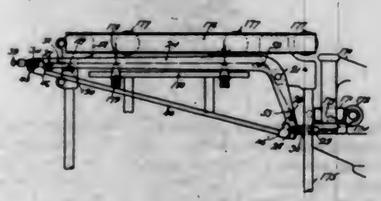
---

1,691,049. COMBINATION PORTFOLIO AND BRIEFCASE. JAMES D. DOUGLAS, Detroit, Mich. Filed Aug. 25, 1927. Serial No. 215,277. 4 Claims. (Cl. 281—33.)

1. A combination portfolio and briefcase comprising two covers connected at their inner ends, one of said covers having an extension thereon adapted to engage the other cover when the covers are opened up to form a substantially triangular stand, means for supporting leaves between said covers, said extension disposed between the covers and over the leaves when the covers are closed, a briefcase container on the outside of one of the covers, a

flap projecting from the other cover, and means for securing said flap over the open end of said container to hold the latter and said portfolio in closed position.

---

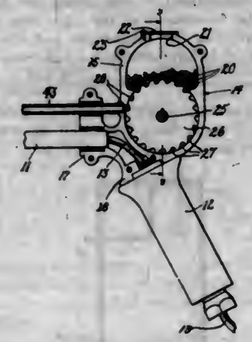


1,691,050. CAN OPENER. FREDERICK DREYER, Chicago, Ill. Filed Jan. 18, 1926. Serial No. 81,945. 5 Claims. (Cl. 30—3.)

1. A can opener having, in combination, a support having a prong on one end adapted to pierce the center of the can cover and to hook underneath the cover when said support lies next to the cover, a carrier slidably mounted on said support, a lug formed on said carrier and adapted to fit over the inside of the end rim, a rotary knife pivotally mounted on the underside of said support, and means for holding said knife in cutting engagement with the side of the can.

---

1,691,051. INK-REGULATING MECHANISM FOR EXTENDED-DELIVERY DEVICES OR PRINTING PRESSES. FRED S. ENGLISH, New London, Conn. Filed Mar. 5, 1925. Serial No. 13,344. 17 Claims. (Cl. 101—365.)

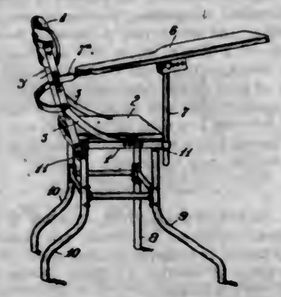


1. The combination with a press having inking mechanism associated therewith, an extended delivery device set off at the end of the press and including a frame and a raising and lowering pile table thereon, and a remote control for said inking mechanism mounted on said delivery frame.

---

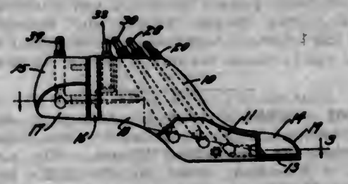
1,691,052. SOLDERING AND WELDING TOOL AND THE LIKE. JOSEPH WILLIAM FAY, Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,177. 5 Claims. (Cl. 113—100.)

1. The combination with a tool having a member capable of receiving heat, of means for holding a supply of matter in pellet form, rotatable means for receiving and withdrawing a pellet of said matter from said first mentioned



means, and means disposed outside of the tool member for receiving said pellet from the rotatable means and for depositing it upon the outer surface of the tool member.

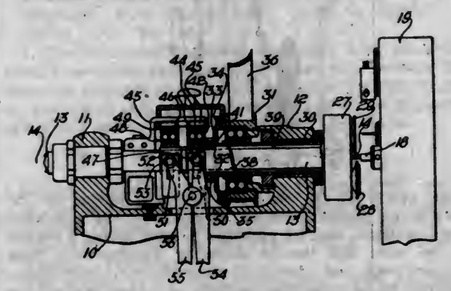
---



1,691,053. TABLET ARMCHAIR. WILLIAM S. FERRIS, Elkhart, Ind. Filed July 27, 1925. Serial No. 46,199. 1 Claim. (Cl. 155—125.)

A chair embodying therein, a seat frame, pairs of front and rear legs connected to the corners of the seat frame, a tablet arm arranged along the right hand side and above the seat frame and having a portion extending forwardly of the same, the bottom end of the right front leg extending diagonally outward and engaging the floor at a point within the area defined by the forward portion of the tablet arm, the bottom ends of the rear legs being offset rearwardly to extend beyond the vertical plane of the rear end of the seat frame while the other front leg member is straight and an upright member rising from that corner of the seat frame associated with said right front leg for supporting said tablet arm.

---

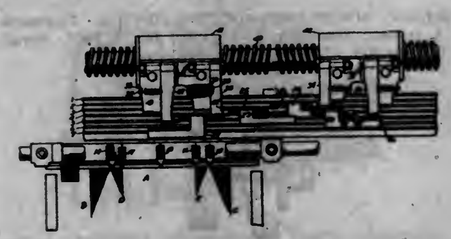


1,691,054. SHOE-STRETCHING LAST. ELIA GALTERIO, Denver, Colo., assignor to Ada Galterio, D. Charles Mariotti, and A. L. Ruggiero, Denver, Colo. Filed July 25, 1927. Serial No. 208,155. 8 Claims. (Cl. 12—128.3.)

1. A shoe stretching last comprising a body portion; vamp stretching members hinged to each side of said body portion; a screw threaded into said body portion; a pointed extremity formed on said screw; actuating members adapted to be separated by said pointed extremity so as to move said vamp stretching members away from said body portion, said actuating members comprising balls; and spring means for causing said balls to bear against opposite sides of said pointed extremity.

---

1,691,055. SCREW-FORMING MACHINE. ERNEST GAUTHIER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,226. 6 Claims. (Cl. 82—20.)

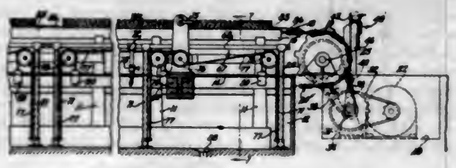


1. In a machine for severing blanks of predetermined lengths from a continuous metal strand, a stationary spindle, means for intermittently advancing the strand axially through said spindle, a tool supporting head carried by and rotatable about the spindle, a severing tool carried by said head and slidable therein toward and away from the strand, means for actuating the severing tool comprising a rack secured to the tool, a pinion gear meshing with said rack, and revoluble means surrounding the stationary spindle for rotating said pinion gear to cause a movement of the severing tool.

5. In a material working machine, a stationary hollow spindle, means for advancing the material through the spindle, a pair of semi-circular sleeves rotatably mounted about the spindle and having rack portions at one end, a tool carrier rotatable with the sleeves, a spiral pinion individual to and meshing with the rack portion of each sleeve, tool holders slidably mounted in the rotatable tool carrier and having rack portions meshing with the spiral pinions, and means for reciprocating the rotating sleeves whereby the tools may be independently controlled to advance them to and away from the material being worked.

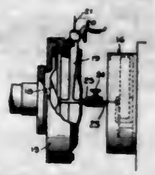
---

1,691,056. HOSIERY-KNITTING MACHINE. CLAUS THURE M. GREEN, Brooklyn, and FRED H. DOST, Freeport, N. Y., assignors to Julius Kayser & Co., New York, N. Y., a Corporation of New York. Filed Aug. 2, 1927. Serial No. 210,118. 5 Claims. (Cl. 66—129.)



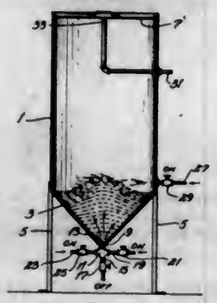
1. In a hosiery knitting machine, the combination comprising abutment heads movable toward or away from each other, abutment levers hinged thereon, and spring plungers arranged to hold said levers in operative or inoperative positions.

1,691,057. LEGGINGS. HENRY C. GERLICH, Brooklyn, N. Y. Filed Nov. 15, 1927. Serial No. 233,342. 1 Claim. (Cl. 2—227.)



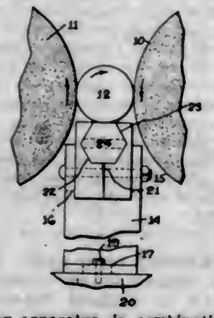
An article of the character described having an expansible leg enclosing portion of comparatively nonelastic fabric material, said leg enclosing portion having a cut-out at the inner side thereof extending longitudinally from its lower edge, and a length of comparatively highly elastic material folded upon itself entirely occupying said cut-out and secured at its longitudinal edges to the body fabric of said leg portion, and an elastic strap within the fold of said fabric material extending beyond the opposite edges thereof and attached at its ends to the lower edge of said leg portion and acting independently of said inserted elastic material to yieldingly resist expansion of said leg portion at the lower edge thereof.

1,691,058. MATERIAL-TREATING APPARATUS. HANS HENRIK CHRISTIAN GRONDAHL, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1926. Serial No. 126,167. 6 Claims. (Cl. 266—6.)



1. In material treating apparatus, an endless horizontal material conveying means, a driving means therefor, means for spraying a fluid upon material associated with the conveying means, and means for vertically adjusting the position of the spraying means.

1,691,059. SOUND-REPRODUCING DEVICE. THEODORE A. HARRIS, New York, N. Y. Filed Jan. 8, 1927. Serial No. 159,795. 7 Claims. (Cl. 179—100.1.)

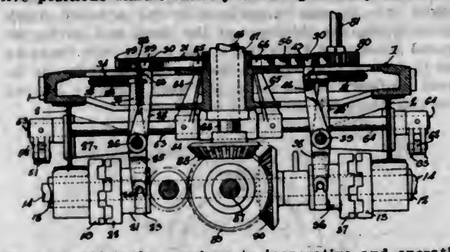


1. In a device of the character described, in combination, a pivotal phonograph tone arm, a sound box carried by the end thereof and including a vibratable diaphragm, an independent reproducing unit including a vibratable element, said unit being so mounted and positioned as (a) to permit normal utilization of the tone arm and sound box and (b) to be encountered by the sound box after a predetermined pivotal movement of the tone arm, and means for removably securing the diaphragm and the vibratable element together when said encounter has been effected.

1,691,060. CLEANING APPARATUS. BENJAMIN L. HARRISON, Maplewood, Mo. Filed Feb. 27, 1926. Serial No. 91,079. 2 Claims. (Cl. 210—51.)

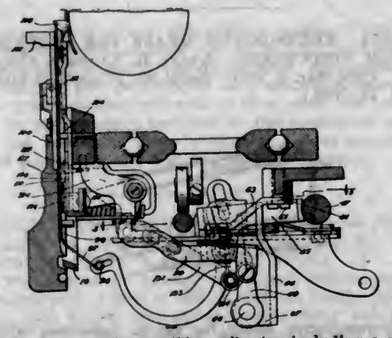
1. The method of reclaiming solvent and the like from sludge and the like, whereby the solvent is saved and sludge rendered harmless comprising passing at one time solvent carrying sludge and water into a chamber having an overflow therein to a depth below the overflow, mixing the sludge and water settling out the sludge and water below the solvent of said sludge, passing water into the chamber below the upper sludge and water surface whereby solvent is decanted into the overflow, shutting off said water before sludge and water reach the overflow, and then draining the sludge and water from the tank.

1,691,061. GRINDING DEVICE. LEWIS R. HEIM, Danbury, Conn., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 17, 1921. Serial No. 508,125. 3 Claims. (Cl. 51—238.)

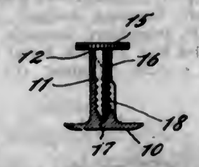


1. In grinding apparatus, in combination, a work supporting member having a recess throughout its length, and a wear-resisting member fitted into and interlocked with said supporting member substantially throughout its length and adjustable with respect thereto about its longitudinal axis to change the surface exposed for wear.

1,691,062. STEERING GEAR. ARTHUR G. HENRICKS and HOLGER L. MITCHELL, Milwaukee, Wis., assignors to Harnischfeger Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 26, 1925. Serial No. 4,800. 21 Claims. (Cl. 180—9.2.)



18. In steering gear of the character described, the combination of a plurality of clutches, a brake member associated with each of said clutches, and a cam member adapted to effect movement of said clutches to operative and inoperative positions simultaneously or independently and move-



ment of said brake members to inoperative and operative positions simultaneously or independently, said cam member effecting positive and gradual application and release of said brake members.

1,691,063. TYPEWRITER. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Sept. 22, 1924. Serial No. 738,982. 20 Claims. (Cl. 197—159.)

1. In a typewriter, a ribbon vibrator including a ribbon guide, a line finder, and a stop for said ribbon vibrator connected with said line finder, said ribbon vibrator having an abutment in fixed relation with said ribbon guide for contacting with said stop.

1,691,064. FASTENING DEVICE. OLGA I. HOPPE, Kew Gardens, N. Y. Filed Mar. 9, 1925. Serial No. 14,032. 4 Claims. (Cl. 85—4.)

1. A fastening device consisting of a base portion having a hollow stem sharply pointed and provided with an internal thread and a top part having a threaded shank to engage said hollow stem and a head positioned at the end of the said stem opposite the base when said parts are in fastening position.

1,691,065. PROCESS OF MAKING DIPOLYMER. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,811. 8 Claims. (Cl. 134—56.)

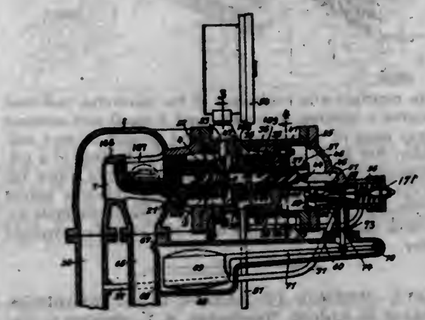
7. The process of preparing "Dipolymer" which includes subjecting pine oil to heat and the action of a neutral catalyst to effect dehydration and finally polymerization of a substantial proportion of the pine oil.

1,691,066. DEHYDRATION PRODUCTS OF PINE OIL AND PROCESS OF PRODUCING SAME. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,813. 10 Claims. (Cl. 134—56.)

1. The process of producing a turpentine substitute from pine oil which includes dehydrating the pine oil with a halogen.

1,691,067. PROCESS OF MAKING DIPOLYMER. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,816. 7 Claims. (Cl. 134—56.)

1. The process of preparing Dipolymer from dipentene which comprises vaporizing dipentene and passing the vapors in intimate contact with a catalyst for such length of time and at such temperature as will effect the polymerization of a substantial part of the dipentene vapors.



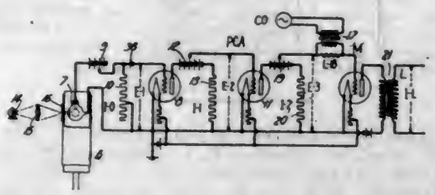
1,691,068. PROCESS OF MAKING DIPOLYMER. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,817. 1 Claim. (Cl. 134—56.)

The process of preparing "Dipolymer" from dipentene which includes treating dipentene with heat in the presence of a metallic chloride for a sufficient time to effect conversion thereof into di and higher polymers.

1,691,069. PROCESS OF MAKING DIPOLYMER. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,818. 2 Claims. (Cl. 134—56.)

1. The process of preparing "Dipolymer" from pine oil, which includes treating pine oil with a metallic chloride and heat to effect dehydration of components of the pine oil and the formation of dipentene and continuing the treatment for a time sufficient to effect conversion of a substantial proportion thereof and of the dipentene into di and higher polymers.

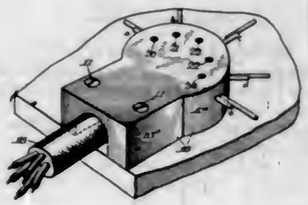
1,691,070. APPARATUS FOR DISPENSING LIQUIDS. ERNST HURLBRINK, Berlin, Germany, assignor to Martini & Huneke Maschinenbau Aktien-Gesellschaft, Berlin, Germany, a Corporation of Germany. Filed June 9, 1927, Serial No. 197,541, and in Germany Sept. 25, 1925. 7 Claims. (Cl. 73—28.)



1. An apparatus for measuring liquids, comprising a measuring vessel, a conduit through which the liquid to be measured is delivered under pressure to said vessel, a valve in said conduit, a cylinder, a plunger therein, a spring constantly urging the plunger in one direction, connecting means between said plunger and said valve whereby movement of the plunger by said resilient means actuates

said valve, means for diverting the pressure from the conduit to said cylinder to force the plunger in the opposite direction when the liquid reaches a predetermined level in said vessel, and means operative at the end of the plunger stroke in said opposite direction to relieve the plunger of the pressure of the liquid.

---

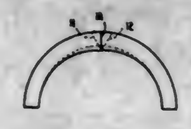


1,691,071. TRANSMISSION OF PICTURES BY ELECTRICITY. HERBERT E. IVES, Montclair, and MAURICE B. LONG, Glen Ridge, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 14, 1924. Serial No. 713,362. 9 Claims. (Cl. 178—7.)

7. In a system for the transmission of pictures by electricity, a source of carrier waves, means to modulate carrier waves from said source to produce modulated carrier waves having amplitudes which vary between two finite limiting values, neither of which is zero, corresponding to variations in the tone values of elemental areas of a picture between black and white, and detecting means for producing from said modulated carrier waves a picture the tone values of the elemental areas of which vary between black and white corresponding to the original.

---

1,691,072. CONNECTION DEVICE. HOWARD B. JONES, Evanston, Ill. Filed May 15, 1925. Serial No. 30,456. 6 Claims. (Cl. 173—353.)



1. In multiple-wire cable unit of the character described comprising a multiple-wire cable and a small and compact terminal head of insulating material formed to seat substantially flat and having an open bottom leading to a hollow interior, the head having a passageway into which the cable extends, walls of the head having openings spaced apart through which respectively the wires of the cable extend, with means holding the cable and the head strongly together.

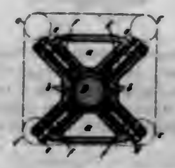
---

1,691,073. METHOD OF MAKING LINED BEARINGS. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 5, 1928. Serial No. 282,971. 13 Claims. (Cl. 29—149.5.)

1. In a method of making lined tubular bearings, the steps which consist in forming a rectangular blank from sheet stock having a considerable tensile strength and inherent resiliency, forming said blank into cylindrical shell with the grain of the metal in said blank extending longitudinally of said shell while flowing the metal circumferentially into an end engagement having a radial depth approximating the thickness of the blank and having an opposed pressure in the metal acting across such engaging ends to maintain the same in closed engagement by the inherent resiliency of the metal, and then casting a bearing alloy over the inner surface of said shell.

13. In a method of making cylindrical shells for lined tubular bearings, the steps which consist in forming a blank from sheet stock of greater length than the circumference of the desired finished bearing, and forming said blank into a cylindrical shell while causing the excess metal in the blank to be upset into an end engagement having a radial length approximating the thickness of the blank.

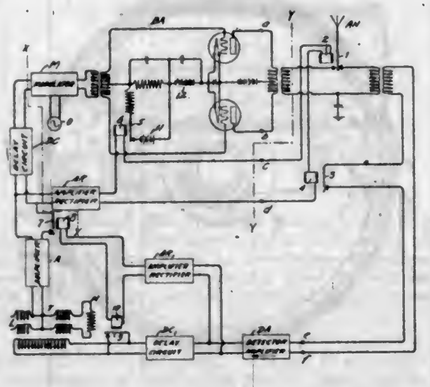
---



1,691,074. REENFORCING MEANS FOR CONCRETE-BEAM STRUCTURES. HENRY H. LAMPERT, Chicago, Ill. Filed Mar. 5, 1927. Serial No. 173,106. 3 Claims. (Cl. 72—109.)

1. A reenforcing device for use in connection with a structural element comprising a pair of substantially parallel reenforcing rods, and a pair of tie wires crossed and relatively movable at their medial parts and connected to said rods at points removed from said medial parts whereby said parallel rods have a limited relative movement toward and away from each other.

---

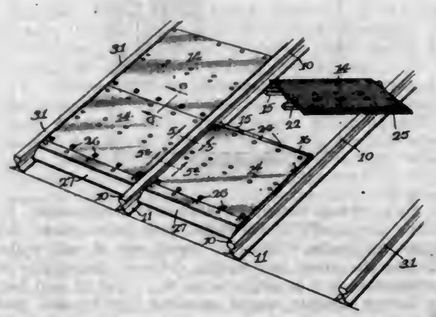


1,691,075. MANDREL-UPSETTING PRESS. LUDWIG LÖWY, Dusseldorf, Germany, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany, a Corporation of Germany. Filed Mar. 25, 1926, Serial No. 97,252, and in Germany Apr. 1, 1926. 5 Claims. (Cl. 78—17.)

1. In a mandrel upsetting press, the combination with a casing, of a plurality of movable arcuate members concentrically positioned in said casing, means for adjusting said members relative to each other, means for upsetting a mandrel positioned within said arcuate members, and mechanism for rigidly maintaining said movable arcuate members in position during said upsetting.

1,691,076. TWO-WAY RADIO SIGNALING SYSTEM. ROBERT C. MATHES, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 11, 1924. Serial No. 698,353. 24 Claims. (Cl. 250—9.)

1. A signaling circuit comprising a source of modulating waves, means utilizing the waves from said source for producing a signal modulated wave, and means for transmitting the elements of said modulated wave at equal predetermined intervals of time after the production of corresponding elements of the modulating wave, said last mentioned means comprising a delay circuit between said source and said first mentioned means.

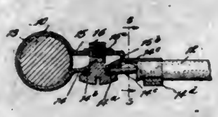


---

1,691,077. SPENT-SOIL COMPOST. RICHARD HENRY MORRIS, 3d, Philadelphia, Pa. Filed Aug. 20, 1925. Serial No. 51,332. 8 Claims. (Cl. 71—6.)

1. The method of forming a compost, which consists in maintaining a bed of soil containing twenty percent fibrous peat mixed with eighty percent straw and horse manure, at a temperature of approximately 60° F., and moist for longer than three months, while cultivating mushrooms therein; said peat being primarily alkaline and inoculated with a substance toxic to mushroom disease germs; then shredding the mixture aforesaid to break up the fibrous portions thereof and mixing the same substantially uniformly throughout the mass.

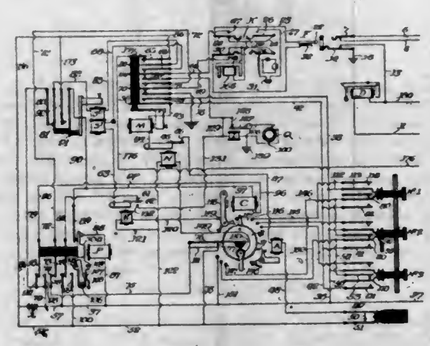
---



1,691,078. RAILWAY CROSSING. DANIEL C. MULVIHILL, Hannibal, Mo. Filed May 5, 1928. Serial No. 275,423. 11 Claims. (Cl. 238—8.)

1. A railway crossing comprising a plurality of similar units connected together, each unit comprising a plate having openings through one end thereof, a support rigidly connected to the opposite end of said plate and extending beyond the sides and end thereof, and an intermediate support rigidly secured to said plate and extending parallel to said first named support, the ends of said supports being coped to provide clearance for a railway wheel flange.

---

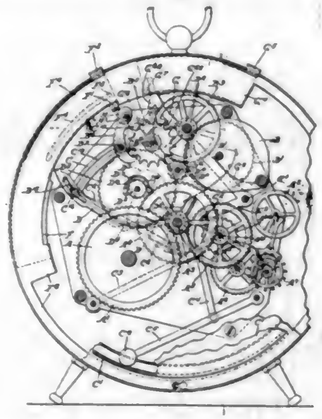


1,691,079. TERMINAL CLAMP FOR STORAGE BATTERIES. ROBERT J. NIGHTINGALE, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Apr. 10, 1922. Serial No. 551,084. 1 Claim. (Cl. 173—259.1.)

In combination, a storage battery terminal post, a clamp having a socket portion adapted to encircle the post and having substantially parallel outstanding end portions, a fastening device extending transversely through said outstanding portions, one of said outstanding portions having its end bent inwardly to form an abutment and the other outstanding portion having an inwardly offset extension adapted to engage the abutment and projecting beyond the abutment, said extension being formed to embrace a conductor, and a conductor having an insulated portion received in said extension, said conductor being secured to the clamp under the fastening device.

---

1,691,080. PARTY-LINE TELEPHONE EXCHANGE. NILS E. NORSTROM, Chicago, Ill. Filed June 24, 1926. Serial No. 118,136. 16 Claims. (Cl. 179—33.)



1. A slow speed pole changer, a master switch having wipers insulated from each other and a series of contact points in the path of each wiper, and means including a battery and connections so arranged that the master switch will make one forward step at each alternation of the pole changers.

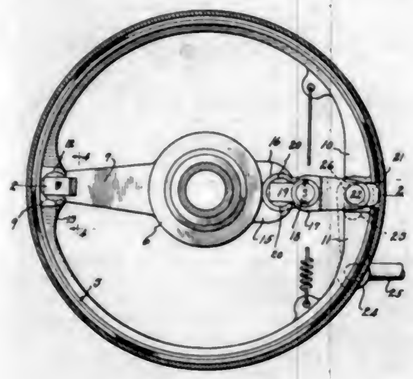
---

1,691,081. ALARM OF VARIABLE INTENSITY. RAYMOND C. PIERCE, St. Louis, Mo. Continuation of application Serial No. 503,780, filed Sept. 28, 1921. This application filed July 28, 1922. Serial No. 578,058. 15 Claims. (Cl. 58—16.)

1. An alarm clock comprising an alarm mechanism and means for actuating it, a percussion element operated thereby and means intermediate the alarm mechanism and

the percussion element for increasing the impact of the percussion element on the bell, progressively from substantially no impact to a predetermined maximum impact,

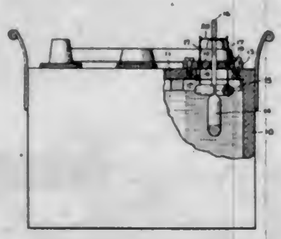
and means for suddenly reducing the impact to a minimum and again gradually increasing it to a maximum in a recurrent cycle.



---

1,691,082. SUPPORTING DEVICE FOR SOCKS AND THE LIKE. OVIDIO ROQUE PODESTÁ, Buenos Aires, Argentina. Filed Jan. 19, 1927, Serial No. 162,119, and in Argentina June 12, 1926. 1 Claim. (Cl. 241—1.)

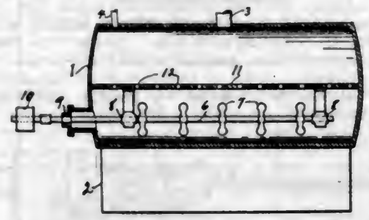
A sock support comprising an elongated rigid rectangular frame embodying a pair of flat rods arranged in spaced, parallel relation, and a plurality of transverse guides connecting the same; a narrow, flexible bar slidable endwise between said rods and beneath said guides and provided with a longitudinal series of orifices; a pin secured to the frame and interchangeably engaging said orifices to retain the bar in adjusted position with relation to said frame, said pin being removed from such engagement by flexing the bar away from the frame by lateral pressure applied directly against its back through the space between the rods; and a fastener attached to the upper end of the frame to engage the edge of the sock.



1,691,083. VEHICLE BRAKE. JOY S. REYNOLDS, Detroit, Mich. Filed Oct. 10, 1925. Serial No. 61,653. 7 Claims. (Cl. 188—78.)

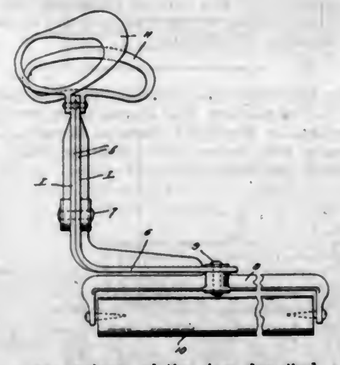
1. In a vehicle brake, the combination with a rotatable brake drum and stationary axle housing, of a plate mounted on the housing, a split internal expanding brake band within the drum, a lever within the drum pivoted on the said housing, a hinge connection between an end of the lever and the band at a point practically opposite the split point, a second lever, a stationary pivot therefor carried by the plate, a cam having a single point positioned between the two ends of the band, a shaft for the cam, the second lever having one end pivotally connected with the shaft a slot in the plate through which the shaft extends permitting movement of the shaft, the said second lever having its opposite end in hinged connection with an arm of the first lever, the arms of said levers being substantially in such relationship that the pressure applied by the cam to expand the band is also equally applied at the point of the hinged connection of the first named lever with the band, the said levers limiting the extent of rotative movement of the band with the drum.

---



1,691,084. DEVICE FOR INDICATING DENSITY OF LIQUIDS. FRANK SCHWARTZ, New York, N. Y. Filed Oct. 6, 1926. Serial No. 139,934. 4 Claims. (Cl. 136—182.)

1. In a storage battery, a device for continuously indicating the density of the liquid, said device comprising two floating bodies within the liquid, one of said bodies encircling the other and having different characteristics of submersion per density-change, the cover of said battery having suitable spaced openings therein, and said bodies having indicating portion extending outwardly through said openings into mutually proximate positions, the indicating portion associated with the encircling body serving to retain the latter against rotation.



1,691,085. PROCESS OF TREATING HYDROCARBONS. ALFRED SCHWARZ, Montclair, N. J., assignor to Petroleum Sand Products Corporation, a Corporation of Delaware. Filed Mar. 1, 1924. Serial No. 696,146. 2 Claims. (Cl. 196—68.)

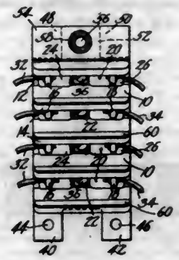
1. The process which comprises heating heavy oil sufficiently to evolve vapor and violently agitating the vapor and oil while being heated to a cracking temperature by means of an agitator rotating at a speed of about 400 to 600 revolutions per minute thereby forming a vapor-oil emulsion.

---

1,691,086. MOP WRINGER. ROLAND S. SCHWARZ, Sr., Huntington, W. Va. Filed Feb. 7, 1928. Serial No. 252,481. 3 Claims. (Cl. 15—202.)

1. In a mop wringer of the class described, a pair of substantially L-shaped members each including a pair of arms angularly disposed with respect to each other, means pivoting the intermediate portions of two of the arms together, the other two arms extending away from the plane of movement of the first mentioned two arms in the same direction with respect to each other, and mop wringing elements on the second mentioned two arms.

---

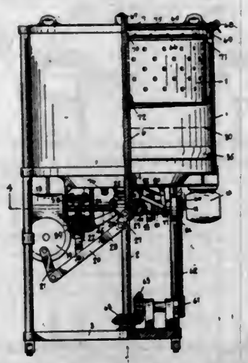


1,691,087. MARGARINE COMPOSITION. JOHN C. SHERMAN, Portland, Me., assignor to Brown Company, Portland, Me., a Corporation of Maine. Filed Dec. 9, 1922. Serial No. 605,978. 11 Claims. (Cl. 99—13.)

6. A margarine composition substantially free from water and comprising hydrogenated peanut oil which is substantially solid at ordinary temperatures and is liquefiable by heat, and a dry milk-like product of peanuts in a state of such fine subdivision that the particles thereof, being in homogeneous mixture with said oil, constitute the disperse phase of a colloid of which the oil is the dispersion medium.

---

1,691,088. TERMINAL BLOCK. AUGUST L. STARKE, Brookhaven, N. Y., assignor to Insulation Manufacturing Company, Inc., a Corporation of New York. Filed Jan. 3, 1927. Serial No. 158,620. 4 Claims. (Cl. 175—298.)



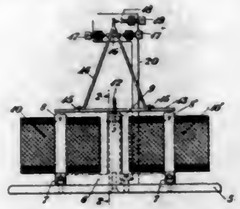
1. A terminal block which comprises a body of insulating material having grooves in its forward surface to form a back plate and a series of spaced horizontal partitions projecting forwardly therefrom, and a series of terminal plates one in the bottom of each of said grooves between said partitions and removably secured between its ends

to the bottom of said groove, and binding means embedded in the block at the bottom of said groove and having a removable connection to said terminal plate.

---

1,691,089. WASHING MACHINE. JACOB F. STEINHELFER, Toledo, Ohio. Filed Nov. 25, 1927. Serial No. 235,417. 5 Claims. (Cl. 68—37.)

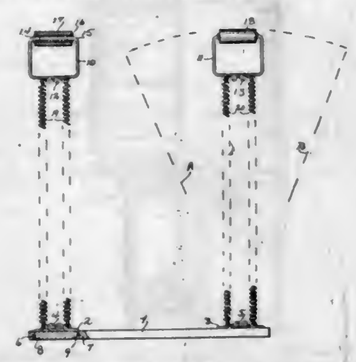
1. In a washing machine, an article containing drum, a member for reciprocating the drum, a rotatable member for rotating the drum, a driving means, a clutch for connecting the driving means with either the member for reciprocating the drum or the member for rotating the drum the clutch having a part operated by the member for reciprocating the drum for operating the clutch when the path of the movement of the drum reciprocating member in its reciprocation is altered, and means for altering the path of the reciprocating movements of the member for reciprocating the drum.



---

1,691,090. SHIPPING TAG. SWAN NILS TEVANDER, Maywood, Ill. Filed Aug. 15, 1923. Serial No. 657,466. 1 Claim. (Cl. 40—27.)

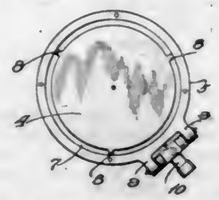
A laminated tag comprising a layer of metal and a layer of softer sheet material such as paper coextensive with the metal and adherent thereto with the marginal area doubled over into a bead or hem with the metal extending around and forming the extreme outer layer of the bead or hem embracing the softer material to protect it against rupture or separation from the metal.



1,691,091. ALTERNATING-CURRENT RELAY. ELMER O. THOMPSON, Tomkinsville, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 19, 1922. Serial No. 576,049. 3 Claims. (Cl. 200—91.)

1. A relay comprising a yoke, said yoke having a plurality of vertical cores, an armature, a torsional support for the armature, and a vibrating contact member mounted longitudinally of said armature.

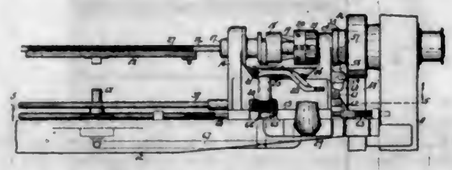
---



1,691,092. EXERCISING DEVICE. WEIMER HARRY TITUS, New York, N. Y. Filed Mar. 6, 1926. Serial No. 92,928. 2 Claims. (Cl. 272—79.)

1. An exerciser comprising a floor member, a plurality of wire members extending therethrough, the ends of said wire members being bent inwardly upon the underside of said board, grip members and a plurality of spring members between each said wire member and its co-operating grip member.

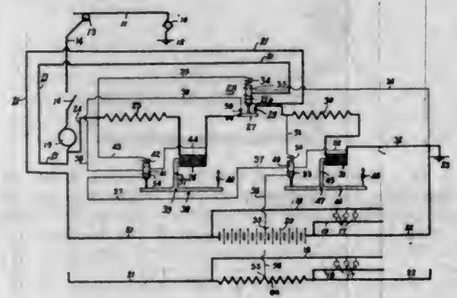
---



1,691,093. DIAPHRAGM AND MOUNTING THEREFOR. EDWARD TOMAN, Chicago, Ill., assignor to E. Toman & Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1926. Serial No. 103,428. 1 Claim. (Cl. 181—31.)

In a device of the class described, an annular casing having an internal flange, a ring of resilient material on the flange diaphragm positioning means, a diaphragm positioned on said ring so that only the extreme edge of the diaphragm for a major portion of the periphery thereof engages said ring, said diaphragm positioning means comprising narrow radial prongs at widely spaced intervals on the periphery of said diaphragm to engage said ring and said casing, and thereby to suitably position said diaphragm and to substantially prevent lateral displacement of said diaphragm in said casing.

---



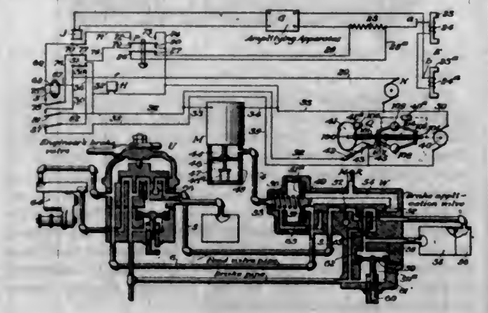
1,691,094. MACHINE FOR TWISTING WIRES WITH MATERIAL THEREBETWEEN. ANTON VAN VEEN, West Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed July 3, 1926. Serial No. 120,359. 21 Claims. (Cl. 140—71.)

1. A wire twisting machine comprising a rotatable spindle having means for holding wires to be twisted, a driving member mounted on said spindle, a clutch comprising clutch members between said driving member and spindle and including a stop movably mounted to effect release and engagement of said clutch, means for imparting movement to said stop to effect one of said operations, and means governed by the twisting operation for effecting the other operation of said stop.

---

1,691,095. ELECTRICAL SYSTEM OF DISTRIBUTION. LOUIS H. VON OHLSEN, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Feb. 20, 1926. Serial No. 89,619. 20 Claims. (Cl. 171—313.)

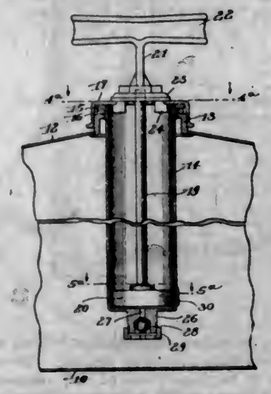
2. In apparatus of the character described, in combination, a source of current having serially connected thereto a translating device and a storage battery, a by-pass circuit in shunt relation to said storage battery and having included therein two variable resistance units, coils each responsive to a function of the current supplied to said storage battery and each adapted to control one of said variable resistance units, and means operative upon each of said coils and arranged to affect the operation of its associated coil so that each variable resistance unit is prevented from exceeding a predetermined ratio of its range of action with respect to the range of action of the other variable resistance unit.



5. In apparatus of the character described, in combination, a source of current and a current-consuming device connected thereto; and means for controlling a function of the current supplied to said device from said source comprising a plurality of regulators, and means arranged to insure a division of the controlling function between said regulators in accordance substantially with their respective regulating capacities.

16. In apparatus of the character described, in combination, a circuit having included therein a source of current, a translating device and a storage battery in series, a by-pass circuit shunted about said storage battery and having included therein means for controlling the division of current therebetween and said battery in substantial accordance with the state of charge of said battery, and means responsive to effective condition of said first-mentioned circuit adapted to close said by-pass circuit.

---

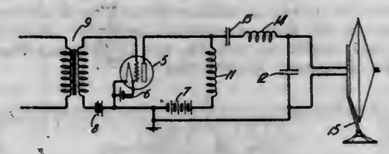


1,691,096. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1923. Serial No. 669,739. 21 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising automatic fluid pressure braking mechanism on a train, means responsive to traffic conditions in advance for at times actuating said mechanism, and slow acting means including an electric motor for subsequently preventing such mechanism from being manually restored to its normal condition for a given time interval.

---

1,691,097. SPRAYING APPARATUS. GILBERT C. WATERS, Jr., Rochester, N. Y., assignor to The E. C. Brown Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 8, 1927. Serial No. 182,087. 5 Claims. (Cl. 299—96.)



1. In an apparatus of the class described, the combination of a liquid holding container, a pump extending therein for pumping air thereto comprising a piston and a cylinder for the same having a valve adapted to check the flow of liquid from the container to the cylinder, operating means for the piston arranged to cooperate with the cylinder to limit inward movement of the piston to a predetermined point during the pumping operations and being adjustable to permit the piston to have an extended movement inwardly of said point and a by-pass for relieving the pressure of air trapped within the cylinder as a result of said extended movement.

2. In an apparatus of the class described, the combination of a liquid holding container, a pump extending therein for pumping air thereto, said pump comprising a piston and a cylinder therefor having a valve for checking the flow of liquid from the tank to the cylinder, an adjustable operating rod for the piston projecting through the outer end wall of the cylinder, means upon the rod adapted in one position of adjustment thereof to engage said wall whereby to limit inward movement of the piston and adapted in an extended position of the piston to project through said wall for locking engagement with the inner face thereof and a by-pass for relieving pressure in the cylinder when the piston is moved to said extended position.

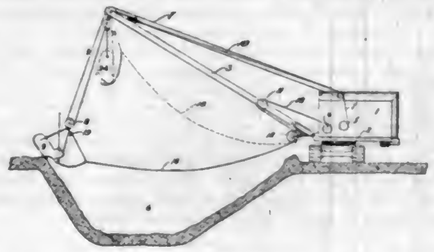
---

1,691,098. MEANS FOR COUPLING CIRCUITS OF DIFFERENT IMPEDANCE CHARACTERISTICS. DONALD F. WHITING, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1926. Serial No. 134,721. 5 Claims. (Cl. 178—44.)

1. A circuit arrangement for coupling circuits of different impedance-frequency characteristics to transmit waves of a plurality of frequencies therebetween, comprising a plurality of reactive impedance elements forming with the circuits to be coupled a plurality of parallel circuits resonant at different frequencies to be transmitted the element being so proportioned that the impedance at the terminals of each of the circuits to be coupled is substantially equal to the impedance of the respective circuit.

---

1,691,099. ELECTRICAL RECEIVER. HENRY M. WILLIAMSON, Chicago, Ill., assignor to Johnson-Williamson Laboratories, Incorporated, a Corporation of Illinois. Filed July 12, 1923. Serial No. 650,981. 2 Claims. (Cl. 175—339.)

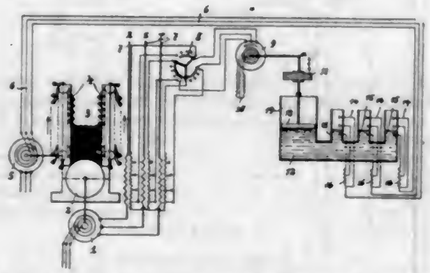


1. An electrical receiver including in combination a magnet, pole pieces for said magnet, an armature element disposed between said pole pieces, a continuous torsional spring, fixed at its ends, constituting a mounting for said armature element and of sufficient strength to normally retain said armature element in substantially a median position between and to prevent its contact with said pole pieces, and windings for receiving current to cause said armature to be attracted and repelled by said magnet.

---

1,691,100. DRAGLINE ARRANGEMENT. EMERY J. WILSON, Cleveland, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Apr. 16, 1926. Serial No. 102,478. 2 Claims. (Cl. 37—116.)

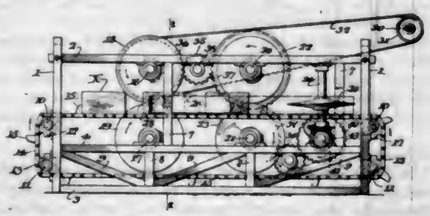
1. A drag line arrangement comprising a turn-table, a boom hinged at its heel to one end of said table, a winding



drum on said table adjacent the heel of said boom, a sheave carried by said boom and spaced thereon from said drum, a sheave mounted for lateral swinging movement adjacent

the heel of said boom, a scoop adjustably suspended from the free end of said boom, and a drag line passing from said drum, over said sheaves in the order named and to said scoop.

---



1,691,101. WOOD GRINDER. XAVER WINKLER, Weisenbachfabrik, Germany, assignor to the Firm E. Holtzmann & Cie. A.-G., Weisenbachfabrik, Germany. Filed Sept. 3, 1927, Serial No. 217,374, and in Germany Sept. 6, 1926. 8 Claims. (Cl. 83—75.)

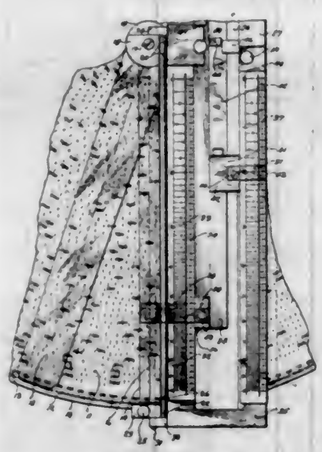
8. In a wood-grinder the combination with a rotating grindstone, electric driving means for the stone and electrically operated wood-feeding means cooperating therewith, a stepped rotary magnetic switch, controlling means for said switch, operatively connected to the stone-driving means, a liquid-container, a supply of mercury in said container, means operatively connected to the magnetic switch and operatively associatted with the mercury and adapted to change the level thereof, and current regulating and proportioning means on the container and connected to the wood-feeding means and adapted for differently extensive engagement with the mercury of the container.

---

1,691,102. WOOD SPLITTING MACHINE. GEORGE S. WITHAM, Sr., Hudson Falls, N. Y., assignor to Ramar Syndicate, Inc., Norfolk, Va., a Corporation of Virginia. Filed May 31, 1927. Serial No. 195,337. 7 Claims. (Cl. 144—193.)

1. A wood splitting machine comprising a frame, an endless chain carriage for supporting and moving wood blocks and a plurality of pairs of disks arranged in vertical and horizontal planes and positioned to act in sequence upon said blocks and split the same along a plurality of planes by a single passage through the machine, the discs of each pair having their edges in alignment and close together.

---



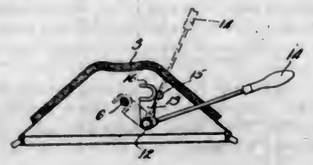
1,691,103. MATERIAL-WORKING APPARATUS. THORNTON MCDUFFEY YANCEY, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1926. Serial No. 133,381. 11 Claims. (Cl. 117—16.)

1. In a material working apparatus, material working means, a single element for individually feeding materials thereto under an equal tension within a predetermined range, means cooperating with the feeding element to maintain the necessary friction between the material and the element and for moving the worked material from the working means, the material moving means permitting the material to slip on the feeding element when the tension on the material at opposite sides of the element reaches a predetermined point, and means for operating the material feeding element and the worked material moving means at different predetermined speeds.

---

1,691,104. CALCULATING DEVICE. JOHN GUSTAV ZOLLMAN, Chicago, Ill. Filed May 3, 1926. Serial No. 106,204. 1 Claim. (Cl. 235—70.)

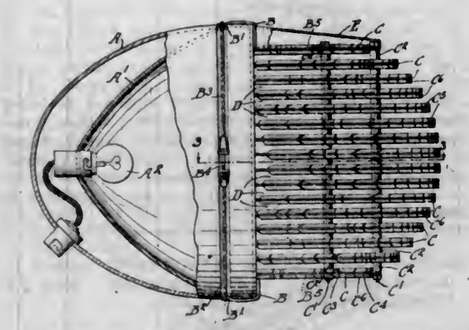
A slide rule comprising a single disc having a series of numbered graduations arranged spirally thereon spaced proportionately to the logarithms of such numbered graduations, two relatively movable indicators pivotally mounted to turn about the center of said disc, and a straight slide rule connected to one of said indicators with a scale thereon having the "1" and "10" marks at the same distances from the center of the disc as the "1" and "10" marks on the spirally arranged graduations, and an indicator on said straight slide rule adapted to give the approximate numerical result of the calculation with the straight slide rule and simultaneously indicate on which spiral to read the accurate result.



1,691,105. LANDING GEAR FOR AIRPLANES. GUISEPPE MARIO BELLANCA, Passaic, N. J. Filed Sept. 16, 1926. Serial No. 135,771. 7 Claims. (Cl. 244—2.)

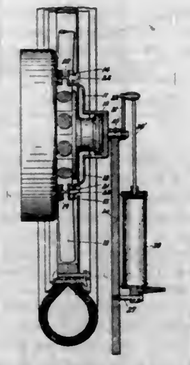
7. In a landing gear for airplanes, a pair of girder members adapted to be attached at their upper ends to the fuselage of an airplane, said girder members being spaced apart longitudinally of the fuselage, and a landing wheel supported between the lower ends of said girder members.

---



1,691,106. NECKBAND AND ATTACHED-COLLAR IRONING MACHINE. DANA H. BENJAMIN, Cleveland, Heights, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 18, 1926. Serial No. 89,167. 2 Claims. (Cl. 68—9.)

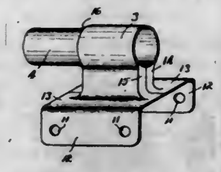
1. In a machine of the class described, a pair of ironing members relatively movable to open and close, and to and from registry, and means for adjustably limiting said movement from registry, to expose portions of the buck ironing member adapted to receive a shirt neckband with or without attached collar, whereby after return to registry the ironing members will close upon the neckband only or neckband with attached collar.



---

1,691,107. ANTIGLARE DEVICE. GUY W. BLACKBURN, Elgin, Ill. Filed Nov. 7, 1927. Serial No. 231,435. 8 Claims. (Cl. 240—48.4.)

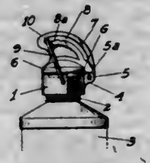
7. In an anti-glare device for a lamp, a plurality of superposed groups of deflector members, the members of each group being arranged in a horizontal plane, each such group including a plurality of longitudinally extended deflectors laterally inclined across the main axis of the lamp, each such group including a pair of opposed plates having deflector members upset therefrom, a portion of each such deflector member projecting upwardly from the upper plate of each pair and another portion of each said deflector member projecting downwardly from the lower plate.



1,691,108. POWER TIRE PUMP. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 6, 1921. Serial No. 435,380. 3 Claims. (Cl. 230—214.)

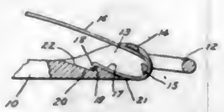
1. In a device of the class described, the combination of a central member adapted to pass over the wheel hub of an automobile, extensions on said member for clamping the same to the supports of the hub, an outwardly extending stub shaft carried by said central member, a support for a pump connected to said shaft and a crank arm operated by said stub shaft for operating the pump.

---



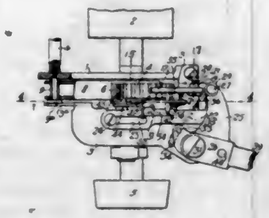
1,691,109. METHOD OF FORMING PRESSED-METAL HINGES. ROBERT F. CARPENTER, Cleveland Heights, Ohio, assignor to The Sany-Metal Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1921. Serial No. 476,211. 5 Claims. (Cl. 29—11.)

3. The method of forming a hinge member from a sheet metal blank having a knuckle portion, end angular bracket portions and intermediate neck portions, consisting in pressing said blank to completely form the angular brackets and partially form the knuckle, and then completing the hinge member by pressing the knuckle to substantially cylindrical shape and thereby bringing the neck portions into substantially parallel relation.



---

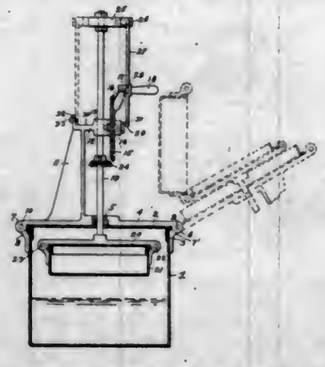
1,691,110. CLOSURE. WAREHAM G. CLARK, Escalon, Calif. Filed Nov. 14, 1927. Serial No. 233,110. 6 Claims. (Cl. 221—60.)



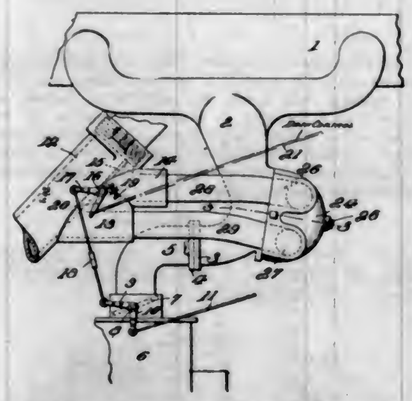
1. A closure comprising a base member, a cap for the base pivoted onto the same at one side thereof, a swinging latch member pivoted onto the base parallel to the cap pivot, and means on the cap permanently engaged by the latch to enable said cap to turn to closed or open positions with the swinging of the latch and normally held in a closed position by said latch.

1,691,111. SNAP HOOK. JOHN M. GLASER, Buffalo, N. Y., assignor to U. S. Hame Company, Buffalo, N. Y. Filed Sept. 9, 1926. Serial No. 134,471. 5 Claims. (Cl. 24—236.)

1. A snap hook comprising a body having a hooked nose at one end, and an attaching loop at the opposite end, and a bent spring secured in said body and having a tongue which bears resiliently against the nose, said body having spaced side walls at its inner end, a transverse bearing for said spring between said side walls and around which the bent portion of the spring passes and a transverse wall which connects said side walls and is located above the inner portion of the spring tongue and extends nearer to said nose than said transverse bearing, the space between said side walls being unobstructed inwardly beyond said spring bearing whereby the bent spring can be inserted and removed through said space, and said body having a continuous back wall provided on its front side between said side walls with a stop with which a hook on the end of the spring engages for retaining the spring in place in the body, said spring hook being held in engagement with said stop by the resilience of the spring and being adapted to be disengaged from said stop by flexing said spring.



1,691,112. TYPEWRITING MACHINE. GEORGE G. GOING, Middletown, Conn., assignor, by mesne assignments, to Remington Typewriter Company, a Corporation of New York. Filed Mar. 5, 1927. Serial No. 173,074. 17 Claims. (Cl. 197—114.)



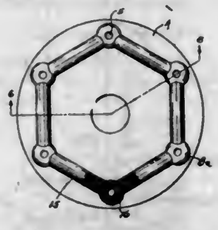
1. In a typewriting machine, the combination of a line spacing wheel, a line spacing pawl coacting with said wheel to effect an intermittent step-by-step forward feed of the platen, an adjustable line space regulating device on which said pawl normally rests and on which it has a sliding movement in its line spacing operation, and an overlying arm that holds the pawl against accidental displacement from said regulating device without interfering with the return movement of said pawl independently of the wheel after each line spacing movement is effected.

1,691,113. CLEANING AND EXTRACTING MACHINE. FRED L. HARDING, Glendale, Calif. Filed July 28, 1927. Serial No. 209,155. 3 Claims. (Cl. 68—18.)

1. A washing machine comprising a tank; a receptacle mounted in said tank; a shaft journaled on said tank secured to said receptacle; a pinion fixed to said shaft; a gear journaled on said tank adapted to mesh with said pinion; a link pivoted to said shaft and to said gear; and a handle on said gear, said handle normally reciprocating said shaft while said gear and pinion are disengaged from each other, said gear and pinion being adapted to be brought into engagement with each other to rotate said shaft while the reciprocatory function is rendered inoperative, and said link sustaining said pinion in mesh with said gear during the rotary operation of the aforementioned receptacle.

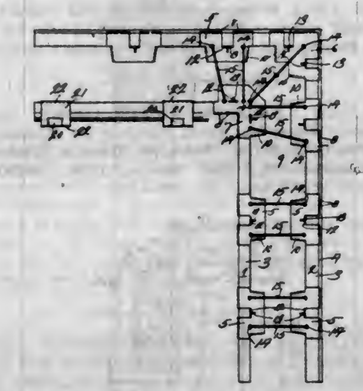
1,691,114. MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. WALTER G. HEGINBOTTOM and JACOB RICHARD FRANCIS, Flint, Mich. Filed Apr. 23, 1919. Serial No. 292,084. 5 Claims. (Cl. 123—122.)

1. An internal combustion engine having a manifold provided with a horizontally disposed offset pocket, a carbureter having an outlet in line with the mouth of said pocket, manually operated means for controlling the application of heat to said pocket and means controlled by the movement of the throttle controlling the application of heat to said pocket.

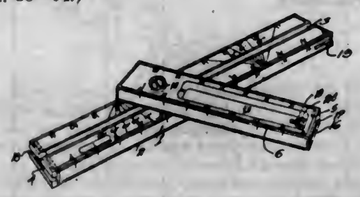


1,691,115. CURLING-IRON ATTACHMENT. JOSEPH H. JACOBS, Rochester, N. Y. Filed Oct. 3, 1927. Serial No. 223,604. 10 Claims. (Cl. 132—37.)

1. A hair curling device having a member of heat conducting material, means for heating said member, a protector comprising a member of poor heat conducting material extending along the heated member and means for detachably securing the protector in place.

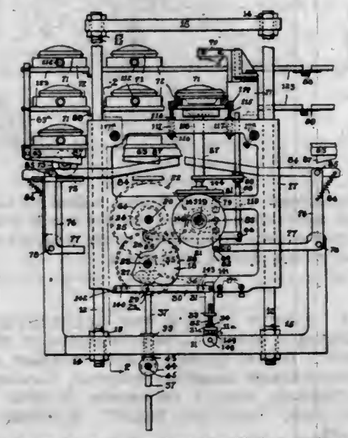


1,691,116. FLEXIBLE COUPLING. STEPHEN JENCICK, Cleveland, Ohio. Filed Apr. 29, 1920. Serial No. 377,623. 7 Claims. (Cl. 64—96.)



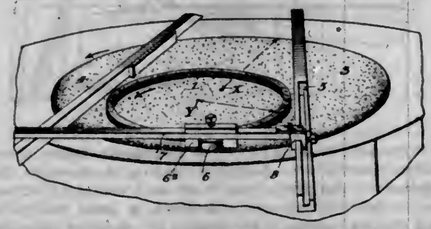
1. A coupling member, comprising a disc of flexible material provided on one face with circumferentially extending reinforcing ribs.

1,691,117. PLASTIC REENFORCED BUILDING CONSTRUCTION. PAUL KOSACK, Grand Island, Nebr. Filed July 23, 1927. Serial No. 207,861. 2 Claims. (Cl. 72—30.)



1. A wall construction comprising inner and outer wall sections having a chamber therebetween, plates extending between courses of blocks of the wall sections, said plates having angularly disposed flanges engaging the outer faces of the blocks, said plates extending inwardly into the chamber, downwardly extending flanges carried by the plates within the chamber and engaging the inner sides of the blocks at an angle thereto, tie rods connecting the plates of the inner and outer wall sections, said plates having recesses therein for the reception of vertically disposed members engaging the inner sides of the wall sections.

1,691,118. MITER SQUARE. WILLIAM LISSY, Spokane, Wash. Filed Dec. 21, 1925. Serial No. 76,586. 1 Claim. (Cl. 33—94.)

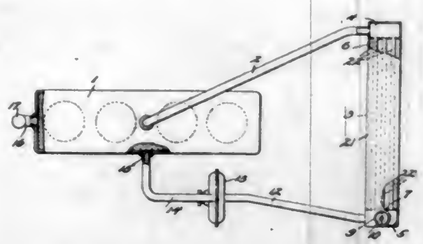


The combination with a stock having an undercut, transverse, end groove, of a blade and a bolt mounted therein and movable longitudinally thereof, a T-head on one end of the bolt for co-action with said end groove, said stock also being formed with an undercut side socket adapted to receive said T-head, and a clamp nut on the bolt.

1,691,119. MOLD LOADING AND TRANSFERRING MACHINE AND JIGGER COMBINED. WILLIAM J. MILLER, Swissvale, Pa. Filed Nov. 26, 1926. Serial No. 150,809. 20 Claims. (Cl. 25—24.)

1. In a machine of the class specified, a main stationary frame, jiggering mechanism movably supported on said frame, means for supporting molds in multiple levels, means for periodically moving the jiggering mechanism adjacent each level, and means for successively moving the molds of each level into operative adjacency to said jiggering mechanism.

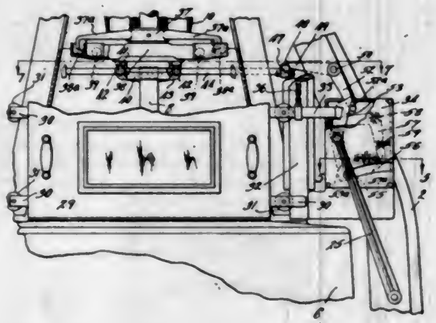
1,691,120. METHOD OF GRINDING PISTON RINGS. ALLEN W. MORTON, Baltimore, Md., assignor to The American Hammered Piston Ring Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 30, 1927. Serial No. 243,671. 3 Claims. (Cl. 51—278.)



1. That method of producing piston rings from individual castings having a series of spaced projections extending outwardly from one face thereof which consists in bringing the ends of said projections into a common plane; placing the casting upon a magnetic chuck with the ends of the projections resting thereon; removing the opposite face of the casting while thus supported to produce, a plane surface thereon, placing such treated face upon a magnetic chuck; and thereafter removing the projections and the underlying body to such extent as to produce a ring of the desired thickness.

1,691,121. MEANS FOR OPERATING COOLING SYSTEMS FOR INTERNAL-COMBUSTION ENGINES. WELLINGTON W. MUIR, Lockport, N. Y., assignor to Harrison Radiator Corporation, Lockport, N. Y. Filed Aug. 20, 1925. Serial No. 51,382. 5 Claims. (Cl. 123—174.)

1. In a cooling system for internal combustion engines, the combination of a jacket; a cross flow radiator provid-

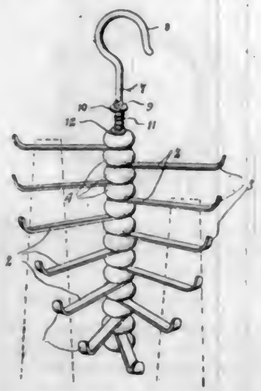


ed with cooling passages extending from side to side thereof; a connection leading from said jacket to said radiator; a connection including a fluid forcing means leading from said radiator to said jacket; a by-pass con-

nection associated with said forcing means joining said jacket and means connected with the cold side of said radiator adapted to permit the escape of air from the system when said side is flooded with liquid.

---

1,691,122. SAFETY DEVICE FOR OVERDRIVEN EXTRACTORS. CHARLES M. OTIS, Rochester, N. Y., and FORREST J. COUCH, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Norwood Station, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 9, 1926. Serial No. 140,573. 6 Claims. (Cl. 192—136.)



1. In an article of the class described a frame, a container mounted for rotation therein, a movable door adapted to guard the mouth of said container, driving means for rotating said container, a lever controlling said driving means, latch means for securing said door in guarding position, a device responsive to rotation of said container, a connection between said latch means and said device whereby the weight of a part of the device tends at all times to maintain said latch means in door securing position and positively maintains said latch member in said position during rotation of said container, and said lever being provided with means to release the latch means upon movement of said lever from driving position beyond its driving release position.

---

1,691,123. NECKTIE RACK. CHARLES H. PAJEAU, Evanston, Ill., assignor to The Toy Tinkers, Inc., Evanston, Ill. Filed Feb. 7, 1928. Serial No. 252,572. 1 Claim. (Cl. 211—165.)

A necktie rack comprising a standard having means at the upper thereof for suspending the same, arms pivoted upon the standard to freely swing in a horizontal plane, spacer buttons upon the standard between the arms, the standard being non-circular in cross section and the spacers having standard-receiving openings conforming to the standard to prevent rotation of the spacers about the

standard, and a coiled spring around said standard between said means and the uppermost spacer for frictionally binding said arms and spacers against each other.

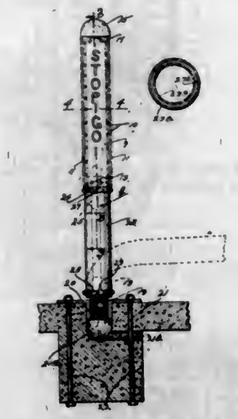
---

1,691,124. ATTACHMENT FOR LOOMS. ALBERT PALMER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 4, 1928. Serial No. 244,515. 7 Claims. (Cl. 234—1.)

7. A device of the class described for a loom having a relatively fixed breast beam and a lay moving toward and from the breast beam and a shuttle to move along the lay, a recording member supported by the breast beam, and means supported by the lay and deriving movement from the shuttle when the latter is in flight to make a record upon said means to indicate the time in the cycle of the loom when the shuttle engages the device.

---

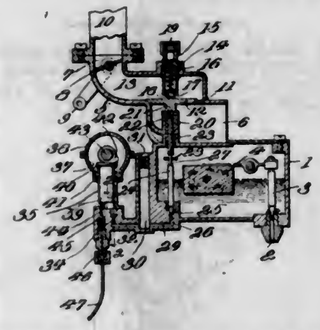
1,691,125. TRANSFORMER. WLADIMIR J. POLYDOROFF, Chicago, Ill., assignor to Johnson-Williamson Laboratories, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1925. Serial No. 22,291. 15 Claims. (Cl. 175—359.)



1. An electrical device including a radio frequency transformer having a plurality of separate windings, said windings being in close magnetic relation, a magnetic field of a primary winding being substantially enclosed

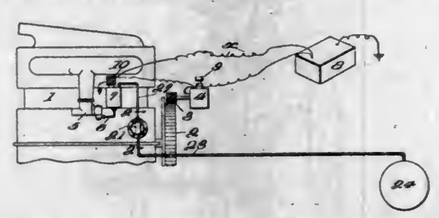
in other windings, and said windings being wound in such a way that every half turn forms a complete circle and is continued in the same plane and same form, but in a direction opposite to another half winding.

---



1,691,126. TRAFFIC SIGNAL. JOHN RANK and HENRY W. RANK, Minneapolis, Minn. Filed Sept. 3, 1925. Serial No. 54,240. 9 Claims. (Cl. 40—145.)

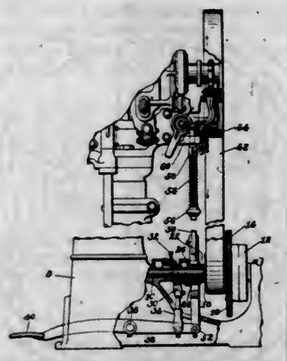
1. A traffic signal in the form of a post and comprising an anchoring base, a hollow rigid upper section having sign-bearing elements, and a resilient integral tubular section deformable in cross-section and connected to said anchoring base and said rigid upper section and adapting the latter to be readily turned from a normal upright position into an approximately horizontal position when the tubular section is deformed.



---

1,691,127. CHARGE FORMING AND INJECTING DEVICE FOR INTERNAL COMBUSTION ENGINES. ALBERT GREEN REDMOND, Indianapolis, Ind., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Indiana. Filed Mar. 19, 1920. Serial No. 367,246. 17 Claims. (Cl. 123—32.)

1. A charge forming and injecting device for internal combustion engines comprising a fuel chamber having an outlet, an air passage communicating with the internal combustion engine, a suction controlled valve arranged in said air passage, a valve operated by said suction controlled valve for controlling the outlet of fuel from said fuel chamber and a plurality of pump cylinders communicating with said outlet passage having outlets corresponding to the cylinders of the internal combustion engine for injecting fuel into the cylinders of said engine.

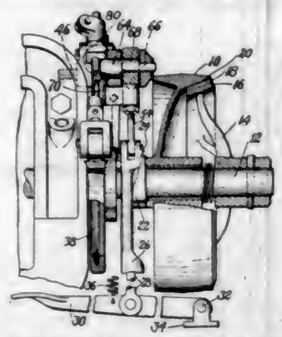


1,691,128. FUEL-FEEDING SYSTEM FOR MOTOR VEHICLES. ALBERT G. REDMOND, Flint, Mich., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Apr. 30, 1925. Serial No. 27,113. 9 Claims. (Cl. 123—187.5.)

1. In a fuel feeding system for motor vehicles, the combination with an internal combustion engine having an electric starter, an electric circuit for said starter, a source of current, a receiving chamber, means for forcing fuel from a low level tank to said receiving chamber, an electric magnet valve for venting said receiving chamber, said valve being arranged in said electric circuit and adapted to be opened when the starter is in operation.

---

1,691,129. SAFETY DEVICE. JOHN B. ROULO, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 24, 1927. Serial No. 201,155. 5 Claims. (Cl. 192—17.)

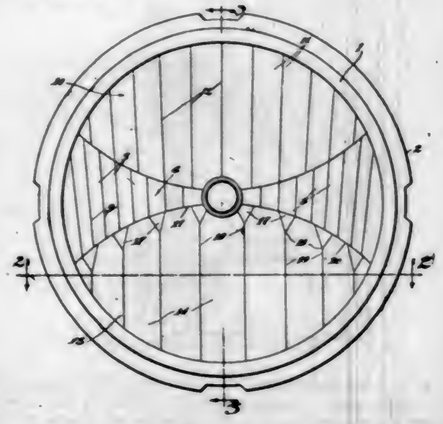


2. In a machine of the class described, the combination of a main shaft, a counter shaft, a clutch on the counter shaft for controlling the transmission of power to the main shaft, a power operated brake for arresting movement of the main shaft when the clutch is released, a treadle for operating the clutch, a rod operated by the treadle for releasing the brake, a projection on said rod, and an adjustable stop comprising a sleeve having slots at right angles to each other adapted to engage the projection on the rod, adjustment of the sleeve to cause the projection to engage one of the slots permitting operation of the machine as usual, and adjustment of the sleeve to cause the projection to engage the other slot permitting the brake to be released and preventing operation of the treadle to set the clutch.

---

1,691,130. SAFETY DEVICE. JOHN B. ROULO, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 5, 1927. Serial No. 231,260. 8 Claims. (Cl. 192—17.)

3. A safety device for a brake and clutch mechanism for preventing operation of the clutch after the brake has been released, comprising a treadle, two members oper-

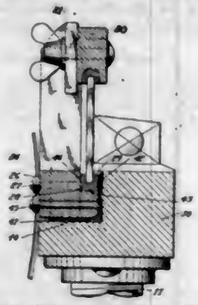


atively connected with the treadle to move relatively toward each other upon movement of the treadle and so constructed and arranged that when the members come in contact with each other further movement of the

treadle and engagement of the clutch are prevented, and an eccentric mechanism movable to prevent said members from coming in contact during normal operation of the machine.

---

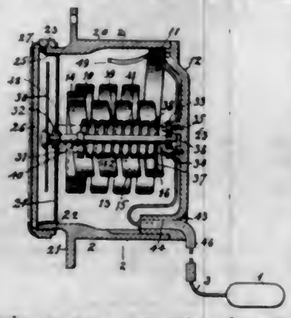
1,691,131. CONFIGURATED REFLECTOR. CHARLES D. RYDER, Covington, Ky., assignor to The Cincinnati Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 28, 1926. Serial No. 118,874. 3 Claims. (Cl. 240—41.)



1. A concave configurated reflector for automobile headlights, comprising three horizontal zones, the axis of the middle one of these zones being horizontally disposed, the axis of a second zone being disposed downwardly at an angle to the axis of the middle zone to cast light belonw that cast by the middle zone, said second zone provided with curvature variations constituting vertically extending panels adapted to spread light horizontally to a greater extent than vertically, the axis of the third zone being disposed downwardly to a greater extent than the axis of the second zone, said third zone also provided with panels adapted to spread light to a greater extent horizontally than the panels of the second zone, said axes intersecting at their foci to provide a common focal point.

---

1,691,132. LAY FOR LOOMS. EPPA H. RYON, Pasadena, Calif., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 12, 1927. Serial No. 239,327. 3 Claims. (Cl. 139—188.)

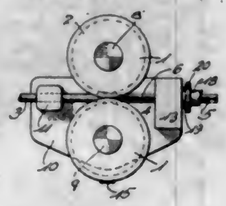


1. In a lay for a loom having a reed, a backstay movable relatively to the lay and having a groove therein, an angle iron secured to the backstay and having a vertical portion along the front edge of the backstay, the vertical

portion of said angle iron cooperating with the groove in the backstay to define a slot which receives the lower end of the reed.

---

1,691,133. TEMPERATURE-INDICATING DEVICE. HERMAN SCHLAICH, Brooklyn, N. Y. Filed Feb. 23, 1918. Serial No. 218,801. 26 Claims. (Cl. 73—118.)



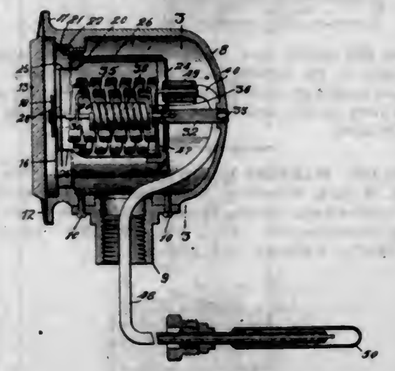
1. A tubular pressure responsive element for gages wound into compound helical form, some of the coils of the tube being wound in an opposite axial direction to other of the coils but all of the coils being wound in the same circumferential direction.

20. A distance type thermometer having a bulb, an indicating gage, and corrugated capillary transmission tubing connecting said bulb and gage.

---

1,691,134. SMALL-BORE TUBING, AND METHOD AND APPARATUS FOR THE MAKING OF SAME. HERMAN SCHLAICH, Brooklyn, N. Y. Filed Apr. 10, 1918. Serial No. 227,754. 16 Claims. (Cl. 153—7.)

1. Corrugated capillary tubing.



5. The method of reducing the volume of capillary tubing which consists in depressing a longitudinal groove therein.

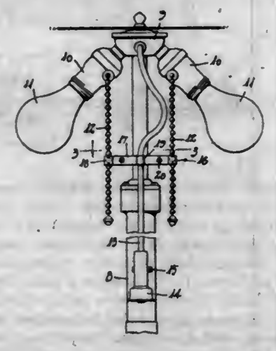
11. The combination of a pair of rolls having grooves for reshaping a piece of tubing, a guide at one side of the rolls, a support on the other side of the rolls, and means comprising a slotted nut and a member having a conical bearing surface for said nut for securing to the support the end of a larger piece of tubing to receive the first tubing after the rolls deliver the same.

---

1,691,135. INSTRUMENT. HERMAN SCHLAICH, Long Island City, N. Y. Filed Nov. 10, 1921. Serial No. 514,196. 5 Claims. (Cl. 73—118.)

1. In an instrument, a helically coiled Bourdon tube, an arbor to which one end of said tube is operatively connected, an indicator secured on the opposite end of said arbor, bearings in which the ends of said arbor are journaled, means for rotatably supporting one of said bearings, a support to which the other end of said tube is connected, and a connection between said support and said rotatably supported bearing for enabling the support, the tube, the arbor and the indicator to be adjusted as a unit by rotation of the bearing, the bearing being directly engageable for effecting such adjustment.

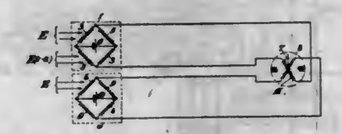
---



1,691,136. INDOOR-OUTDOOR THERMOMETER. HERMAN SCHLAICH, Long Island City, N. Y. Filed July 6, 1922. Serial No. 573,089. 17 Claims. (Cl. 73—52.)

1. A thermometer comprising a frame, temperature indicating means carried by said frame and visible from the front thereof, a temperature responsive element, a flexible connection connecting said element to operate said indicating means, and means carried by said frame for removably holding said element and the major portion of said flexible connection.

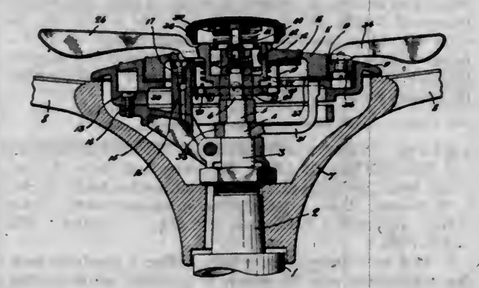
---



1,691,137. COMBINATION LAMP AND SMOKER'S STAND. OTTO A. SCHUCHERT, Elgin, Ill. Filed Oct. 11, 1926. Serial No. 140,968. 4 Claims. (Cl. 240—81.)

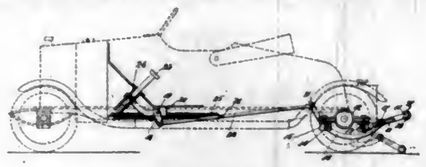
1. A device of the character described comprising a lamp fixture having a lamp socket with a pull chain, an electric cord connected to said fixture and connected to said pull chain for operating said chain, and an electric cigar and cigarette lighter connected to said cord and serving as a handle for pulling the cord and chain.

---



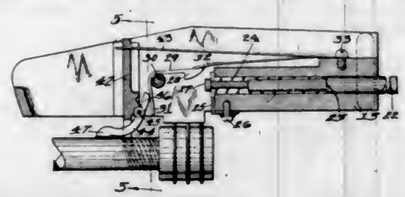
1,691,138. DETERMINING THE CONTENTS OF A GAS. HANS SCHMICK, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, Germany, a German Corporation. Filed June 3, 1926, Serial No. 113,434, and in Germany June 4, 1925. 10 Claims. (Cl. 23—254.)

1. In a method for determining a gas by radiation measurement, the use of a selective radiator the emission bands of which overlap as little as possible the absorption bands of the test gas.



---

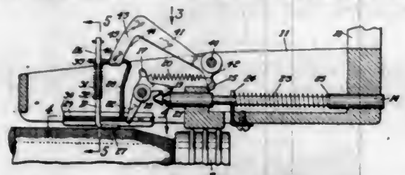
1,691,139. STEERING-WHEEL-CONTROL ASSEMBLY. ERNEST W. SEAHOLM, Detroit, and HARRY M. DENYES, Saginaw, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 10, 1927. Serial No. 167,247. 19 Claims. (Cl. 74—39.)



1. A steering wheel control assembly including a steering wheel, and a plurality of relatively movable control rings located on the hub of the wheel, and having their peripheral edges disposed one beyond another, in concentric succession.

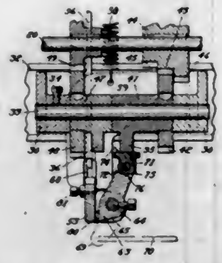
1,691,140. ANTISKID DEVICE FOR MOTOR VEHICLES. ROBERT THORNER, Asheville, N. C. Filed Apr. 6, 1925. Serial No. 20,943. 2 Claims. (Cl. 188—5.)

1. An anti-skid device for motor vehicles comprising in combination a rearwardly-extending frame having two arms substantially parallel to the longitudinal axis of the vehicle and a transverse drag connecting the rearward ends of said arms, means pivotally connecting the forward ends of said arms to the vehicle, a pair of curvilinear levers each pivotally connected at a point intermediate its ends to said vehicle, a pin-and-slot connection between the rearward ends of said curvilinear levers to said arms, respectively, a transverse bar connecting the forward ends of said curvilinear levers, a lever pivotally connected to said vehicle near the forward end thereof, a rod connecting the lower end of said lever to said transverse bar, a foot pedal and a pin-and-slot connection between said pedal and the upper end of said lever.



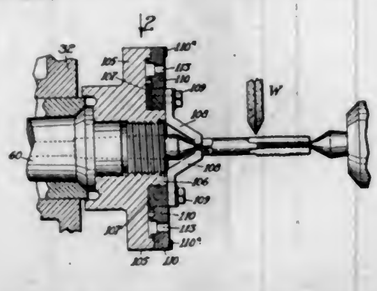
1,691,141. WEFT DETECTOR IN REGULARLY-MOVING TRANSFERRER. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 3, 1926. Serial No. 120,490. 15 Claims. (Cl. 139—271.)

1. In a weft detector for a loom having a surface to be detected, a detector to cooperate with the surface, means to cause relative motion between the detector and the surface to lessen the distance between said detector and surface, a support for the detector, means exerting a force on the detector to cause the latter to maintain the same relative position with respect to the support during the time that the distance between the surface and detector is being reduced, means to cause an abrupt change in the force acting on the detector as the distance between the detector and surface is reduced, a weighted mass operatively connected to the detector and tending to act by the inertia thereof at the time of said abrupt change to caust a relative change in the relation of the detector and support therefor and tending to give the detector an indicating movement while in contact with the surface.



1,691,142. INERTIA-ACTUATED WEFT DETECTOR ON A TRANSFERRER ARM. KENNETH J. UNWIN, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1927. Serial No. 232,424. 7 Claims. (Cl. 139—271.)

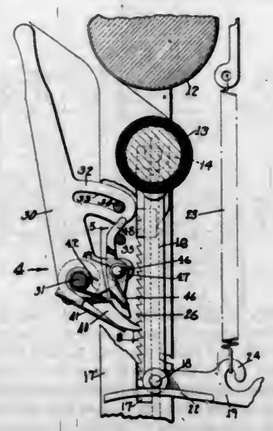
1. In a weft detector for a loom having a regularly moving transferrer arm on which is mounted an indicating plunger, a movable latch normally holding the plunger in nonindicating position, a carrier slidable on the transferrer arm in a direction substantially parallel to the surface being detected, a detector mounted on the carrier, a weighted member pivoted to the transferrer arm and free to move downwardly relatively to the transferrer after the latter has reached the bottom of its stroke due to the momentum of said weighted arm, and means defining a connection between the weighted arm and the carrier whereby the downward motion of the weighted arm is caused to



move the carrier in a substantially horizontal direction parallel to the surface being detected, said latch to be moved to plunger releasing position when the carrier moves relatively to the transferrer arm on an indicating beat of the loom.

1,691,143. HARNESS MOTION FOR LOOMS. WILLIAM M. WATTIE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 25, 1927. Serial No. 235,575. 5 Claims. (Cl. 139—80.)

1. In a harness motion for a loom having a pair of oppositely moving harness frames to be moved by a treadle lever, an actuator cam having a motion the cycle of which is completed in a given number of picks of the loom, a second actuator cam for a motion the cycle of which is completed in a different number of picks of the loom, and a device moving with but movably mounted with respect to the treadle lever to have direct engagement with either cam whereby either cam causes movement of the treadle lever.

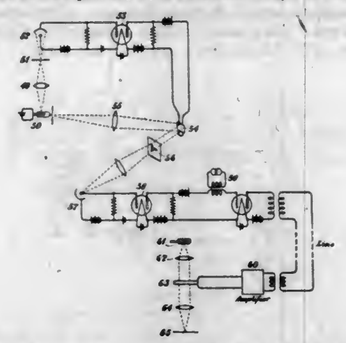


1,691,144. WORK-DRIVING DEVICE. JOHN BATH, Worcester, Mass. Original application filed Dec. 27, 1921, Serial No. 524,817. Divided and this application filed Dec. 14, 1925. Serial No. 75,201. 5 Claims. (Cl. 51—237.)

1. In a thread grinding machine, a head stock, a work supporting spindle rotatable therein, a work driving member mounted thereon, and means on said head stock effective to release said member from said spindle and to hold said released member in fixed angular position,

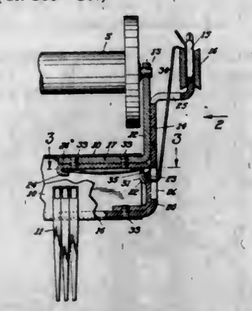
1,691,145. CLOTH-ROLL SUPPORT. CARL P. BERGSTROM and VICTOR A. FOISY, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 21, 1927. Serial No. 241,667. 7 Claims. (Cl. 139—308.)

1. In a loom, cloth roll supporting mechanism comprising a pair of vertically slidable supporting bars, said bars being simultaneously manually depressible, means to hold said bars depressed, and means to accomplish a yielding upward step by step movement of said bars to operative raised position.



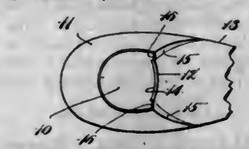
1,691,146. COTTON-PICKING MACHINE. GUY E. BOGGS, Kaufman, Tex. Filed Jan. 15, 1923. Serial No. 612,687. 1 Claim. (Cl. 56—32.)

Cotton picking apparatus including a suction tube, a nozzle carried thereby having an opening in the wall thereof, a flap valve hingedly connected to the nozzle and movable to position to close the opening, said valve being normally extended into the nozzle to partly close the passage through the nozzle and a finger piece extending from the valve, and outwardly from the nozzle for actuation by a finger of an operator to shift the valve away from normal position and to close the opening.



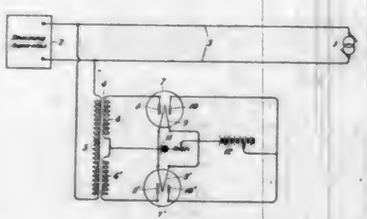
1,691,147. ELECTRICAL PICTURE-TRANSMITTING SYSTEM. ALVA B. CLARK, Brooklyn, N. Y.; HARRY NYQUIST, Millburn, N. J.; and DANFORTH K. GANNETT, Jackson Heights, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 6, 1925. Serial No. 35,328. 20 Claims. (Cl. 178—7.)

1. In the transmission of pictures by electric currents, the method which consists in sending currents varied in a non-linear relation to the light values of the successive elements of the picture to be transmitted, and at the re-



ceiving end exposing corresponding elements of a sensitive surface to light varied in inverse non-linear relation to the received current.

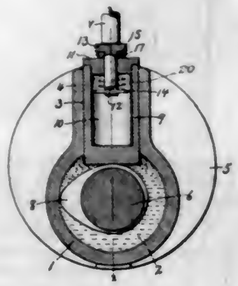
1,691,148. TUBE-FRAME BRACKET. EVERETT E. CLARK, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 26, 1927. Serial No. 178,785. 8 Claims. (Cl. 139—10.)



1. In a loom, a rectangular yarn tube frame, and a tube frame bracket comprising an L-shaped spool-supporting member, an L-shaped chain-engaging member having upper and lower slots therein, said members being permanently secured together and having their parallel offset lower end portions extending within said tube frame, and a chain-engaging spring hook of general L-shaped formation mounted in said bracket and having its offset lower end extending freely a substantial distance within said tube frame and secured at its inner end in substantially fixed relation to said tube frame bracket, said spring being free to flex throughout substantially its entire length.

1,691,149. HEEL. ANTHONY COCOZELLA, Lynn, Mass., assignor, by direct and mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 28, 1925. Serial No. 71,989. 16 Claims. (Cl. 36—34.)

6. As an article of manufacture, a heel block having ribs formed one at each lateral margin of its breast and projecting beyond its breast surface, said ribs extending from the top to the bottom of the breast to protect the lateral edges of a breast covering to be fitted between them.

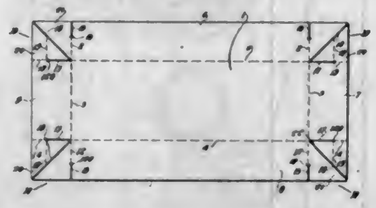


1,691,150. ELECTRICAL POWER-LIMITING DEVICE. GEORGE CRISSON, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 2, 1925. Serial No. 27,563. 4 Claims. (Cl. 171—119.)

1. A device for limiting the electrical power delivered over a circuit including a source of power and a transmission line, said device consisting of a duplex three-electrode vacuum tube arrangement connected effectively in shunt with the transmission line, and means for controlling the potential applied to the grid electrodes of the tubes, the plate electrodes of the tubes being electrically connected one to each side of the transmission line, and the filament electrodes of the tubes being connected to a neutral point in the circuit.

---

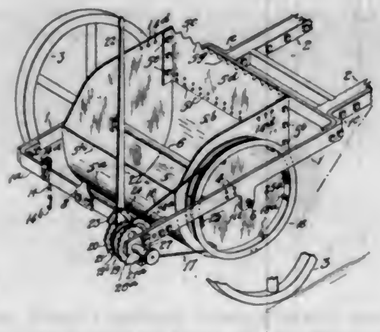
1,691,151. INTERNAL-COMBUSTION ENGINE. WILLIAM M. GOODWIN, Central Square, N. Y. Filed Jan. 11, 1927. Serial No. 160,406. 3 Claims. (Cl. 123—90.)



2. The combination with an internal combustion-engine frame having a circular opening, a tubular casing supported in said opening and provided with a radial guide opening, a valve-operating plunger movable in said guide opening, and a cam shaft journaled within the tubular casing for operating said plunger, the opening in the frame being of greater diameter than the external diameter of the casing to permit said casing with the cam-shaft and plunger therein to be displaced endwise without changing the normal relation between the casing, cam-shaft and plunger.

3. An internal combustion engine as in claim 2 in which the circular opening in the frame is eccentric to the axis of the tubular casing and its longer radius is disposed at the same side of said axis as the guide opening for the plunger.

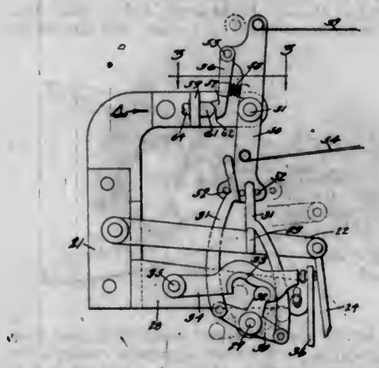
---



1,691,152. COLLAPSIBLE BOX. EDWARD EVERETT HALE, Buffalo, N. Y. Filed Aug. 15, 1927. Serial No. 213,127. 1 Claim. (Cl. 229—35.)

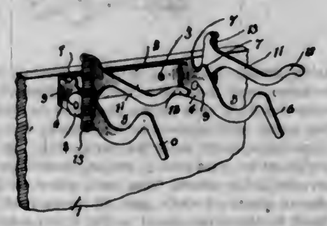
In a corner locking structure for collapsible boxes, the combination of the bottom and two adjacent sidewalls of integral triangular corner locking members formed upon the ends of the sides and bent at right angles thereto and having slots extending along the lines about which they are bent, one of said slots extending upwardly from the bottom of the corner along the bending line of one triangular corner locking member, the other slot extending downwardly from the top of the corner along the bending line of the other triangular corner locking member, and a bending line extending across the triangular member having the upwardly extending slot from the top of such slot to one of the free edges of such member, a tongue member formed by the slot and said free edge in said locking member and adapted to be bent back upon its corner locking member along the bending line so that it enters the slot in the other corner locking member when the corner is being formed, a means whereby the returning of the tongue to its original unbent position constitutes a corner retaining lock.

---



1,691,153. EARTH SCOOP. PERCY HERBERT HISCOCK, Pyalong, Victoria, Australia. Filed Aug. 26, 1926, Serial No. 131,759, and in Australia Nov. 21, 1925. 3 Claims. (Cl. 37—140.)

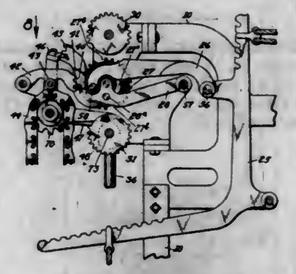
1. A rotatable scoop, having a wheeled frame, and at one side of the scoop rear a series of ratchet wheels fixed on a rotatable winding drum, a plurality of ropes each fastened at one end to said drum, and extending therefrom to a pulley fixed at the side of the scoop, the other ends of the ropes being fastened to the pulley, a pair of pawls bearing on different ratchet wheels of the said series either pawl of said pair being raisable to allow of rotation of the series of ratchet wheels in a distinctive direction, the unraised pawl preventing reverse rotation, and a lever carrying a pair of pawls each locatable to bear on a different ratchet wheel so that each of these pawls is adapted to rotate the drum in a distinctive direction according to the direction of movement of the lever, rotation of the drum moving the ropes, and thereby rotating the pulley and scoop, adjusting the latter into either scooping, load carrying non-scooping, or discharging, position, at will.



1,691,154. JACQUARD INDICATOR FOR LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 4, 1926. Serial No. 133,702. 10 Claims. (Cl. 139—180.)

1. In a jacquard indicator for the box motion of a loom, a member connected to and movable by the jacquard mechanism, a regularly moving actuator, a pair of elements operatively connected to the box motion and movable with the member relatively to the path of the actuator, and a pair of cooperating devices acting to complete a motion of the member initiated by the jacquard mechanism, one of said devices being connected to and movable with the member, the other device being capable of assuming any one of a number of fixed positions relatively to the member when the latter is at rest, the variation of the position of said second device rendering possible a variation in the time at which said devices will begin to complete a motion of the member which is initiated by the jacquard mechanism.

---



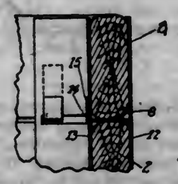
1,691,155. HOLDER. EDWARD I. HOWELL, Phillipsburg, N. J. Filed Mar. 22, 1927. Serial No. 177,376. 1 Claim. (Cl. 248—20.)

A holder comprising a pair of horizontally spaced supporting arms having article-receiving recesses formed in their upper edges and having their forward ends inclined downwardly to form guides, means for securing said arms to a relatively fixed support, spaced stop lugs on the upper edges of the arms in rear of the recesses therein, clamping arms pivotally attached to the respective supporting arms and extending upwardly and then forwardly above the supporting arms and over an article in the recesses therein, a lateral lug on each clamping arm movable between the stop lugs on the respectively adjacent supporting arm whereby to limit the movement of the clamping arms in either direction, and retractile springs attached to the supporting arms and the clamping arms pivoted respectively thereto in advance of the pivotal point and in rear of the recesses in the supporting arms.

1,691,156. HEAD MOTION FOR LOOMS. CHESTER L. HUSSEY, Oyster Bay, N. Y., and WILLIAM H. STEBBINS, Norwich, Conn., assignors to J. B. Martin Company, Norwich, Conn., a Corporation of Delaware. Filed Sept. 10, 1927. Serial No. 218,759. 19 Claims. (Cl. 139—77.)

5. A reversible head motion for looms comprising vibrator gears, and upper and lower driving cylinder gears, the axes of all of said gears being located substantially in a single plane, and means to drive said cylinder gears in forward and rearward directions.

---

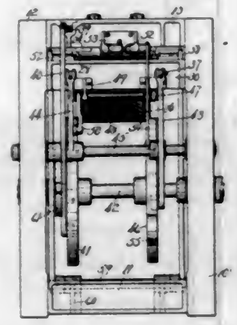


1,691,157. WAGON SEAT. BARRON JAMES JOSEPH KERR, Wimborne, Alberta, Canada. Filed Oct. 28, 1926. Serial No. 144,844. 1 Claim. (Cl. 155—9.)

A wagon seat comprising a body of rigid angle bars, longitudinally extending reinforcing bars connecting the angle bars, a back frame for the body, and side arms integral with said frame and connected to the angle bars, a plurality of longitudinally extending spaced wires spring-connected at each end to the body portion and the back frame, a plurality of spaced cross wires connected to the aforementioned wires, a central reinforcing plate for the body portion and the back engaging the longitudinally extending wires, coil spring supports between said plate and the reinforcing bars for the angle bars, suspending clamping members for the seat, and flexible members connecting the clamping members with the angle bars.

---

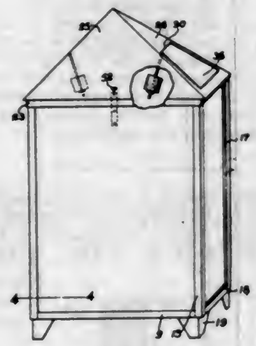
1,691,158. BOX. HAROLD S. LION, Cincinnati, Ohio, assignor, by mesne assignments, to United Milk Crate Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 9, 1926. Serial No. 114,821. 2 Claims. (Cl. 217—69.)



1. A box having side and end walls composed of a frame of wooden strips arranged in tiers, with a metallic angle plate for the outside of each corner of the box having ears

punched therefrom extending inwardly, horizontally, flatwise, and at right angles to the plate, and a locking plate for the inside of each corner provided with slots to receive said ears of the outside plate for clinching, to secure the corner plates in position.

---

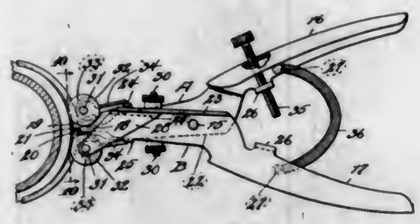


1,691,159. WIRE-BENDING MACHINE. GEORGE FRANKLYN MATTESON, Rocky Hill, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed May 2, 1925. Serial No. 27,576. 20 Claims. (Cl. 153—45.)

1. A bending machine including a bending member rotatably mounted, a pair of formers projecting from said bending member and spaced for the reception of articles to be bent between them, means for operating said bending member to cause one of said formers to bend said articles around the other of said formers, a placer to place opposite ends of articles simultaneously between said formers, and means for supplying articles to said placer.

---

1,691,160. SELF-CLOSING RECEPTACLE. WILLIAM ROGER MEUTTMAN, Cincinnati, Ohio. Filed Sept. 17, 1926. Serial No. 136,150. 9 Claims. (Cl. 220—32.)



1. In a waste receptacle the combination of a housing having an apertured top portion, a swinging door movable through said aperture in both directions, a rod associated with the door and disposed interiorly of the housing and an adjustable weight on the rod for counter-balancing the swinging door and retaining said door normally in a plane with the edges of the aperture in the top.

3. In a device of the class described the combination of a plurality of W-shaped corner strips, side walls flanged at the edges and secured to the corner strips for providing ways wherein display panels may be mounted, and a cover having a flange for closing the ways in the sides.

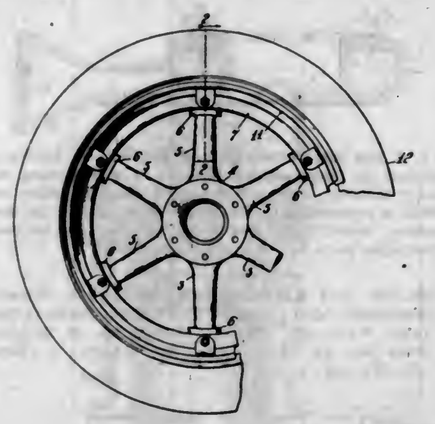
---

1,691,161. PISTON-RING MOUNTING AND REMOVING TOOL. FRANK MILLER, Los Angeles, Calif. Filed Jan. 24, 1927. Serial No. 163,096. 7 Claims. (Cl. 29—86.4.)

1. A tool of the class described comprising ring holding means consisting of relatively adjustable elements for adaptation to rings of different thickness, and adapted to be locked in the adjusted position, and means for spreading the ring ends and securing the spread ends in the ring holding means.

---

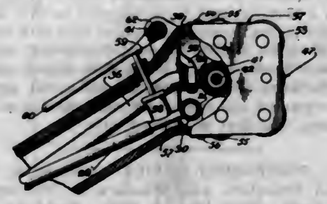
1,691,162. VENTILATING APPARATUS. MARK H. MILLER, Indianapolis, Ind. Filed Aug. 26, 1926. Serial No. 131,608. 1 Claim. (Cl. 98—88.)



Ventilating means including a frame having an opening in the lower part thereof, a vertical series of angular screens secured within said frame arranged in substantially A-shaped pairs, said screens being formed of a translucent but non-transparent material for permitting the passage of light while preventing vision therethrough, the pairs of screens being spaced from each other vertically so that the lower edges of each pair of screens will extend down at least to the same plane as the upper edges of the pair of screens below so as to permit the free passage of air while preventing the passage of the elements, a vertical screen insertable in and removably mounted through the opening in said frame between each series of angular screens, and a latch secured to the lower portion of said frame adjacent the opening therein for locking said vertical screen therein.

---

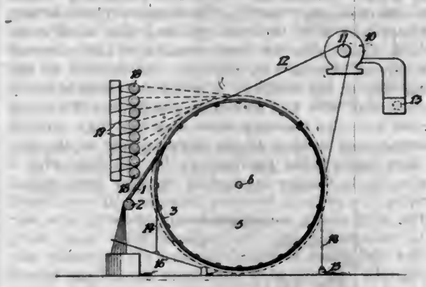
1,691,163. METHOD OF MAKING METAL WHEELS. EDMUND C. MOGFORD, Buchanan, and FREDERICK W. BURGER, Niles, Mich., assignors to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed May 29, 1925. Serial No. 33,657. 14 Claims. (Cl. 29—174.)



1. The method of constructing a circular wheel which comprises, forming a rigid spider, forming a circular felloe of outwardly facing channel section and of relatively deep flanges and of an internal diameter smaller than the outer diameter of the spider, pressing the spider into the felloe to create a tension in the felloe not sufficient to substantially distort the form of the felloe, but great enough to hold the spider under compression for all loads within the capacity of the wheel.

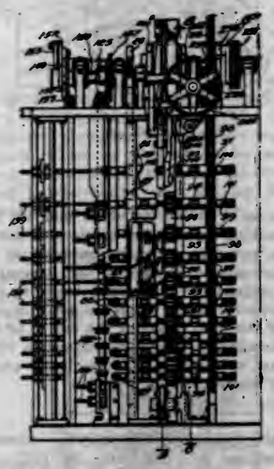
---

1,691,164. WINDOW-WASHING DEVICE. TRAVIS B. MONK, Chicago, Ill. Filed May 13, 1927. Serial No. 190,983. 6 Claims. (Cl. 15—103.)



1. A window washing device comprising a washer mounted in a nozzle connected to a fluid container; means for spraying washing fluid on said washer; means for rotating said washer; rollers associated with said washer for wiping said washing fluid from the surface being washed and returning said fluid to said nozzle; means for creating a vacuum in said nozzle for aiding the return of said fluid to said nozzle; other rollers associated with the first said rollers for removing washing fluid from the first said rollers and plate members frictionally engaging said other rollers, and fluid straining and absorbing means said fluid straining and absorbing means being incorporated within said fluid container.

---

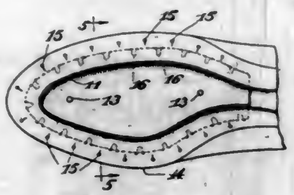


1,691,165. FILAMENT-DRYING APPARATUS. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed June 5, 1926. Serial No. 113,869. 3 Claims. (Cl. 242—1.)

1. In filament drying apparatus; the combination with an open reel; of means arranged to rotate said reel selectively in opposite directions; means arranged to singly direct and assemble a plurality of wet filaments in a single skein or band upon said reel, at one end thereof, and distribute the same in helical convolutions by reciprocation parallel with the axis of said reel, while rotating said reel in one direction; means arranged to rotate said reel at increased speed when charged, to dry said filaments; and means arranged to withdraw the dried filaments, in reverse direction, singly and separately but simultaneously from said reel, and contemporaneously wind each of said filaments singly and separately upon respective bobbins while rotating said reel in the opposite direction.

---

1,691,166. WIRE-FENCE MACHINE. CARL A. PORATH, Kokomo, Ind., assignor to Kokomo Steel and Wire Company, Kokomo, Ind., a Corporation of Indiana. Filed Feb. 14, 1924. Serial No. 692,646. 26 Claims. (Cl. 140—13.)



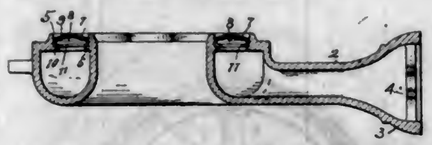
1. In a wire fence machine for the manufacture of wire fencing having horizontal strand wires and vertical cross stay wires, the combination of means for supporting the horizontal strand wires in parallel position within a vertical plane, means for feeding a plurality of stay wires equal in number to the spaces between the strand wires and in a direction initially parallel to the strand wires, each stay wire being initially located below the position of the strand wire space which it is to occupy, means for directing each stay wire as fed into a vertical position across the strand wire space which it is to occupy, said directing means including a slotted guideway having a side opening facing in the direction of fence delivery, whereby the stay wire sections are placed across the spaces between the strand wires and with the adjacent stay wires overlapping each other at the positions of the strand wires, a rotatable primary twister in line with each strand wire and having oppositely disposed teeth adapted to engage the stay wire ends, a stationary knife blade beneath each

strand wire and adjacent to the feeding position of the corresponding stay wire, a movable cutting blade corresponding to each stationary blade, means for moving the movable blades towards the respective stationary blades and for simultaneously moving the primary twisters into firm engagement with the corresponding stay wire ends, a rotatable fixed coiler for each strand wire and provided with a central strand wire passage, and located at the receiving side of the machine, a rotatable movable coiler for each strand wire and having a longitudinally extending strand wire slot reaching more than half way through its diameter and located at the delivery side of the machine, each coiler being provided on its end face with a tooth adapted to engage the end of the stay wire, means for turning the primary twisters substantially one-fourth turn after they are in engagement with the stay wire sections to thereby overlap the adjacent stay wire ends, means for thereafter rotating the fixed and movable coilers to thereby coil the stay wire ends around the strand wires, means for thereafter shifting the movable coilers sidewise to remove them from the position of the strand and stay wires, and means for thereafter moving the completed fencing a distance equal to the spacing between consecutive stay wires substantially as described.

---

1,691,167. METHOD OF MAKING SHOES. ABRAHAM L. POSTMAN, Brooklyn, N. Y. Filed Nov. 19, 1925. Serial No. 69,977. 4 Claims. (Cl. 12—142.)

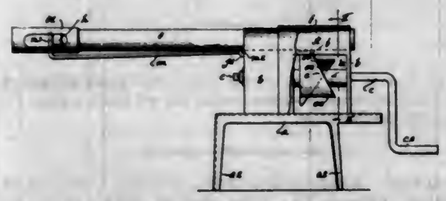
1. The process of producing shoes and the like, which comprises attaching a temporary insole provided with a peripheral strip, to a last, attaching an upper to the last so that its edge overlaps the edge of said temporary insole, stapling the strip of the insole together with the edge of said upper, permitting the upper to set and shape itself to the form of the last, removing the means of attachment holding the temporary insole and upper to the last, removing the last, sewing a sole to the upper and removing the temporary insole.



---

1,691,168. MUSICAL INSTRUMENT. JOSEPH RAFSEVEZ, Philadelphia, Pa. Filed Mar. 28, 1927. Serial No. 178,890. 4 Claims. (Cl. 84—294.)

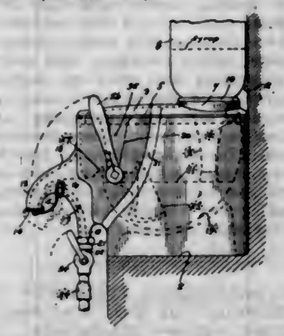
1. A stringed musical instrument including a hollow violin body having front, back and side walls, a horn disposed partly within the body and extending through one of the side walls, and a bowl on the inner end of the horn having its opening disposed in close proximity to the front wall.



1,691,169. BURNER. JOHN P. REINECKE, Lorain, Ohio, assignor to The Hoffman Heater Company, Lorain, Ohio, a Corporation of Ohio. Filed Apr. 20, 1923. Serial No. 633,506. 5 Claims. (Cl. 158—99.)

1. A gas burner comprising a hollow body having an opening, an insert member mounted in said opening, said insert member being hollow and having an outer wall which is rounded on its outer surface and flat on its inner surface, thereby providing a wall of varying thickness there being ports drilled through said wall.

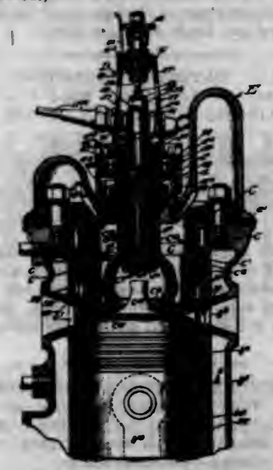
---



1,691,170. TOY MACHINE GUN. WILLIAM F. SCHMIDT, Wyandotte, Mich., assignor to All Metal Products Company, Wyandotte, Mich., a Corporation of Michigan. Filed Nov. 29, 1926. Serial No. 151,309. 5 Claims. (Cl. 124—13.)

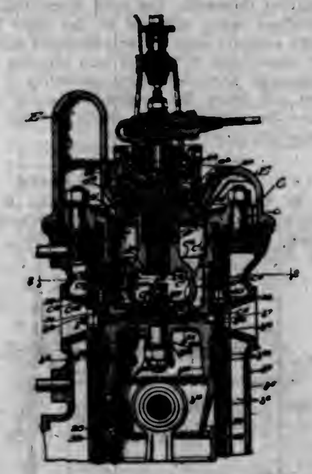
1. In an apparatus of the kind described, the combination of a barrel, a piston adapted to reciprocate in said barrel, a spring acting to press said piston forward, a wire rigidly secured to said piston and extending rearwardly therefrom, a cork adapted to be inserted in said barrel in front of said piston, means for guiding said cork into position in said barrel, a wire secured to said first mentioned wire to move therewith and adapted to engage said cork to force the same into position in said barrel when said piston is retracted and means for continuously retracting and releasing said first mentioned wire.

---



1,691,171. DISPENSING DEVICE. WALTER E. TWICHELL, San Francisco, and WALLACE B. TWICHELL, St. Helena, Calif. Filed May 13, 1925. Serial No. 29,924. 2 Claims. (Cl. 221—97.)

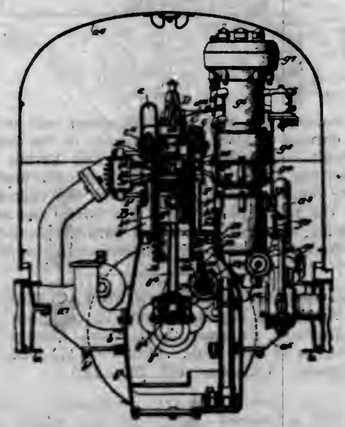
1. A dispensing device of the character described comprising a receptacle provided with a spout projecting from one side, a tiltable ladle within the receptacle arranged for ladling liquid from the receptacle for ejection from the spout, said ladle being mounted on trunnions, one resting on a bearing formed within the receptacle, and the other extending through an opening in the side wall of the receptacle and provided with a handle lying adjacent said wall.



1,691,172. FUEL INJECTOR FOR INTERNAL-COMBUSTION ENGINES. AAGE E. WINCKLER, Milwaukee, Wis. Filed Mar. 26, 1925. Serial No. 18,381. 15 Claims. (Cl. 123—32.)

1. In a fuel injector for internal combustion engines, the combination of an injection valve provided with a stem, a casing in which said valve-stem is slidably mounted for delivering fuel into the combustion chamber of an engine, means operable by the pressure of the fuel, for operating the valve, a sleeve disposed outside of the casing and extending around and fixed to move with the valve-stem, and fuel delivering means connected to the sleeve, and means forming a fuel passage between the sleeve and the valve for conducting fuel from the delivering means to the casing.

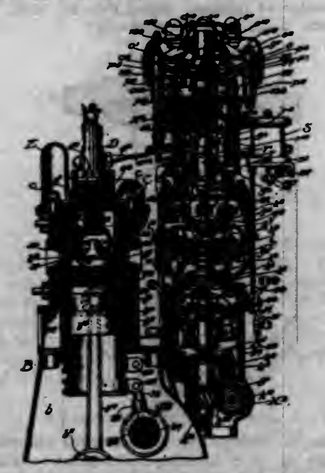
---



1,691,173. COMBUSTION CHAMBER FOR INTERNAL-COMBUSTION ENGINES. AAGE E. WINCKLER, Milwaukee, Wis. Filed Mar. 26, 1925. Serial No. 18,382. 4 Claims. (Cl. 123—32.)

1. In an internal combustion engine, the combination of a cylinder, a reciprocating piston therein, a cylinder head provided with a combustion chamber coaxial with the cylinder, an injector connected to the upper end of the head and positioned to spray fuel into the combustion chamber, said head having a wall at its lower end with an opening therein between the cylinder and said chamber, the chamber having a greater diameter than the opening, and a circular tip on the end of the piston, having a base portion disposed adjacent said wall and a top portion smaller in diameter than said opening and adapted to extend into the combustion chamber so that the fuel and air will be mixed in the chamber between the side wall thereof and the tip, the upper end of the top portion of the tip being flared outwardly so as to direct the air from the base portion upwardly and outwardly toward the upper and outer portion of the combustion chamber.

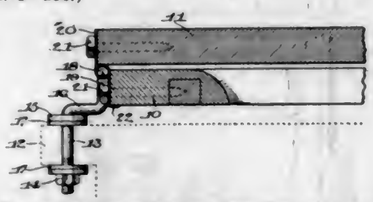
---



1,691,174. INTERNAL-COMBUSTION ENGINE. AAGE E. WINCKLER, Milwaukee, Wis. Filed Mar. 26, 1925. Serial No. 18,384. 4 Claims. (Cl. 123—32.)

1. The combination of an internal combustion engine comprising a casing and a series of cylinders, a fuel injector for each cylinder, a plurality of sleeve-valves in each cylinder, a shaft driven by the engine for operating said sleeve-valves, and enclosed fuel feed mechanism removably secured to the casing, and gearing driven by the shaft for driving the fuel feed mechanism.

---

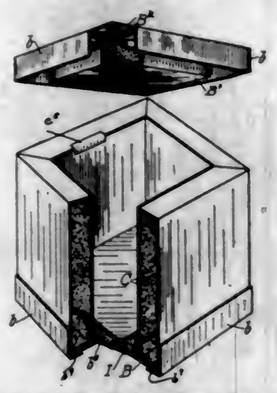


1,691,175. FUEL-FEEDING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. AAGE E. WINCKLER, Milwaukee, Wis. Filed May 25, 1925. Serial No. 32,550. 45 Claims. (Cl. 123—140.)

1. In mechanism for feeding fuel to a multi-cylinder internal combustion engine, the combination of an enclosing casing, a drive-shaft longitudinally disposed therein, a

series of fuel pumps annularly arranged around and substantially parallel with the axis of the shaft, mechanism driven by the shaft for operating said fuel pumps, metering valves annularly arranged in said casing and extending longitudinally of the pumps and shafts and mechanism driven by said shaft for operating the metering valves.

1,691,176. CLOSET SEAT. EUGENE A. ZUNDEL, Chicago, Ill. Filed Jan. 2, 1926. Serial No. 78,904. 8 Claims. (Cl. 4—236.)

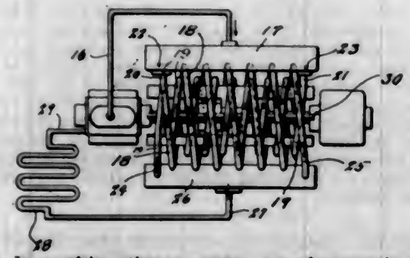


1. In combination with a wooden closet seat and cover, a hinge formed of hinge plates secured to the rear edges of the seat and cover respectively and having aligned barrel sections, and hinge posts with horizontal pintle arms extending into the barrel sections from the opposite ends thereof, the hinge plates when the cover and seat are closed being arranged in vertical parallel planes spaced apart a distance equal to the diameter of the hinge barrel.

1,691,177. MEANS FOR OBTAINING VACUUMS. CLARENCE W. BALKE, Highland Park, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Feb. 17, 1927. Serial No. 168,850. 5 Claims. (Cl. 250—27.5.)

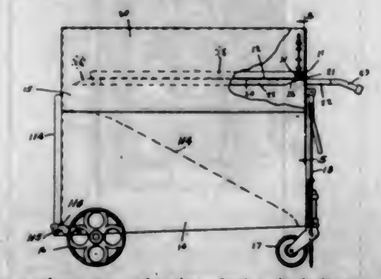
5. In a vacuum tube, a filament, a piece of columbium adjacent said filament so as to be heated thereby and to absorb gases present in the tube.

1,691,178. INSULATING SHIPPING CONTAINER. GEORGE B. BEAMAN, Fort Wayne, Ind., assignor to Fort Wayne Corrugated Paper Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Feb. 20, 1925. Serial No. 10,592. 2 Claims. (Cl. 229—14.)



1. For use in constructing an insulating shipping container, made up of a plurality of separately assembled sections comprising an inside tubular element and a head for each end thereof, and an outer casing, a creased blank and a creased and slotted blank from which the main walls of the inside tubular element of said container are formed, two creased and slotted blanks from which the walls of each head are formed, said head having a channel within which an end of the inside tubular element seats and a creased and slotted blank to form an outer casing for said tubular member and heads when assembled.

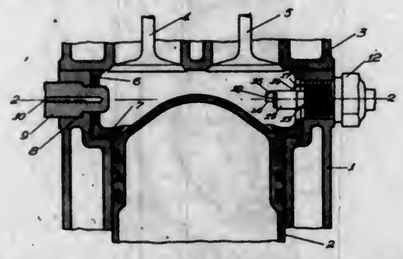
1,691,179. MATERIAL-FASTENING DEVICE. CHARLES BETZ, St. Louis, Mo. Filed June 14, 1926. Serial No. 115,934. 1 Claim. (Cl. 72—118.)



A wall-board joint-concealing and fastening strip of substantially T-cross-section and comprising a web and a pair of oppositely disposed flanges presented outwardly from an end of and at an angle to the web, each of said flanges having a down-turned serrated lip along its outer margin.

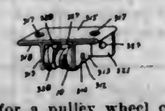
1,691,180. CONDENSER FOR REFRIGERATING APPARATUS. JOHN O. CARREY, St. Louis, Mo., assignor to C & C Engineering Co., Inc., St. Louis, Mo., a Corporation of Missouri. Filed June 28, 1926. Serial No. 119,106. 5 Claims. (Cl. 257—39.)

1. In a refrigerating apparatus, a condenser unit comprising two different sized sections of coiled pipe, the smaller section being arranged within the larger and in spaced relation therewith, the inlet connections of both of said sections being disposed in the same horizontal plane at the opposite ends of the respective sections, and the outlet connections of both of said sections being disposed in the same horizontal plane oppositely to said inlet connections and below the longitudinal plane thereof so as to cause the refrigerant to travel through said sections in opposite directions.

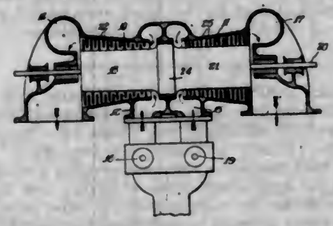


1,691,181. POULTRY-PAN-CLEANING DEVICE. HENRY B. COATS, Veedersburg, DONALD E. JAQUES, Thorntown, and ARTHUR W. HOLMES, Veedersburg, Ind. Filed Aug. 26, 1926. Serial No. 131,600. 7 Claims. (Cl. 15—93.)

1. A poultry tray cleaning device including a tray receiving compartment, a tray supporting frame slidable therein, and cleaning means mounted in said compartment reciprocable towards and from the tray supporting frame for cleaning a tray on said frame as the latter is moved with reference to the compartment and cleaning means.

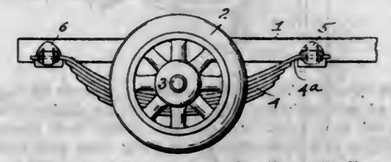


1,691,182. INTERNAL-COMBUSTION ENGINE. GEORGE K. DAVOL, San Francisco, Calif., assignor to Charles A. Brown, Hinsdale, Ill. Filed Aug. 26, 1921. Serial No. 495,478. 8 Claims. (Cl. 123—32.)



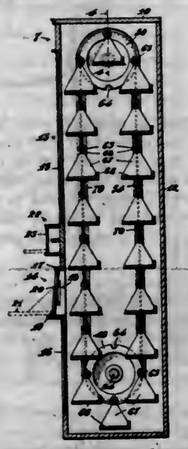
1. The method of operating an internal combustion engine consisting of stratifying or segregating a charge of fuel and air within a combustion chamber by centrifugal action into zones or strata of different fuel densities and igniting the charge at points of different fuel densities.

1,691,183. CATCH PULLEY. WILLIAM H. FORSE, Jr., Anderson, Ind. Filed Mar. 7, 1927. Serial No. 173,235. 2 Claims. (Cl. 254—191.)



1. A mounting for a pulley wheel comprising an elongated sheet metal strip having an intermediate base forming portion, a pair of ear forming portions integral therewith and positionable at right angles to the base forming portion for rotatably supporting said pulley wheel in spaced relation to the base portion, said base portion projecting laterally of and beyond the ear portions, and an intermediate connecting portion constituting a return bend lying parallel to and reinforcing said base portion and connecting each ear to the base portion, each ear portion including a return bend portion extending from the free end of the ear toward the base and terminating in abuttable relation therewith for reinforcing said ear, each ear return bend portion including an angular extension lying parallel to said base portion within the pulley receiving channel formed by the ears, each extension terminating short of the other to form a cord receiving groove therebetween.

1,691,184. TURBINE CONSTRUCTION. KARL FREY, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed July 7, 1927, Serial No. 204,120, and in Germany July 12, 1926. 2 Claims. (Cl. 253—67.)

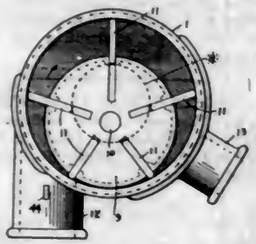


1. In a steam turbine of the double flow type, in combination, a casing affording respective working cylinders arranged to transmit steam in different axial directions, a common shaft served by said cylinders, blading in the cylinders arranged to induce rotation of the shaft in the same direction, means for controlling steam admission to different cylinders independently, a thrust balancing element carried by the shaft and subject to pressure of steam in different cylinders, and auxiliary blading carried by said element for controlling the flow of steam from one cylinder to another.

1,691,185. VEHICLE-SPRING CONNECTION. GILBERT C. GOODE, East Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 9, 1922. Serial No. 605,838. 1 Claim. (Cl. 267—56.)

In a motor vehicle, longitudinally extending angle frame members, an axle, a wheel mounted on the axle, a spring extending longitudinally of the vehicle connected to the axle and having its ends free, angle brackets embracing the axle frame members and connected thereto upon opposite sides of the axle, said brackets having downwardly facing channels spaced laterally outwardly from the frame members for receiving the free ends of said spring, and lining members of fibrous material secured to said brackets and covering the bottoms of said channels, said linings having a rubbing contact with the free ends of the spring upon which they bear.

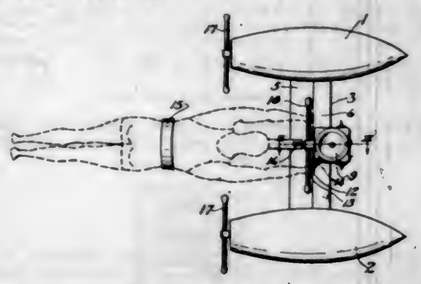
1,691,186. CABINET. AUGUST GRETH, Los Angeles, Calif. Filed Jan. 22, 1923. Serial No. 614,112. 1 Claim. (Cl. 312—97.)



In a cabinet of the character described, a plurality of individually flexible links, each link having a ring at each of its ends, the rings of each link overlapping rings of adjacent links, a plurality of rods extending through the rings thus forming a chain of said links, a pair of spaced sheaves having peripheral notches adapted to receive said rods, supporting said chain, and a carrier suspended from each of said rods.

1,691,187. LUBRICANT METER. ORA B. HALEY, San Francisco, Calif. Filed Feb. 23, 1927. Serial No. 170,198. 7 Claims. (Cl. 73—37.)

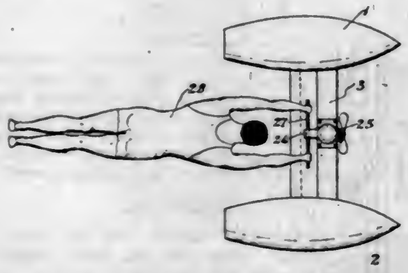
1. A liquid meter comprising a body provided with a circular chamber open at one end, a vaned rotor revolvably mounted in the chamber, indicating means connected with



said rotor adapted to indicate the number of revolutions of the same, outlet and inlet ports to the chamber arranged to cause revolution of the rotor upon forcing a

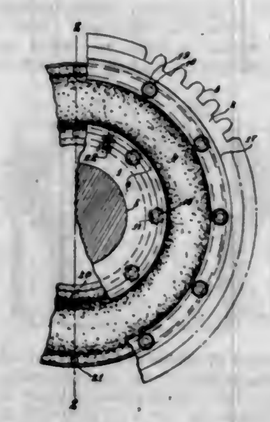
liquid through the ports and chamber, a cover on the open end of said chamber, and a disk fitting against the end face of said rotor beneath the cover, and means for adjusting said disk toward and away from said rotor.

---



1,691,188. PROPELLED BATHING DEVICE. JUDSON HALL, Hartland, Wis., assignor of one-fourth to Benjamin F. Bayha and one-fourth to Herbert A. Bell, Milwaukee, Wis. Filed Nov. 7, 1927. Serial No. 231,407. 5 Claims. (Cl. 9—21.)

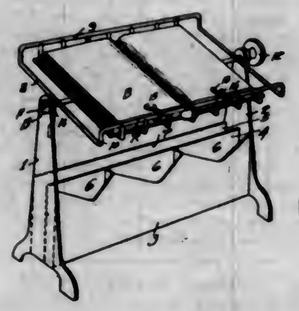
5. In combination, a buoyant unit, propulsive means mounted thereon, means on said unit graspable by a user in such a manner that said user will be towed behind said unit in the liquid floating the same, means graspable by said user and operable when released to stop said propulsive means, and means for retaining said user connected to said element when the grasp of said user is released.



---

1,691,189. FLOATABLE TOY. JUDSON HALL, Hartland, Wis., assignor of one-fourth to Benjamin F. Bayha and one-fourth to Herbert A. Bell, Milwaukee, Wis. Filed Nov. 7, 1927. Serial No. 231,408. 10 Claims. (Cl. 46—37.)

10. In a toy, a floatable unit, means carried by said unit, and a doll-like body secured to said means and extending rearwardly of said unit.



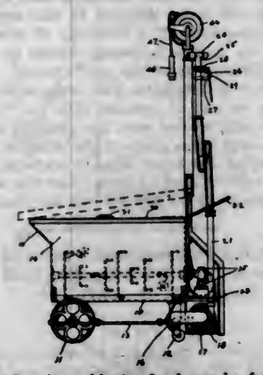
1,691,190. FLEXIBLE GEAR. SCHUYLER C. HATFIELD, Baltimore, Md. Filed Mar. 9, 1927. Serial No. 173,920. 3 Claims. (Cl. 74—29.)

1. A machine gear having an outer ring adapted to engage a cooperating gear, a hub member surrounded by the ring member and spaced therefrom radially, a hollow pad between the hub and ring member, the pad having inner and outer beads, the ring member having bead clamping means on its inner periphery and the hub member having bead clamping means on its outer periphery.

---

1,691,191. BOOKRACK. ELLA C. HENDERSON, Pullman, Wash. Filed Jan. 31, 1927. Serial No. 164,665. 2 Claims. (Cl. 45—80.)

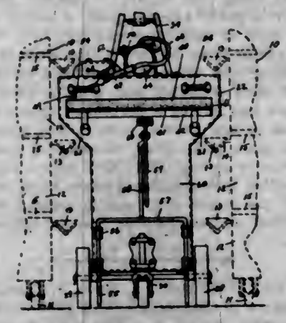
1. The combination with a pair of spaced posts and longitudinally disposed, spaced boards joined at their ends to said posts to form pockets between the posts, of a bookrack pivoted in the upper ends of the posts, and means for retaining said rack in adjusted position.



---

1,691,192. DISPENSING DEVICE. ARTHUR W. HOLMES, Veedersburg, DONALD E. JAQUES, Thorntown, and HENRY B. COATS, Veedersburg, Ind. Filed June 25, 1926. Serial No. 118,467. 2 Claims. (Cl. 221—80.)

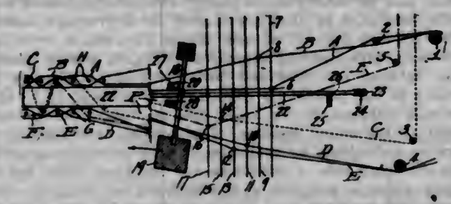
1. A fluid dispensing machine including a tank for containing the fluid, wheels upon which the tank is mounted so as to render the same portable, a frame secured to the tank, a pump mounted in said frame for forcibly discharging the contents of the tank, an electric motor mounted in said frame for operating the pump, a standard mounted on the upper end of said frame so that it can be maintained



in an upright position or turned down upon the top of the tank as desired, a reel on the upper end of the standard, and an electric supply line on said reel and connected with

said motor, whereby said standard can be folded down on said tank when the machine is not in operation and when moved about in a poultry house, substantially as set forth.

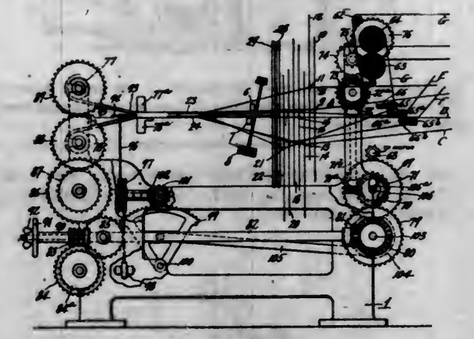
---



1,691,193. PORTABLE CLEANER. ARTHUR W. HOLMES, Veedersburg, DONALD E. JAQUES, Thorntown, and HENRY B. COATS, Veedersburg, Ind. Filed June 25, 1926. Serial No. 118,468. 1 Claim. (Cl. 15—21.)

A cleaning device for poultry crate pens and the like including a lower compartment and above it a wider compartment, communicating therewith and with an opening to receive the crate pans to be cleaned, wheels for supporting said lower compartment to render the device portable, and means mounted in said upper wider compartment for cleaning the crate pans when placed therein and discharging the waste into the lower compartment.

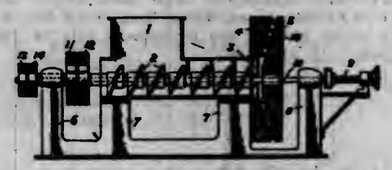
---



1,691,194. LOOM AND METHOD OF WEAVING DOUBLE-PILE FABRICS. HENRY HOWARD, Seymour, Conn., assignor to Tingue Manufacturing Company, Seymour, Conn., a Corporation of Connecticut. Filed May 3, 1927. Serial No. 188,492. 19 Claims. (Cl. 139—37.)

1. A loom for weaving double pile fabrics, face to face, at the same time, including in combination, vertically incompressible fabric separating and pile weft supporting ribbons, of greater height than width, the height of said ribbons determining the height of the pile of both fabrics, said ribbons extending lengthwise of the loom and between the two fabrics, means for supplying ground warp, pile warp and weft threads for each fabric, and means for weaving said fabrics above and below and intermediate the ends of the said ribbons.

---

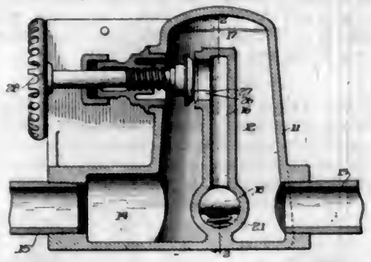


1,691,195. LOOM AND METHOD OF WEAVING DOUBLE-PILE FABRICS. HENRY HOWARD, Seymour, Conn., assignor to Tingue Manufacturing Company, Seymour, Conn., a Corporation of Connecticut. Filed Aug. 18, 1927. Serial No. 213,762. 17 Claims. (Cl. 139—21.)

1. A loom for weaving double pile fabrics face to face, comprising in combination two sets of ribbons, one set arranged beyond the other, so as to space apart the fabrics being woven, each ribbon extending warpwise of the loom, means for supplying ground warps for the respective fabrics woven about each of the two sets of ribbons, and means for supplying wefts to the ground warps.

---

1,691,196. APPARATUS FOR PRODUCING HARD HOMOGENEOUS FUEL OR SIMILAR OBJECTS FROM PEAT, PEAT MOSS, LIGNITE, OR THE LIKE. BOHUMIL JIROTKA, Berlin, Germany, assignor to the Firm Dr. Otto Sprenger Patentverwertung Jirotka mit beschränkter Haftung, Vaduz, Litchtenstein. Original application filed May 29, 1926, Serial No. 112,536, and in Germany Aug. 13, 1921. Divided and this application filed Feb. 11, 1927. Serial No. 167,508. 8 Claims. (Cl. 83—8.)

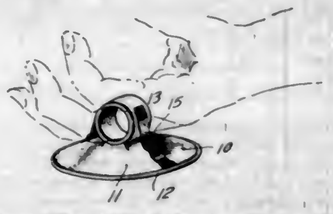


3. A device for producing hard, homogeneous fuel or similar objects from peat, peat-moss, lignite and the like, comprising a pressure-feed channel in combination with a cooperating grinding device, the movable surface of which is provided with adjustable and elastic rubbing members acting upon the other surface.

---

1,691,197. WATER-MIXING VALVE. ADOLPH T. JOHANSON, Chicago, Ill. Filed Feb. 29, 1928. Serial No. 257,829. 4 Claims. (Cl. 236—12.)

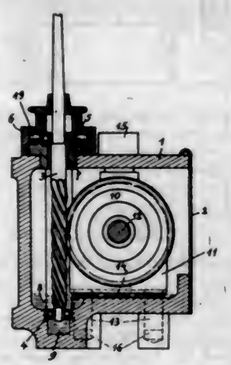
1. In a water-mixing valve, the combination of a hollow valve-casing having a hollow partition extended across the chamber thereof but terminating short of the top wall of the casing, the interior of said partition having a discharge port near the top of one side wall thereof, means to admit water into the lower portion of said chamber at the side of said partition opposite said discharge port, means to



admit water into said partition, means to deliver the mixed waters from the lower portion of said chamber on the same side of said partition as the discharge port of said partition,

and means subject to the temperature of the mixed delivering water controlling the flow of one of said water supplies to said valve.

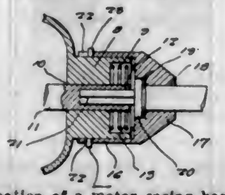
---



1,691,198. VACUUM LIFTER. LEWIS JONES, New York, N. Y. Filed Oct. 29, 1927. Serial No. 229,766. 1 Claim. (Cl. 294—64.)

A vacuum lifter adapted for operation on the hand of the user comprising a suction member of resilient material, a ring shaped gripping member connected thereto and having a reduced neck portion, and an elastic band connecting portions of the rim of said suction member at oppositely disposed points with said gripping member, said band being operable by a digit of the hand, operating such lifter to raise the edges of the suction member to break the vacuum thereon.

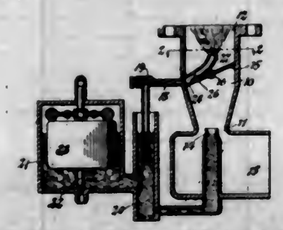
---



1,691,199. SUPPORTING MEANS FOR SPINDLES IN SPINNING MACHINES AND THE LIKE. JOHANN JACOB KEYSER, Aarau, Switzerland. Filed Dec. 8, 1923, Serial No. 679,479, and in Germany July 14, 1923. 1 Claim. (Cl. 308—169.)

A spindle bearing and lubricating structure for spinning and twisting machines comprising a casing having an integral bottom wall constituting a depressed lubricant channel and a plurality of spaced lubricant cavities communicating therewith at their upper ends, a plurality of spindles supported in and by the said casing, actuating worms on the said spindles extending into the said lubricant channel and being adapted to lift lubricant therefrom upon being rotated, a plurality of worm gears engaging with the spindle actuating worms at a point supplied with lubricant from the said channel by and upon rotation of the said spindles and being arranged at such a level as to be out of contact with the lubricant that may be on the said bottom wall, a supporting and actuating shaft for the said worm gears, upper resilient bearings for the said spindles and lower spindle bearings at the junctions of the said lubricant channel and the said lubricant cavities substantially as and for the purpose described.

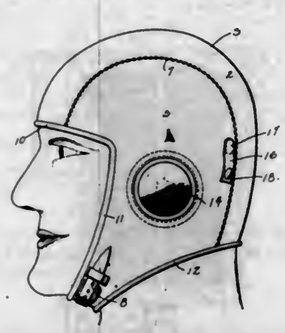
---



1,691,200. HOUSEHOLD-MOTOR COMBINATION. RICA KRUG, Gardner, Ill. Filed Dec. 30, 1925. Serial No. 78,377. 1 Claim. (Cl. 64—89.)

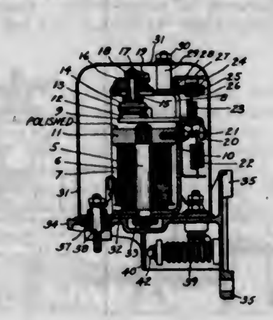
The combination of a motor casing having a projecting, exteriorly circular block with a longitudinal central bore therein, said block also having a forward chamber and diametrically opposite exterior pins, a motor shaft turnable in the bore of said block and having a longitudinal socket of angular cross section in its forward portion, a sleeve receiving and turnable about said block and having bayonet slots receiving said pins, a shaft journaled in said sleeve and having a portion of angular cross section sheathed in said angular socket; said sleeve abutting against said shaft, and holding the angular portion thereof in the angular socket of the first named shaft, and an expansible coiled spring disposed in the block chamber and coiled about the motor shaft and interposed between the transverse wall of the chamber and an opposed portion of the sleeve.

---



1,691,201. CARBURETOR. ELWOOD T. LARKIN, Buffalo, N. Y., assignor to Charles A. Criqui, Buffalo, N. Y. Filed July 2, 1926. Serial No. 120,202. 1 Claim. (Cl. 261—41.)

A carburetor comprising a mixing chamber having an inlet and an outlet, an air supply conduit communicating with said inlet, an auxiliary conduit for delivering a liquid fuel jet into the side of said mixing chamber, a butterfly throttle valve pivotally supported within the mixing chamber between the inlet and outlet thereof and having a notch in one part of its edge which is adapted to be arranged adjacent to the lower side of said auxiliary conduit in the closed position of said valve, and deflecting means comprising an extension or deflecting tube secured to the upper side of said valve and having a radial lower part which is adapted to communicate at its outer end with said auxiliary conduit and an upwardly turned inner part which is arranged to discharge adjacent to the axis of the mixing chamber.

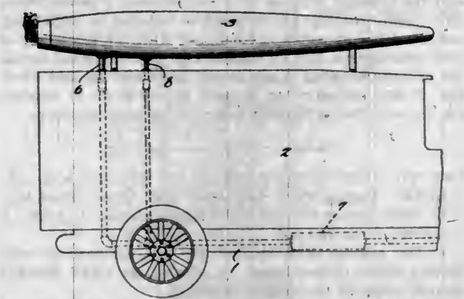


1,691,202. HELMET. REABOURNE C. LA VAN, Dayton, Ohio. Filed June 9, 1926. Serial No. 114,749. 5 Claims. (Cl. 2—6.)

1. A helmet comprising a pair of similarly shaped top sections extending from front to rear of the helmet, one on each side of the plane of symmetry thereof and attached together by a seam from the front to the rear of the helmet along the plane of symmetry, and a a pair of side pieces, one for each side of the head, said pieces being joined to the adjacent top sections along lines substantially concentrically parallel with the central seam as viewed from the side.

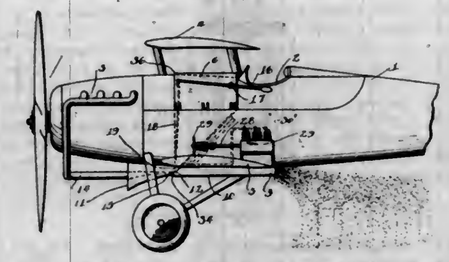
---

1,691,203. ELECTROMAGNETIC INSTRUMENT. THOMAS L. LEE and HENRY C. ROHR, Rochester, N. Y., assignors to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 27, 1923. Serial No. 659,597. 4 Claims. (Cl. 200—87.)



3. In an electromagnetic instrument, the combination of a core provided with a winding; a magnetic yoke attached to the lower end of the core; an armature cooperating with the upper end of the core; a magnetic temperature-compensating shunt, comprising a body of suitable alloy, extending between the upper end of the core and an adjacent part of the yoke; contacts, controlled by the armature, of which one is fixed on the yoke; a heat-conductive cover enclosing the foregoing parts; and a heat-conductive connection from the cover to the yoke, at a point relatively near to said contact and remote from the compensating shunt, said connection serving also as means for securing the cover in place.

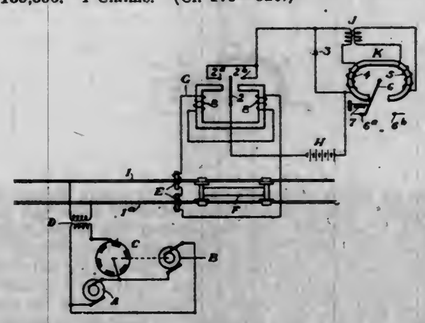
---



1,691,204. ADVERTISING DEVICE. OTTIS F. MEADOWS, Asheville, N. C. Filed Sept. 21, 1926. Serial No. 136,833. 1 Claim. (Cl. 40—126.)

The combination with a motor propelled vehicle including a body, of a hollow casing mounted on the body simulating an article being advertised, said casing having an outlet opening from which the bottom portion of the casing is inclined downwardly, a screen extending across the outlet opening, means for directing exhaust gases to the casing from the engine of the vehicle, and a drain pipe extending from the lowest portion of said casing downwardly to a point below the body of the vehicle for delivering accumulated oil and the like onto the ground.

---



1,691,205. POWDER-DISTRIBUTING APPARATUS. ALAN L. MORSE, Dayton, Ohio. Filed Apr. 24, 1925. Serial No. 25,721. 9 Claims. (Cl. 244—1.)

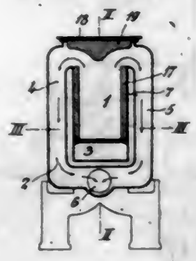
1. A distributor for distributing substances to the atmosphere from an aircraft, comprising in combination with the aircraft a hopper mounted thereon and a Venturi shaped distributor having a flattened rear portion mounted beneath the aircraft with its restricted throat in communication with the hopper to receive the substances therefrom, the flattened rear portion of the distributor being mounted beneath and adjacent the rear edge of the wing, for the purpose described.

---

1,691,206. ELECTRICAL APPARATUS. LEWIS L. NETTLETON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,356. 4 Claims. (Cl. 175—320.)

4. In combination, a vibration relay supplied at times with periodically interrupted alternating current and tuned to the frequency of such alternating current, said relay

having two contacts closed respectively at each end of the stroke of the vibrating member, a circuit including said two contacts in multiple as well as a source of current and the primary winding of a transformer, a second relay having two windings one of which is included in said circuit and the other of which is connected with the secondary of said transformer, and an asymmetric unit connected across the primary winding of said transformer and the first winding of said second relay in such direction as to conduct the current due to the self-induction of such windings.

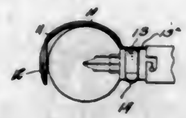


---

1,691,207. PROCESS OF REFINING METALS AND ALLOYS. ALADAR PACZ, East Cleveland, Ohio. Filed May 11, 1921, Serial No. 468,778. Renewed Mar. 1, 1926. 6 Claims. (Cl. 75—1.)

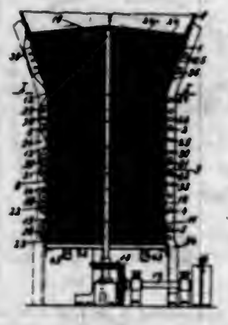
1. The process of refining a metallic composition containing silver characterized by stirring an alkali fluoride therein while in the molten condition.

---



1,691,208. HEATING STOVE. CARL EMIL PEDERSEN, Borg, Ostre Aker, near Oslo, Norway. Filed June 17, 1926, Serial No. 116,710, and in Norway Nov. 21, 1924. 2 Claims. (Cl. 126—69.)

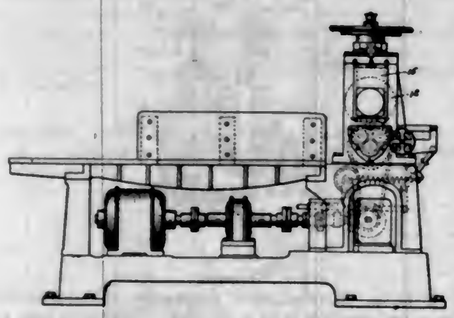
1. In a heating stove, a fire pot, flues extending around the sides and bottom of said fire pot and connected to said fire pot adjacent its upper end, said flues being spaced from said fire pot below the points of connection, by a continuously open U-shaped air gap extending under said fire pot and at the sides, from the front to the back of the stove, leaving said fire pot wholly unsupported at the lower part and at the sides up to said points of connection.



---

1,691,209. ANTIGLARE SHIELD FOR AUTOMOBILE LAMPS. DREW REYNOLDS and HARRY L. SIMPSON, Denver, Colo. Filed Aug. 23, 1927. Serial No. 214,922. 1 Claim. (Cl. 240—48.6.)

As an article of manufacture, an anti-glare dimmer for headlights formed from a single sheet of metal and providing a relatively wide, transversely flat longitudinally curved body portion having a longitudinally extending rib, a concavo-convex disk-like portion at the forward end of the body portion connected by a neck thereto and extending substantially at right angles to the body portion, the body portion having a rear extension, the rear end of which is adapted to fit within the socket of a lamp and said extensions having curved confronting lugs adapted to embrace the base of a lamp bulb.



1,691,210. GRINDING AND PULVERIZING MILL. BERNHARD SCHERBAUM, Wedel, Germany. Filed Dec. 23, 1925, Serial No. 77,355, and in Germany Dec. 31, 1924. 6 Claims. (Cl. 83—44.)

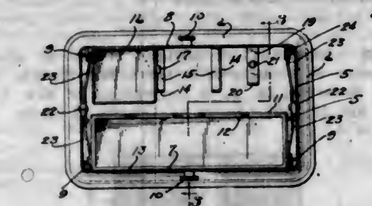
1. A grinding and pulverizing mill comprising an outer body arranged axially vertically, said body being formed of superposed sections, said sections being formed with peripheral teeth, said teeth being of varying size and depth, and a solid inner body coaxial with said outer body, said solid body being formed with corresponding teeth entering the inter-dental spaces of the teeth of the outer body into grinding relation therewith.

---

1,691,211. MANUFACTURE OF SPRINGS. JAMES M. SCHOONMAKER, Jr., Sewickley, and DONALD T. GLEASON, Coraopolis, Pa., assignors to Standard Steel Spring Company, a Corporation of Pennsylvania. Filed May 6, 1925. Serial No. 28,396. 11 Claims. (Cl. 153—54.)

1. The method of bending which consists in passing a blank between rolls, releasing said blank from the pressure of said rolls, positioning the end of said blank a predetermined distance from said rolls and completing the rolling thereof.

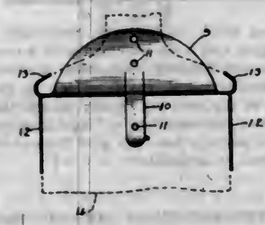
6. A bending machine for the eye plates of leaf springs including in combination, bending rolls, one of said rolls having a concavity for accommodating the spring eyes formed at each end of the blank and means permitting the adjustment of said blank during rolling so that said concavity receives the eye at the rear of each blank as it passes through said rolls.



---

1,691,212. SMOKER'S CABINET. SAMUEL B. SKLAR, Minneapolis, Minn. Filed Oct. 31, 1927. Serial No. 229,996. 1 Claim. (Cl. 312—155.)

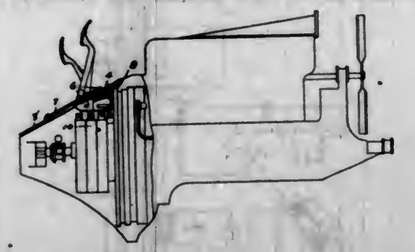
A smoker's cabinet comprising a shell having a door opening a door normally closing said opening and having on its back a pair of laterally spaced upright channel members,



the webs of which at their lower ends are turned laterally inward, said channel members affording a holder for a package of cigarettes one of said channel members having a

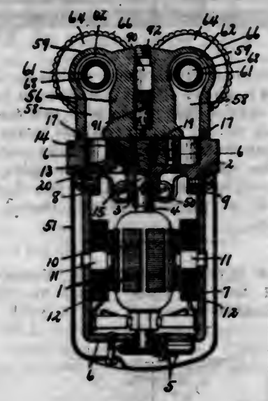
notch in the upper end of its web, an ash tray having a headed stud extending into said notch and supporting the ash tray from said channel member.

---



1,691,213. TELEPHONE SUPPORT. GEORGE W. SMITH, Chicago, Ill. Filed Feb. 14, 1927. Serial No. 168,020. 1 Claim. (Cl. 248—20.)

In a one-piece support for telephone instruments, an oblong base having one projected rounded edge, an upturned flange formed upon the base opposite said edge and disposed at right angles thereto, downturned parallel prongs formed laterally of said base and contiguous to said flange, a tongue struck from said base and flange jointly and in the common direction of said prongs and disposed between the same and at right angles to said base, and oppositely disposed twin curved tongues extending upwardly from said base contiguous to said rounded edge, all of the before-mentioned elements being permanently fixed with relation to each other, substantially as and for the purpose set forth.



---

1,691,214. LUBRICATION SYSTEM. TALCOTT P. SMITH, Washington, D. C. Filed Mar. 29, 1924. Serial No. 702,984. 4 Claims. (Cl. 184—11.)

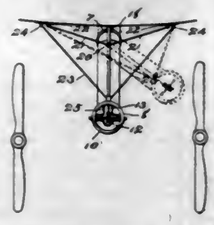
2. In a lubricating system for internal combustion engines of the Ford type, an oil deflector adapted to be secured to said engine and a flexible closure member secured to said deflector and extending to a point laterally of and near the upper periphery of the fly-wheel of said engine and adjacent the transmission housing thereof, said closure member being adapted to be actuated to function as such by the flow of oil particles being thrown off from the fly wheel due to centrifugal force.

1,691,215. SIGNALING DEVICE. WILLIAM SPARKS, THEODORE JOHNSON SCOFIELD, LLOYD ELMER JOHNSON, and FRED WILLIAM BILLIG, Jackson, Mich., assignors to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed May 18, 1927. Serial No. 192,330. 16 Claims. (Cl. 116—142.)

1. A signaling device comprising a motor, a rotary compressor driven thereby, a horn body having a passageway in communication with the pressure side of the compressor and formed at its upper end with a tubular boss, a projector having its rear end mounted in said boss, a tube mounted in the boss, a diaphragm chamber mounted in the boss and spaced from the exterior wall of the tube to form an annular passageway, a diaphragm in said chamber extending acros the end of said tube, and means for maintaining atmospheric pressure on the side of the diaphragm opposite the tube.

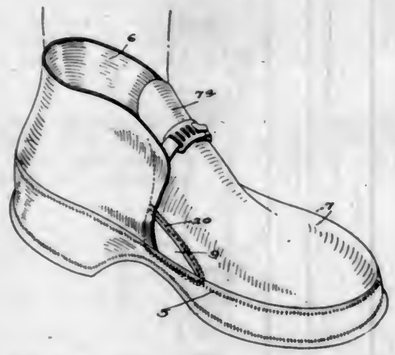
---

1,691,216. WRENCH. JOHN STROBEL, Burlingame, Calif. Filed July 11, 1927. Serial No. 204,705. 3 Claims. (Cl. 81—165.)



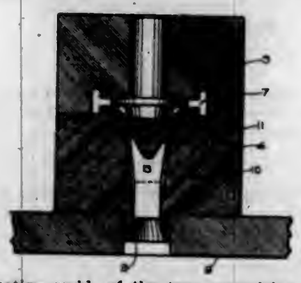
2. A wrench comprising a handle provided at one end with a jaw mounting head, a pair of duplicate jaw plates having independent interlocking engagement with the opposite faces of the jaw head, each provided with a jaw, said plates mounted on the outer faces of the jaw mounting head and independently movable transversely thereof, an adjusting screw carried by each jaw plate and each having independent threaded engagement with the head whereby said jaws are capable of independent adjustment transversely of the head and to and from each other.

1,691,217. VEHICLE SUSPENSION MEANS. LESTER M. WALDEN, Chicago, Ill. Filed Aug. 4, 1923. Serial No. 655,573. 10 Claims. (Cl. 280—106.5.)



1. The combination with a motor vehicle having a body, a rear axle and a pair of elliptical suspension springs pivoted at their forward ends to the body and connected between their ends to said axle, of resilient means connected between the opposite ends of said springs and the body, said means being operable to transmit relative movement between the spring and the body at one side thereof to the spring and body at the opposite side thereof but in a reverse direction.

1,691,218. AIR SCOOP. STEPHEN R. WARREN, Dayton, Ohio. Filed Apr. 30, 1923. Serial No. 635,628. 5 Claims. (Cl. 244—6.)

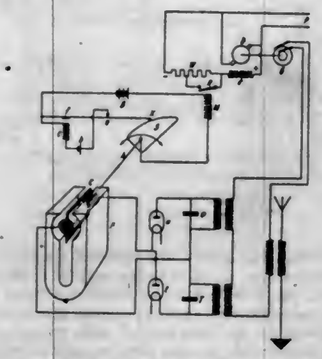


1. An air scoop for dirigibles or the like embodying an air tube, a visible hood for closing and opening the intake mouth thereof, and means permitting said tube to be swung laterally to move the intake mouth thereof into and out of the propeller slip stream.

1,691,219. BUCKLE OVERSHOE. ADELBERT D. WINN, Toronto, Ontario, Canada. Filed Mar. 4, 1927. Serial No. 172,792. 2 Claims. (Cl. 36—5.)

1. In an arctic overshoe comprising a sole section, and an upper made up of a rear section and a forward section having its rear extremity extending over the instep and providing a tongue, the combination of an elastic insert section, the instep side of said forward upper section being free of attachment with said sole section for a substantial distance forwardly from its rear edge, adjacent the rear edge of the forward upper section, said elastic insert section being connected to the sole section and side edge of the forward upper section beneath the instep at the inner side of the shoe whereby to relieve the instep of the binding action of the forward section of the upper, said elastic insert section being substantially concealed by the lateral flexing of the forward upper section by the instep of the foot when the overshoe is in use.

1,691,220. DIE-CASTING MOLD. HARRY A. ADAMS, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 12, 1927. Serial No. 183,208. 1 Claim. (Cl. 22—136.)

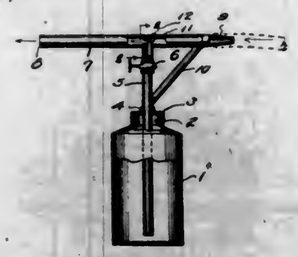


A die-casting mold, of the type comprising a die provided with a gate and a die provided with a core extending into said gate and forming, therewith, a narrow annular passage for molten metal, characterized by the fact that the extremity of the core fits closely within the extremity of the gate, and the core has a longitudinally extending slot forming a passage into the gate beyond the point at which the parts are so fitted.

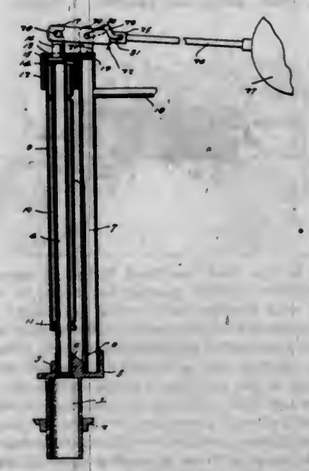
1,691,221. HYDROGENIZING TAR OIL. RUDOLF BERNHARD, Bochum, and WALTER DEMANN, Cologne, Germany. Filed June 25, 1925, Serial No. 39,500½, and in Germany June 30, 1924. 3 Claims. (Cl. 196—53.)

1. The mehod of hydrogenizing tar oil comprising heating the oil to a temperature approaching its boiling point and treating same in the presence of a colloidal nickel catalyst with the dry gas resulting during the manufacture of coke, this gas being under the normal pressure prevailing in a coke oven, said catalyst being prepared by reduction at 310° C. with that part of said oil which boils between 375 and 390° C.

1,691,222. SPEED-CONTROL MEANS FOR HIGH-FREQUENCY GENERATORS. OTTO BÖHM, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Apr. 2, 1926, Serial No. 99,253, and in Germany May 25, 1925. 9 Claims. (Cl. 171—119.)

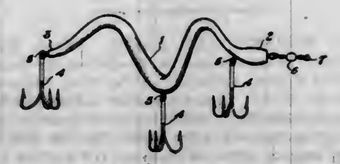


1. A speed regulating means comprising a motor field resistance, a shunting relay connected thereto, means for actuating said shunting means comprising a current



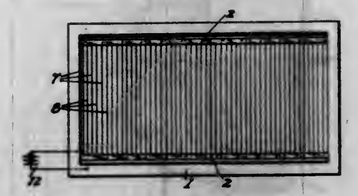
source and vibratory and adjustable contacts, means for adjusting said adjustable contact comprising a rotatable cam, and speed responsive means actuating said cam, comprising means for producing a magnetic field, a coil mounted therein and connected to said cam, and means for electrically energizing said coil with a current in one direction or the reverse according as the regulated speed departs above or below its regulated value.

1,691,223. SPRING LUBRICATOR. HORACE I. BROOKS and MACK D. NORMAN, Dallas, Tex. Filed Jan. 15, 1926, Serial No. 81,551. Renewed Apr. 2, 1928. 1 Claim. (Cl. 299—88.)



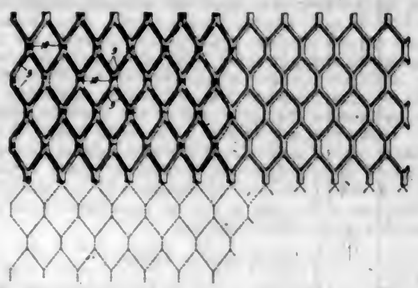
A device of the class described comprising a container for a liquid to be sprayed, a liquid supply pipe extending downwardly into the container, a pipe joined between its ends to the upper end of the first mentioned pipe and in communication therewith, the second mentioned pipe having an air inlet branch at one side of its juncture with the liquid supply pipe and a spray delivery branch at the other side of its juncture with the liquid supply pipe, a baffle extending upwardly from the side of the liquid supply pipe at the side thereof at which the air supply branch of the second mentioned pipe is located and terminating approximately at the axis of the said branch, and a transversely straight lip at the upper end of the baffle extending at right angles therefrom toward the adjacent end of the spray delivery branch of the second mentioned pipe and diametrically of the second mentioned pipe at its juncture with liquid supply pipe and above the upper end of said supply pipe.

1,691,224. BALL COCK. DAVID L. BUTLER, Blackfoot, Idaho. Filed May 4, 1927. Serial No. 188,759. 5 Claims. (Cl. 137—104.)



1. In a ball cock, a supply head, a main intake pipe supported at its lower end on said head and communicating therewith, an auxiliary intake pipe supported on the head and being out of communication with the head, said auxiliary intake pipe being provided with a water inlet opening in the lower portion of the side thereof, a tube surrounding the main intake pipe and being spaced therefrom to provide an annular water outlet chamber, the lower end of the tube being spaced from the lower end of the main intake pipe whereby a quantity of water discharged from the chamber will enter the auxiliary intake pipe through the inlet opening formed therein, a cap secured on the upper end of the tube, the closed end of the cap being spaced from the upper outlet end of the main intake pipe, a valve arranged within the cap for cooperation with the upper discharge end of the main intake pipe, a plug secured in the upper end of the auxiliary intake pipe, a refill pipe extending from the upper portion of the auxiliary intake pipe, a float carrying member pivotally supported on said plug, and cooperating means between the free end of the pivoted member and the valve for moving the valve into or out of engagement with the upper end of the main intake pipe.

1,691,225. FISH LURE. ROBERT L. CLEWELL and CHARLES W. CLEWELL, Canton, Ohio; said Charles W. Clewell, assignor to said Robert L. Clewell. Filed July 13, 1926. Serial No. 122,110. 7 Claims. (Cl. 43—42.)



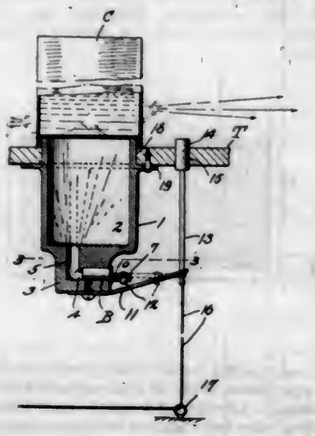
1. A fish lure comprising a sinuous body of substantially round cross section of rigid helical and spiral form, hooks carried by the body and means for attaching a line for drawing the same through the water.

1,691,226. INSECT SCREEN. HARRY HUMPHREY CRAGG, Calgary, Alberta, Canada. Filed Feb. 25, 1926, Serial No. 90,625. Renewed Sept. 15, 1928. 3 Claims. (Cl. 43—112.)

1. The combination in an insect screen, a frame, two separate and similar grids of wire supported on dielectric strips, forming a plurality of regularly spaced parallel wire members, the grids superimposed with wires facing inwardly so that all wires fall in the same plane with alternate wires belonging to separate grids and without conductive contact between the separate grids, means of supporting the said grids in the frame and maintaining their proper relative position, and means connecting the grids to the opposite poles of a source of electricity.

1,691,227. METAL LATH. LEONARD W. CROSS, Wheeling, W. Va., assignor to Consolidated Expanded Metal Companies, Braddock, Pa., a Corporation of Pennsylvania. Filed Oct. 12, 1926. Serial No. 141,074. 4 Claims. (Cl. 72—117.)

4. Metal lath having certain of its strands and bridges lengthwise of the sheet wider than the remaining strands and bridges to provide a relatively stiff and strong meshwork section running lengthwise of the sheet.

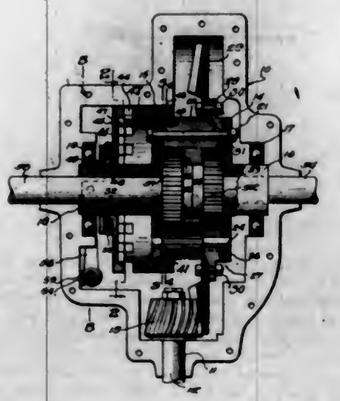


---

1,691,228. DISINFECTING AGENT. KARL DAIMLER, FRITZ JUST, GERHARD BALLE, Hochst-on-the-Main, and SIGISMUND FUCHS, Frankfort-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 31, 1926, Serial No. 126,334, and in Germany Aug. 3, 1925. 4 Claims. (Cl. 167—6.)

1. A disinfecting agent, consisting of an aromatic sulfonic acid, being substituted by at least one side chain containing at least three carbon atoms.

---



1,691,229. INITIATION DEVICE. ULYSSES S. DE MOULIN, Greenville, Ill. Filed July 23, 1926. Serial No. 124,517. 2 Claims. (Cl. 272—27.)

1. An initiation device including a supporting structure, a container thereon, and means below and concealed by said structure and container for shattering the container and distributing its contents over the supporting structure and adjacent thereto, said means including a block having an expansion chamber, there being an angular explosion chamber opening into the expansion chamber for receiving a cartridge, a trigger, and remote controlled means for releasing the trigger to explode the cartridge.

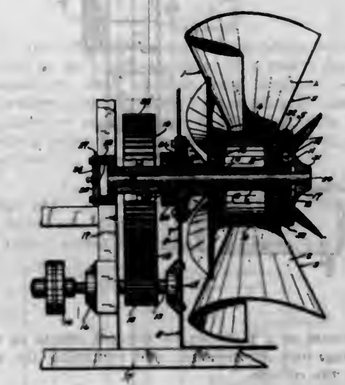
---

1,691,230. DIFFERENTIAL GEARING. ROBERT L. DENISON, New York, N. Y. Filed July 6, 1926. Serial No. 120,818. 8 Claims. (Cl. 74—100.)

1. Differential gearing comprising a main driven gear, pinions carried thereby, a pair of gears driven by said pinions, a shaft connected to each gear of said pair, a locking member rotated by said driven gear, and a coacting locking member driven by said pinions, said locking members being coaxial and adapted to be brought into peripheral engagement with each other by movement of said first named locking member.

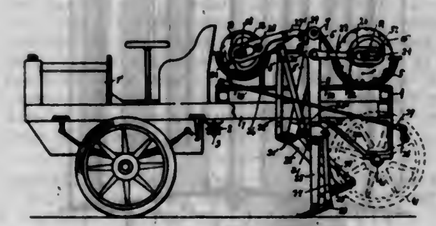
---

1,691,231. PLUG. OSCAR C. DUDLEY, Canton, N. C. Filed Oct. 14, 1924. Serial No. 743,603. 1 Claim. (Cl. 173—360.)



A plug of the class described including oppositely disposed duplicate handles having flat faces in sliding engagement, said handles cooperating constantly to form a knob, an extension at one end of each handle, said extensions being substantial duplicates and each extension having a flat surface and a rounded threaded surface, the flat surfaces of the extensions being coextensive and occupying planes at right angles to the flat faces of the handles, there being a pivotal connection between the handles close to their extensions, said connection constituting means for holding the handles from spreading apart along lines extending through the flat faces of the handles, resilient means interposed between the extensions for holding them normally spaced apart, and laterally extending ears integral with the respective handles, each ear being extended in a direction opposite to that of the ear on the other handle and said ears, when pressed toward each other, constituting means for shifting the handles about their pivotal connection to move the extensions toward each other.

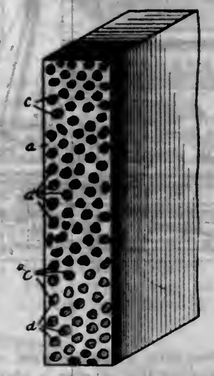
---



1,691,232. MOUNTING AND DRIVING MEANS FOR SNOWPLOW CUTTING WHEELS. ROGER D. EDWARDS, Albert Lea, Minn. Filed Apr. 17, 1926. Serial No. 102,086. 8 Claims. (Cl. 37—43.)

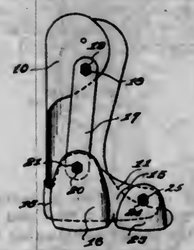
1. In a snow plow, the combination with a fixed tubular spindle, and a driven shaft extending through said spindle, said shaft being unsupported within the spindle and out of peripheral contact therewith, of a full floating cutting wheel journaled on said spindle, and a shearing pin connecting the cutting wheel to said shaft.

---



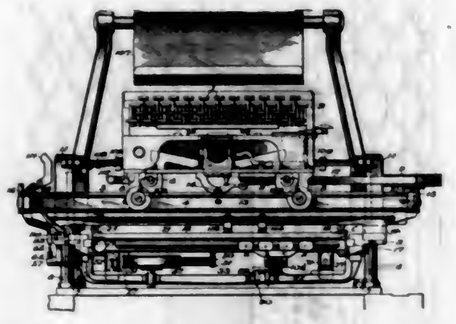
1,691,233. VEHICLE PROPELLED BY STEPPERS. ADOLF EHRLICH, Budapest, Hungary. Filed Apr. 8, 1926. Serial No. 100,725. 5 Claims. (Cl. 180—8.)

1. In a drive means for a motor vehicle, a motor, a casing, drive shafts at the front and rear ends of the casing, means for driving said shafts from the motor, cams on said shafts, a nondriven shaft intermediate said first shafts, jointed legs hingedly mounted on said second shaft, a bell crank on the upper part of each leg, means operatively connecting one arm of the bell crank with the lower part of the leg, means operatively connecting the other arm of the bell crank with said front cam, and means operatively connecting the said rear cam with the upper part of said leg.



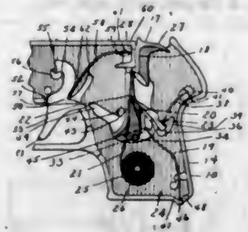
1,691,234. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Original application filed May 10, 1922, Serial No. 559,908. Divided and this application filed Oct. 19, 1925. Serial No. 63,357. 9 Claims. (Cl. 94—18.)

1. A preformed compressible and elastic construction unit consisting of a mass of ductile bituminous material and resilient elements distributed throughout said mass providing mass portions in which the resilient elements are freely contractible and expansible within said ductile material.



---

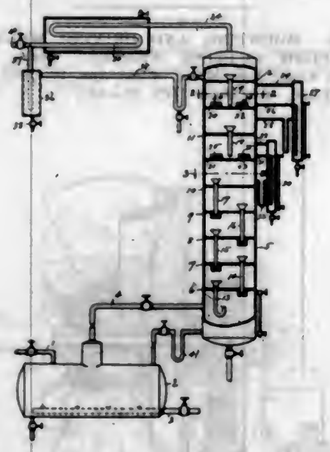
1,691,235. BRACE FOR CLUB FEET. OTTILLIE L. FISCHER, Bancroft, Nebr. Filed June 1, 1927. Serial No. 195,762. 3 Claims. (Cl. 128—80.)



1. A brace for treating club feet formed of sheet metal shaped to provide a leg embracing portion and a foot embracing portion including a sole, the sole being formed by two separate parts connected to one side of the foot embracing portion and extending upward against the other side of the foot embracing portion and connected thereto, and a resilient flexible element connected to the last named part and extending upward and rearward and connected at its upper end to the leg embracing portion and adjustable to increase or decrease the tension.

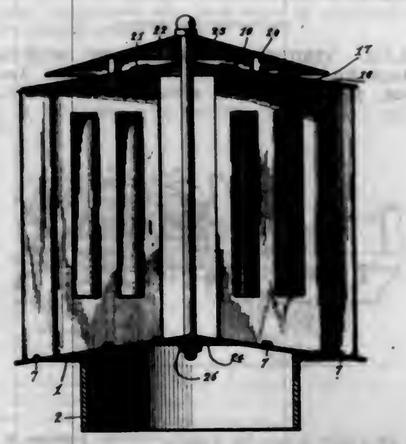
1,691,236. FLAT-PLATEN TYPEWRITER. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed May 3, 1924. Serial No. 710,804. 42 Claims. (Cl. 197—2.)

1. The combination with a main frame, of a platen frame movable therein for line spacing, a platen mounted in the platen frame and movable to engage or release the work, line spacing mechanism for the platen frame, and automatic means for moving the platen through movement of the platen frame.



1,691,237. TOY-PISTOL CONSTRUCTION. RUSSELL A. FRISBIE, Middletown, Conn., assignor to The J. & E. Stevens Company, Cromwell, Conn., a Corporation. Filed Dec. 19, 1927. Serial No. 241,017. 5 Claims. (Cl. 42—57.)

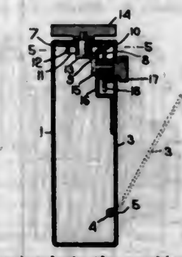
1. In toy pistol construction, a casing composed of mating parts held together by a rivet and having an opening on the side of the handle portion that is provided with a cover, a hammer member operatively supported in said casing and provided with a main spring, mechanism for cooperating with said hammer member for effecting the firing, said casing having a seat for one end of said spring, and said casing being provided with an opening adjacent said seat for admitting said spring.



1,691,238. PROCESS OF FRACTIONATING. IRA B. FUNK, Alhambra, Calif., assignor to Union Oil Company of California, a Corporation of California. Filed Oct. 30, 1926. Serial No. 145,231. 13 Claims. (Cl. 196—100.)

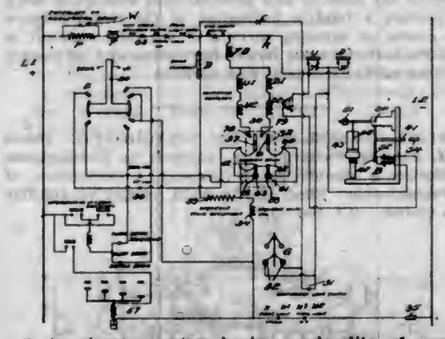
3. A process of rectification which comprises distilling liquid hydrocarbons with steam to obtain vapors therefrom, passing the mixture through a rectifying column wherein certain fractions are progressively condensed together with the steam, then removing said fractions and

condensed steam at a plurality of selected points as condensed during such progression, and returning the said fractions to the column.

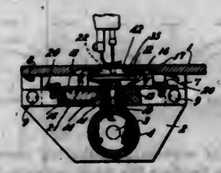


1,691,239. VENTILATOR. JOSEPH CLEMENT GIOUÈRE, Montreal, Quebec, Canada. Filed Aug. 18, 1927, Serial No. 213,917, and in Canada Jan. 5, 1927. 6 Claims. (Cl. 98—78.)

1. A ventilator comprising a base, a plurality of hollow air columns mounted vertically thereon in spaced relation, the walls of said columns being formed with vents communicating with the spaces between the columns, a cover plate closing the upper ends of said columns, said cover plate having ports formed therein and disposed between the columns.

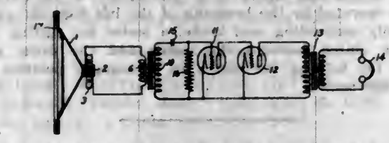


1,691,240. COMBINATION LOCK. ABRAHAM GOLDER, Everett, Mass. Filed Apr. 20, 1928. Serial No. 271,505. 4 Claims. (Cl. 70—53.)



1. In a combination lock, the combination with two elements to be locked together, of a rotary locking member carried by each element, said locking members being rotatable about axes at right angles to each other, and a finger on each element co-operating with the rotatable locking member on the other element to lock said members together.

1,691,241. ELECTRICAL CONTROL SYSTEM. HARRY BENJAMIN GOLDMAN, Pittsburgh, Pa. Filed Apr. 4, 1925. Serial No. 20,787. 7 Claims. (Cl. 187—29.)

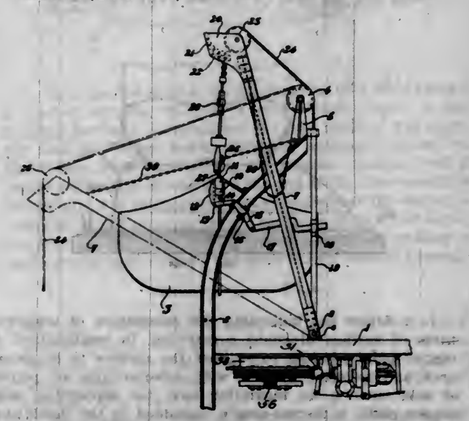


5. An elevator system having a plurality of control circuits, an elevator, driving apparatus for said elevator, a controller for governing the movement of said elevator in either of two directions, a door contact or multiple number of door contacts in one of said control circuits, a sequence relay common to all of said control circuits, a coil arranged to magnetically actuate said relay, a resistance, means for controlling the opening and closing of said circuits over variably adjustable time periods, and circuit connections whereby said coil is shunted by said resistance when said controller is actuated prior to the closing of said door contact and said coil placed in series with said resistance when said door contact is closed prior to the actuation of said controller.

1,691,242. BOBBIN CASE. CHARLES H. GREENWOOD, Canton, Ohio. Filed Mar. 5, 1924. Serial No. 697,081. 6 Claims. (Cl. 112—184.)

1. In a sewing machine, a rotary loop taker, a bobbin case peripherally supported thereon and provided with notches and a sliding plate provided with fingers arranged to alternately engage the notches to positively prevent rotation of the bobbin case without retarding the loop.

1,691,243. ELECTRODYNAMIC SIGNAL DEVICE. CLINTON R. HANNA, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 25, 1925. Serial No. 52,268. 1 Claim. (Cl. 179—1.)

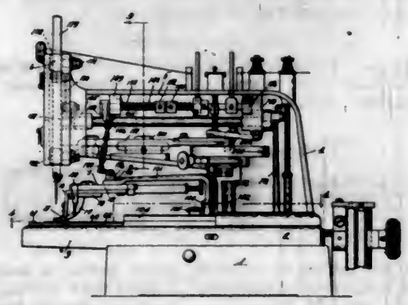


In a sound-translating device, a microphone including a coil, means for moving said coil in response to sound, means for producing a magnetic field across said coil, a circuit into which said microphone delivers, means for minimizing the inductive effect of said microphone in said circuit and a transformer having a primary in said circuit, the inductance of which is approximately equal to the inductive effect of said coil.

1,691,244. HAIR-CURLING IRON. EDWARD K. HUSSEY, Oakland, Calif. Filed Apr. 26, 1926. Serial No. 104,687. 1 Claim. (Cl. 219—24.)

A hair curling or marcelling device having in combination a hair-shaping structure; a liquid-tight heating container mounted therein; an insulated electric heating conductor provided within the container; said conductor being provided with an electrical connection and adapted to be supplied with electrical energy; a handle provided on said hair-shaping structure; means in the handle for containing liquid; means for forcing the liquid against the heating container to form vapor; and a plurality of holes provided into and around the hair-shaping structure for permitting vapor to pass out of and completely around the hair-shaping structure while the hair is being shaped.

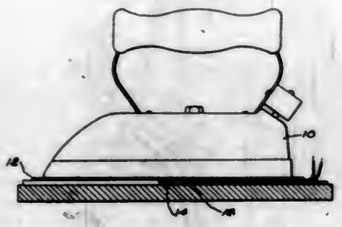
1,691,245. DAVIT FOR LIFEBOATS. ARTHUR W. LYDA, North Canton, Ohio, assignor to The American Safety Navigation Company, Canton, Ohio, a Corporation of Ohio. Filed Oct. 12, 1926. Serial No. 141,068. 6 Claims. (Cl. 9—22.)



1. Davits for a ship's life boat including supports mounted upon the ship's deck, a boom member pivotally mounted upon the deck adjacent to each support, a pulley

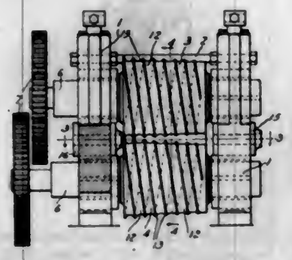
upon the upper end of each support, a pulley upon the upper end of each boom member, a drum adjacent to the davits, a cable located over the pulley of each boom member and support and having one end connected to the drum, a life boat suspended from the free ends of the cables, a brake mechanism operatively connected to the drum, means operated by the lowering of the life boat for automatically controlling said brake, a motor for raising the boat, a clutch between the motor and the drum and means for holding the clutch in disengaged position to lower the boat.

---



1,691,246. BUTTON-SEWING MACHINE. ROBERT L. LYONS, Waltham, Mass., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed Apr. 21, 1923. Serial No. 633,625. 22 Claims. (Cl. 112—110.)

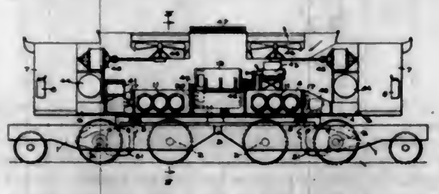
1. In a machine of the class described, a button carrier, a work holder, sewing instrumentalities for sewing a button carried by said carrier to work held by said holder, and means for relatively moving said carrier, holder and instrumentalities by successive increments during the sewing operation whereby a plurality of stitches passed through each of the holes in said button engage the work at points spread along a line therein.



---

1,691,247. MEANS FOR MEASURING TEMPERATURE. HOWARD D. MATTHEWS, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1926. Serial No. 137,482. 2 Claims. (Cl. 73—32.)

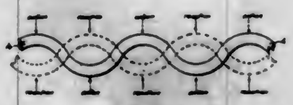
1. A device for indicating the summation of temperatures of surface divisions comprising, in combination, a copper plate adapted to support the surface to be measured and to make contact with substantially all points of said surface, an insulating base for supporting said copper plate, a thermo-couple embedded in the insulating base and welded to said copper plate, and a voltmeter electrically connected to said thermo-couple.



1,691,248. BALL-FORMING MACHINE. ALEXANDER C. MUNRO, Britannia Beach, British Columbia, Canada. Filed Apr. 19, 1926. Serial No. 102,917. 6 Claims. (Cl. 80—23.)

1. A ball forming machine comprising two rotary forming rolls provided with similarly pitched multiple-threaded helical grooves whose cross-section corresponds to the shape of the balls to be formed, said rolls being so constructed and mounted that corresponding portions of the grooves in the two rolls are presented opposite one another and that the space between the opposing peripheral surface portions of said rolls converges toward one end of the machine the pitch of said grooves being sufficiently steep to produce a relative inclination of the ridges between the groove on opposing portions of the rolls sufficient to hold the material being formed in position without the use of other guiding means at such portions.

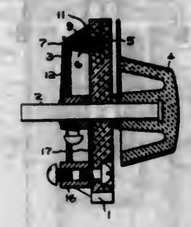
---



1,691,249. DIESEL-ELECTRIC LOCOMOTIVE. DELOS M. PALMER, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 30, 1926. Serial No. 105,750. 6 Claims. (Cl. 105—35.)

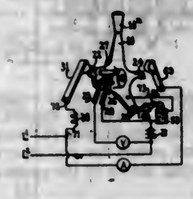
1. In an oil-electric locomotive, the combination with a truck and cab structure, of two multicylinder horizontal-opposed oil engines having their crankshafts disposed longitudinally of the cab, and an electric generator mounted between said engines and operatively connected thereto.

---



1,691,250. METHOD AND APPARATUS FOR OPENING SHEET PACKS. CLIFFORD F. PEEK, Chesterton, Ind., assignor of one-half to Charles A. Ball, Wheeler, Ind. Filed June 16, 1925. Serial No. 37,421. 9 Claims. (Cl. 29—19.)

1. The process of separating adhering sheets of a metal pack consisting in feeding the pack between a pair of corrugating rolls to form transverse corrugations in the pack of small radius, in reversing the corrugations at substantially the same radius and in subsequently removing the corrugations from the pack.



1,691,251. GRID LEAK. THOMAS C. RATHBONE, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1925. Serial No. 20,188. 6 Claims. (Cl. 201—48.)

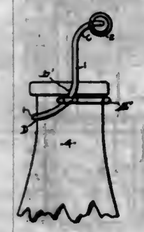
6. As an article of manufacture, a resistance device comprising a base-member having a groove therein, a coil of wire having elongated whorls partially stepped in said groove, the several whorls being severed adjacent said base member, a moldable material having high resistivity encompassing a portion of each of said whorls and maintaining them separated, and a contact device so disposed as to be movable over the exposed portion of said whorls.

---

1,691,252. ELECTRIC SWITCH. GUSTAVE B. REISBACH, San Diego, Calif., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 9, 1925. Serial No. 67,752. 7 Claims. (Cl. 171—314.)

1. In battery charging equipment, the combination with a battery and variable circuit connections therefor, of a rotatable contact member biased to one extreme position to interrupt said connections and movable to an opposite extreme position to commutate the same, and means for automatically holding said member in an intermediate position wherein the charging circuit of said battery is completed.

---



1,691,253. OVERSHOE AND METHOD OF MAKING SAME. FRED THOMAS ROBERTS, Yonkers, and ALBERT J. ELDON, Mount Vernon, N. Y., assignors to Paramount Rubber Consolidated, Inc., Tuckahoe, N. Y., a Corporation of Delaware. Filed Mar. 28, 1925. Serial No. 18,933. 19 Claims. (Cl. 154—42.)

19. The method of making footwear comprising cutting with an outline die through a pair of rubber sheets comprising two outer sheets and an intermediate doubled sheet with its folded edge within the circuit of the die and with a separator between its leaves, said die having a portion which has a shallow bevel which forms a cut seam between the side sheets at the front and another beveled portion which forms a cut seam between the sides and the sole, and another portion which is sufficiently sharp to cut through the side sheets without joining them.

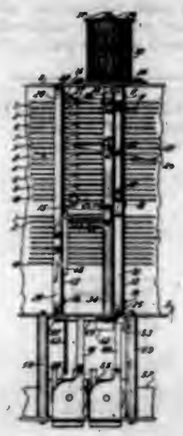
---

1,691,254. BOTTLE-CARRYING DEVICE. JOSEPH E. ROBINSON, Topeka, Kans. Filed Mar. 15, 1926. Serial No. 94,835. 1 Claim. (Cl. 215—100.)

In a bottle carrying device, in combination with the neck of a bottle, a bail of the kind described having a centrally disposed curve and transversely positioned curves to the first said curve for each of the bail members, and a reverse curve to the second said curve to engage with a handle member, whereby the handle is eccentrically positioned to the vertical axis of the neck of a bottle, a yoke member having both ends looped to form eyes to slidably engage on the bail so that by raising the bottle the centrally disposed curve of the bail and the yoke will grip on the neck thereof by reason of the eccentrically positioned handle to the axis of said bottle.

---

1,691,255. CONDUIT FITTING. HOWARD A. SELAH, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1925. Serial No. 72,181. 3 Claims. (Cl. 247—25.)

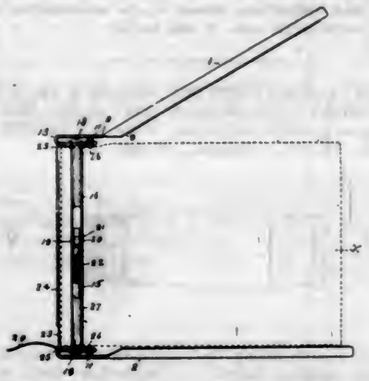


1. In a conduit fitting, the combination of a body having a conduit opening therein; a contractible sleeve in the opening having a longitudinal slit, the walls of the opening and the sleeve having wedging surfaces; a nut on the sleeve, said nut having an internal flange; and a gasket within the nut between the end of the sleeve and the flange, said nut forcing an axial movement of the sleeve to compress it and pressure on the gasket to form a seal on an inserted conduit, said fitting including means forming a seal between said nut and the walls of the conduit opening.

---

1,691,256. SWITCHING MECHANISM. HANS SENGEBUSCH, Chicago, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 5, 1925, Serial No. 48,247. Renewed Nov. 28, 1927. 30 Claims. (Cl. 179—27.5.)

1. An automatic switching mechanism having a vertically and radially movable shaft, a pair of stationary wipers provided with sectional extensions, terminals ar-

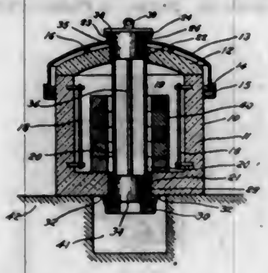


ranged in a vertical plane accessible to said wipers over said extensions but normally out of engagement therewith, means for moving said shaft vertically to select certain of

said terminals, and means for then moving said shaft radially to cause certain ones of said extensions to engage the selected terminals.

---

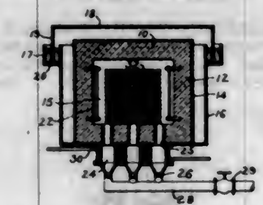
1,691,257. BINDER FOR LOOSE LEAVES. WILLIAM H. SMITH, San Francisco, Calif. Filed Aug. 2, 1926. Serial No. 126,415. 7 Claims. (Cl. 129—13.)



1. A transfer binder comprising opposed covers having channels hinged to the edges thereof; binding means extending betwen said channels and adapted to engage the inner plates thereof and terminating within said channels; backing sheets attached to each of said covers adapted to be overlapped and attached to each other when the binder is filled; and a strip of tape having an end secured to one of said covers protruding beyond said binder.

---

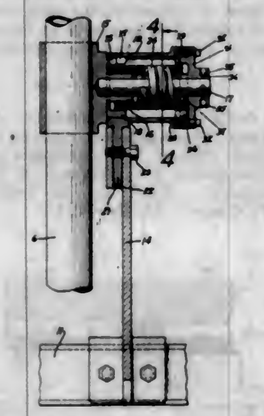
1,691,258. FURNACE. KARL TAMELE, Berlin-Wilmersdorf, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1926, Serial No. 152,153, and in Germany Dec. 3, 1925. 2 Claims. (Cl. 266—5.)



1. In a furnace, in combination, a casing provided with a material-receiving chamber, electric heating means in said chamber, a metallic pipe mounted in said casing and extending vertically through the center of said chamber, a pair of connected removable stoppers fitting in said pipe

for heat-insulating the interior thereof from the outside atmosphere, whereby the pipe will act as a manually controlled cooling means.

---

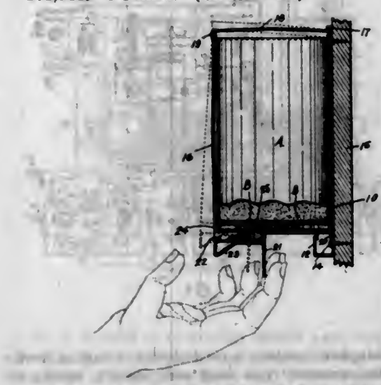


1,691,259. ANNEALING FURNACE. KARL TAMELE, Berlin-Wilmersdorf, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1926, Serial No. 152,155, and in Germany Dec. 5, 1925. 3 Claims. (Cl. 266—5.)

1. In a bright-annealing furnace, in combination, a heat-insulated casing having a chamber therein, cooling means below the chamber for condensing the steam in the furnace atmosphere, and means for exposing the furnace atmosphere to the cooling action of the cooling means.

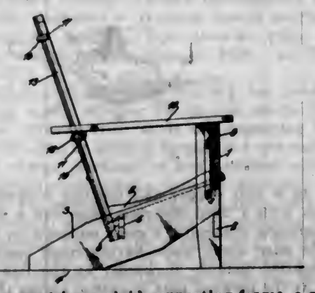
---

1,691,260. FOLDING BED. JOHN M. THOMSON, Davenport, Iowa. Filed Nov. 9, 1925. Serial No. 67,851. 9 Claims. (Cl. 5—164.)



2. A base, sockets axially aligned crosswise of the base at opposite sides thereof, a frame having side rails each of which has a projection rotatable upon one end of a corresponding socket, a cap rotatably adjustable upon the opposite end of each socket, and a coil spring within each socket having its terminals respectively engaged with projection and cap, to submit the spring to torsion when the frame is lowered.

---

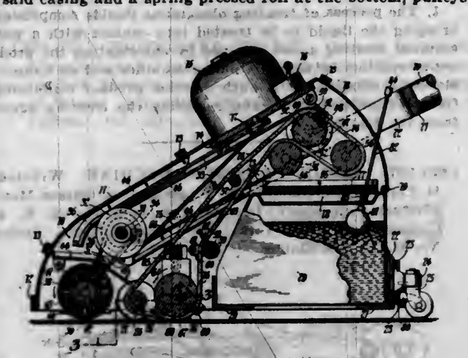


1,691,261. DISPENSING RECEPTACLE FOR POWDERED AND GRANULAR MATERIALS. GEORGE E. WILSON, Omaha, Nebr. Filed Apr. 19, 1926. Serial No. 102,941. 4 Claims. (Cl. 221—65.)

4. In a device of the class described, a receptacle having a discharge opening in the bottom thereof, means disposed about said discharge opening and forming a discharge passage extending horizontally therefrom, the length and depth of said passage being proportioned to normally inhibit gravitational flow of material through the same, and means supporting said receptacle for oscillation between fixed limits in a direction longitudinal of said passage, whereby to effect intermittent movement of material through said passage to the open end thereof.

---

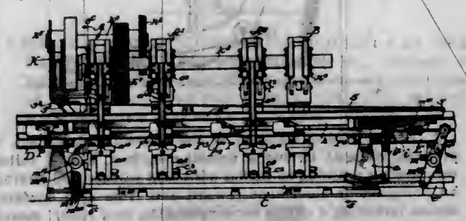
1,691,262. CHAIR. ARTHUR WURDACK, Normandy, Mo. Filed June 1, 1926. Serial No. 112,785. 2 Claims. (Cl. 155—191.)



1. A chair comprising a rigid supporting frame, a pair of arm members having their front ends attached to said frame, a support attached to the under side of the rear of each of said arm members, a cross member connecting said supports, a series of back forming slats having their lower ends attached to the rear side of said frame and having their intermediate portions attached to the front side of said cross member, and elements supporting said supports and having their upper ends attached to said supports and their lower ends attached to adjacent ones of said back forming slats.

---

1,691,263. FLOOR-WASHING MACHINE. ROMULO ALVARADO, Jamaica, N. Y. Filed Nov. 30, 1925. Serial No. 72,149. 1 Claim. (Cl. 15—4.)



In a floor scrubber, the combination with a casing having a motor on its upper surface, of a tank in said casing having a wringing means thereover, a counter shaft within the forward end of said casing belt driven by said motor, a rotary brush at the front of the casing driven by a belt from said counter shaft, a plurality of rolls journalled in the casing sides, including a drive roll near the top of said casing and a spring pressed roll at the bottom, pulleys

on the ends of the drive roll belt driven by said counter shaft, an endless mop trained over said rolls and held in contact with the floor by the spring pressed roll, a handle pivoted on the sides of said casing, and means combined with said handle for retracting the spring pressed roll.

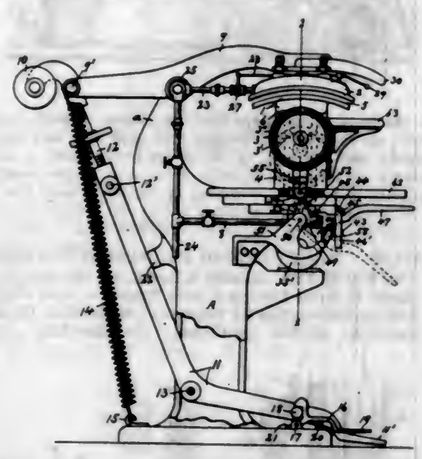
---

1,691,264. WORK-FEEDING MECHANISM FOR SHEARING MACHINES. ALBERT J. BATES, Jr., Chicago, Ill., assignor to Bates Expanded Steel Truss Co., East Chicago, Ind., a Corporation of Delaware. Filed Oct. 11, 1926. Serial No. 140,767. 23 Claims. (Cl. 164—6.5.)

1. In a machine of the character described, the combination of shearing mechanisms for cutting metal beams or bars on different lines, each comprising a reciprocable shearing element, mechanism for operating said elements, and mechanism for intermittently feeding the work comprising a feed carriage, a toothed bar shorter than the work connected to the carriage, and a series of progressively acting dogs for the bar.

---

1,691,265. NAILING INSERT. GEORGE W. BROOKS, Topeka, Kans. Filed Mar. 27, 1925. Serial No. 18,822. 3 Claims. (Cl. 72—105.)

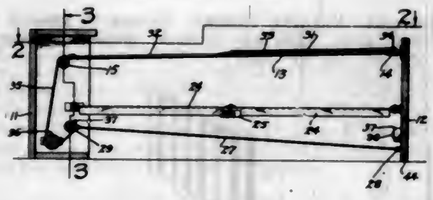


2. A nail guide comprising a sheet having staggered longitudinal channels, the walls of the channels providing adjacent guides for nails, and a holder therefor consisting of parallel bodies provided with slots disposed transversely to said channels of the sheet.

1,691,266. PROCESS OF TREATING LIQUIDS. LYLE CALDWELL, Los Angeles, Calif., assignor to The Celite Company, Los Angeles, Calif., a Corporation of Delaware. Filed Jan. 27, 1926. Serial No. 84,247. 9 Claims. (Cl. 196—147.)

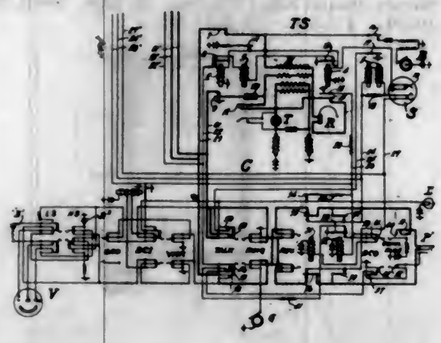
1. The process of treating oleaginous liquids comprising bringing the liquid to be treated into contact with a pulverulent treating agent obtained by chlorinating the product of reaction between diatomaceous silica and an hydroxide of an alkaline earth, such reaction product containing free alkaline hydroxide, and removing the treating agent from the liquid.

---



1,691,267. GARMENT-PRESSING MACHINE. WILLIAM H. CLISSON, Binghamton, N. Y., assignor to Clisson Manufacturing Company, Incorporated, Syracuse, N. Y., a Corporation of New York. Filed Mar. 6, 1926. Serial No. 92,721. 10 Claims. (Cl. 68—9.)

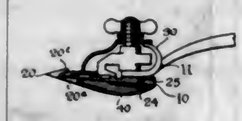
1. In a pressing machine of the character described, a pressing element having a pressing surface, a feed roller rotatable in pressing co-action with said surface and having an independent movement toward and from said surface, means including a clutch for rotating the feed roller, means including a hand lever for shifting the clutch, and means actuated by the hand lever for moving the feed roller into pressing co-action with the pressing element.



---

1,691,268. FOLDING BED. FREDERICK K. CONRAD, St. Paul, Minn. Filed Sept. 11, 1926. Serial No. 134,892. 7 Claims. (Cl. 5—119.)

1. A portable, foldable bed, including a spring fabric having one end secured to a movable support, a roller for supporting the other end of the fabric, pads for covering said fabric, one of the pads being secured to the fabric and adapted to be wound upon said roller with said fabric when in inoperative position, and independent storage means for receiving the other of said pads.



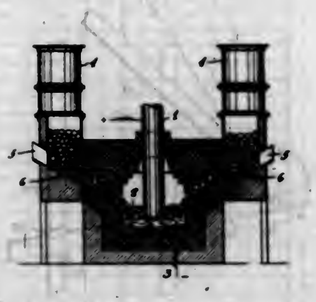
1,691,269. WIRE CHIEFS' TEST CIRCUITS FOR TELEPHONE SYSTEMS. THOMAS F. CROCKER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 9, 1925. Serial No. 74,231. 40 Claims. (Cl. 179—175.)

1. In a telephone system, a cord circuit, a calling device normally disconnected from said cord circuit, means responsive to each movement of said calling device from its normal position for bridging said calling device across the talking conductors of said cord circuit while said calling device is in an off-normal position, and separate means for maintaining said calling device bridged across said talking conductors an interval after it returns to normal.

---

1,691,270. HAIR CLIPPER. JOHN H. DONNELLON, Evanston, Wyo.; Mildred A. Donnellon administratrix of said John H. Donnellon, deceased. Filed Dec. 31, 1925. Serial No. 78,544. 3 Claims. (Cl. 30—1.)

1. In a hair clipper and the like comprising in combination with a fixed shearing blade and a vibrating blade co-operating therewith, a comb mounted on the under side of the fixed shear blade having comb teeth projecting a substantial distance forwardly of the line of cut thickened at the forward part to extend across the plane of the cut, and above that plane extending back across the line of cut to form guard terminals overhanging the path of the points of the teeth of the vibrating cutter, the comb being adjustable in the direction of the length of the comb teeth wih respect to the line of cut for varying the approximation of the points of the teeth of the vibrating cutter to the guard terminals in the under cut formed by said terminals.



---

1,691,271. RESINOUS MATERIAL AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed Nov. 28, 1924. Serial No. 752,811. 9 Claims. (Cl. 106—22.)

1. The process which comprises reacting together a crude xylenol and a magnesium formaldehyde jelly, agitating at room temperature until the formaldehyde has combined, and separating out the water.

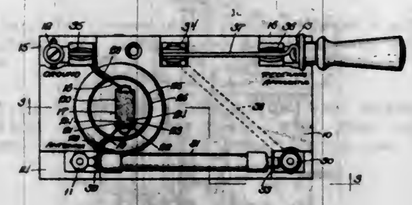
1,691,272. METHOD OF PRODUCING METALS AND METAL ALLOYS LOW IN CARBON. GUSTAV HENNING FLODIN, Roslags-Nasby, Sweden. Filed Mar. 18, 1924, Serial No. 700,162, and in Sweden Apr. 20, 1923. 12 Claims. (Cl. 75—22.5.)

1. A method of producing metals and metal alloys low in carbon, consisting in preparing a mixture of finely divided metal ore and finely divided carbonaceous material of such a quantity that the entire quantity of carbon is practically consumed on reduction, transforming said mixture into briquettes so as to bring the substances that are to chemically act upon each other into intimate contact with one another and to prevent the formation of local excesses of the one or other substance, reducing and melting said briquettes in an electric electrode furnace in which heat is developed by electric resistance in the slag bath, with the charge swimming on the slag.

---

1,691,273. METHOD OF PRODUCING IRON AND ALLOYS OF IRON HAVING A VERY LOW PERCENTAGE OF CARBON. HENNING GUSTAV FLODIN, Roslags-Nasby, and EMIL GUSTAF TORVALD GUSTAFSSON, Stockholm, Sweden, assignors to Hampus Gustaf Emrik Cornelius, Stockholm, Sweden. Filed June 22, 1925, Serial No. 38,940, and in Sweden May 11, 1925. 16 Claims. (Cl. 75—22.5.)

11. An endothermic reduction process for producing iron and other carbon binding metals and alloys thereof low in carbon directly from oxide ore consisting in reducing and melting in an electric furnace in a non-oxidizing atmosphere a charge composed of finely divided oxide ore and finely divided carbonaceous reducing material, mixed and solidified, the quantity of reducing agent being less than the theoretical amount required for reduction of the ore, and decreasing the electric conductivity of the slag formed and liberating metal of the metal oxides in the slag by adding a thermic reducing agent to the slag bath.



---

1,691,274. METHOD OF PRODUCING DENSE IRON AND IRON ALLOYS DIRECTLY OUT OF OXIDE ORES. HENNING GUSTAV FLODIN, Roslags-Nasby, and EMIL GUSTAF TORVALD GUSTAFSSON, Stockholm, Sweden, assignors to Hampus Gustaf Emrik Cornelius, Stockholm, Sweden. Filed June 22, 1925, Serial No. 38,941, and in Sweden May 26, 1925. 11 Claims. (Cl. 75—225.)

1. A direct electric reduction process for producing dense iron or iron alloys from oxide iron ore containing a metal capable of deoxidising and degasifying iron, with a charge composed of such ore in a finely divided state and carbonaceous material, mixed and solidified, feeding said charge successively into an electric furnace and smelting same whilst floating on top of a slag bath in said furnace, separating iron and slag, forming on the iron an oxidising slag, removing said slag containing the main part of the said metal, defining the reduced iron or iron alloy, slagging off, reducing the slag from the oxidizing period in the presence of the refined iron or iron alloy in an electric furnace and tapping the iron alloy with said metal.

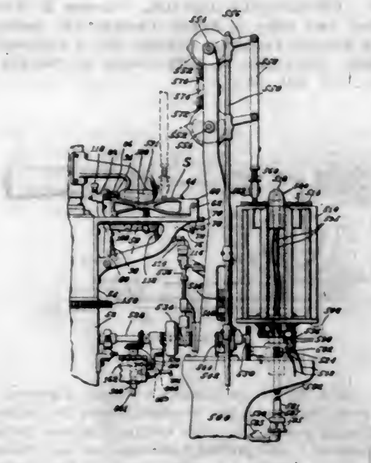
---

1,691,275. PROTECTIVE DEVICE. GEORGE R. FOLDS, Evanston, and JOHN S. BAKER, Chicago, Ill., assignors to Cook Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1923. Serial No. 625,474. 9 Claims. (Cl. 250—33.)

1. In a radio circuit, an antenna terminal, a ground terminal, a receiving apparatus terminal, means for constantly maintaining a path for high voltage currents between said antenna and said ground terminals, means connected to said antenna terminal for protection of the receiving apparatus from excessive currents, and a switch for connecting said last named means in series with the receiving apparatus terminal or for disconnecting the receiving apparatus terminal and connecting said last named means to said ground terminal.

---

1,691,276. COMBINED INTERIOR COLLAR CAN AND PAIL. LOUIS J. FREUNDT, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 9, 1924. Serial No. 685,108. 8 Claims. (Cl. 220—54.)

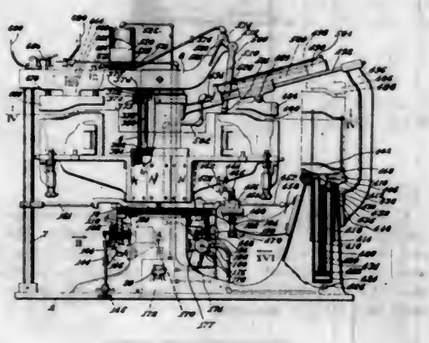


1. A container, comprising a body provided with a side tearing strip, and an internal collar secured to the body and extending across said tearing strip, said collar being provided with oposite perforations adapted to receive the ends of a bail, said perforations being covered by the body until said strip is removed.

---

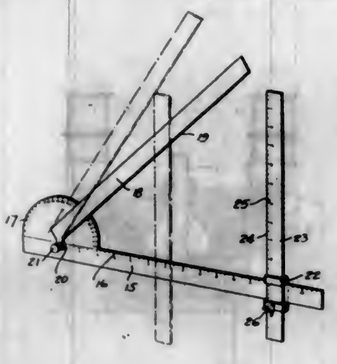
1,691,277. ASSEMBLING MACHINE. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 15, 1921. Serial No. 477,709. 398 Claims. (Cl. 12—17.)

38. In a composite-sole-assembling machine, a support, means for causing the travel of the support to different positions, a sole-container at one position, mechanism at said position for transferring a sole from the container to



the support, a cement-receptacle at another position, mechanism for delivering cement from the receptacle to the sole upon the support, a container at a succeeding position

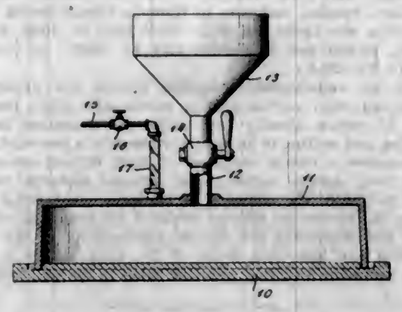
for auxiliary sole-portions, and mechanism at this position for transferring an auxiliary portion from its container to the cemented sole.



---

1,691,278. MACHINE FOR USE IN THE MANUFACTURE OF SHOES. FREDERICK M. FURBER, Revere, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 2, 1919, Serial No. 314,947. Renewed Feb. 4, 1928. 72 Claims. (Cl. 12—17.)

1. A shoe bottoming machine having, in combination, a shoe support, a plurality of mechanisms for operating successively on a shoe carried by said support, and automatic mechanism for bringing said support and said operating mechanisms into predetermined relation and for causing said operating mechanisms to travel successively around the forepart of the shoe.

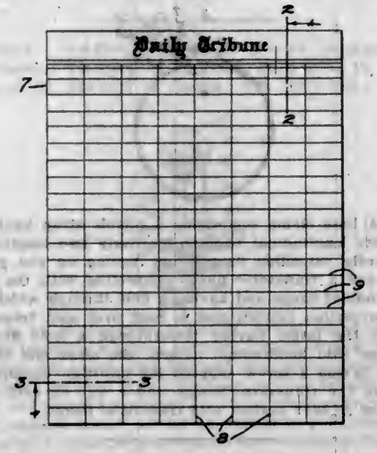


1,691,279. MEASURING INSTRUMENT. ELIZABETH H. GATES, Los Angeles, Calif. Filed July 6, 1925. Serial No. 41,845. 1 Claim. (Cl. 33—97.)

A geometrical instrument comprising a horizontal bar provided with a linear scale, a protractor at one end of the bar, the center of said protractor being located at the end of the scale, an arm pivoted to said bar at the center of the protractor and adapted to move over the face of said protractor, said arm having a free outer end, a yoke mounted on said bar, supporting means on said yoke located on the same side of said bar as said arm, a vertical bar adjustably mounted in said supporting means in the same plane with said arm, whereby said vertical bar may be adjusted to support the free end of said arm.

---

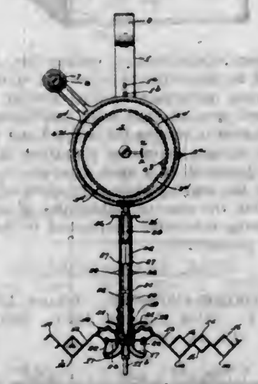
1,691,280. METHOD OF MAKING POROUS MATERIAL. BERNARD GRANVILLE, New York, N. Y. Filed July 26, 1926. Serial No. 124,938. 9 Claims. (Cl. 25—155.)



1. The process of making porous solid material, which comprises subjecting wet gas-containing material which has the property of setting and hardening to a sub-atmospheric pressure and maintaining a sub-atmospheric pressure on the expanded material until it has set.

---

1,691,281. TRANSPARENT MAKE-UP PLATE FOR USE IN PRODUCING PAGE STEREOTYPE. ROY V. GRAVES, Minneapolis, Minn., assignor of one-half to Lyman H. Hoyt, Fridley, Minn. Filed June 30, 1926, Serial No. 119,762. Renewed Feb. 9, 1928. 3 Claims. (Cl. 95—85.)

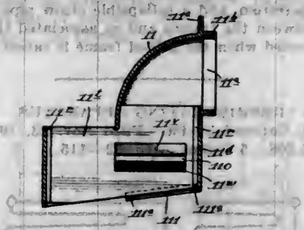


1. A transparent "make-up" page plate, having parallel column demarking grooves and parallel paragraph demarking grooves at right angles to said column demarking grooves, for assembling thereon and handling together all

the master sheets of composition required for a printed page, in producing a page stereotype of said composition, substantially as described.

---

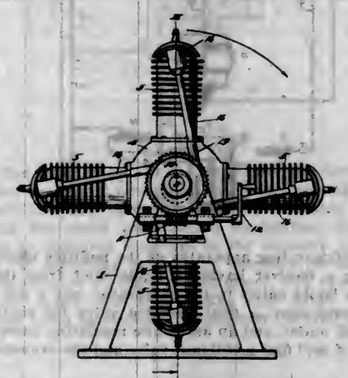
1,691,282. CREAM WHIPPER. AUGUST C. GUHL, Chicago, Ill. Filed June 11, 1926. Serial No. 115,275. 18 Claims. (Cl. 259—144.)



1. In a cream whipper or the like, a beater mounted for rotation about an axis and for reciprocation along said axis, a toothed pinion associated with said beater and a driving wheel having perforations adapted to mesh with the pinion, said perforations being disposed in non-circular arrangement for causing the reciprocation of the pinion and the beater.

---

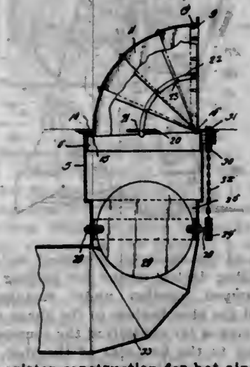
1,691,283. VENTILATOR. HAROLD N. HANSEN, Highwood, Ill., assignor to Henry Giessel Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1925. Serial No. 42,725. 9 Claims. (Cl. 98—20.)



1. A ventilator having an entrance port in one plane, exhaust outlets with an outlet passage extending therebetween, said outlets being in planes angularly disposed with respect to the plane of said entrance port and a passage extending between and connecting said entrance port and said outlet passage, and vertical partitions substan-

tially parallel to the ends of said ventilator located in said first passage and extending the distance between said outlets.

---

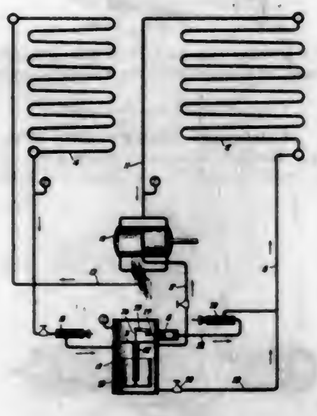


1,691,284. VARIABLE COMPRESSION AND SPEED DEVICE. JASON E. HARRIS, Howard, Kans. Filed Aug. 3, 1925. Serial No. 47,753. 4 Claims. (Cl. 123—48.)

1. In a variable compression and speed device, a crank shaft, a crank case disposed eccentrically of the axis of the shaft and around the crank of the latter, cylinders carried by the crank case, pistons in the cylinders, connecting rods between the pistons and the crank of the shaft, and means for varying the degree of eccentricity between the axis of the crank case and said crank by relative rotary adjustment between the shaft and crank case.

---

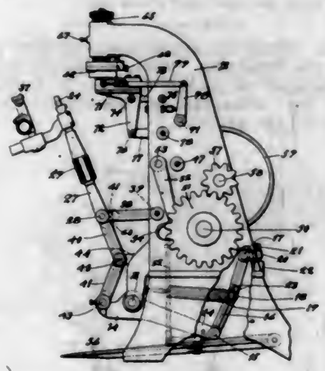
1,691,285. HEAT REGISTER AND CUT-OFF FOR AIR-HEATING SYSTEMS. HENRY C. HELMS, Indianapolis, Ind., assignor of one-half to Edgar C. Kreglo, Indianapolis, Ind. Filed May 19, 1927. Serial No. 192,625. 6 Claims. (Cl. 98—103.)



1. In a register construction for hot air heating systems, an open frame for disposition in a floor opening, a grilled

frame pivoted at one edge within the first mentioned frame and adapted for disposition therein or to be swung upwardly therefrom, and a collapsible elbow pipe section arranged between the frames and so associated therewith as to be extended when the grilled frame is raised.

---



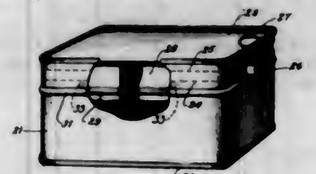
1,691,286. REFRIGERATING APPARATUS. NICOLAI H. HILLER, Carbondale, Pa. Filed Nov. 23, 1927. Serial No. 235,208. 5 Claims. (Cl. 62—115.)

1. A refrigerating apparatus of the multiple effect type, including a receiver having a liquid inlet from the condenser, a liquid outlet to the evaporator, and a gas outlet to the compressor, a float operated valve for controlling said liquid outlet, and an automatic regulating valve intermediate of said first mentioned valve and the evaporator.

---

1,691,287. MACHINE FOR OPERATING ON FOOTWEAR. ERIC A. HOLMGREN, East Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 25, 1919. Serial No. 326,178. Renewed Nov. 9, 1926. 56 Claims. (Cl. 12—17.)

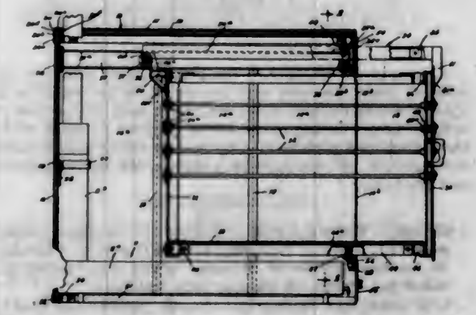
1. A machine of the character described having, in combination, a molding device, means for holding a shoe and said device clamped together under sustained molding pressure to mold the shoe bottom to the shape of the molding device, and means for subjecting the counter and upper material adjacent to the heel-seat of the shoe to pressure which increases and diminishes during maintenance of said molding pressure.



1,691,288. HOSE CLAMP. JOHN H. HOLYFIELD, Kansas City, Kans. Filed Feb. 13, 1928. Serial No. 253,967. 2 Claims. (Cl. 24—19.)

1. A hose clamp comprising a pliable strap having at opposite longitudinal edges respectively two longitudinal outwardly extending flanges, one having an end projection, and a transverse flange connecting with the other longitudinal flange and having a hole through which said end projection extends and is bent over said transverse flange, the latter having therethrough a hole disposed between said longitudinal flanges, the other end of said strap having a screw adapted for insertion through the hole in the transverse flange, and a nut on said screw adapted to bear against said transverse flange.

---



1,691,289. CONTAINER. JOHN M. HOTHERSALL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 18, 1923. Serial No. 632,843. 1 Claim. (Cl. 220—53.)

A container, comprising a rectangular body adapted to be opened by severance of a tearing strip beneath the top, a separate rectangular collar member having yieldable sides and open at both ends, positioned within said body and adapted to receive the severed end of the body as a temporary closure after the container is opened, said collar being fastened at a spot or spots to said body at points below the tearing strip, the spots of fastening being well within the zone of yieldability of said collar, the said collar being otherwise unattached to the can body in said zone of yieldability.

---

1,691,290. DRIER CABINET. JULIUS JUDELSON, New York, N. Y. Filed Feb. 11, 1925. Serial No. 8,333. 9 Claims. (Cl. 34—40.)

1. A drier of the character described comprising a cabinet having side and top walls, a drier frame formed of parts mounted to reciprocate in and out of the cabinet,

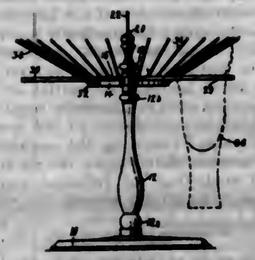
and connections for detachably securing said walls to each other and for connecting said frame parts together to form separate rigid structures, said connections being made without the use of tools.

---

1,691,291. SWITCH. JOSEPH KAUWE, KAHALEOHU, Honolulu, Territory of Hawaii. Filed Feb. 19, 1927. Serial No. 169,649. 4 Claims. (Cl. 200—157.)

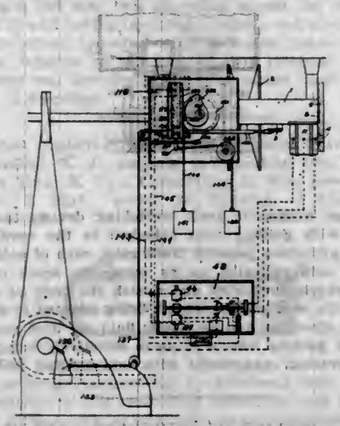
4. In an electric iron, a handle carried normally open switch including a spring actuated button, a plate mounted below the handle and provided with spaced bearings, a rock shaft mounted in said bearings, a collar secured to the shaft and adapted to engage one of the bearings to hold the shaft against rotary movement, means to yieldingly hold the collar in engaged position, an arm extending from the collar to engage the button and hold the switch in closed position and an operating finger for the shaft.

---



1,691,292. CULTIVATOR-SHOVEL STRUCTURE. CARL HERMAN KYRKLUND, Winthrop, Minn. Filed July 8, 1926. Serial No. 121,243. 4 Claims. (Cl. 97—198.1.)

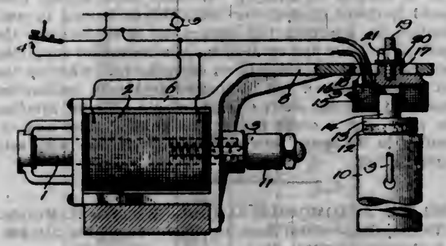
1. A cultivator having a shovel supporting member, an arm secured at one end of said member and extending downwardly and forwardly therefrom, said arm having a lower terminal portion, offset forwardly from its upper portion, said lower portion being also offset laterally from said upper portion and a shovel secured to said lower portion whereby said shovel is spaced forwardly from the upper portion of said arm and is offset laterally in relation to said supporting member.



---

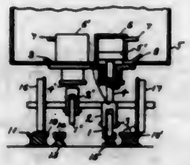
1,691,293. HOSIERY-DISPLAY RACK. ENOCH LARSON, Eldora, Iowa. Filed May 2, 1927. Serial No. 188,184. 8 Claims. (Cl. 211—163.)

1. In a display rack, an annular disc, a second annular disc above the first disc, means for supporting said discs for rotation, the second disc having a plurality of radial slots extending inwardly from its periphery and a plurality of supporting members projecting from the first disc upwardly and outwardly through said slots.



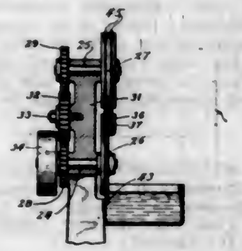
1,691,294. AUTOMATIC SPEED-CONTROLLING DEVICE. DARCY E. LEWELLEN, Columbus, Ind., assignor to Lewellen Manufacturing Company, Columbus, Ind., a Corporation of Indiana. Filed Aug. 7, 1922. Serial No. 580,312. 29 Claims. (Cl. 74—7.)

1. The combination with a variable speed transmission mechanism and a processing machine operated thereby, of an electrically operated motor for changing and controlling the speed transmission mechanism, means controlled by changing condition of the elements being processed for energizing said motor, selective mechanism for determining the rotation of said motor, and automatically operated means for de-energizing said motor when the variable speed mechanism has reached its limit of adjustment.



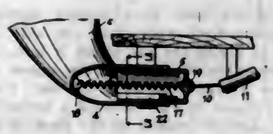
---

1,691,295. MUSICAL-SOUND-PRODUCING INSTRUMENT. FREDERICK B. LITTLE, Chicago, Ill., assignor to J. C. Deagan, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 17, 1927. Serial No. 226,745. 1 Claim. (Cl. 84—407.)



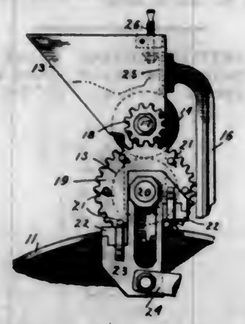
The combination with an elongated sound producing bar; of a hammer mounted upon one side of said bar and operable to strike the bar to set it into vibration; a sound dampener bearing against the upper end of the bar and whose weight is borne by the bar; a solenoid including one element in the form of a hollow energizing winding and another element in the form of a magnetizable core received in the interior of said winding, the winding being normally stationary and the core being movable and coupled with the dampener; and a mounting for the electromagnet winding and bar and upon which this electromagnet element and bar are adjustable toward and from the hammer.

1,691,296. AUTOMATIC TRAIN-SWITCHING DEVICE. IVAN I. LITVINCHEV, Moscow, Russia. Filed Dec. 5, 1927. Serial No. 237,870. 2 Claims. (Cl. 246—424.)



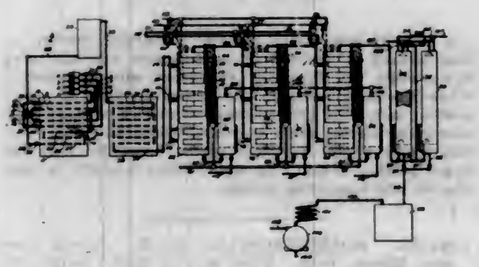
1. In an automatic train switching device, the combination with guiding rails attached to the roadbed at points of switching between track rails, each of said guiding rails being parallel to its respective track rail, of guiding wheels supported underneath the body of a railroad vehicle, said guiding wheels being adapted to slide in a vertical direction, and an elastic fluid operated means to move said guiding wheels so as to selectively bring them in an operating engagement with said guiding rails.

1,691,297. SEALING OF SLIP-COVER CANS OR CONTAINERS. GEORGE F. MILLER, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed June 16, 1924. Serial No. 720,409. 2 Claims. (Cl. 226—80.)



1. A compound applying machine for applying compound to closed beaded sheet metal boxes, having in combination an applying roll shaped to enter between the beads of the body and cover of the box, means for supplying fluid compound to said roll, an opposing roll, whereby the box is held between and rotated by said rolls, mechanism connected with the shaft of each of said rolls for rotating the same, and a chute having box guiding sides and extending to the space between said rolls in line with said applying roll.

1,691,298. AUTOMOBILE SANDER. WILLIAM H. MINLER, Toledo, Ohio. Filed Sept. 14, 1927. Serial No. 219,409. 5 Claims. (Cl. 291—34.)

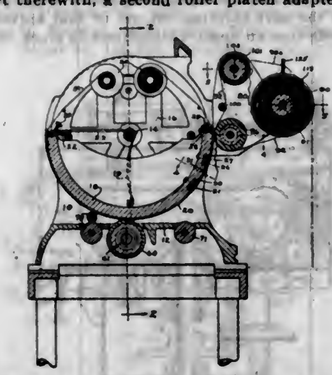


1. In an automobile sander, a container for containing sand, the container having a funnelled end terminating in a cylindrical throat, a cylindrical stopper having a slot and fitting the throat and movable longitudinal with respect to the axis of the throat.

1,691,299. PRINTING PRESS. ALBERT S. N. OLSON, St. Louis, Mo. Filed Feb. 7, 1925. Serial No. 7,630. 3 Claims. (Cl. 101—340.)

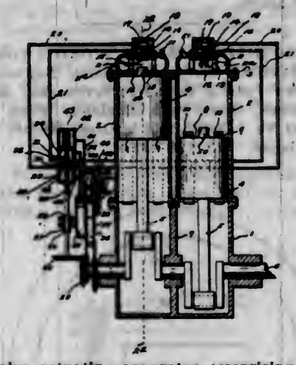
1. In a printing press the combination of an ink disk, rounded to rotate in a fixed position, form inking means moving to and from the disk and means for supplying ink to the disk directly independently of the form inking means over an area substantially less than the disc area, comprising a roller having contact with the disk, and a ductor roller having driving contact with said first mentioned roller, both of said rollers being mounted to rotate in fixed positions, whereby both are in constant contact, and the roller in contact with the disk is in constant contact therewith.

1,691,300. PROCESS OF AND APPARATUS FOR PRODUCING GASOLINE AND OTHER LIGHT HYDROCARBONS FROM HEAVIER HYDROCARBONS. BERNARD ORMONT, New York, N. Y., assignor to Bernard Ormont Associates, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 9, 1923. Serial No. 667,532. 7 Claims. (Cl. 196—53.)

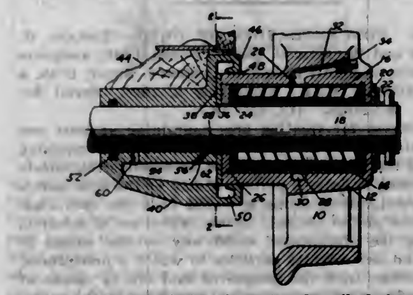


1. A method of treating a hydrocarbon oil which comprises heating the oil to a temperature sufficient to vaporize the lighter fractions thereof but insufficient to completely vaporize the same; independently heating water to produce a region of nascent steam; regulating the proportion of oil to water so that with any oil treated the product of the latent heat of vaporization of the oil and the weight of said oil shall substantially equal the product of the latent heat of vaporization of the water and the weight of said water; conveying the unvaporized oil to said region of nascent steam where the oil is completely vaporized; and subjecting the resultant mixture of oil vapors and steam to additional heating.

1,691,301. PRINTING MACHINE HAVING A CHANGEABLE FORM. HENRY C. OSBORN, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 27, 1926. Serial No. 151,091. 14 Claims. (Cl. 101—53.)



1. The combination of a printing member, a set of mutually independent address plates adapted to be individually mounted thereon successively, a roller platen adapted to coact therewith, a second roller platen adapted to coact

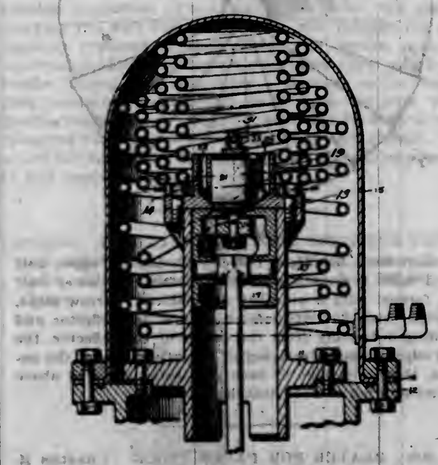


with the same address plates while on the printing member, and means for holding a roll of paper passing between the second platen and the form.

1,691,302. FUEL-INJECTION ENGINE. ADOLPHE C. PETERSON, Minneapolis, Minn. Filed Feb. 21, 1923. Serial No. 620,529. 16 Claims. (Cl. 123—32.)

1. A valve actuating apparatus comprising a fluid distributor and a plurality of valve pistons in valve piston casings, means whereby the fluid distributor may cause reversal of pressures on the opposite sides of the valve pistons periodically, and means whereby the reversal of a piston causes a change in the release of fluid to a related cylinder chamber.

1,691,303. JOURNAL BOX. HOWARD K. PORTER, Ridgewood, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 3, 1925. Serial No. 20,495. 5 Claims. (Cl. 308—180.)

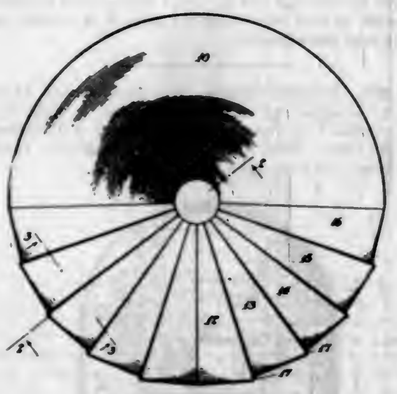


1. In a device of the character described, in combination, an axle, a wheel hub journalled on the axle and having a thrust face at its inner end, a journal box surrounding the axle and having a thrust face near its outer end, a lubricant reservoir at the bottom of the box at the side of its thrust face, a freely rotatable member supported by the axle between said thrust faces, said member having a flat side face extending across the end of the reservoir and having lubricant receiving and carrying openings in lateral communication with said reservoir, whereby the rotation of the member lifts lubricant from the reservoir and distributes it to the thrust faces; substantially as described.

1,691,304. SHOE-POLISH BOX. GEORGE CLAYTON REID, Cranford, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 9, 1921. Serial No. 513,918. 1 Claim. (Cl. 220—43.)

A container, comprising a cylindrical body having a circumferential rib protruding therefrom, and a resilient cover formed with an upwardly curved and domed top and having a flange adapted to frictionally engage the part of the body above said rib only, and provided with offset hollow portions at the bottom edge of the cover adapted to be pressed inwardly by the fingers to spring said cover flange from frictional engagement with said body part, the part of the body above said rib being tapered inwardly towards its top edge and the cover flange being expansible, by reason of said offset portions after it is pressed, relative to said tapered part.

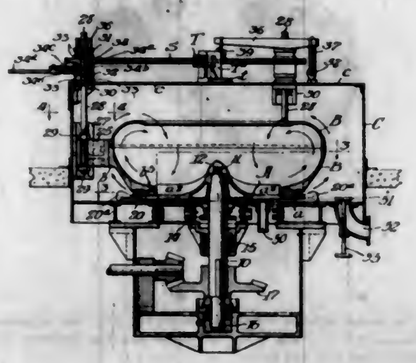
1,691,305. COMPRESSOR. JOHN R. REPLOGLE, Detroit, Mich., assignor, by mesne assignments, to Electric Refrigeration Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 21, 1926. Serial No. 110,616. 8 Claims. (Cl. 62—115.)



1. In a refrigerating system having a condenser in communication with the outlet port of a compressor, an exhaust valve structure comprising a seat, a closure element, a spring for exerting pressure to return and maintain said closure element against said seat between the compression strokes, a stop element to limit the lift of said closure element under a predetermined pressure, and a liquid shock absorber means associated with said closure element and said stop member.

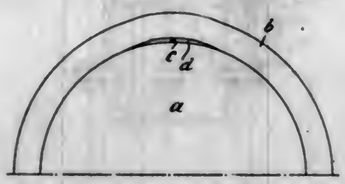
1,691,306. PACKAGE. MARTIN ROSEN, Chicago, Ill. Filed Aug. 24, 1927. Serial No. 215,004. 4 Claims. (Cl. 206—56.)

1. A package comprising in combination loose particles of food, a stiff sheet and a diamond-shaped wrapper for enclosing said particles of food, three corners of said wrapper being folded over and secured to one face of said sheet, the remaining corner of said wrapper being disposed between said contents of the package and the other face of said sheet, whereby said last mentioned corner may be pulled out and assist in dispensing the contents from the package.



1,691,307. HEADLIGHT REFLECTOR. EUGENE SCHIMPFF, Scranton, Pa. Filed Apr. 23, 1926. Serial No. 104,000. 1 Claim. (Cl. 240—41.)

A short-focus headlight reflector having its upper half formed with a smooth parabolic surface, its lower half being formed with a plurality of relatively narrow steps, the steps being flat circumferentially of the reflector and extending outwardly from the center of the reflector, the upper edge of each step lying in a continuation of the parabola, the lower edge of each step being elevated above the continuation of the parabola.

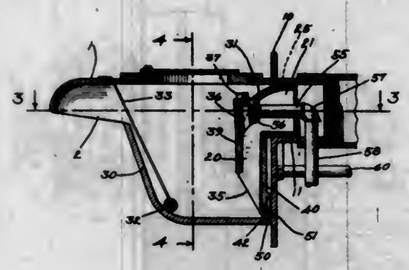


1,691,308. BEATER FOR PAPER STOCK. CHARLES R. SEABORNE, Appleton, Wis. Filed Aug. 5, 1925. Serial No. 48,217. 19 Claims. (Cl. 92—20.)

1. A machine of the character described comprising a tank, a bowl within said tank and spaced from the wall thereof, said bowl having a bottom with an opening therein and provided around said opening with a plurality of spaced and downwardly projecting beater knives, a plate located beneath and closing the bottom opening of said bowl and provided with beater knives arranged opposite the knives of said bowl to cooperate therewith and provide an entrance therebetween for stock to be beaten, means for imparting rotation to the part carrying one set of said knives, and means for effecting an upward circulation to stock between

the tank and bowl, and both an upward and downward circulation to stock within the bowl to prevent the stock within the bowl from settling over and plugging the entrance to the knives.

1,691,309. LOADED ELECTRIC CONDUCTOR. WILLOUGHBY STATHAM SMITH, Benchams, Newton Poppleford; HENRY JOSEPH GARNETT, Sevenoaks; and JOHN ANCEL HOLDEN, Gidea Park, England. Filed Nov. 17, 1926, Serial No. 149,007, and in Great Britain Sept. 25, 1926. 7 Claims. (Cl. 178—45.)



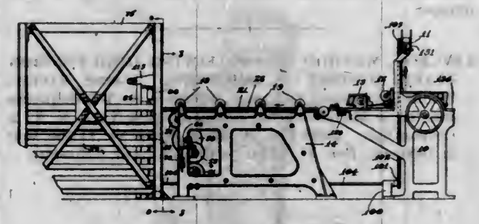
1. A method for the manufacture of loaded conductors which require heat treatment to develop the required magnetic properties, which comprises laying a metal spacer fusible at a temperature not exceeding the temperature for annealing the loading upon the conductor, winding the loading material over the conductor and the metal spacer and subjecting the loaded conductor to the said heat treatment which causes the metal spacer to melt.

1,691,310. CONCENTRATION OF ORES. EDWARD H. SNYDER and WILLIAM D. GREEN, Bauer, Utah, assignors to Combined Metals Reduction Company, Bauer, Utah, a Corporation of Utah. Filed July 2, 1925. Serial No. 41,200. 8 Claims. (Cl. 75—18.)

1. A process for treating ores containing at least one of the metals of the group, silver, lead, copper, comprising subjecting the ores to the action of an alkaline thiosulfate for dissolving at least a portion of any of the said metals when present, precipitating as sulfid from the said alkaline solution any of the said metals, which are in solution, separating the precipitated sulfid, any natural sulfids in the ore and any mineral particles to which a precipitated sulfid adheres, from the gangue of said ore by means of froth flotation while regenerating the solvent by the action of the precipitant upon the ore solution.

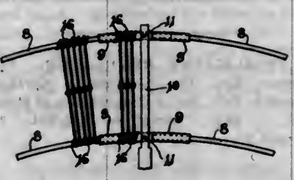
1,691,311. OIL-BURNING APPARATUS. CHARLES M. STROUD, Minneapolis, Minn., assignor of one-half to Leslie H. Fawkes, Minneapolis, Minn. Filed Feb. 16, 1927. Serial No. 168,619. 25 Claims. (Cl. 158—56.)

1. A device of the class described comprising a casing having a flame discharge orifice and a horizontal air intake conduit at that end opposite the orifice, a tubular element as a chamber and as a continuation of the air intake orifice having an extension arranged to discharge downwardly into the casing the point of discharge being below the level of the air intake conduit, means for delivering oil into the extension in a downward direction at a point substantially at the level of the air intake, an oil over-flow pipe communicating with the casing below the air intake, said extension being protectingly opposed to the intake end of the over-flow pipe.

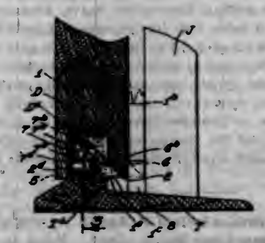


1,691,312. WINDSHIELD FOR AUTOMOBILES. HORACE T. THOMAS, Lansing, Mich. Filed Sept. 15, 1924, Serial No. 737,708. Renewed Sept. 23, 1927. 4 Claims. (Cl. 296—93.)

1. The combination of a wind shield, an automobile having an opening for said wind shield, and a flexible part joining adjacent edges of said shield and opening and constituting a hinge that shall hold the edge of said shield adjacent to the edge of said opening in position and permit the wind shield to turn about said hinge, said part consisting of a strip of rubber permanently secured to one of said edges and fixedly secured to the other edge by a groove and tongue construction so as to form a tight joint between said edges.



1,691,313. DISTRIBUTING DEVICE. FRANK TOOHEY, South Acton, Mass., assignor to Harding Engineering Company, East Boston, Mass., a Corporation of Massachusetts. Filed Mar. 27, 1925. Serial No. 18,838. 17 Claims. (Cl. 209—88.)

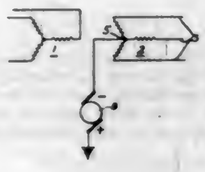


1. An improved distributing device for sheet material, comprising a vertically movable rack having a plurality of shelves, means for positioning said shelves in accordance with the thickness of the sheet material, and means for automatically depositing the sheet material thereon.

1,691,314. SHEDDING MOTION FOR CIRCULAR LOOMS. SAKICHI TOYODA, Nagoya, Japan. Filed Jan. 10, 1928. Serial No. 245,642. 3 Claims. (Cl. 139—16.)

1. In a circular loom of the type having a circular reed adapted to partake of a gyratory movement, the shuttle carrying the weft being adapted to pass through the successively produced sheds along the said circular reed, an improved shedding mechanism comprising upper and lower heddle frames, each comprising a plurality of arc-shaped rods connected continuously to form a complete ring, sheaths telescopically connected with said arc-shaped rods, operating rods pivotally connected with said sheaths, and a cam for controlling the outward and inward movements of said operating rods.

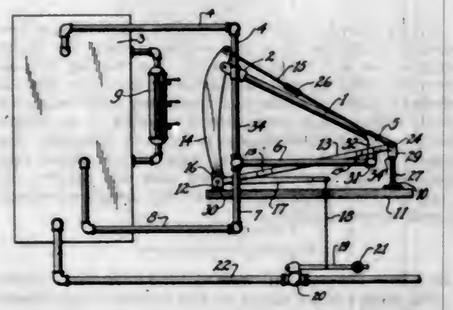
1,691,315. AUTOMATIC WEATHER STRIP FOR DOORS AND THE LIKE. LLOYD E. VAN AUKEN, Lemon Grove, Calif. Filed June 27, 1927. Serial No. 201,642. 8 Claims. (Cl. 20—67.)



1. In a device of the class described, a door grooved at its lower edge, a weather strip supporting means secured over each end of said groove in said door, a plunger recip-

rocally mounted in one of said weather strip supporting means, a lug extending from said plunger through said weather strip supporting means, a weather strip pivotally mounted between said weather strip supporting means, and a slotted lug at one end of said weather strip shiftable and operatively connected with said lug in said plunger.

---

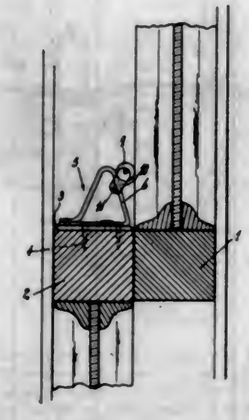


1,691,316. METHOD OF PROTECTING HIGH-TENSION LINES AGAINST FLASHOVERS. ALBERT VAUPEL, Berlin-Grunewald, Germany, assignor to Westinghouse Electric & Manufacturing Company, New York, N. Y., a Corporation. Filed Feb. 26, 1925, Serial No. 11,899, and in Germany Feb. 27, 1924. 4 Claims. (Cl. 175—30.)

1. The method of protecting high-tension electrical distribution systems against flashover which consists in reducing the magnitude of the positive half-cycle of potential with respect to the magnitude of the negative half-cycle of potential.

---

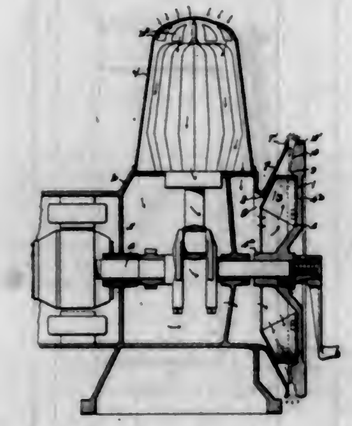
1,691,317. FEED-WATER REGULATOR. VINCENT Y. VEENSCHOTEN, Erie, Pa., assignor to Northern Equipment Company, Erie, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1922. Serial No. 585,984. 11 Claims. (Cl. 122—451.1.)



1. A feed-water regulator comprising a thermostatic tube in combination with a feed-water valve, means supporting one end of said tube, two levers, means pivotally connecting the fulcrum of each lever directly with said end, means fixed to the other end of said tube and pivotally connected with one of said levers, means operatively connecting the other lever with said valve, and means pivotally connecting said two levers, a triangle being formed by said tube, one of said levers and the means connecting the other lever to said fixed end, said triangle being approximately equilateral.

---

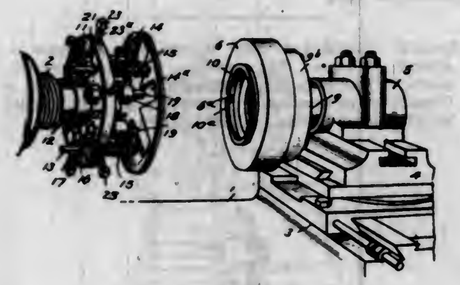
1,691,318. BURGLARPROOF SASH FASTENER. WILLIAM E. WARD, Long Beach, Calif. Filed Oct. 6, 1926. Serial No. 139,825. 1 Claim. (Cl. 292—239.)



In a window comprising upper and lower sashes, a plate secured to the top of the lower sash, a wedge member secured to said plate, said wedge member comprising an inclined wedge plate, a roller, links on which said roller is journaled, a pin extending between said links and back of said wedge plate, said links serving to couple the roller to

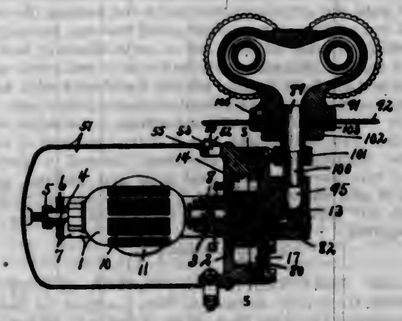
the wedge member, a stop lug on the inside of said inclined wedge plate, against which said pin is adapted to rest to prevent accidental displacement of the roller.

---



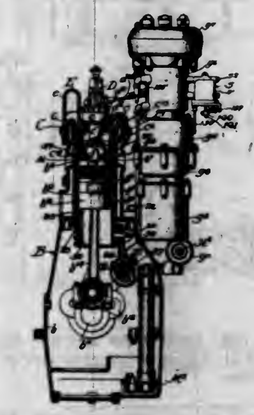
1,691,319. CENTRIFUGAL FAN. JAMES A. WATKINS, Detroit, Mich., assignor, by mesne assignments, to American Blower Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed Dec. 18, 1920, Serial No. 431,590. Divided and this application filed Nov. 3, 1923. Serial No. 672,526. 2 Claims. (Cl. 123—171.)

1. The combination with an engine having a casing, of a fan wheel positioned at one side of the fly wheel of the engine, said fly wheel having an outer annular peripheral portion extending beyond the tips of the blades of the fan wheel, and the engine casing having an opening and an annular extension adjoining said opening extending beyond the tips of the fan blades, said outer peripheral portion of the fly wheel and said annular extension of the engine casing forming an annular peripheral discharge nozzle for the fan wheel.



1,691,320. ATTACHMENT FOR LATHES. HARRIS MORGAN WHITCOMB, Albany, Wis. Filed Aug. 24, 1925. Serial No. 52,082. 10 Claims. (Cl. 82—34.)

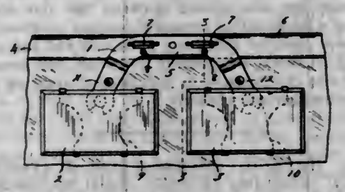
1. A cutting attachment for lathes or the like comprising a tool plate having means for attachment in a chuck, said tool plate having a plurality of radially arranged transverse slots, cutting elements working in certain of said slots and having means whereby they may be adjusted and locked in a set position, shanks extended through other of said tool plate slots and radially adjustable therein, each of said shanks having a socket in its outer end, an antifriction work-engaging roller and bearing therefor axially slidable in said socket, a spring interposed between said bearing and the inner end of said socket for yieldingly projecting said roller in the direction of the work, and means for holding said bearing and shank in assembled relation and positionable to variably limit the relative axial movement of said bearing in said socket.



---

1,691,321. SIGNALING DEVICE. GEORGE A. WHITE and WILLIAM SPARKS, Jackson, Mich., assignors to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed June 13, 1927. Serial No. 198,422. 8 Claims. (Cl. 116—142.)

1. In an apparatus of the class described, the combination with a vehicle body of a combined motor and pump disposed within the vehicle body, a horn body, diaphragm chamber and projector disposed exterior of the vehicle body, a tubular member connected to the pump and to the horn body, and extending through the vehicle body, and a bracket connected to the combined motor and pump and secured to the vehicle body for supporting the structure.

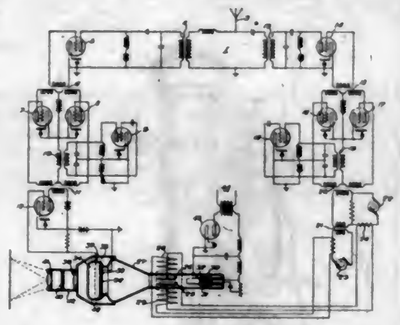


1,691,322. LUBRICATING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. AAGE E. WINCKLER, Milwaukee, Wis. Filed Mar. 26, 1925. Serial No. 18,383. 30 Claims. (Cl. 123—196.)

1. The combination of an enclosing casing adapted to contain lubricant, fuel pumps in said casing, metering devices in said casing, mechanism for operating said devices in said casing, means for delivering lubricant under pressure to said casing to lubricate the parts therein, and means for rendering the pumps ineffective to deliver fuel when the pressure of the lubricant in the casing falls below a predetermined degree.

---

1,691,323. SUPPORT FOR REAR-VIEW MIRRORS. FRED W. ZINK, Detroit, Mich., assignor to Kales Stamping Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 23, 1926. Serial No 96,710. 1 Claim. (Cl. 45—99.)



In combination, a pair of laterally spaced mirrors, a pair of holders secured to said mirrors, arms projecting at substantially right angles from said holders, an inverted substantially U-shaped bracket having the base of the U attachable to the top rail of a windshield, said frame, and having the arms of the U extending downwardly adjacent said holders, and jaw members respectively secured to the arms of said U-shaped frame and claiming the arms aforesaid against the said arms of said U-shaped bracket.

---

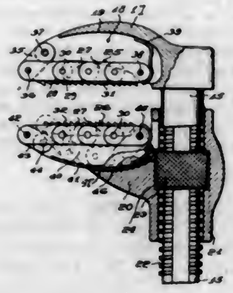
1,691,324. TELEVISION SYSTEM. VLADIMIR K. ZWORYKIN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 18, 1925. Serial No. 43,219. 5 Claims. (Cl. 178—6.)

1. In a television system, comprising a television transmitter, a television receiver and an object at the transmitter, means including said transmitter and receiver for reproducing an image of the object, a light filter associated with both the transmitter and receiver, means con-

trolled by the filters for causing the reproduced image to appear in the colors of the object, a source of monochromatic light of a definite color, and means including the light

for enabling the light filter at the receiving station to be properly adjusted to control the reproduction of the image in the desired colors.

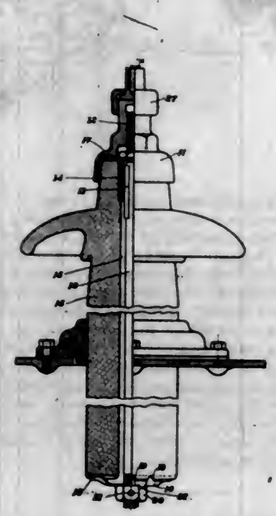
---



1,691,325. AUTOMATIC BRAKE-ADJUSTING MECHANISM. CHARLES O. ANDERSON, Omaha, Nebr. Filed Mar. 26, 1927. Serial No. 178,669. 11 Claims. (Cl. 188—202.)

1. In an automatic slack-adjuster for brakes, a brake-lever-connection comprising terminal heads connected with the brake-levers, and an intermediate rod connecting said heads and rotatable relatively thereto, a portion of said rod being threaded and engaging a threaded portion of one head, means for maintaining between the rod and the other head a longitudinal pressure constant in direction, a clutch-sleeve mounted rotatively upon said rod and having a constant frictional engagement therewith, and means for actuating said clutch-sleeve in directions alternating as the brakes are applied and released.

---



1,691,326. WRENCH. CHARLES F. ASH, Jr., Valley Station, Ky. Filed July 18, 1927. Serial No. 206,602. 4 Claims. (Cl. 81—66.)

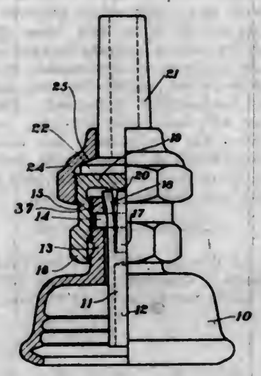
1. In a wrench of the character described, a shank, a relatively stationary jaw head carried thereby, a movable jaw head mounted upon the shank, a chain element arranged adjacent to the stationary jaw head and having its inner end pivotally connected therewith, links pivotally connecting the outer end of the chain element with the stationary jaw head, a second chain element arranged adjacent to the movable jaw head and having its inner end pivotally connected therewith, and links pivotally connecting the outer end of the second named chain element with the movable jaw head.

---

1,691,327. TERMINAL FOR BUSHINGS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 29, 1922. Serial No. 578,464. 9 Claims. (Cl. 173—318.1.)

2. In combination a dielectric bushing, a conductor rod extending thru said bushing, means connected with said rod for engaging the inner end of said bushing for limiting the outward movement of said rod, means removably connected with the outer end of said rod for holding the end of said rod against movement into said bushing, means for preventing rotation of said rod in said bushing, and a closure member threaded onto said rod at the outer end thereof and having a bearing portion registering with said bushing and exerting an outward tension on said rod.

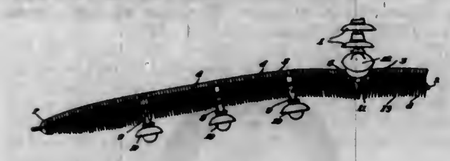
5. In combination a dielectric bushing, a conductor rod extending thru said bushing, a stop at the inner end of said rod for limiting outward movement thereof, a spring washer interposed between said stop and bushing, and means on said washer co-operating with said conductor and bushing for preventing rotation of said rod relative to said bushing.



---

1,691,328. TERMINAL FOR INSULATOR BUSHINGS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 3, 1922. Serial No. 579,347. 10 Claims. (Cl. 173—353.)

10. A fitting for an insulator bushing comprising a cap arranged to cover the end of a bushing and having a flange of less diameter than said cap extending upwardly from the top thereof, said flange having an opening therethrough, a conductor extending through said opening and having a portion of the end thereof projecting beyond said flange, said projecting portion being slitted to provide resilient tongues, and a cover cap threaded upon the exterior of said

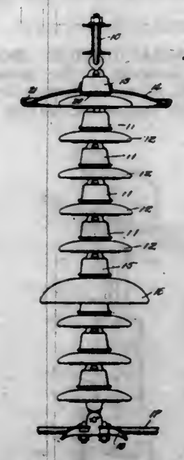


flange and providing an imperforate closure for an opening through said flange, said cover cap having a tapered boss

extending toward the end of said conductor and arranged to enter between said tongues to force said tongues outwardly against the inner face of said flange.

---

1,691,329. HIGH-TENSION INSTALLATION. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Original application filed Oct. 20, 1921, Serial No. 508,933. Divided and this application filed May 4, 1925. Serial No. 27,691. 9 Claims. (Cl. 173—13.)

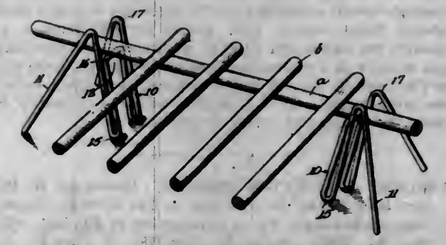


1. The combination with a high potential transmission line, and a series of connected loops of conducting material surrounding said line and electrically connected therewith and spaced from one another to provide an openwork cage extending longitudinally of said line.

2. The combination with a transmission line, having a support, of an openwork cage disposed adjacent said support and extending longitudinally of said line, said cage comprising an elongated member of conducting material wound in a helix about said transmission line.

---

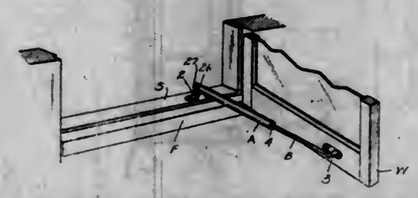
1,691,330. INSULATOR. ARTHUR O. AUSTIN, near Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Substitute for application Serial No. 459,063, filed Apr. 6, 1921. This application filed June 10, 1927. Serial No. 197,976. 2 Claims. (Cl. 173—318.)



2. The combination with a series string of detachably connected insulators, each having an upper approximately cylindrical restricted portion and a radially projecting flange of supplemental flanges of dielectric material, each having a diameter greater than the maximum diameter of said insulators, one of said supplemental flanges having an opening therethrough of a size to receive the upper restricted portion of one of said insulators, to permit the supplemental flange to rest on the flange of the insulator and support said supplemental flange on said insulator, said supplemental flange being carried on the uppermost insulator of the string and having a reinforcement extending about the periphery of the opening therethrough, another

of said supplemental flanges being carried on an insulator between the ends of the string, the intervening insulators of the string being without supplemental flanges.

---

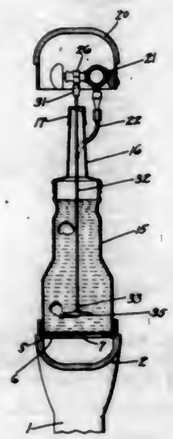


1,691,331. ROD SUPPORT. FRANCIS M. BARTON, Chicago, Ill. Filed Apr. 11, 1928. Serial No. 269,056. 2 Claims. (Cl. 72—122.)

1. A support for a reinforcing bar, formed from a single strip of wire and comprising a pair of substantially parallel legs, each consisting of a member having one end doubled back upon itself to form a second member directly in front thereof, and a cross member joined to the second members by bent portions disposed directly in front of and lapping the front faces of the other members, said cross-bar being operative to space the legs apart and support the bar.

---

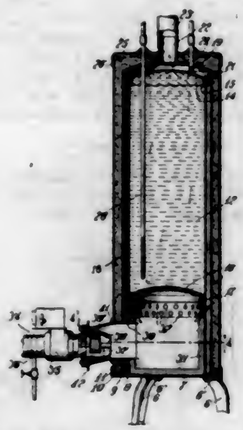
1,691,332. BRACE ROD FOR CASEMENT WINDOWS. JACOB BEUC, St. Louis, Mo. Filed Jan. 23, 1928. Serial No. 248,787. 4 Claims. (Cl. 292—275.)



1. A brace rod for casement windows, or the like, comprising a tubular casing, a plurality of clutch members within said casing, a rod adapted for sliding movement

within said casing, means for actuating the clutch members to grip and release said rod, and means for effecting adjustment for compensating against play due to wear.

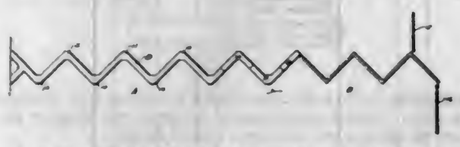
---



1,691,333. OIL-DISPLAY DEVICE. HANS M. BOE, Minneapolis, Minn., assignor to Boe Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 16, 1927. Serial No. 175,903. 7 Claims. (Cl. 40—126.)

1. A display device comprising a tube of transparent material having liquid therein, a bubble-forming and releasing element submerged in the liquid and having a downwardly faced concave side, means for delivering a gas beneath the submerged element, and means for controlling gas delivery in a manner to form small bubbles, cause them to rise beneath the submerged element, and collect to form one large bubble, and to cause said bubble to gradually displace the liquid, and escape intact and rise.

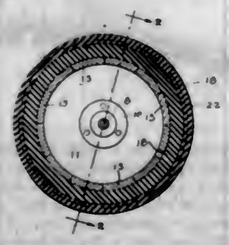
---



1,691,334. HOT-WATER HEATER. MARSHALL H. BRADEN, Rock Island, Ill., assignor to The Nu-Way Corporation, Rock Island, Ill., a Corporation of Illinois. Filed Dec. 13, 1926. Serial No. 154,378. 3 Claims. (Cl. 122—19.)

2. A domestic hot water heater comprising three spaced concentric shells, a single bottom plate on which all three of said shells rest, separate heads closing the upper ends of the inner and intermediate shells, said heads being spaced to define an upper flue area therebetween, an outlet duct communicating with said upper flue area, a lower head in said inner shell to define a water chamber above said lower head, and a combustion chamber between said head and said bottom plate, said inner shell having a plurality of holes therein adjacent to said lower head for conducting the products of combustion from said combustion chamber to an annular flue area defined between the inner and intermediate shells, said annular flue area communicating with said upper flue area, heat insulating material between the intermediate and outer shells and extending down around the sides of said combustion chamber substantially to said bottom plate, and burner means associated with said combustion chamber.

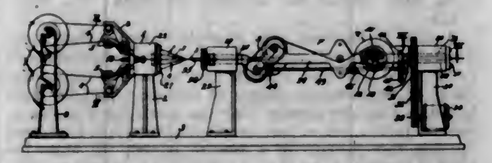
---



1,691,335. SEA WALL, JETTY, AND SIMILAR STRUCTURE. HARRY V. CAMPBELL, Freehold, N. J. Filed Oct. 20, 1926. Serial No. 142,855. 11 Claims. (Cl. 61—4.)

1. A self-sustaining sea wall consisting of a rigid elongated structure extending substantially perpendicular to the shore line and having a series of alternately arranged interconnected portions extending on opposite sides of a longitudinal or mean center line of the structure.

---



1,691,336. ROLL. LLOYD V. CASTO, Detroit, Mich., assignor to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 14, 1927. Serial No. 175,308. 6 Claims. (Cl. 101—407.)

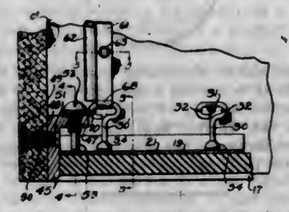
1. In an impression or transfer roll, the combination of a core structure embodying sponge rubber and an overlying composition surface placed thereon in precompressed relation to the sponge rubber.

---

1,691,337. STRANDING MACHINE. EDWARD A. CONNER, Stratford, Conn., assignor to American Cable Company, Inc., a Corporation of Delaware. Filed July 25, 1925, Serial No. 45,970. Renewed Jan. 21, 1928. 24 Claims. (Cl. 117—16.)

1. In a stranding machine, a non-rotating head provided with means to form the strand components into helices prior to laying said strand components, and means to draw said strand components through said preforming means and lay the helical components and at the same time rotate the product at a speed coordinate with the speed of formation of the helices.

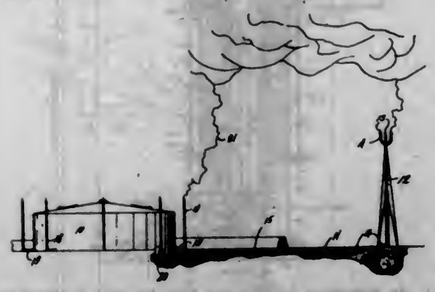
---



1,691,338. AERIAL SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 5, 1923. Serial No. 666,703. 5 Claims. (Cl. 250—9.)

1. An antenna system comprising an aerial, a counterpoise, a conductor of minimum inductance therebetween, an oscillation generator at a distance greater than the sphere of inductive influence, and a single-conductor link circuit therebetween.

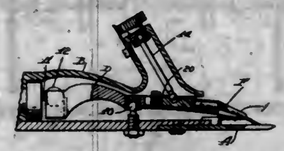
---



1,691,339. SHOWER-BATH PROTECTOR. WILLIAM L. DEMING, Salem, Ohio. Filed Dec. 31, 1927. Serial No. 243,859. 17 Claims. (Cl. 4—146.)

1. In combination, an upper and lower rail, a curtain, spaced means at the upper and lower edges of the curtain in sliding engagement with respective rails, and rigid means reinforcing one edge of the curtain and arranged to impart movement to the spaced means when manipulated to move the curtain to thereby prevent binding between said means and the rails.

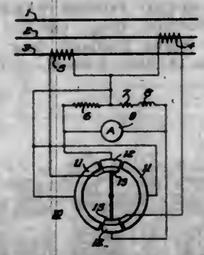
---



1,691,340. METHOD AND SYSTEM FOR PROTECTING PETROLEUM TANKS AND TANK FARMS AGAINST LIGHTNING. WEST DODD, Des Moines, Iowa. Filed May 15, 1926. Serial No. 109,310. 2 Claims. (Cl. 173—31.)

1. In a system for protecting tanks, the combination of a plurality of tanks having metallic parts, means for electrically connecting said parts, a plurality of points arranged around the tanks spaced relatively short distances from the side walls thereof, a pipe line communicating with the tanks at the bottoms only, metallic towers spaced at greater distances from the tanks, terminating in metallic points, means for connecting said first-described points with the bottoms only of the adjacent tanks, and means for electrically connecting the points on the towers with the pipe line at locations farther from the tanks than are the first-described points.

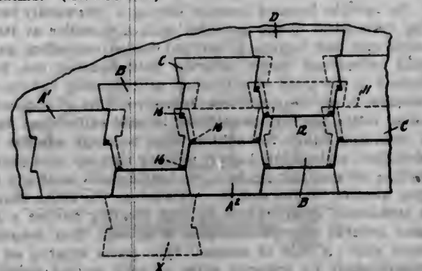
---



1,691,341. SHEEP SHEARS. FREDRICK G. EVANS, Oak Park, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1927. Serial No. 215,965. 4 Claims. (Cl. 30—1.)

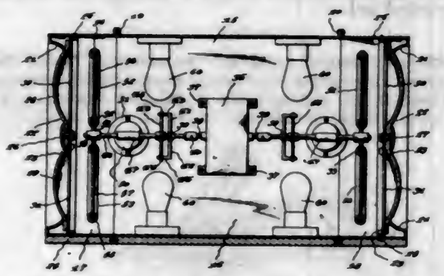
1. In a sheep shear and the like in combination with a fixed comb and cutter blade, a co-operating reciprocating cutter blade and a lever by which the latter is reciprocated over the fixed blade, the reciprocated blade having recesses in its upper side for engagement by the actuating lever, and the lever having a plurality of projections for engaging said recesses, one of said projections being formed on a part carried by the lever and mounted movably thereon for movement with respect thereto at the point at which the projection is situated, in the general direction of the reciprocation of the blade.

---



1,691,342. MEASURING INSTRUMENT. ROBERT D. EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 31, 1924. Serial No. 729,232. 2 Claims. (Cl. 172—245.)

1. An instrument comprising a current-responsive device, means associated with said device for segregating the positive and negative components of an unbalanced polyphase quantity and means, including a switch having short-circuiting segments, for actuating said device in accordance with either component, as desired.

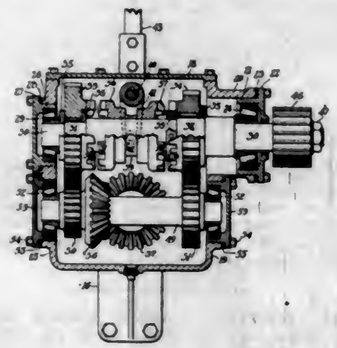


---

1,691,343. ROOFING. JARED B. FRENCH, Rutherford, N. J. Filed Mar. 24, 1927. Serial No. 177,980. 10 Claims. (Cl. 108—7.)

1. A flexible roofing element adapted to be laid widely spaced with others in courses and comprising spaced, downwardly tapering portions and an intermediate upwardly tapering portion.

1,691,344. TRAFFIC SIGNAL. BERNARD FUHRER, New York, N. Y. Filed Nov. 18, 1927. Serial No. 234,216. 5 Claims. (Cl. 116—63.)



1. In a traffic signal, a casing presenting a series of openings disposed in the opposite sides thereof, a double unit screen member adapted to rotate before each of said openings for exhibiting a selected color signal and means for intermittently and simultaneously operating said screens.

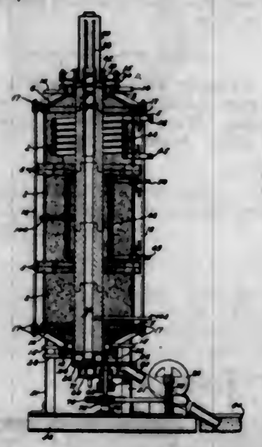
1,691,345. DECOLORIZATION OF ALKALINE-EARTH-METAL THIOCYANATE SOLUTIONS. ROBERT R. FULTON, Wilkinsburg, Pa., assignor to The Koppers Company, a Corporation of Pennsylvania. Filed Dec. 31, 1926. Serial No. 158,422. 16 Claims. (Cl. 260—10.)

1. The process of decolorizing a solution of an alkaline earth metal thiocyanate which comprises adding thereto a derivative of a water-soluble fatty acid.

1,691,346. TWO-SPEED POWER TAKE-OFF. SIDNEY B. GORBUTT, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg. Filed Apr. 6, 1927. Serial No. 181,383. 1 Claim. (Cl. 74—59.)

An upright housing member having a rearwardly extending cylindrical flange provided with a shoulder at its forward end and having a vertical flange extending around said cylindrical flange whereby said housing can be attached to the body of a tractor, said housing having a removable cover over the top thereof; a pair of opposed tapered roller bearings shouldered in said cylindrical flange; a retaining flange for holding said bearings against their shoulder; a shouldered shaft passing through said bearings having its shoulder against one bearing and having a bevel gear secured on the end thereof against the other bearing; a transverse countershaft in said housing having a bevel gear secured thereto meshing with said first mentioned bevel gear; a pair of unequal spur gears secured on said countershaft on opposite sides of said second mentioned bevel gear; a power delivery shaft having loose gears mounted thereon meshing with said unequal gears, said loose gears having clutch teeth formed on their adjacent sides; and having a clutch collar splined on said power delivery shaft between said loose gears with lever means for moving and holding said collar into engagement with either gear or in a neutral position.

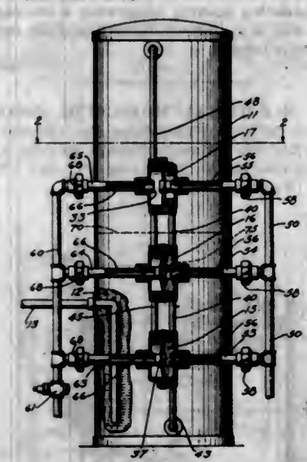
1,691,347. METHOD OF MOLDING EBONITE COMPOSITION. HAROLD GRAY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 14, 1923. Serial No. 645,367. 11 Claims. (Cl. 18—53.)



1. The method of producing ebonite which comprises mixing rubber, a vulcanizing agent and sufficient pigment substantially to stiffen the mix after a momentary vulcanization, partially vulcanizing the mix in a mold, removing it from the mold and thereafter subjecting it to further vulcanization.

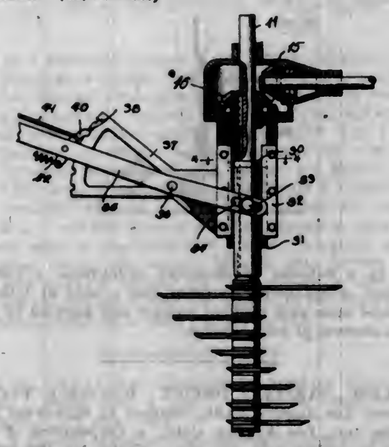
1,691,348. DRESS SHIELD. FLORENCE L. HANAUER, New York, N. Y. Filed June 22, 1927. Serial No. 200,528. 3 Claims. (Cl. 2—53.)

1. A dress shield comprising a single flat blank transversely foldable to provide a body portion and a sleeve portion, the outermost edge of the latter being concave when the blank is flat, whereby said edge will lie in a plane substantially transverse to the arm of a wearer when the blank is folded into position beneath the armpit of the wearer.

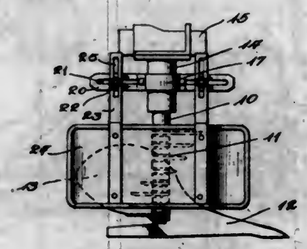


1,691,349. HIGH-FREQUENCY INDUCTION FURNACE. GEORGE F. HARRINGTON, Edgewood, and PORTER H. BRACE, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 1, 1927. Serial No. 195,629. 4 Claims. (Cl. 266—1.5.)

1. An induction furnace for heat treating a continuous train of articles of uniform size, comprising a vertically disposed elongated graphite tube adapted to contain a stack of said articles, an inductor coil surrounding the central portion of said tube to effect the heating thereof, and a second inductor coil of relatively few turns surrounding the upper end of said tube to effect a desired temperature gradient longitudinally of said tube.

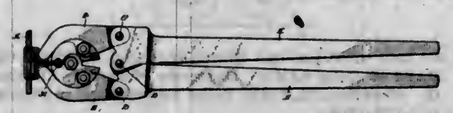


1,691,350. GAS TRAP. FORD W. HARRIS, Los Angeles, Calif. Filed Jan. 18, 1927. Serial No. 161,841. 7 Claims. (Cl. 183—2.7.)



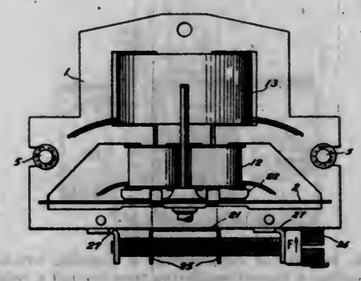
3. In a gas trap, the combination of: a tank providing a separating chamber; means for supplying a gas-liquid mixture to said separating chamber; a plurality of valve structures placed at different heights, each of said valve constructions consisting of a gas chamber, a liquid chamber, a diaphragm forming a common wall for said chambers, a gas port for said gas chamber, a liquid port for said liquid chamber, a gas valve carrier by said diaphragm for closing said gas port, and a liquid valve carried by said diaphragm for closing said liquid port; means for connecting said gas chambers to the gas end of said separating chamber; means for connecting said liquid chambers to the liquid end of said separating chamber; a plurality of liquid flow tubes, one of said liquid flow tubes being connected to each of said liquid ports, said liquid tubes having different sized openings; and a plurality of gas flow tubes, one of said gas flow tubes being connected to each of said gas ports, said gas flow tubes having different sized openings.

1,691,351. TILLER. THOMAS W. HICKS, Minneapolis, Minn. Filed Mar. 29, 1923. Serial No. 628,643. 5 Claims. (Cl. 97—43.)



1. In a tillage implement, a substantially vertical rotatable and longitudinally adjustable shaft provided with horizontally extending tiller blades, a bracket member for supporting the shaft adjacent only at its upper end, driving means for the shaft carried by the bracket, a sleeve enclosing the shaft and vertically adjustable with relation to the bracket, and a collar on the shaft resting on the upper edge of the sleeve whereby vertical adjustment of the sleeve will correspondingly adjust the tiller shaft.

1,691,352. TILLER. THOMAS W. HICKS, Minneapolis, Minn. Filed Mar. 29, 1923. Serial No. 628,649. 3 Claims. (Cl. 97—6.)

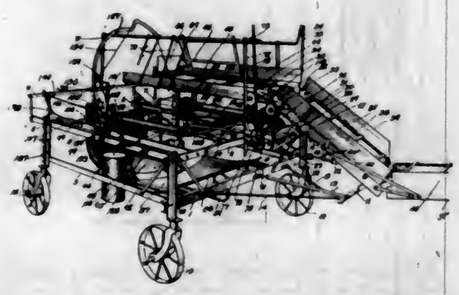


1. In a plow having a rotatable tiller mounted thereon to disintegrate earth in the act of being turned by the plow, a shield adjustably mounted with respect to the tiller, and means providing for an adjustment of said shield both vertically and horizontally.

1,691,353. CLIP-ATTACHING TOOL. CLAYTON JONES, Duluth, Minn. Filed May 13, 1927. Serial No. 191,132. 6 Claims. (Cl. 81—15.)

1. In an attaching tool, a pair of gripping jaws, a pivoted connection between said jaws, a pair of bending jaws pivotally connected to the gripping jaws, and a pair of pivotally connected operating levers, one of said levers being pivotally connected to each of the bending jaws.

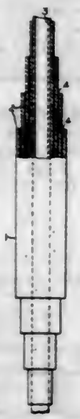
1,691,354. ELECTRICAL MEASURING INSTRUMENT. BERT G. LA BAR, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1924. Serial No. 736,425. 2 Claims. (Cl. 171—264.)



1. An electrical measuring instrument comprising a magnetizable core member, means for energizing said core member, a pivoted armature adjacent said core member,

and friction-compensating means for said armature, said compensating means comprising a reciprocally movable conducting member resiliently engaging said core member.

---

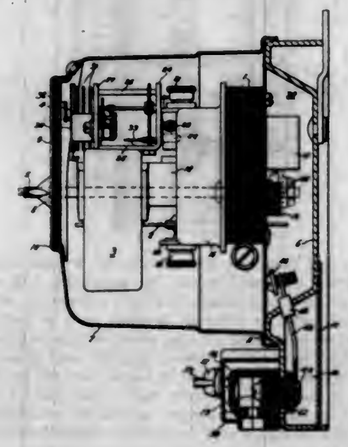


1,691,355. SHOCKER. JAMES A. MCELROY, Kansas City, Mo. Filed Mar. 30, 1923. Serial No. 628,788. 24 Claims. (Cl. 56—409.)

1. A sheaf shocker comprising a frame, a shock forming mechanism carried thereby, a conveyor mechanism for delivering the bundles from the binder to the shock forming mechanism endwise, means for obstructing the movement of the bundles and means for conveying the bundles sidewise into the shocker.

---

1,691,356. INSULATING BUSHINGS AND METHOD OF MAKING THE SAME. MONTFORD MORRISON, Chicago, Ill. Filed Sept. 13, 1923. Serial No. 662,458. 10 Claims. (Cl. 173—318.)

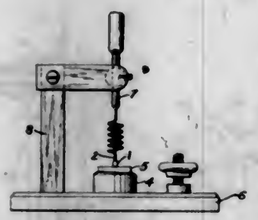


1. The method of constructing a bushing which comprises placing a heated insulating tube around a conductor and allowing the tube to shrink into position on the conductor.

4. The method of constructing a bushing which comprises initially independently constructing a plurality of fibrous insulating cylinders of different diameters, placing a body of metal foil thereon and placing the cylinders together with the body of metal foil in compression therebetween.

6. An insulating bushing comprising a current-carrying conductor and a preformed insulating tube surrounding the same under tension.

---

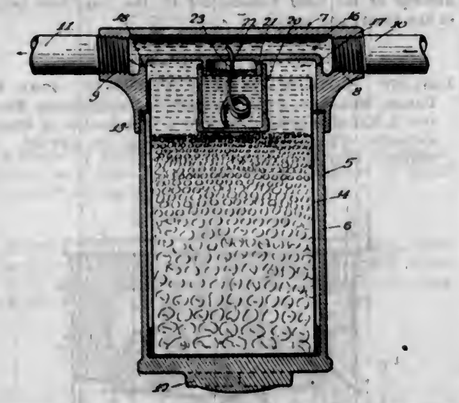


1,691,357. ELECTRICAL MEASURING INSTRUMENT. WALTER G. MYLIUS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,044. 5 Claims. (Cl. 171—34.)

2. A base for watthour meters comprising a one-piece sheet-steel member having a substantially U-shaped channel near its margin.

---

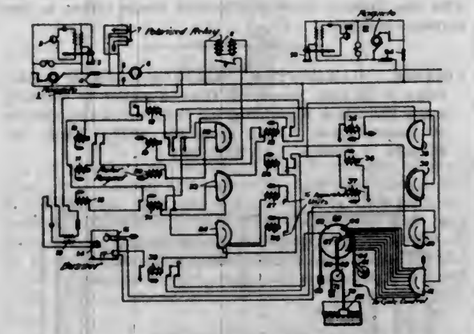
1,691,358. DETECTOR. ARTHUR K. PHILLIPPI, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 7, 1921. Serial No. 506,172. 11 Claims. (Cl. 250—31.)



1. In a detector of electrical oscillations, a resilient member of conducting material and a bead of tellurium mounted upon said resilient member and adapted to serve as an element of said detector.

---

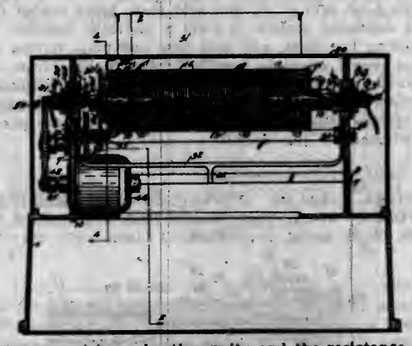
1,691,359. SANITARY DEVICE. WILLIAM R. PULKINGHORN, Los Angeles, Calif., assignor to Spra-O-Sal Products, Inc., Los Angeles, Calif., a Corporation of California. Filed July 25, 1927. Serial No. 208,227. 3 Claims. (Cl. 4—226.)



1. A sanitary device for toilet fixtures comprising a container for chemicals having a fluid passage above its upper end adapted for connection in a fluid supply pipe line, and a wick leading from the container into the fluid passage for delivering the chemical from the container to the fluid passage, whereby the water flowing through the passage will be chemicalized.

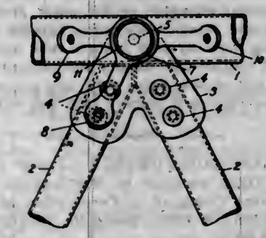
---

1,691,360. CONTROL SYSTEM. MAURICE E. REAGAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 6, 1924. Serial No. 718,221. 3 Claims. (Cl. 177—351.)



1. In a signalling system, a first station, a second station including a switch comprising a bank of contacts, a movable member comprising a bank of contacts each of which is connected to an individual contact on said switch, means for moving said member in accordance with a variable quantity, a contact member arranged to wipe over said movable member contacts, means for moving said movable contact member in accordance with a second variable quantity whereby said contact member will engage one of said movable member contacts depending upon both of said variable quantities and a code transmitter means including circuit connections between said switch bank and said movable member for transmitting a code combination of impulses to said first station in accordance with the contact engaged by said contact member.

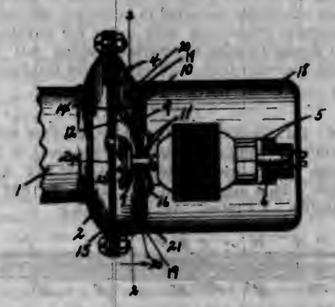
---



1,691,361. TOASTER. EDMUND W. ROBERTS, Cincinnati, Ohio. Filed June 6, 1927. Serial No. 196,733. 17 Claims. (Cl. 219—19.)

5. A toaster comprising cylindrical rollers in parallel, shells of heat conducting material comprising the peripheral surface of the rollers, cores within the shells comprised of insulation of low heat conductivity, spindles in the cores and projecting from the ends thereof, the spindles of conducting material as metal, screws crosswise of the spindles and threaded therein, the screws passing into the spindles through the cores, a helix of resistance conductor comprising a heating unit; and the resistance conductor in electrical connection with the spindles through the screws.

---

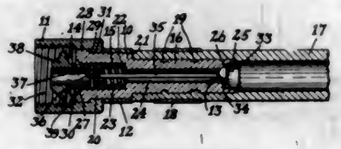


1,691,362. SKELETON STRUCTURE SUCH AS AIRCRAFT FUSELAGES. FREDERICK SIGRIST, Oxshott, and SYDNEY CAMM, Long Ditton, England. Filed June 15, 1927, Serial No. 198,951, and in Great Britain Mar. 31, 1927. 12 Claims. (Cl. 244—31.)

12. A skeleton structure such as a fuselage for aircraft comprising a metal tubular member, another metal tubular member with its end abutting against the first mentioned member intermediate of the ends of said first mentioned member to constitute a joint therewith, the said members being provided with flats at the joint, a clamping plate engaging the flats and fastening means extending through the plates and the tubular members meeting at the joint.

---

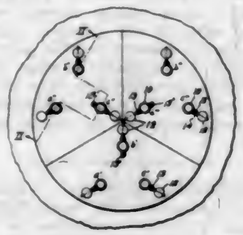
1,691,363. SIGNALING DEVICE. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Mar. 20, 1924. Serial No. 700,504. 5 Claims. (Cl. 177—7.)



5. A horn comprising an armature shaft, a rear diaphragm case section having a base provided with a depressed portion formed with an opening for the passage of

said shaft, a plate rigidly secured to the case section and including a hardened cylinder alined with the opening in the depressed portion and which constitutes the forward bearing for said shaft, and said plate being spaced from said depressed portion to form a lubricant chamber surrounding the shaft, and said base and plate having portions spaced apart to form a conduit leading from said lubricant chamber to the edge of the base for conveying lubricant to said chamber, and said case section having an opening alined with said conduit to permit the passage of lubricant to the conduit.

---



1,691,364. VALVE CONNECTER FOR DELIVERY TUBES. ROY W. TADD, Walnut Park, Calif. Filed Apr. 18, 1027. Serial No. 184,609. 1 Claim. (Cl. 284—18.)

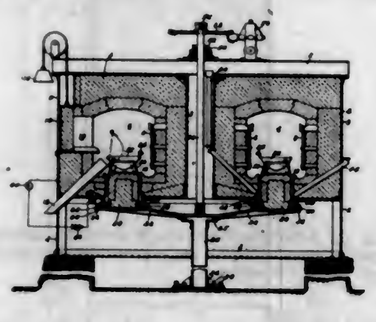
In a device of the character described, the combination, with the valve tube, and valve at the inner end of said tube; of a contact tube extending into the outer end portion of said valve tube and in axial alinement with the latter, the external diameter of the portion of said contact tube which is within said valve tube being slightly less than the internal diameter of the outer portion of said valve tube, there being co-operating beveled seating surfaces co-acting between said contact tube and valve tube to center said contact tube loosely and concentrically within the outer end of said valve tube, and a connecting rod connecting together said contact tube and valve.

---

1,691,365. ELECTRIC FURNACE. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 19, 1927. Serial No. 162,013. 5 Claims. (Cl. 266—1.5.)

1. In an electric arc furnace, a plurality of heating units comprising electrodes mounted in operative relation, means for electrically connecting said units for parallel operation, and means forming a separate heating unit composed of a single electrode from each of the first mentioned heating units.

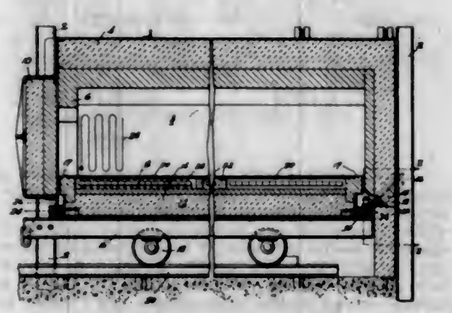
---



1,691,366. IMAGE-MODIFYING APPARATUS FOR PHOTOGRAPHY. ADELBERT AMES, Jr., Hanover, N. H. Continuation of application Serial No. 351,012, filed Jan. 17, 1920. This application filed June 1, 1923. Serial No. 642,754. 8 Claims. (Cl. 95—81.5.)

1. An absorption screen for use in photography comprising a color absorption element arranged selectively to absorb more light of the same color at one part of the image than at another part of the image, and a corrector element adapted and arranged to absorb a compensating amount of the light transmitted by the respective parts of the absorption screen.

---

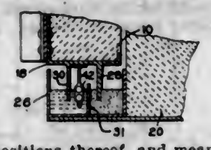


1,691,367. ROTARY-HEARTH FURNACE. JOHN F. BAKER, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 18, 1927. Serial No. 199,691. 6 Claims. (Cl. 263—7.)

1. In a rotary-hearth furnace, the combination with an annular furnace chamber and an annular hearth projecting through the bottom wall thereof, of means for rotatably supporting said hearth in operative position, and means permitting the lowering of said hearth out of engagement with the furnace, thereby affording ready access to said furnace chamber.

---

1,691,368. CAR-BOTTOM FURNACE-HEARTH SEAL. JOHN F. BAKER, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 25, 1927. Serial No. 201,420. 7 Claims. (Cl. 263—28.)



2. In a car-bottom furnace, the combination with a furnace chamber and a horizontally removable hearth, of a seal between the rear edge of said hearth and an adjacent wall of said chamber comprising a sand trough carried by said hearth and a flange pivotally secured to said wall, and means responsive to movement of said hearth for moving said flange into operative position with respect to said sand trough.

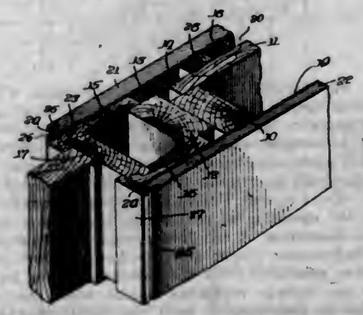
---

1,691,369. FURNACE. JOHN F. BAKER, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1927. Serial No. 205,557. 8 Claims. (Cl. 266—5.)

1. In a furnace, the combination with a hearth, a plurality of furnace walls and means permitting a relative vertical movement therebetween, of means for providing liquid and sand seals between said hearth and walls in

the operative positions thereof, and means for artificially cooling said seals to prevent the evaporation of liquid from said sealing means.

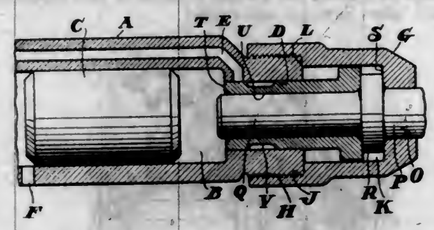
---



1,691,370. DOOR. ALLAN S. BARROWS, Los Angeles, Calif., assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 27, 1924. Serial No. 722,761. 11 Claims. (Cl. 189—46.)

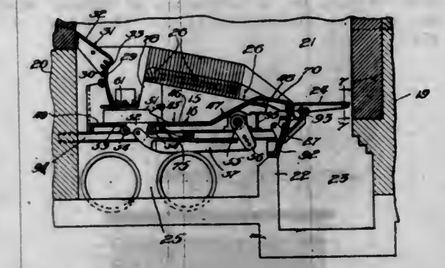
1. In a door, the combination with a plurality of sheet metal plates, having their adjacent edges over-lapping and joined together, the over-lapping edges at each joint between the sheets being offset outwardly from the main body portion of the sheets; of a strip reinforcing each of said offset joint portions and corresponding in section thereto; and a second reinforcing strip spanning each offset joint and rigidly secured to the body portions of the corresponding plates.

---



1,691,371. FRAME CONSTRUCTION. ISAAC A. BAUM, Chicago, Ill. Filed July 5, 1927. Serial No. 203,384. 3 Claims. (Cl. 20—11.)

1. In a wall having an opening, the combination of a stud, sheathing secured thereto, a cripple stud arranged in staggered relation to the stud with one face flush with the exterior face of the sheathing, and blind stops secured to the opposite outer faces of the cripple stud.

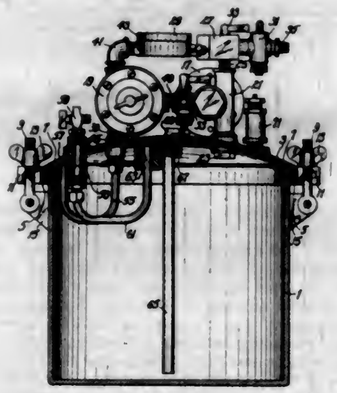


1,691,372. PNEUMATIC TOOL. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 16, 1927. Serial No. 175,781. 2 Claims. (Cl. 121—11.)

1. In a pneumatic tool, the combination of a cylinder having a reduced bore in its front end, an inlet passage in the cylinder opening into the bore, a hammer piston reciprocable in the cylinder, a working implement extending through the bore to receive the blows of the hammer piston, a slidable bushing in the bore for guiding the working implement, and an annular external groove in the bushing extending into the cylinder to afford communication between the inlet passage and the cylinder in one position of the bushing, said bushing being exposed at one end to pressure fluid in the cylinder whereby it is actuated to another position to cut off communication between the inlet passage and the cylinder upon the cessation of resistance to the working implement, thus preventing reciprocation of the hammer piston.

---

1,691,373. UNDERFEED STOKER. ROYCE L. BEERS, Detroit, Mich., assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed June 16, 1922. Serial No. 568,797. 10 Claims. (Cl. 110—44.)

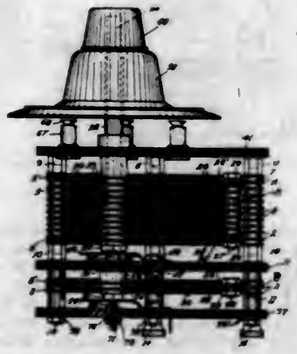


5. In a stoker structure of the character described, the combination of a plurality of lateral retorts arranged side by side, a main retort crossing the inner ends of said lateral retorts in arrangement to deliver fuel thereto, said main retort having along its side at places directly opposite the said lateral retorts overhanging portions disposed to direct up-thrust fuel toward the respective lateral retorts, and means for feeding fuel longitudinally of the main retort and causing up-thrust of fuel.

---

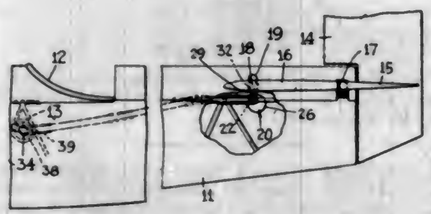
1,691,374. PAINTING APPARATUS. THEODORE BIRKENMAIER, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 18, 1924. Serial No. 744,335. 6 Claims. (Cl. 91—45.)

5. In a pressure paint vessel comprising a pot and cover, the provision in combination of a pressure regulator on said cover adapted to regulate the pot pressure, a blow-off cock on said cover, blind holes on the inside of said cover, pipes within said pot and on said cover connected with said cock and regulator respectively and extending



into said holes for the purpose of preventing passage of paint to the cock or regulator, an air manifold on said cover and another regulator therefor, means for drawing paint from the bottom of said pot through said cover, means for reading the low-side pressure of each regulator and a safety valve on said cover.

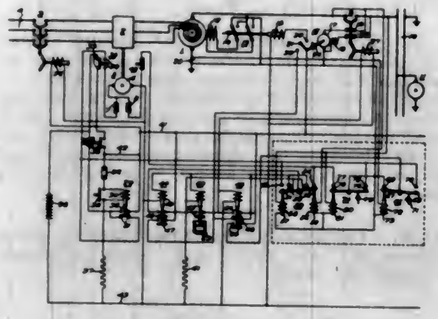
6. The pressure vessel comprising a pot, a removable cover therefor, at least one accessory connected to said cover for functioning with air, at least one tubular portion leading from said accessory to within the vessel and at least one blind hole provided within said cover for receiving one end of said tubular portion, the cover accessory and tubular portion being movable as a unit.



---

1,691,375. CONDENSER. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1923. Serial No. 615,501. 17 Claims. (Cl. 175—41.5.)

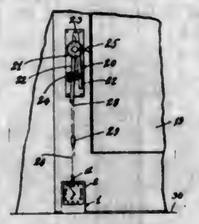
1. In a device of the character described, including a plurality of stationary members, a plurality of movable members positioned parallel to said stationary members, and operatively associated with said stationary members, a shaft for said movable members and adapted to move in a rotary and longitudinal direction, spring means for opposing longitudinal movement of said shaft and for restoring and retaining said shaft in a normal endwise position, and adjustable means for limiting the longitudinal movement of said shaft to prevent engagement of said movable members with said stationary members, and insulation means secured between some of the said plates to prevent the contactnal engagement of said movable and said stationary plates when said shaft is moved in a rotary direction.



1,691,376. STABILIZER-ADJUSTING MECHANISM. DANIEL J. BRIMM, Jr., West Hempstead, N. Y., assignor to Ireland Aircraft Inc., a Corporation of New York. Filed Mar. 10, 1927. Serial No. 174,215. 2 Claims. (Cl. 244—29.)

1. The combination, in an aeroplane, of a fuselage skeleton including a horizontally extending upper cross-frame member, an adjustable horizontal stabilizer mounted above said fuselage skeleton and including as a structural element thereof a beam, a fitting mounted on said beam directly above said cross-frame member, a sleeve mounted for rotation on said frame member, an eccentric and a sprocket carried by said sleeve, a band loosely encircling said eccentric, ears formed upon said band, a direct pivotal connection between said ears and said fitting, and means engaging said sprocket to rotate said sleeve and said eccentric to thereby adjust the stabilizer.

---



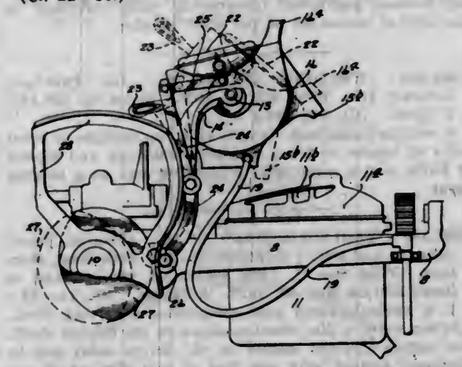
1,691,377. AUTOMATIC STATION. CHARLES A. BUTCHER, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 18, 1927. Serial No. 176,450. 10 Claims. (Cl. 171—118.)

2. In an electrical system, the combination with an alternating-current circuit, a direct-current circuit and a rotary converter for translating energy therebetween, of a cicuit interrupter and a voltage regulating device between the alternating-current circuit and the rotary converter, a circuit interrupter between the rotary converter and the direct-current circuit, switching means for controlling the operation of the circuit interrupters to control the conenction of the rotary converter between the alternating-current circuit and the direct-current circuit, and means associated with the switching means for controlling the voltage regulating means when the rotary converter is disconnected from the alternating-current circuit and the direct-current circuit to cause said voltage regulating means to be actuated to such position that minimum voltage will be applied to the rotary converter when it is again connected to the alternating-current circuit.

1,691,378. ALARM APPARATUS. SARAH E. CHENEY, Los Angeles, Calif. Filed Apr. 12, 1927. Serial No. 183,137. 4 Claims. (Cl. 116—94.)

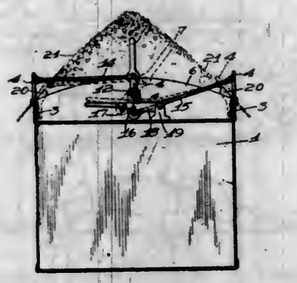
1. In an alarm apparatus for giving an alarm upon the moving of a part barring entrance to a room, the combination of a freely movable alarm device resting upon, but unattached to, the floor below the said part, a movable member associated with the alarm device for releasing the same, and an adjustable connection between the said movable member and the said part or sash and connecting the same, operating to move the movable member when the said part is moved, and thereby pull up on said movable member to release the alarm.

---



1,691,379. SHIPPING COVER BAG. ANDREW CHRIST, Jr., Chicago, Ill. Filed Dec. 5, 1924. Serial No. 754,024. 1 Claim. (Cl. 135—1.)

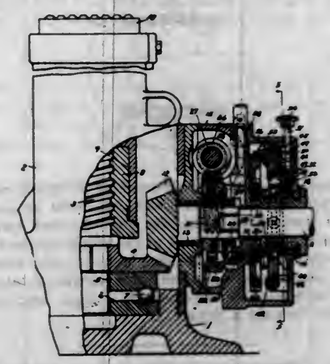
A protective cover for automobiles comprising a hood to surround the automobile and formed from a plurality of crepe paper sheets joined together, and a flexible element arranged between the meeting edges of the sheets and extending longitudinally of the sheets and acting to cause the cover to stand out from the automobile.



---

1,691,380. AUXILIARY MELTING POT FOR LINOTYPE MACHINES. GEORGE LOUIS CURLE, Minneapolis, Minn. Filed Sept. 17, 1927. Serial No. 220,263. 10 Claims. (Cl. 22—80.)

1. The combination with a main pot, of an oscillatory auxiliary pot arranged to tilt for discharge into said main pot, and automatic means for oscillating said pot and for controlling the discharge therefrom into said main pot, according to the variations in the level of molten metal in said main pot.

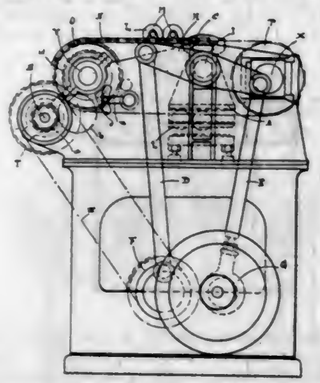


1,691,381. LOCOMOTIVE TENDER. FREDERICK DARBY, Chicago, Ill. Filed Aug. 29, 1927. Serial No. 216,257. 5 Claims. (Cl. 105—237.)

1. A locomotive tender having a coal hopper, hinged extensions carried by the sides of the hopper at the upper edges thereof, and means for swinging said extensions inwardly at an angle to the sides and for swinging said extensions into substantially vertical alignment with the sides.

---

1,691,382. LIFTING JACK. JAMES C. DAWLEY, CHARLES D. DERBY, and ALBERT G. KILIAN, Dayton, Ohio, assignors to The Joyce-Cridland Company, Dayton, Ohio, a Corporation of Ohio. Filed June 19, 1924. Serial No. 721,117. 16 Claims. (Cl. 254—103.)

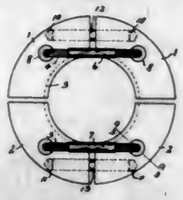


1. In a lifting jack, a lifting element, mechanism comprising an actuating member for operating said lifting element and elevating a load, mechanism to control the downward movement of said lifting element, and means for connecting said actuating member with said controlling mechanism to so actuate the latter that the lifting element will move downwardly, said actuating member being movable in one direction to elevate the load and being movable in the other direction to lower the load.

---

1,691,383. TYPOGRAPHICAL PRINTING MACHINE. PAUL ANDRÉ CAMILLE DUWOOS, Rouen, France. Filed Aug. 5, 1926, Serial No. 127,456, and in France Aug. 8, 1925. 3 Claims. (Cl. 101—304.)

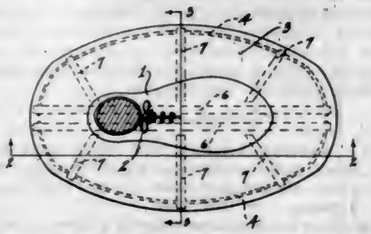
1. In a platen typographical printing machine, the combination with the general printing mechanism, of an inking device, comprising paste contact rollers, a chain carrying said rollers, means for imparting a uniform rotary movement around the platen of the machine to the same, a suitably arranged inking table over which said rollers are moved to be charged with ink, and a form secured below



the platen intended to be inked by said rollers, and means for actuating the platen of the machine comprising two connecting-rods, a crank-disc and a cam-disc actuating

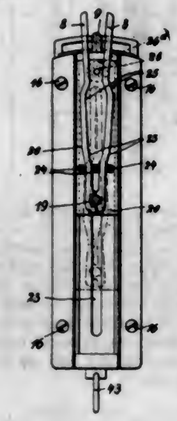
said connecting rods, a cross-bar pivoting around a pin on the platen, said connecting rods being pivotally connected to the ends of said cross-bar, substantially as set forth.

---



1,691,384. PIPE-ENGAGING SLIP. CHARLES R. EDWARDS and SETH EVANS, Houston, Tex. Filed May 7, 1921. Serial No. 467,690. 7 Claims. (Cl. 24—263.)

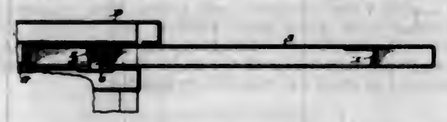
1. A pipe engaging slip, whose outer periphery converges downwardly formed of two sections, each section being formed of jaws whose sides have aligned bores, and bearing rods wheron each of the jaws of the respective sections are slidably mounted, the respective ends of said rods fitting into the corresponding bores, and means retaining the jaws of each section together as a unit, said retaining means also forming a handle.



---

1,691,385. SWIMMING SHOE. AUGUSTUS F. FIBIGER, Spokane, Wash., assignor of one-tenth to Harve H. Phipps and Elmer J. Edwards, Spokane, Wash., and five-tenths to Charles Fibiger, trustee. Filed Feb. 6, 1928. Serial No. 252,082. 2 Claims. (Cl. 9—21.)

2. A swimming shoe having a web extending therefrom, a pair of longitudinally extending spaced resilient blades embedded in the web to permit the web to flex along its longitudinal center, and wire reinforcing elements along the side edges of the web having their ends connected to an adjoining resilient blade.



1,691,386. SURGICAL INSTRUMENT FOR MAKING LIGATURES. BERTRAM FISHER, Charlottenburg, near Berlin, Germany, assignor to Paul Rosenstein, Berlin, Germany. Filed Apr. 12, 1927, Serial No. 183,116, and in Germany Apr. 16, 1926. 9 Claims. (Cl. 128—355.5.)

1. A surgical instrument for making ligatures, comprising in combination a casing, a forceps and a plurality of knotting stretchers operatively mounted in the casing, and a common actuating means for successively operating the forceps and the individual stretchers.

---

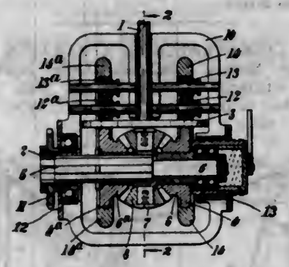
1,691,387. EXTENSION SHELF FOR DESKS. JASON A. FITCH, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Aug. 16, 1924, Serial No. 732,467. Renewed May 10, 1928. 7 Claims. (Cl. 45—6.)

6. A stop construction for sliding metal extension shelves consisting of relatively fixed and movable members adapted to engage to limit the movement of the shelf, and one of said members being a coiled spring under tension positioned transversely with reference to the path of movement of the other member.

---

1,691,388. WELDING COMPOUND. IRA FREEMAN, Cataract, Ind. Filed May 10, 1926. Serial No. 108,167. 1 Claim. (Cl. 148—26.)

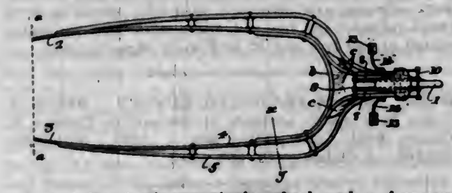
A welding compound, comprising a dry mixture of equal parts by volume of borax, powdered charcoal, and plaster of Paris, and a solution of silicate of soda as a binding agent.



---

1,691,389. VARIABLE-SPEED GEAR. CHARLES RILEY GARRARD and ERNST GOTTLIEB FAUSER, Sydenham, England. Filed Mar. 8, 1928, Serial No. 260,144, and in Great Britain Mar. 25, 1927. 6 Claims. (Cl. 74—34.)

1. A variable speed gear comprising a driving shaft, a driven shaft, a disc wheel mounted on the driving shaft, two rollers mounted loosely on the driven shaft and in frictional contact with one face of said disc wheel one on each side of the axis of said wheel said rollers being free to traverse the face of the disc wheel, an epicyclic gear coupling said two rollers together the primary wheels of said gear being respectively in couple with one of said rollers and the element of said gear carrying the planet wheels being mounted on the driven shaft, two auxiliary

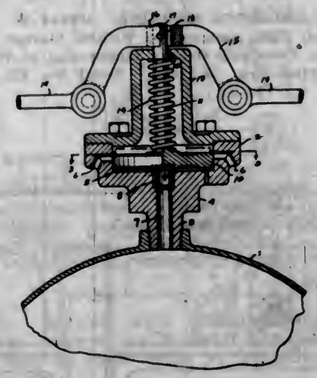


rollers in frictional contact with the other face of the disc wheel, two intermediate rollers in frictional contact with the auxiliary rollers, a loose binding ring encircling

the main rollers and the auxiliary rollers, and means for traversing the epicyclic gear and the main rollers transversely relative to the face of the disc wheel.

---

1,691,390. SULKY. HERBERT WILMER HANAN, Brooklyn, N. Y. Filed Oct. 3, 1924. Serial No. 741,394. 19 Claims. (Cl. 280—78.)



1. A sulky having a single wheel and a framework comprising shafts and a body supported by the said wheel, each shaft being made up of a plurality of spaced members, of which at least one lies outside the plane of the others.

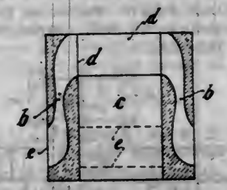
10. In a sulky shaft the combination with a plurality of substantially similarly shaped members, of a plurality of spreading devices adapted to hold the said members in fixed relation to each other, a cross-section of the shaft being substantially triangular.

---

1,691,391. AIR-RELEASE VALVE. GUY F. HITCHCOCK, Houston, Tex., assignor, by direct and mesne assignments, of one-third to Joe L. Tomlinson and one-third to Thomas H. Meeks, Harris County, Tex. Filed Apr. 16, 1926, Serial No. 102,373. Renewed Aug. 27, 1928. 8 Claims. (Cl. 303—80.)

3. A valve including a valve body formed with a cylinder and having a pressure relief conduit entering the cylinder and a pressure relief port leading from said cylinder, a bearing member fastened on said body having a bearing, a plunger in the cylinder adapted to close said port, a valve carried by the plunger adapted to close said conduit, a stem connected to the cylinder and working through said bearing, a yieldable member interposed between said bearing member and plunger, a yoke above the cap and having a pivotal connection with said stem and operating rods pivoted to the respective ends of said yoke.

---



1,691,392. CLAMP. BROR W. JOHNSON, Fertile, Minn. Filed Mar. 16, 1928. Serial No. 262,206. 1 Claim. (Cl. 24—81.)

In a clamp, a channel shaped bar, the sides thereof being cut away at its respective ends to form stationary jaws, said ends of the base of the channel shaped bar being curved upwardly to form lips, channel shaped members having each their sides tapering gradually from the center of the member to the respective ends thereof to form a jaw at one end of said member, and a handle at the other end, the sides of each member being disposed within the respective sides of the channel shaped bar, a pin extending through registering openings in the sides of each channel shaped bar inwardly of the stationary jaw and through the intermediate portions of the sides of the members whereby said members being pivoted on said bars, the jaw formed ends of the pivoted members being formed with inwardly curved lips at the extremities of the base portion of the channel shaped member for cooperation with the aforementioned lips, and tensional means for maintaining the jaws in a closed position.

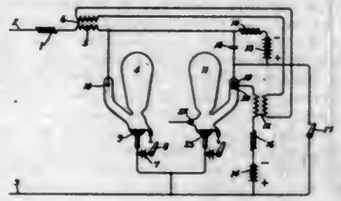
---

1,691,393. STATIONARY COWL WITH WIND CHANNELS. JOHANN KAMPS, Dislaken-Eppinhoven, Germany. Filed Aug. 20, 1927, Serial No. 214,414, and in Germany Jan. 28, 1927. 1 Claim. (Cl. 98—66.)

A stationary cowl formed integral with a chimney, said cowl having inwardly and upwardly extending wind-channels extending therethrough, the outer and inner orifice of each channel being of the same width, each channel being substantially S-shaped and tapering uniformly from both ends toward the middle and having uniform width coextensive with the width of the smoke channel.

---

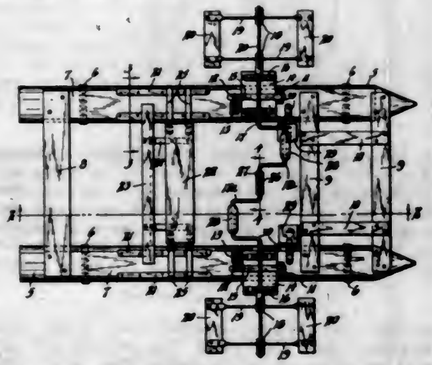
1,691,394. SANITARY PRESERVING FOOD CONTAINER SUCH AS CANS OR BOXES OF ANY SHAPE. HEINRICH KARL, Jersey City, N. J. Filed Feb. 13, 1924. Serial No. 692,524. 3 Claims. (Cl. 22—53.)



1. In a container including a cover, a part made of sheet metal and serving for uniting said cover with said container and for hermetically closing the container by

means of a binder, and being positioned more or less remote from the opening of the container, said part having incisions which are made so that there is always a flap left between two of said incisions, these so formed flaps placed close to the container when it is closed but so that they do not grip or exert pressure whatsoever thereupon or to said cover, the binder applied at the inner side of said part in such manner that said flaps are left free from binder, said flaps adapted to be pulled outwardly to such an extent with the fingers or with some tool that the portion of said part to which the binder is applied will be pulled away from the container and thereby ruptured and said binder broken or separated therefrom thus permitting the removal of the cover from the container without causing particles of the sheet metal or particles of the binder to fall into the contents of the container.

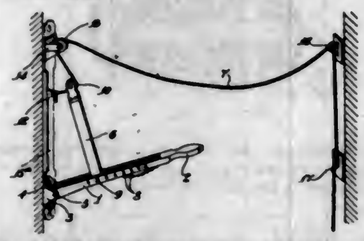
---



1,691,395. CIRCUIT-CONTROL APPARATUS. IRVING LANGMUIR, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 16, 1926. Serial No. 129,380. 6 Claims. (Cl. 175—320.)

6. An apparatus comprising an anode and a cathode, a grid for controlling the starting of current between said cathode and anode, an energy storage element, a space discharge device, an electrode connected to said anode through said element and a grid connected to said cathode for controlling the current between said electrode and cathode, and means operable to control the potentials of said grids in accordance with an electrical condition of said anode.

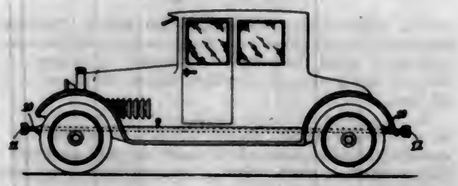
---



1,691,396. PADDLE BOAT. FRANK A. LINDSTROM, St. Paul, Minn. Filed Oct. 29, 1927. Serial No. 229,614. 2 Claims. (Cl. 115—23.)

1. A paddle boat having in combination a pair of floats secured together in spaced relationship, a slotted keeper mounted on each float, an eye mounted on each float, a latch mounted on each float and adapted to be releasably engaged in one of said eyes, a bearing adapted to be placed on each float between the keeper and the eye thereon, a U-shaped bar for each float having one end adapted to be placed within the slot in one of said keepers and another hasp like end adapted to be fitted over one of said eyes, said bar being adapted to fit over one of said bearings and to be held in place by one of said latches, a crank shaft journaled in each bearing and having a crank portion adapted to extend inwardly from its respective float and a portion extending outwardly therefrom, a paddle wheel secured to the outwardly extending portion of each crank shaft and a seat adapted to be secured rearwardly from said crank shafts between said floats.

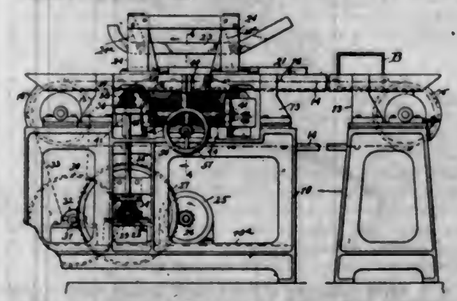
---



1,691,397. LINE-STRETCHING APPARATUS. DOROTHY LOCKWOOD, Merton Park, and ALFRED JAMES SEARLE, London, England. Filed Dec. 31, 1926, Serial No. 158,358, and in Great Britain Jan. 27, 1926. 3 Claims. (Cl. 254—135.)

1. A line stretching apparatus comprising a U-shape bearing bracket adapted to be fixed to a support, a split operating lever pivoted between the sides of said bracket, a work engaging arm pivoted in said split operating lever between its pivot and free end, and a work engaging pulley mounted at the free end of said work engaging arm.

---

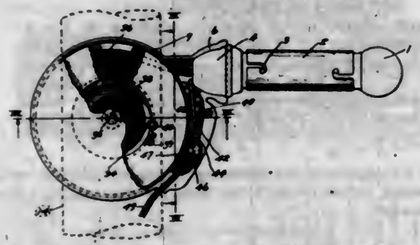


1,691,398. SHOCK-ABSORBING BUMPER. MELVIN J. LONG, Brea, Calif., assignor of one-half to Thomas H. Cooper, Brea, Calif. Filed Mar. 1, 1928. Serial No. 258,160. 3 Claims. (Cl. 293—30.)

3. In a device of the class described, the combination, with the frame and emergency brakes of a vehicle; of an impact bar, a thrust bar in operative relation to said impact bar, a collar on said thrust bar, an upright lever having a bifurcated upper portion which includes said thrust bar and is in an operative relation to said collar, and means operatively connecting said lever with the aforementioned emergency brakes.

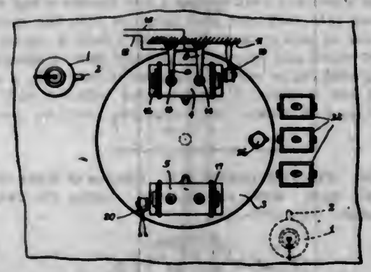
---

1,691,399. BRUSHING MACHINE. HENRY W. LORMOR, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Feb. 26, 1923. Serial No. 621,256. 4 Claims. (Cl. 15—21.)



1. In a machine of the character described, a platform along which the articles to be brushed are moved, a brush projecting through the platform, and a vertically movable gravity actuated depressor under which the articles move and which serves to hold the articles down against the brush during the brushing operation.

---



1,691,400. SIGNALING DEVICE. MALCOLM E. MITCHELL, Alameda, Calif., assignor of one-half to David Garfinkle, Alameda, Calif. Filed Jan. 12, 1925. Serial No. 2,001. 5 Claims. (Cl. 200—153.)

2. In a signaling device, a casing comprising two sections, a central hub extending from one of the sections toward the other and a screw bearing on the latter and threaded into the hub for holding the sections together and a drum comprising a disc having a central portion depressed to form a recess on one side, and a cylinder on the opposite side, and having a central sleeve, extending from said depression adapted to revolve on the hub, a second flat disc fastened to the depressed section, with insulating material interposed between the discs, a spring in the recess connecting the recessed disc to the hub, a cord wound on the cylinder between the peripheral portions of the discs, having two wires connected to the two discs respectively, a seat formed in the casing, a signaling element connected to the wires and adapted to be seated on said seat by the action of the spring and a contact lever pivoted in the casing and spring-actuated to normally contact one of the discs, and extending into the path of the signaling element moving toward its seat for breaking the contact.

---

1,691,401. ART OF USING DIRECT METAL FROM BLAST FURNACES. RICHARD MOLDENKE, Watchung, N. J., assignor to New Process Multi-Castings Company, Irvington, N. J., a Corporation of New Jersey. Filed Dec. 19, 1924. Serial No. 756,873. 5 Claims. (Cl. 75—22.5.)

1. The method of preparing iron for pouring into molds which comprises melting a charge in a blast furnace, and pouring the melt into an electric furnace and mixing it therein with molten iron whose composition has been regulated in accord with the finished composition of the melt.

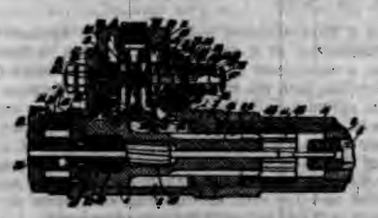
---

1,691,402. MEANS FOR SEALING EXPANSION JOINTS. EUGENE ROBERT ODEN, Lankershim, Calif. Filed Sept. 29, 1926. Serial No. 138,457. 5 Claims. (Cl. 72—106.)

5. A cement reservoir including a recessed slab walled construction, the recess closed at its bottom and opening to the interior of the reservoir, a non-hardening filler in the recess, and a flexible covering impervious to the action of water, spanning the opening of the recess and arranged in intimate contact with said filler so that upon contraction

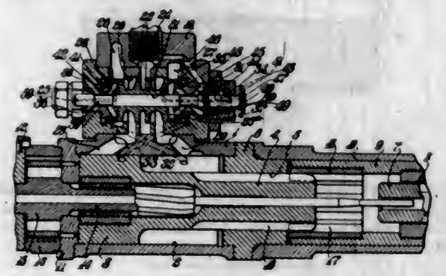
of the slab walled construction, the weight of water within the reservoir will act upon the covering to compress the filler in the recess and maintain the latter watertight.

---



1,691,403. JAR LID. FRANK O'NEILL, Toledo, Ohio. Filed Aug. 21, 1923. Serial No. 658,488. 1 Claim. (Cl. 215—97.)

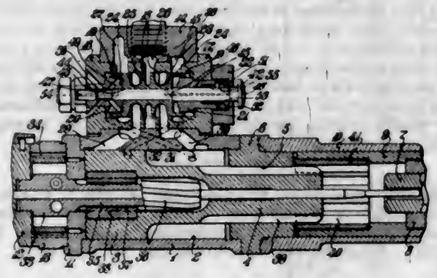
A glass jar having an opening provided with an overhang thereabout, said overhang forming a flat seat about the opening and having multiple thread portions for the full transverse extent thereof, a gasket of seat width, a glass lid on said gasket extending over said seat for fully confining the gasket width between said seat and lid, said lid having a depending portion enterig the jar to center the gasket and lid therewith, and a sealing band of ring form embracing the lid, gasket and overhang, said sealing band having marginally inwardly extending flange portions, one engaging the lid to hold the lid against the gasket and the other providing inwardly extending tongues coacting with said thread portions of the overhang to form therewith a bayonet joint permitting angular shifting of the sealing band relatively to the jar in one direction for drawing the lid against the gasket and in the other direction for releasing the lid and band from the jar for opening the jar, said band between said marginal flange portions being clear for readily locating the lid and gasket on the jar opening seat.



---

1,691,404. DRILLING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 7, 1927. Serial No. 181,808. 15 Claims. (Cl. 121—6.)

1. In a fluid actuated rock drill of the hammer type, the combination of a cylinder and piston reciprocable therein, a valve chest, and a fluid distribution valve therein controlling both the supply and exhaust of pressure fluid for said cylinder, valve throwing passages between opposed spaces in the valve chest and the cylinder bore for supplying pressure fluid for throwing said valve, and manually operable means for initially admitting pressure fluid to one of said valve chest spaces whereby the pressure tending to throw the valve is counteracted and for thereafter directly engaging the valve to shift and hold the same immovable.

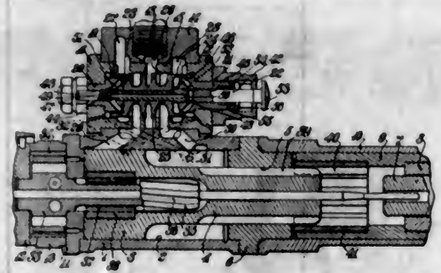


1,691,405. ROCK DRILL. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 2, 1927. Serial No. 196,108. 14 Claims. (Cl. 121—6.)

1. In a fluid actuated rock drill of the hammer type, the combination of a cylinder and a piston reciprocable therein, a valve chest and a fluid distributing valve therein controlling both the supply and exhaust of pressure fluid for said cylinder, valve throwing passages between opposed spaces in the valve chest and the cylinder bore for supplying pressure fluid for actuating said valve, and a hole blowing device comprising a member arranged coaxially with said fluid distributing valve, valve means controlled by movement thereof for admitting pressure fluid to one valve chest space and valve means also controlled by movement of said member for venting the opposed space to atmosphere whereby said distributing valve is pneumatically held immovable to effect a hole blowing operation.

---

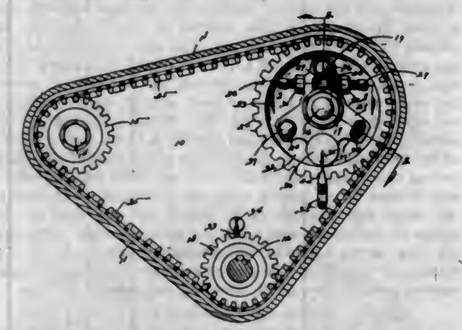
1,691,406. ROCK DRILL. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 2, 1927. Serial No. 196,110. 10 Claims. (Cl. 121—6.)



1. In a fluid actuated rock drill of the hammer type, the combination of a cylinder and a piston reciprocable therein, a valve chest and a fluid distributing valve therein controlling both the supply and exhaust of pressure fluid for said cylinder, valve throwing passages betwen opposed spaces in the valve chest and the cylinder bore for supplying pressure fluid for actuating said valve, and a hole blowing device including means for venting the space at one end of the valve to atmosphere during a hole blowing operation and for directly engaging said valve to shift it toward said end and hold the same immovable.

---

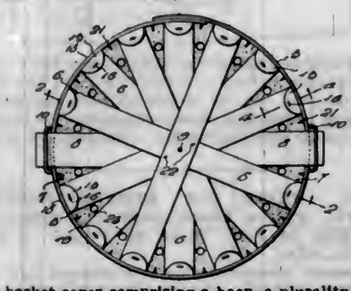
1,691,407. ROCK DRILL. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 2, 1927. Serial No. 196,109. 14 Claims. (Cl. 121—6.)



1. In a fluid actuated rock drill of the hammer type, the combination of a cylinder and a hammer piston reciprocable therein, a valve chest and a fluid distributing valve therein controlling both the supply and exhaust of pressure fluid for said cylinder, valve throwing passages between opposed spaces in the valve chest and the cylinder bore for supplying pressure fluid for actuating said valve, and manually operable valve means to establish communication between the valve chest spaces at the opposite ends of the

valve for equalizing the pressures and means movable with said valve means to shift and hold the distributing valve immovable.

---

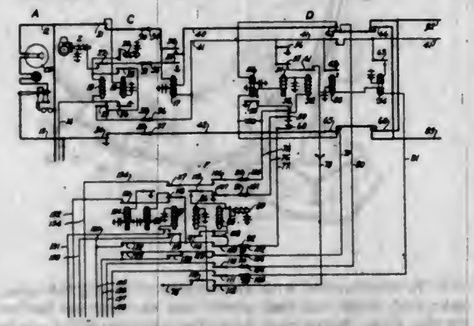


1,691,408. TIMING DEVICE. WALTER TUTTLE PALMER, Des Moines, Iowa. Filed Mar. 18, 1927. Serial No. 176,571. 2 Claims. (Cl. 74—7.)

1. In a device of the class described, a shaft, a sprocket wheel permanently secured to said shaft, a mark on said sprocket wheel, a fixed pointer adjacent said sprocket wheel, a second shaft, a hub member permanently secured to said shaft, a sprocket wheel rotatably mounted on said hub member, projections on said hub member adjacent said sprocket wheel and each having a slot therein a cap screw extending into each slot and threaded into the sprocket wheel, one of said projections having a hole, a lug on said sprocket wheel and extending into said hole, a means for securing said lug in various positions in said hole, a mark on said hub member, a fixed pointer adjacent said hub member, and an endless chain engaging said two sprocket wheels.

---

1,691,409. FRUIT-BASKET LID. GEORGE O. RESHAW, St. Joseph, Mich. Filed Jan. 5, 1928. Serial No. 244,737. 4 Claims. (Cl. 217—124.)



1. A basket cover comprising a hoop, a plurality of slats having their ends turned downwardly and disposed at the inner side of said hoop, a yieldable liner covering the lower sides of said slats and having a downwardly turned edge contacting with the inner sides of said downwardly turned slat ends, and fasteners passing through said hoop, said slat ends and said liner edge; said downwardly turned liner edge constituting a washer between which and said hoop said slat ends are securely held.

---

1,691,410. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, and MARTIN L. NELSON, Park Ridge, Ill., assignors, by mesne assignments, to Automatic Electric, Inc., Chicago, Ill., a Corporation of Delaware. Original application filed Feb. 23, 1922, Serial No. 538,551. Divided and this application filed Aug. 6, 1928. Serial No. 297,609. 175 Claims. (Cl. 179—18.)

1. The combination, with a trunk line and means for transmitting series of impulses thereover, of a line relay in the trunk responsive to said impulses, and means controlled by said line relay and responsive only to entire series of impulses for transposing the conductors of said trunk line after each series of impulses is transmitted.

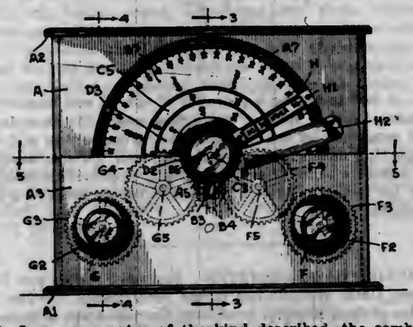
---

1,691,411. TENT. CHARLES C. ROTH and DONALD A. CAMPBELL, Denver, Colo., assignors to The Denver Tent & Awning Company, Denver, Colo., a Corporation of Colorado. Filed Jan. 19, 1924. Serial No. 687,256. 3 Claims. (Cl. 135—15.)

2. A hollow metallic tent pole having an electrical insulating plug at each end.

---

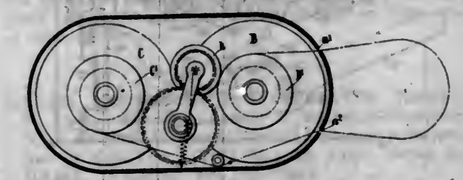
1,691,412. TOWEL SUPPORT. AUGUST RUETZ and ROBERT G. DALLMANN, Milwaukee, Wis. Filed Mar. 10, 1927. Serial No. 174,238. 3 Claims. (Cl. 211—87.)



1. Means for supporting a towel which has been gathered together laterally and folded upon itself between its ends, comprising an attaching member, a stationary loop projecting outwardly from said member in a horizontal plane and through which the folded portion of the towel may be passed, said loop being of a size to be substantially filled by the folded portion of the towel within it, and a hook on the member to enter the fold of the towel, said hook

being arranged in closely spaced relation to the loop and projecting outwardly from the member and across the loop, whereby the towel will be gripped by its engagement with the hook and loop and prevented from slipping thereon when its projecting free portions are in use.

---

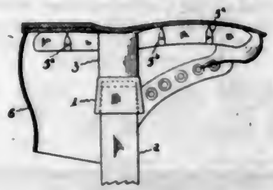


1,691,413. RADIO APPARATUS. ALFRED F. SANFORD, Knoxville, Tenn. Filed Aug. 11, 1925. Serial No. 49,636. 16 Claims. (Cl. 250—40.)

1. In an apparatus of the kind described, the combination with a plurality of tuning shafts on parallel axial lines, of a plurality of parallel members shiftable independently of each other and having record-receiving surfaces near each other parts of the which may be brought substantially into alignment with each other by the shifting of said members, and motion transmitting means connecting each of said shafts with one of said shiftable members, substantially as described.

---

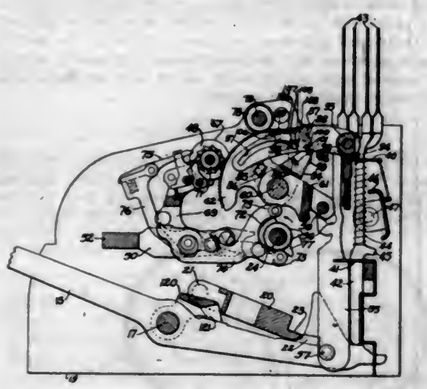
1,691,414. CINEMATOGRAPH SPOOLCASE. JOHN EDWARD THORNTON, West Hampstead, London, England. Filed Jan. 26, 1927, Serial No. 163,804, and in Great Britain Jan. 11, 1926. 2 Claims. (Cl. 242—55.)



1. A cinematograph film spool case and a film-strip having its film-feed effected and controlled partly inside the spoolcase itself and partly by the camera or projector

mechanism outside the spoolcase, the spoolcase and film-strip comprising in its construction a suitable enclosing case, having openings in one wall thereof, through which the film and its leader-strip can pass out of the case and again into the case forming a loop outside the case between the point of egress and ingress and inside the case two spools to form a supply-spool and a receiving-reel respectively, two feed-controlling leader-strips permanently attached, one to each spool, a film secured by its two ends to the two leader-strips attached to the two spools; the mechanism being rotatable in both directions a first group of pictures being exposed during the forward movement of the film and a second group during the return movement of the film; the spoolcase being adapted to engage with the exposure driving-mechanism, whereby the spoolcase mechanism is driven by the exposnre mechanism in both directions without the operator having to change the spools.

---



1,691,415. SHOEMAKER'S LAST. JOHN TOOLE, Kirkland Lake, Ontario, Canada. Filed Dec. 19, 1927. Serial No. 241,110. 4 Claims. (Cl. 12—123.)

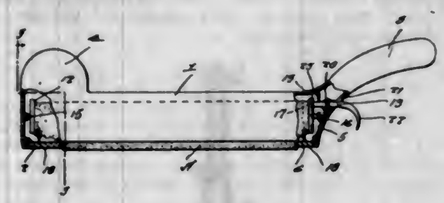
1. A last including a plurality of spaced sole supporting members having narrow contacting edges for engaging a boot supported by the last; and means connecting said sole supporting members, the spaces between the sole supporting members being of sufficient depth to provide a passageway for the point of a drill used for boring holes in a boot supported on the last.

---

1,691,416. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Oct. 3, 1919. Serial No. 328,127. 29 Claims. (Cl. 235—14.)

5. In a machine of the class described, the combination of a plurality of totalizers, a group of actuators for each of said totalizers, an operating frame intermediate the actuator of one group and an actuator of the other group, whereby said actuators may be actuated to like extents, and means whereby the actuator of one group may be given an actuation independent of said operating frame.

---

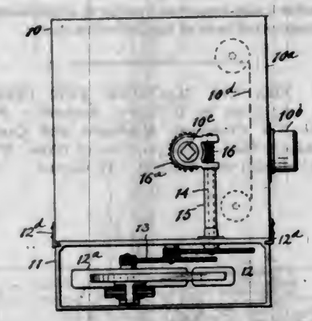


1,691,417. AUTOMOBILE STARTER. THOMAS WARD, New Lexington, Ohio. Filed Sept. 28, 1927. Serial No. 222,657. 2 Claims. (Cl. 200—59.)

1. In combination with an automobile having the usual gear shift lever, starting motor, and an electrical circuit for the motor including a normally open switch, of means mounted on the upper end of the lever and connected with the switch for moving the latter to close the motor circuit, whereby said lever and said switch may be operated simultaneously by the same hand.

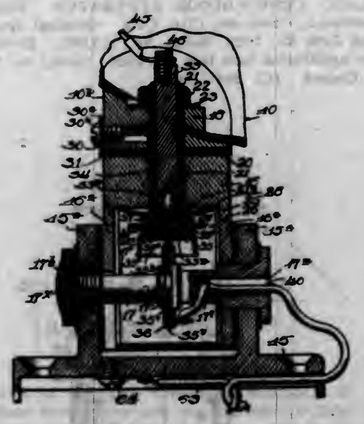
---

1,691,418. SANDPAPER HOLDER. CHARLES F. WHITE, Detroit, Mich. Filed Apr. 29, 1927. Serial No. 187,621. 1 Claim. (Cl. 51—187.)



In a device of the class described, an elongated casing having its bottom open, a cover plate of the same length as the casing adapted to be detachably secured on the open bottom of the casing, said cover plate being of width less than the width of the casing whereby the side edges of the cover plate are spaced from the respective sides of the casing to provide passages ,one side of the casing being formed with a longitudinally extending slot adjacent its lower edge, a roller journaled for rotation within the casing, a roll of sand paper wound on the roller, the free end of the sandpaper extending downwardly through one passage, across the bottom of the cover plate, upwardly through the other passage, and then through the slot in the side of the casing, means for holding the free end portion of the sand paper taut, an additional means for locking the roller against rotation, said last mentioned means comprising a disc secured on end of the roller, said disc being formed with a series of radial notches, a pivoted locking dog carried by the adjacent end of the casing, the outer end of said dog extending through a slot formed in said end of the casing, and providing a handle, the inner end of the dog being adapted for cooperation with the notches, and a spring for normally holding the inner end of the dog in engagement with one of the notches.

---



1,691,419. MOTOR ATTACHMENT FOR MOTION-PICTURE CAMERAS. THEODORE A. WILLARD, Cleveland Heights, Ohio. Filed Feb. 10, 1923. Serial No. 618,261. 2 Claims. (Cl. 88—17.)

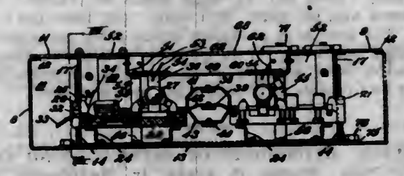
1. In combination with a motion picture camera having a shaft to which an operating crank is adapted to be applied, a film feeding motor attachment comprising a housing detachably secured to the camera, a gyroscopic electric motor carried within said housing, a shaft mounted on said housing, gearing at one end of said shaft cooperating with the shaft of the crank, and reduction gearing between the other end of the shaft and the motor.

---

1,691,420. LIMITED-RANGE SPOTLIGHT. ANDREW C. WOOD, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 5, 1927. Serial No. 188,921. 8 Claims. (Cl. 240—61.)

1. An illuminating device comprising in combination three co-operating members of a light support pivoted successively to one another, the first member being a fixed support, the last member being a lamp body, the axes of the pivotal connections of the second member to the other two being intersecting; a circuit for energizing a lamp to be mounted in the lamp body extending through said three members and comprising annular conductive areas of two of said members extending about the two axes respectively, each of said annular areas having an interruption of limited angular extent at whose coincidence only in the adjustment about said axes, the circuit is interrupted.

---

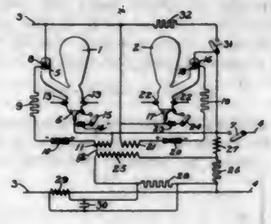


1,691,421. HEATING DEVICE FOR AIR-CIRCULATING FANS. SOCRATES A. XIPPAS, Buffalo, N. Y. Filed Apr. 29, 1927. Serial No. 187,421. 4 Claims. (Cl. 219—19.)

1. An electric heater including a plurality of annular insulating rings, means connecting the rings together, resistance coils associated with the rings, and extending entirely around the heater, one of said rings having its inner surface beveled to permit the same to rest on a substantially spherical surface for supporting the heater.

---

1,691,422. PANEL-BOARD BOX. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1921. Serial No. 501,143. 7 Claims. (Cl. 247—10.)



1. A panel board comprising a main housing, a pan within the housing having outwardly extending flanges, panel members mounted on the pan and having a portion thereof overlapping the said flanges, and a wall member of substantially the same contour as the said flanges and disposed in substantially superimposed relation thereto and extending inwardly into engagement with the said panel for dividing the main housing into an inner and an outer compartment.

---

1,691,423. CIRCUIT-CONTROL APPARATUS. ERNST F. W. ALEXANDERSON and ALBERT H. MITTAG, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 20, 1926. Serial No. 110,347. 10 Claims. (Cl. 175—294.)

1. The combination of a plurality of power line sections, an electron discharge device provided with a cathode and anode connected between said line sections and with

means comprising a grid for controlling the transmission of current between said cathode and anode, and means electrically connected between one of said line sections and

said grid for causing said current to be interrupted in response to a predetermined electrical condition of said line sections.

---

1,691,424. GEL AND PROCESS FOR PRODUCING THE SAME. EUGENE E. AYERS, Jr., Swarthmore, and ERLING H. HAABESTAD, Philadelphia, Pa., assignors to B. A. S. Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 21, 1924. Serial No. 745,006. 17 Claims. (Cl. 252—6.)

1. A composition presenting substances for mutual reaction consisting of a substantially water-insoluble gel comprising a water-soluble salt of a substantially water-insoluble fatty acid and a liquid ester of an inorganic acid and water.

17. A composition presenting substances for mutual reaction consisting of a gel comprising a monochloride of an aliphatic hydrocarbon having three to six carbon atoms and a water-soluble salt of a substantially water-insoluble fatty acid and water.

---

1,691,425. ESTERS PRODUCED FROM ORGANIC HALIDES AND PROCESS OF PRODUCING THE SAME. EUGENE E. AYERS, Jr., Swarthmore, and ERLING H. HAABESTAD, Philadelphia, Pa., assignors to B. A. S. Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 21, 1924, Serial No. 745,007. Renewed Apr. 20, 1927. 22 Claims. (Cl. 260—106.)

1. The process of producing esters which comprises reacting a liquid ester of an inorganic acid in the presence of water with salts of a substantially water-insoluble fatty acid capable of forming a gel with said ester.

---

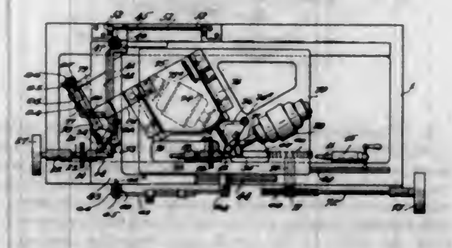
1,691,426. HYDROLYSIS OF ESTER-FORMING COMPOUNDS. EUGENE E. AYERS, Jr., Swarthmore, and ERLING H. HAABESTAD, Philadelphia, Pa., assignors to B. A. S. Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 21, 1924. Serial No. 745,008. 25 Claims. (Cl. 260—156.)

1. The process of substituting hydroxyl groups in place of the acid radicals in liquid esters of inorganic acids which comprises heating such an ester with an aqueous alkaline agent in the presence of an ester which contains a basic radical like the basic radical of said inorganic acid ester combined with the acid radical of a substantially water-insoluble fatty acid.

---

1,691,427. PROCESS FOR THE MANUFACTURE OF PRODUCTS OF CONDENSATION OF UREA AND FORMALDEHYDE AND THE PRODUCTS THUS OBTAINED. HENRI BARTHÉLEMY, Paris, France, assignor to Societe Industrielle des Matieres Plastiques, Paris, France. Filed Sept. 16, 1926, Serial No. 136,003, and in France Sept. 24, 1925. 6 Claims. (Cl. 260—3.)

1. A process of manufacturing condensation products from urea and formaldehyde, comprising the step of treating a syrupy solution of the initial condensation product of urea and formaldehyde with an organic anhydride of the aliphatic series.

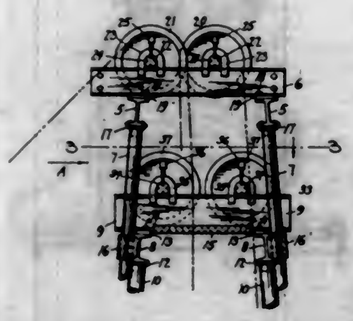


---

1,691,428. PROCESS FOR THE MANUFACTURE OF AMINOANTHRAQUINONES. HERMANN BERTHOLD, Leverkusen-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 27, 1927, Serial No. 229,257, and in Germany Dec. 2, 1925. 3 Claims. (Cl. 260—60.)

1. The process which comprises treating an α-nitroanthraquinone with a hydrogenated base of the quinoline series.

---



1,691,429. SHAPING MACHINE FOR IRREGULAR FORMS. STANLEY E. BOYNTON, Rochester, N. Y., assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 17, 1921. Serial No. 515,990. 47 Claims. (Cl. 142—15.)

1. A shaping machine having two relatively adjustable tools, one designed for rough work and the other designed for finishing work on the portions of the work piece operated upon by the roughing tool, and means controlled from a model for controlling the relative adjustment between the tools and also between a work piece and the tools.

---

1,691,430. CROWN-BLOCK APPARATUS. THOMAS F. CAMPBELL, Oklahoma City, Okla. Original application filed June 28, 1926, Serial No. 119,005. Divided and this application filed Dec. 20, 1926. Serial No. 155,946. 11 Claims. (Cl. 254—190.)

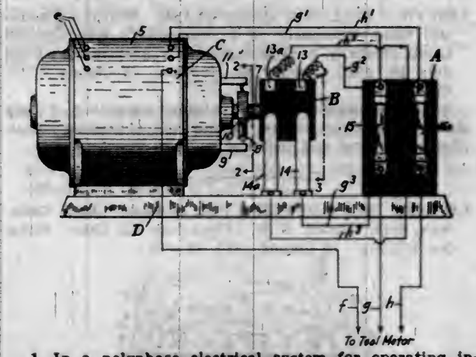
1. A derrick structure comprising two crown blocks each independently supported by said structure, one above the other, a pulley on the upper crown block, and a pulley supported upon the lower crown block, said latter pulley being disposed to guide a cable passing over the upper pulley to a determinate point at the foot of the derrick.

---

1,691,431. VEHICLE DIRECTION SIGNAL. FREDERICK P. CARPENTER, San Diego, Calif. Filed Sept. 1, 1927. Serial No. 216,861. 7 Claims. (Cl. 116—51.)

1. In a signaling means of the class described, a casing, an indicating means pivotally mounted therein, said indicating means comprising a pair of independently pivoted, relatively shiftable shafts, a pair of arrow head members, one of said arrow head members pivotally connected to one of said shafts, and a second arrow head pivotally mounted in said shaft actuated by the longitudinal movement of one shaft in relation to the other.

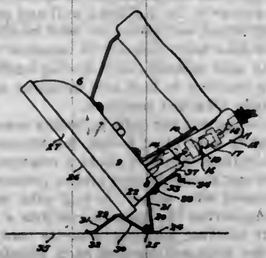
---



1,691,432. HARNESS ATTACHMENT. JAMES R. CRACROFT, Emporia, Kans. Filed Mar. 23, 1926. Serial No. 96,810. 1 Claim. (Cl. 24—183.)

A device of the kind described comprising an elongated plate having one end turned back to form a U-shaped loop extending from the plate adjacent its other end and having a height such as to closely engage a harness strap, a second U-shaped loop adjacent the hook and also projecting from the plate, said second loop being higher than the first loop to loosely engage said harness strap, and a pin projecting from the plate intermediate the loops to engage a hole in said strap.

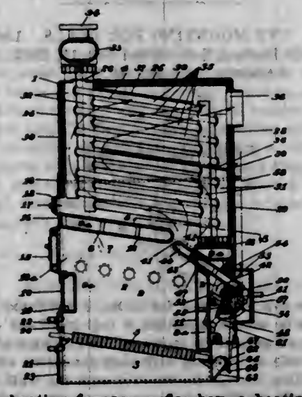
---



1,691,433. PHASE-FAILURE AND PHASE-REVERSAL PROTECTOR. CLARENCE J. DEESSER, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed June 9, 1926. Serial No. 114,628. 14 Claims. (Cl. 175—294.)

1. In a polyphase electrical system for operating induction motors, in combination, fuses for interrupting the circuit to the motor, and means immediately shunting said fuses when the power is turned on if the power characteristics are normal.

---



1,691,434. ELECTRIC IRON. SAMUEL DWORKIN, Philadelphia, Pa. Filed Aug. 11, 1925. Serial No. 49,548. 7 Claims. (Cl. 219—25.)

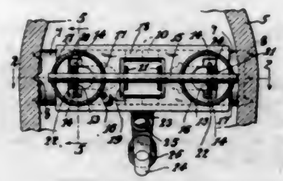
5. The combination of an iron; and a stand connected to the iron and having a portion movable under the iron to support the latter in a tilted position.

---

1,691,435. HEATING SYSTEM. FREDERICK J. FRENE, Avalon, Pa. Filed Aug. 20, 1924. Serial No. 733,093. 7 Claims. (Cl. 110—147.)

1. In a heating furnace, a fire box, a heating chamber, an ash pit, a member movable between said box and cham-

ber for controlling the draft through said furnace, means for automatically moving said member and means automatically operated by the first mentioned means, for controlling and admitting air to said box adjacent said member.



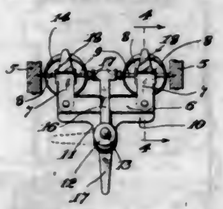
---

1,691,436. SEAL FOR HARD GLASS. WILLIAM BENJAMIN GERO, Bloomfield, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed July 28, 1926. Serial No. 125,591. 4 Claims. (Cl. 176—36.)

1. In combination with a container consisting of hard glass, a conductor sealed therein and consisting of an alloy of tungsten and molybdenum.

---

1,691,437. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, Belle Harbor, N. Y. Filed June 23, 1926. Serial No. 117,931. 12 Claims. (Cl. 46—40.)



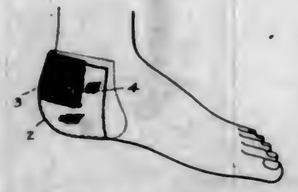
1. Attaching means for oscillatory eye mountings for doll heads comprising two attaching members each having means to support the eye mounting in operative relation to spaced eye openings in the doll head wall and permitting the relative longitudinal movement of said members to their attached positions with respect to opposite sides of the head wall, and said members each having additional means automatically coacting to lock said members against movement from their attached positions.

12. An eye mounting for dolls including spaced eye members, and gravity controlled means for transmitting oscillating motion to said members about a relatively fixed axis, said members and means having means permitting of their angular movement with respect to said axis, and means for operatively supporting the mounting within a doll head including a part coacting with said gravity controlled means to hold the eye members against such angular movement with respect to the axis when they are initially engaged in the eye sockets of the doll head wall, and said part being movable out of engagement with said gravity controlled means in the application of the supporting means to the doll head to thereby release the eye members and gravity controlled means for angular movement with relation to said axis.

---

1,691,438. EYE MOUNTING FOR DOLLS. LEO J. GRUBMAN, Belle Harbor, N. Y. Filed Feb. 11, 1927. Serial No. 167,434. 6 Claims. (Cl. 46—40.)

6. In an eye mounting for dolls, a weighted pendulum adapted to be mounted within a doll head for oscillatory movement, an adjustable stop member having a pivotal connection at one of its ends with said pendulum and adapted in one position thereof for contact with the wall of the doll head to limit oscillatory movement of the pendulum in a direction to dispose the eyes in their open positions, and said member being adjustable to a position substantially at right angles to said first position to permit the eye mounting to be inserted upwardly through the neck opening of the doll head.

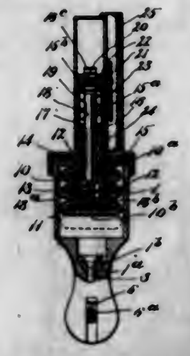


---

1,691,439. PROCESS FOR PRODUCING METALS IN ELECTRIC FURNACES. EMIL GUSTAF TORVALD GUSTAFSSON, Stockholm, Sweden, assignor to Hampus Gustaf Emrik Cornelius, Hamngatan I A, Stockholm, Sweden. Filed Mar. 31, 1926, Serial No. 98,915, and in Sweden May 16, 1925. 1 Claim. (Cl. 75—22.5.)

In the manufacture of metals in electric furnaces under practically continuous operation, the steps consisting in charging the furnace with a metalliferous charge and smelting said charge with the aid of electric heat while forming metal and slag, emptying the furnace to bare the bottom thereof, reintroducing a quantity of the slag substantially in its original tapped condition for protection of the furnace bottom against the action of the electric arc, and starting the charging for the next heat.

---

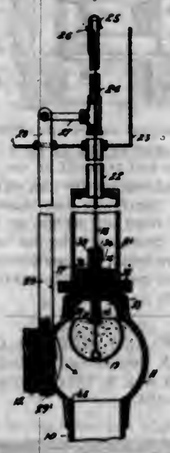


1,691,440. FOOT CAP. HARRIETTE ENSLEY HODGSON, New York, N. Y. Filed June 2, 1925. Serial No. 34,291. 1 Claim. (Cl. 128—156.)

A bandage comprising a body portion of soft flexible material shaped to fit the outlines of portions of the human foot, and a pad affixed to the inner side of such material by edge stitching following the outline of the pad, said pad being formed of lamb's wool or the like with the fibers within the stitched line relatively free to permit such fibers to be bunched or thinned at different areas for bandage purposes.

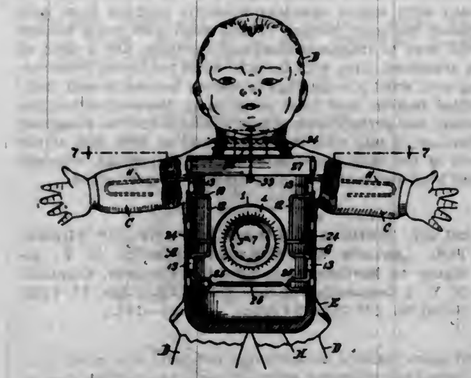
---

1,691,441. TIRE PRESSURE GAUGE. JOHN E. KENNEDY and MICHAEL A. KENNEDY, Los Angeles, Calif. Filed Aug. 8, 1925. Serial No. 48,977. 11 Claims. (Cl. 73—110.)



1. A pneumatic-tire pressure gauge embracing in combination an air-confining chamber adapted for temporary application to a tire stem, a casing secured to the open end of said chamber, an air-confining diaphragm of pliable fabric interposed between the chamber and the casing, an extensible spring-pressed plunger mounted in the casing to oppose a yielding thrust against said diaphragm to counterbalance the air pressure, a spring-tensioning nut interconnecting the extensible members of the plunger to permit extension of the plunger without affecting the spring tension and to permit the tensioning of the spring without extending the plunger, and a pressure scale indicator controlled by the movement of the plunger.

---



1,691,442. TELLTALE POSITIVE AND AUTOMATIC GAS CUT-OFF VALVE. HENRY KENNELL, New York, N. Y. Filed Nov. 28, 1925. Serial No. 71,940. 6 Claims. (Cl. 137—139.)

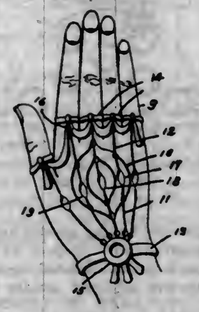
2. A gas supply cut-off device comprising a valve body having a valve seat associated therewith and surrounding the inlet, a ball to fit on said seat for closing said inlet, a tube to normally hold the ball out of engagement with its seat, said tube having a sealed gas passage and means to break the seal for the gas passage and release the ball to close the inlet.

---

1,691,443. SOUNDING FIGURE TOY. BURT E. LLOYD, Montclair, N. J. Filed Mar. 26, 1926. Serial No. 97,523. 4 Claims. (Cl. 46—40.)

4. A doll comprising a body, a casing in the body, a sound producing device arranged transversely, from front to rear, in the casing, a spring normally tending to extend one head of the sound producing device, the other head thereof being in fixed position, an arm support carrying a doll arm, arm operating mechanism, said arm operating mechanism comprising a vertically arranged shaft rockingly mounted at a plurality of points on said casing, an arm extending from said shaft and partaking of the movement of said shaft, an actuating member carried by the movable head of the sound producing device, said actuating member being movable in the same path as the arm carried by said shaft, a presser carried by the movable head, said spring normally holding the sound producing device in extended position, said sound producing device and arm operating mechanism being operable by manual pressure against the presser.

---

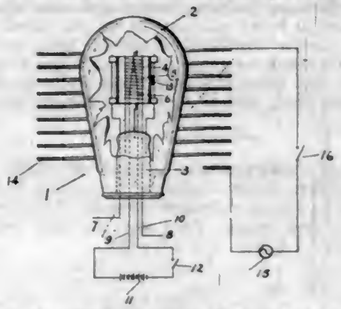


1,691,444. COMPRESSION SPRING WASHER. CYRUS H. LOUTREL, South Orange, N. J., assignor to The National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 27, 1928. Serial No. 265,071. 1 Claim. (Cl. 151—36.)

A compression spring washer of the split ring type in the general form of a helical segment of substantially rectangular cross section, whose opposed ends are spaced apart a distance less than the smallest cross section dimension of the washer stock and are at angles to the washer faces, said ends being extended beyond the two respective faces of the washer to form overlapping spur portions.

---

1,691,445. ORNAMENTAL JEWELRY. JULES A. MELIODON, Lincoln Park, N. J. Filed June 28, 1927. Serial No. 202,002. 1 Claim. (Cl. 63—2.)

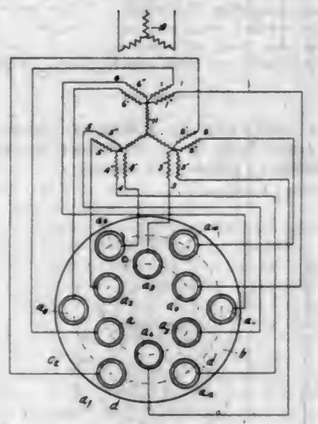


An article of jewelry comprising a plurality of finger rings and a wrist band, an ornamental member carried by said wrist band, a series of connector members secured to said ornamental member and equalling in number the number of finger rings, a flexible link connecting each of said connector members with a finger ring, and a central ornamental member disposed between said finger rings and said wrist band and supported by a plurality of said links, said finger rings being connected together by a band arranged in loops between each of said rings.

---

1,691,446. ELECTRON-DISCHARGE DEVICE WITH OXIDE-COATED FILAMENT. HARVEY CLAYTON RENTSCHLER, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 28, 1925. Serial No. 18,957. 8 Claims. (Cl. 250—27.5.)

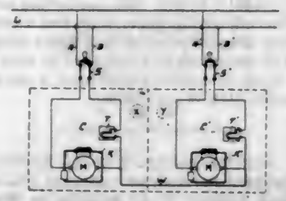
1. The method of producing electron devices having a plate and an electron-emitting cathode which comprises



coating the cathode with a carbonate of an alkaline earth metal, sealing the plate and cathode in an envelope, evacuating the envelope, and thereafter heating the filament to

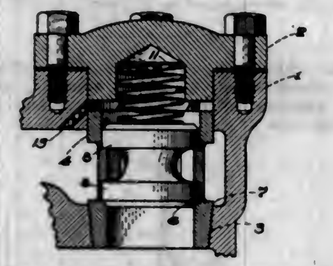
decompose the coating thereon to the oxide and while the filament is in a heated condition vaporizing a metallic clean-up agent within the envelope.

---



1,691,447. RECTIFIER AND CONNECTION THEREFOR. MAX SCHIESSER, Baden, Switzerland. Filed Oct. 21, 1927, Serial No. 227,653, and in Germany Oct. 16, 1926. 6 Claims. (Cl. 175—363.)

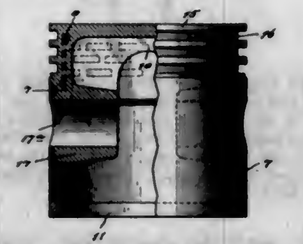
1. Rectifier apparatus having anodes arranged in circles substantially concentric with respect to each other, the anodes in one circle being disposed opposite the spaces between the respective adjacent anodes in the adjacent circle.



---

1,691,448. THERMOSTATICALLY-CONTROLLED ELECTRIC CIRCUITS. JOSEPH F. SEIDEL, Euclid, Ohio. Filed June 13, 1927. Serial No. 198,552. 2 Claims. (Cl. 62—4.)

1. The combination with a plurality of refrigerating units each having an electric motor and a thermostatic switch in the motor circuit, of a shunt connection between the respective circuits, whereby the closure of any switch will start all the motors.



1,691,449. VALVE FOR PUMPS. JEFFERSON M. SHARP, Oil City, Pa. Filed May 16, 1927. Serial No. 191,753. 3 Claims. (Cl. 251—144.)

1. A valve organization for pumps comprising a substantially tubular valve cage having an open upper end, whereby the free insertion and removal of the valve is provided for forming a guide-chamber for the valve and having a valve-seat adjacent the lower end thereof, and a spool-shaped valve each head of which is provided with a seating face, which faces are adapted to interchangeably seat upon said valve-seat; the peripheries of said heads being adapted to have guiding contact with the inner walls of said cage.

---

1,691,450. PISTON AND METHOD OF PRODUCING SAME. HAROLD A. SOULIS and WILBUR T. SOULIS, New York, N. Y. Filed Aug. 9, 1924. Serial No. 731,032. 9 Claims. (Cl. 74—108.)

1. A piston for internal combustion engines, comprising a tubular shell of cast iron, the wall thereof adjacent one end being inset by the formation of an integral circumferential shoulder having a grooved top surface and provided with spaced openings inwardly inclined from said groove, the inset portion of said shell wall being formed with rows of staggered elongated openings, and a head of an aluminum alloy with integral wrist pin bosses cooperating with wrist pin openings oppositely located in said shell, united thereto, said head metal being disposed within the groove and perforations of said shoulder and the elongated openings in said wall thereabove, and on each side of the wall of the shell above said wrist pin openings, whereby said head and said shell are permanently interlocked.

---

1,691,451. SHOE AND LIKE LACE AND TIP THEREFOR. ARTHUR W. UELLENDAHL, Jamaica, N. Y., assignor to Barthels Manufacturing Company, Glendale, N. Y., a Corporation of New York. Filed Jan. 17, 1928. Serial No. 247,324. 2 Claims. (Cl. 24—143.)

1. A shoe lace or the like, comprising a lace or string, and a tip consisting of a piece of flexible material wound compactly upon and around the end of the lace and on itself, the flexible piece being wider than the lace and the material being impregnated with a substance which sets in cooling, and by which substance the piece is held on the outside of the lace and also in the shape of a tip.

---

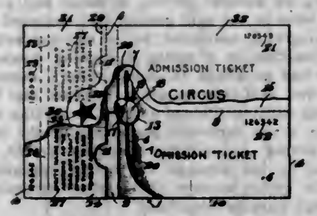
1,691,452. MANUFACTURE OF HYDROCHLORIC ACID. EDSON R. WOLCOTT, Los Angeles, Calif., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 1, 1924. Serial No. 740,903. 1 Claim. (Cl. 23—154.)

In the preparation of a porous coke adapted to the production of hydrochloric acid by contact with steam at elevated temperatures, the method which consists in intimately mixing sadium chlorid and clay with a carbonaceous binder and then effecting destructive distillation of the mixture at a temperature less than 1500° F. to form the said porous coke.

---

1,691,453. FASTENING DEVICE. LOUIS ALTERSON, New York, N. Y. Filed Feb. 28, 1928. Serial No. 257,576. 2 Claims. (Cl. 24—77.)

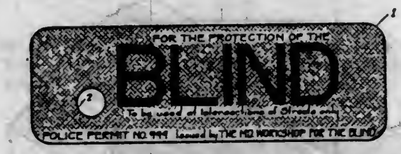
2. A fastening device composed of a pair of overlapping plate members, a stud projecting from the face of one of said members, an aperture in the other plate member adapted to fit over the stud when the plates are in their overlapped relationship, the fit between the stud and aperture being such that a binding effect by the edge of the aperture on the side of the stud is secured by inclination of one plate with regard to the other.



---

1,691,454. MANUFACTURE OF INSECTICIDES. HOWARD W. AMBRUSTER, Westfield, N. J. Filed Dec. 4, 1923. Serial No. 678,434. 20 Claims. (Cl. 167—6.)

20. An insecticide comprising a finely pulverized ore containing native arsenate of iron.



---

1,691,455. CARNIVAL TICKET. EMER D. BATES, Pasadena, Calif. Filed July 11, 1927. Serial No. 204,813. 6 Claims. (Cl. 283—51.)

1. As a new article of manufacture a ticket comprising a body portion and a stub portion severably connected together, said body portion having integral at one end thereof a pair of opposed coacting parts for concealing appropriate indicia, said parts normally connected to said stub portion to conceal such indicia and free of connection with each other whereby when said body portion and parts are severed from the stub portion said parts can be shifted relative to each other to expose the indicia.

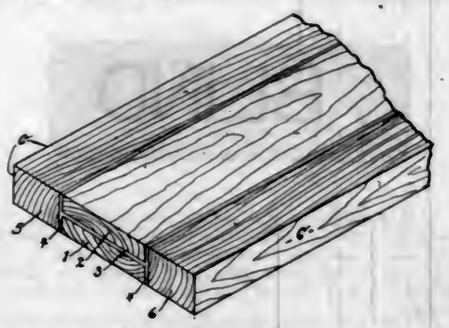
1,691,456. SIGN. JOHN L. BECK, Baltimore, Md. Filed Mar. 17, 1927. Serial No. 175,969. 2 Claims. (Cl. 40—125.)

1. A pocket size sign oblong and substantially rectangular, with an opening therethrough adjacent one end and nearer one long edge thereof than the other for the insertion of the user's finger, and whereby the upright position of said sign may be determined by the sense of touch.

---

1,691,457. PASTE-TUBE HOLDER. WALTER A. BEHRENS, Hollis, N. Y. Filed Nov. 19, 1924. Serial No. 750,796. 3 Claims. (Cl. 221—60.)

1. A holder of the character disclosed, having a substantially flat base with means for enabling attachment of the same to a wall or other supporting structure and provided with a pocket for a paste tube closed at the bottom to form a rest and stationary support for the lower closed end of the tube and open at the top to expose the neck of the tube, said pocket being open up the front of the same to expose substantially the entire front of the supported tube for manipulation purposes.

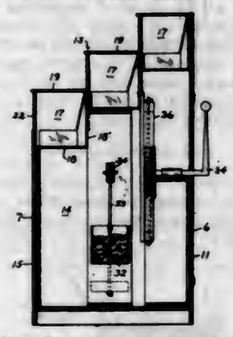


---

1,691,458. METHOD OF TREATING LIQUIDS. CARL BENEDICKS, Stockholm, Sweden. Filed Jan. 29, 1925, Serial No. 5,537, and in Sweden July 2, 1924. 3 Claims. (Cl. 183—114.)

1. A method of liberating a molten mass from gas present therein which comprises stirring the molten mass by means of a body having higher temperature than that of the molten mass, the separation of the gas being localized on said body.

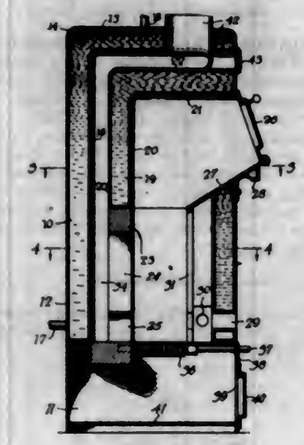
1,691,459. STRAIGHTEDGE. HOWARD E. BENWAY, Wichita, Kans. Filed Aug. 24, 1925. Serial No. 52,054. 1 Claim. (Cl. 33—75.)



In a straight edge, in combination, a pair of wood strips, a fibrous strip between said strips, fiber strips transversely positioned to engage the longitudinal edges of said first named strips, a wood strip positioned on the outside of each of the second named fiber strips, and adhesive substance between all of said strips to firmly hold them together and thus form a straight edge.

1,691,460. COMPOSITION OF GUM CHICLE, RUBBER, AND AN AQUEOUS COLLOID. ARTHUR BIDDLE, Trenton, N. J., assignor to United Products Corporation of America, a Corporation of Delaware. Filed May 22, 1926. Serial No. 111,027. 8 Claims. (Cl. 134—17.)

1. A composition of matter having adhesive properties comprising an aqueous dispersion of gum chicle, rubber and a hydrophilic colloid.



8. A composition of matter having adhesive properties comprising an aqueous dispersion of chicle a hydrophilic colloidal substance, an oil solvent for said chicle, rubber in dispersed phase, and an alkali.

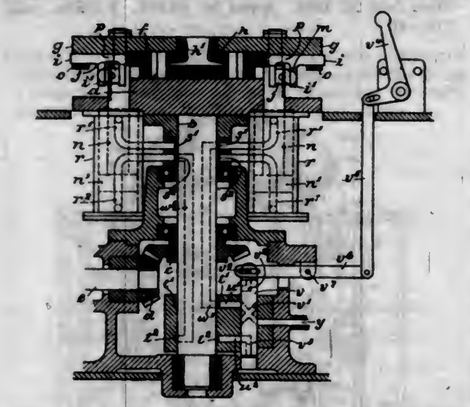
1,691,461. VENDING SHOW CASE. EZRA F. BISHOP, Oakland, Calif., assignor of one-half to Roy W. Dimock, Oakland, Calif. Filed June 23, 1926. Serial No. 118,003. 8 Claims. (Cl. 312—139.)

2. In a vending show case, a body, a merchandise supporting unit mounted to slide vertically therein and comprising merchandise holding horizontally-extending compartments arranged in upwardly and rearwardly progressing steps and each being open at the front thereof, and independent vertically extending transparent plates fixed to said body and so positioned relative to said compartments that the openings thereof will be covered thereby when the unit is in one position to be uncovered thereby when the unit is in another position, and transparent top plates for said compartments movable with said unit and arranged to substantially set upon said front plates and thereby seal the compartments in one of the positions of the unit.

1,691,462. REFUSE BURNER AND WATER HEATER. JOHN BORGH, Bellport, N. Y. Filed May 21, 1926. Serial No. 110,659. 3 Claims. (Cl. 122—2.)

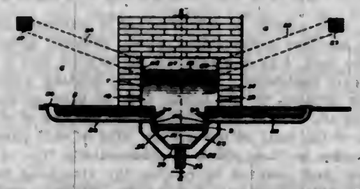
1. An incinerator comprising a pair of spaced casings, said casings being adapted to receive water therein and being connected for circulation of water therebetween, one of said casings having burner openings therein, a plurality of flues connected at one end to said burner openings, said flues having slotted openings at the inner side thereof, a refractory wall mounted within said casings and having a plurality of slotted openings therethrough, a downwardly inclined feeding chute, a door closing the outer end of said chute, and an ash receiver mounted below said casings for receiving the ashes.

1,691,463. FRICTION MEANS FOR WINDOW-SHADE ROLLERS. HUGH R. BREWER, Wichita, Kans. Filed Mar. 1, 1926. Serial No. 91,486. 1 Claim. (Cl. 156—28.)

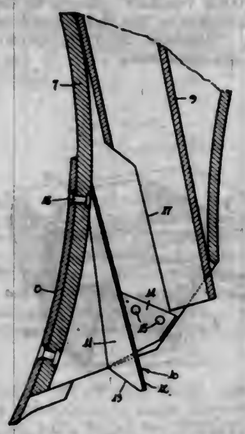


In a friction means for window shade rollers, a thimble comprising an annular groove, a flange and a rib adjacent the sides of the said groove, two concaved shoe segments integrally connected by a rectangularly shaped loop to function as a spring tensioning means for the segments and as means to engage with a detent to prevent rotation, said shoe segments tensioned and frictionally engaging with said flange and rib as braking means for the roller, a pin centrally positioned in the thimble, a bracket having a laterally extending detent, the pin trunnioned in the bracket, the detent engaging in the rectangular spring member of the shoe segments, all as, and for the purpose described.

1,691,464. CENTRIFUGAL MACHINE FOR CASTING METAL. DAVID BROWN, Lockwood, Huddersfield, England, assignor to David Brown & Sons (Huddersfield), Limited, Lockwood, Huddersfield, England, a Company of Great Britain. Filed Aug. 4, 1927, Serial No. 219,639, and in Great Britain Aug. 11, 1926. 8 Claims. (Cl. 22—65.)



7. A centrifugal casting machine including a rotary mold having spaced plates one of which is movable toward and away from the other plate, and including radially movable segments between the plates carried by one plate, means for moving said movable plate toward and away from the other plate, and means operable by the

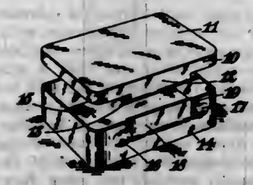


movement of said movable plate toward and away from the other plate for moving said segments inwardly and outwardly respectively.

1,691,465. FIREPLACE HEATING SYSTEM. THOMAS BURLEY, Seattle, Wash. Filed Feb. 28, 1928. Serial No. 257,575. 3 Claims. (Cl. 126—121.)

1. A fireplace heating system comprising a fire-well, a radiator plate arranged to form a back-chamber, a casing arranged to form a bottom-chamber around the fire-well, and said bottom-chamber being in direct communication with said back-chamber.

1,691,466. GRAIN DRILL. JACOB HARP BURTNER, Boonsboro, Md. Filed May 29, 1926. Serial No. 112,547. 3 Claims. (Cl. 111—86.)



1. A deflector for use in the lower end portion of a drill boot composed of sheet metal and V-shaped in horizontal section with its sides converging rearwardly to a ridge, the lower ends of said sides being oblique and extending downwardly and rearwardly to the lower end of said ridge to provide a nose to work in the soil behind a shovel carried by said boot.

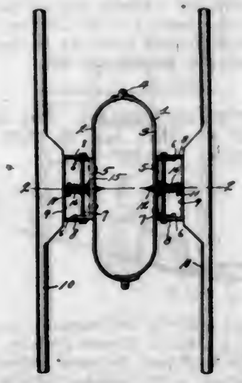
1,691,467. PACKAGE HANDLE. GEORGE W. CARVER, East Orange, N. J. Filed Jan. 6, 1927. Serial No. 159,495. 10 Claims. (Cl. 224—56.)

10. A package carrier comprising a corrugated wire, a hand grip enclosing said wire and fastening means engaging the grip between adjacent corrugations.

1,691,468. HINGED JOINT. ALBERT JAMES COOPER, Kew, and ALWYN ALFRED HOPE BILNEY, London, England. Filed Nov. 2, 1926, Serial No. 145,874, and in Great Britain Dec. 10, 1925. 1 Claim. (Cl. 220—31.)

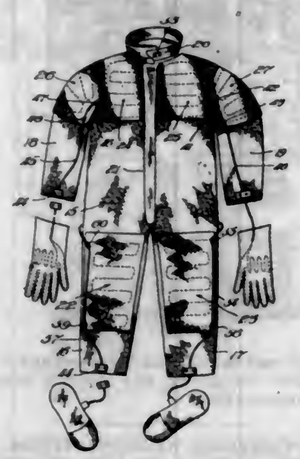
A hinged joint for connecting a cover to a box without the use of tools, the cover having two oppositely extending pivots connected thereto, the box having two oppositely disposed housings extending beyond the outer face of the box, there being an opening to each of the housings, while the other ends of the housings are closed and merge into the body of the box, one of the housings being connected to the body of the box at both sides of the opening there being a slit from the top of the box to the opening to the other housing, whereby one of the pivots can be entered into the opening of the first mentioned housing after which the second pivot can be inserted into its housing by passing it through the slit.

1,691,469. ENVELOPE SEALER. OLIN M. DANTZLER, Greenwood, S. C. Filed Apr. 19, 1927. Serial No. 184,947. 1 Claim. (Cl. 120—6.)



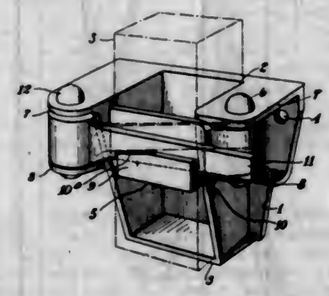
In an envelope sealer of the character described, a liquid container of a shape to provide a handle, an extension at one end of the container, the same projecting from the bottom side thereof, and at oblique relation to the said container, the adjacent end of said container being formed with an opening, a wick adapted to rest upon said extension and to project through said opening and within the container, the longitudinal edge of said extension being bent upon the wick to secure the same in position, a tongue projecting outwardly from the end of the container, in spaced parallelism with the extension, one longitudinal edge of said tongue being adapted to project beyond one longitudinal edge of the extension and is provided with a pair of spaced depending ears, and an elongated roller rotatably mounted between said ears so that the same will depend below the plane of the extension.

1,691,470. NAIL. GEORGE C. FEDDERMAN, Detroit, Mich., assignor to Auto Loading Device Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 3, 1927. Serial No. 217,412. 1 Claim. (Cl. 85—28.)



A round wire upset nail having its extreme upper end in the form of an inverted frusto-cone with the lower end of said frusto-cone of a diameter substantially equal to that of the round wire and with a straight sided frusto-conical portion intermediate the said inverted frusto-conical portion and the round wire stem of the nail, the said intermediate frusto-conical portion having its small diameter upper end of the same diameter as and meeting the small diameter lower end of the upper inverted frusto-conical portion, the lower face of the intermediate frusto-conical portion being flat and said inverted frusto-conical portion being of considerably greater altitude than the intermediate frusto-conical portion, substantially as described.

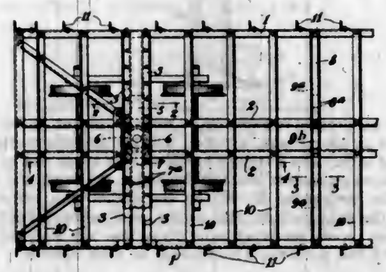
1,691,471. ANIMAL POKE. HARRMANN FISCHER, Raeville, Nebr. Filed June 17, 1927. Serial No. 199,475. 1 Claim. (Cl. 119—140.)



An animal poke comprising a sectional neck encircling yoke, U-shaped brackets secured to opposite sides of the yoke, obstruction engaging bars at opposite sides of the yoke, U-shaped brackets carried by the bars, said U-shaped brackets of the yoke and bars extending forwardly of the yoke and hingedly connected together adjacent their forward sides, prongs carried within the bar brackets and extending inwardly through the yoke brackets and opposite sides of the yoke and springs surrounding said prongs and forming means for normally forcing the bar brackets outwardly and maintaining the prongs in inoperative positions.

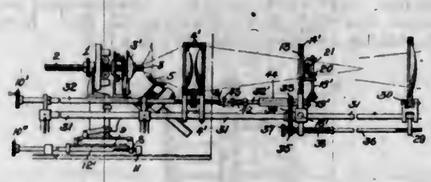
1,691,472. ELECTRICALLY-HEATED GARMENT. WALTER D. GRAHAM, River Forest, and CHARLES M. UHLIG, Chicago, Ill.; said Uhlig assignor to said Graham. Filed June 25, 1925. Serial No. 39,421. 1 Claim. (Cl. 219—46.)

As a new article of manufacture a garment for the purpose specified comprising a woven garment adapted to cover the body, legs and arms of the wearer, and a series of separate individual, self-contained, heating pads, permanently secured to the inside face of said garment at points for the individual protection and heating of selected portions of the body of the wearer, each of said pads having a border portion which is substantially free of heating wires and adapted to receive the attaching threads whereby said pad is attached to the garment, each pad being suitably shaped and conforming to the body of the wearer at the point to be heated, each individual pad being provided with suitable electrical conductors for heating current, and a series of conductors on the garment serving for the supply of current to various pads, substantially as described.



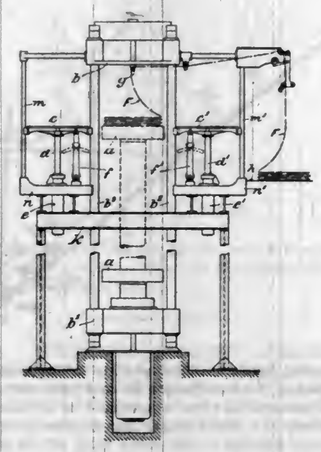
1,691,473. STAKE POCKET. LOUIS D. GREGG, Hackensack, N. J., assignor to The Gregg Company Ltd., Hackensack, N. J. Filed Apr. 20, 1928. Serial No. 271,424. 12 Claims. (Cl. 105—383.)

1. In a stake pocket for railway cars and the like, a stake receiving compartment having an open front, a pivoted door for closing the open front, a pivoted latch bar for releasably latching the door in closed position, a trough on said door for receiving the latch bar and means to permit movement of the latch bar in a vertical and horizontal plane.

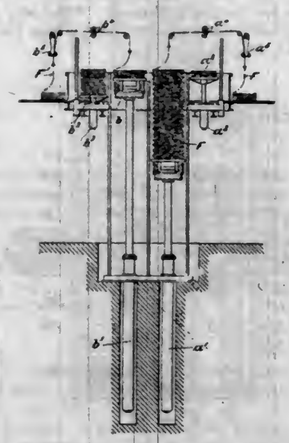


1,691,474. CAR-FRAME CONSTRUCTION. WILLIAM BURR GREGG, Hackensack, N. J., assignor to The Gregg Company Ltd., Hackensack, N. J. Filed Dec. 12, 1927. Serial No. 239,370. 9 Claims. (Cl. 105—416.)

3. In a railway car frame of the cleat floor type, side and center sills, cleats extending across the car frame, a double diaphragmed bolster with a channel top cross member extending across the frame with the flanges of the channel projecting upwardly above the sills, and one or more cross bearers, each with a channel top cross member extending across the frame with the flanges of the channels projecting upwardly above the sills.



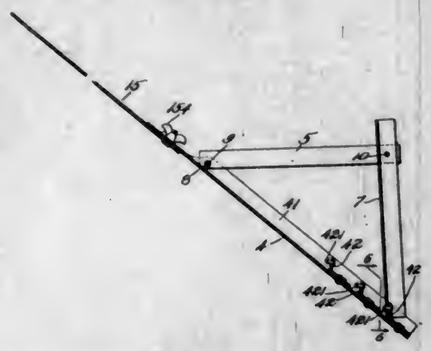
1,691,475. PROJECTOR LAMP. THEODORE HALL, New York, N. Y., assignor to Hall & Connolly, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 18, 1928. Serial No. 247,527. 9 Claims. (Cl. 240—3.)



6. In a flaming arc projector lamp, an arc lamp mechanism, a beam collector, an objective lens, a shutter adjustable to various size apertures positioned between said collector and lens, means for changing the relative position of the arc and said collector, means interconnecting said first-named means and said shutter for adjusting the size of the aperture in said shutter accordingly, and a telescopic shield for enclosing the beam between said collector and shutter.

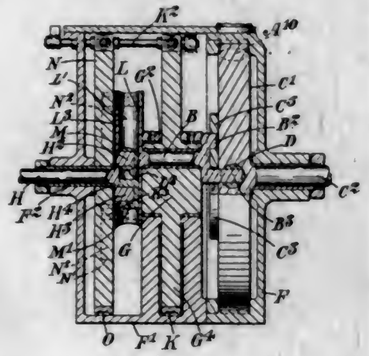
1,691,476. PRESSING OF FABRICS. ARNOLD DOUGLAS HEATON and JOHN OBADIAH LANG, Liversedge, England. Filed Sept. 17, 1927, Serial No. 220,127, and in Great Britain Sept. 18, 1926. 4 Claims. (Cl. 26—38.)

1. A fabric pressing apparatus comprising a press having a top plate and a vertically movable table below the top plate for pressing folded fabric between said table and plate, in combination with paper carrying means adjacent to the press near said top plate, so that press papers on said means may be conveniently placed in the folds of the fabric as it is folded in a pile on the table while the table is descending.



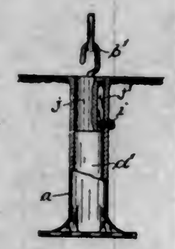
1,691,477. PLANT FOR PRESSING FABRICS. ARNOLD DOUGLAS HEATON and JOHN OBADIAH LANG, Liversedge, England. Filed Sept. 17, 1927, Serial No. 220,128, and in Great Britain Feb. 9, 1927. 1 Claim. (Cl. 26—38.)

Papering apparatus for fabric comprising two adjacent vertically movable platforms for supporting piles of folded fabrics, separate means for guiding the fabric to and from each of said tables, and vertically movable paper platforms at the opposite sides of the fabric platforms, whereby as either fabric platform is raised to remove one fabric therefrom and the other fabric platform is lowered to pile another folded fabric thereon, the papers may be readily transferred from the fabric which is being raised to the fabric which is being lowered and the corresponding paper table.



1,691,478. ROOFING BRACKET. ALONZO P. HENDERSON, Hanover, Mass. Filed July 31, 1926. Serial No. 126,123. 3 Claims. (Cl. 304—20.)

1. A roofing bracket composed of a trough-shaped base-member having the side-flanges thereof upturned and provided with upstanding stops in a series located intermediate said side-flanges, a board-supporting member comprising a pair of strips located at the inner sides of the said side-flanges and having pivotal connection at one end with the said side-flanges, and a trough-shaped strut-member between the said strips, pivotally engaged with the other ends of the latter, said parts adapted to fold into nested condition with the strut-member between the said strips, the strips and strut-member between the flanges of the base-member, and the flanges of the strut-member downturned and enclosing the series of stops between them.



---

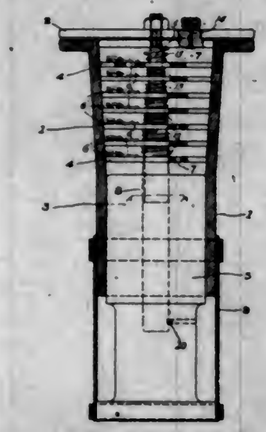
1,691,479. ROTARY PISTON MECHANISM AND ITS APPLICATION TO VARIABLE-SPEED GEARING. HARRY HIORNS, Torquay, England. Filed May 11, 1925, Serial No. 29,466, and in Great Britain May 19, 1924. 7 Claims. (Cl. 74—14.)

1. In a rotary piston mechanism the combination of a rotary element carrying a pair of crank-pins, a cylindrically bored element which is disposed with the longitudinal axis of the bore transverse to the axis of said rotary element, is mounted for rotation about an axis eccentric thereto, is longitudinally slotted to receive one of the said crank-pins, has an external enlargement on its wall which is slotted transversely to the first said slot in the plane of rotation of the crank-pins to receive the other of said crank-pins, and a piston which fits in said cylindrical bore and is engaged by the first said crank-pin so that it may be reciprocated in the cylindrical bore by the crank-pin, substantially as and for the purposes described.

1,691,480. LAND ANCHOR. ROWLAND RUSHWORTH HIRST and ARNOLD HIRST, Halifax, England. Filed Feb. 10, 1927, Serial No. 167,302, and in Great Britain Mar. 16, 1926. 1 Claim. (Cl. 189—90.)

An anchorage comprising a vertical socket to be embedded in the ground, a piston member slidable vertically in said socket and having a portion at its upper end to project above the socket when said member is raised, and a removable projection carried by the socket and extending from the exterior into said socket, said member having a vertical recess receiving said projection for limiting the upward and downward movements of said member.

---

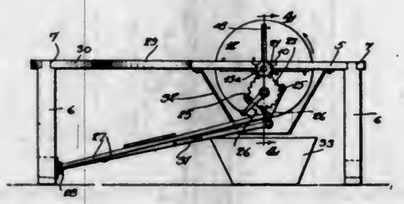


1,691,481. ICE TRAY FOR ELECTRICAL REFRIGERATION. JEAN JACQUES and ALLEN R. COSGROVE, York, Pa., assignors to Martin-Parry Corporation, York, Pa., a Corporation of Delaware. Filed Mar. 25, 1927. Serial No. 178,399. 5 Claims. (Cl. 62—111.)

1. A tray for automatic refrigeration comprising an open-faced receptacle, a grid for fitting into the confines of said receptacle, said grid comprising a strip of metal bent intermediate its ends to define a plurality of partitions for separating the ice to be formed in cubular formation.

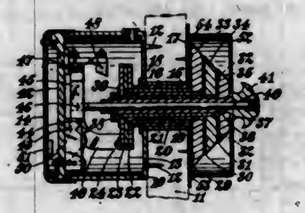
---

1,691,482. PNEUMATIC SPRING. GEORGE ROBERT JOUGHINS, New York, N. Y. Filed Jan. 15, 1923. Serial No. 612,844. 6 Claims. (Cl. 267—65.)



1. A pneumatic spring, in which a gaseous fluid enclosed and controlled within a rigid metal cylinder is the only load supporting resilient element, comprising a cylinder closed at one end; disc shaped diaphragms within the cylinder and placed transversely thereof to divide the cylinder space into separate portions and which have a longitudinal movement relative thereto; a reciprocating plunger fitted to the other end of the cylinder and means for transmitting the gaseous fluid and controlling its movements to and from the various portions into which the cylinder is divided by the diaphragms, the cylinder cover and the plunger.

---

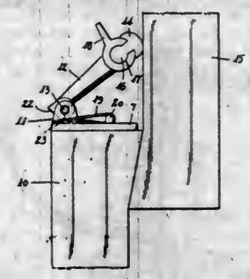


1,691,483. VEGETABLE CUTTER. MARTIN KERY, St. Catherines, Ontario, Canada. Filed Jan. 21, 1927. Serial No. 162,549. 1 Claim. (Cl. 146—116.)

A vegetable cutter comprising an elevated platform, said platform including a rigid portion having a removable section, a rotary cutting knife carrying disk journaled upon a transverse horizontal axle on the bottom of said removable section, and means carried by the removable section to facilitate hand operation of said disk when the platform section is removed.

---

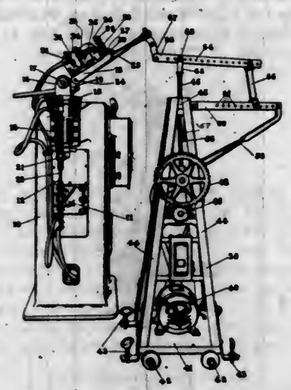
1,691,484. ANTITHEFT DEVICE FOR MOTOR VEHICLES. ALFRED CHARLES KING and JAMES STRINGER, London, England, assignors to King, Stringer & Company Limited, London, England, a British Company. Filed Apr. 26, 1927, Serial No. 186,732, and in Great Britain May 3, 1926. 6 Claims. (Cl. 200—45.)



1. In an anti-theft device for a motor-car, the combination of a plurality of coaxial setting dials of a permutation lock, a corresopnding plurality of locking discs, a plurality of coaxial tubes each connecting a setting disc to a locking disc, said locking discs each being provided with a plurality of radial notches whereof one is deeper than the others, a switch blade pivotally mounted near said locking discs, a co-operating contact for said switch blade, a tail-piece on said blade adapted to enter said notches and to be permitted only by said deeper notches to move so far as to permit the switch blade to engage the said contact, and an operating rod connected to said switch blade extending coaxially through said tubes.

---

1,691,485. SASH FASTENER. WILLIAM A. KIRK, Hot Springs National Park, Ark. Filed Aug. 4, 1927. Serial No. 210,625. 2 Claims. (Cl. 292—228.)

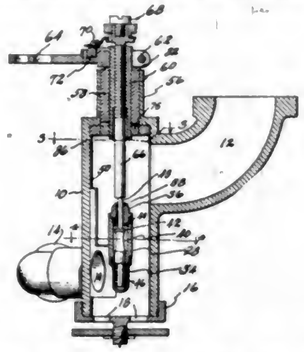


1. A sash fastener comprising a base having an opening and a portion bridging said opening, a dog pivotally mounted on said base, and a doubled leaf spring having its loop embracing said portion and having its terminals projecting below said dog, the dog having an abutment to bear

on the spring for holding the dog in released position and said dog having a cam to move on the spring for holding the dog in fastening position.

---

1,691,486. AUTOMATIC ELECTRIC WELDING MACHINE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 13, 1920. Serial No. 430,320. 5 Claims. (Cl. 219—4.)

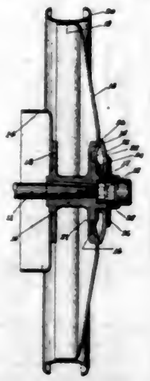


1. In combination with a welding machine having relatively movable electrodes, an auxiliary attachment comprising a substantially vertically extending frame, a pitman having a reciprocatory movement in the upper portion of said frame, motor means located at the bottom of said frame for imparting movement to said pitman, and means connecting said pitman to the machine for operating the relatively movable electrodes.

---

1,691,487. CARBURETOR. CHARLES LOUIS LEVEQUE, Detroit, Mich. Filed July 30, 1926. Serial No. 125,842. 1 Claim. (Cl. 261—49.)

In a carburetor, a mixing chamber having a fuel mixture outlet opening and an air inlet opening, a barrel throttle rotatably mounted within said mixing chamber controlling said openings, a fuel nozzle in said chamber, a valve mounted within said nozzle and held yieldingly upwardly by a spring to close the outlet of the nozzle, said valve provided with a stem extending upwardly through the nozzle outlet into the interior of the mixing chamber, a rotatably operable axially movable member extending through the top of the barrel throttle into engagement with the end of said valve stem, said barrel throttle coupled with a part on the operating member to rotate with said member while permitting relative axial movement of the operating member therethrough, a spring tending to hold said operating member upwardly away from said valve

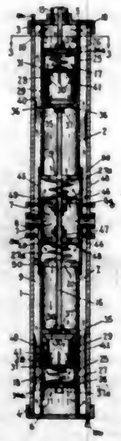


stem, a part having a stationary cam face disposed above said barrel throttle, a part on said operating member co-operating with said operating cam face whereby upon ro-

tation of said member relative to said cam face, the operating member is moved axially against the resistance of said spring to depress the valve stem and the valve.

---

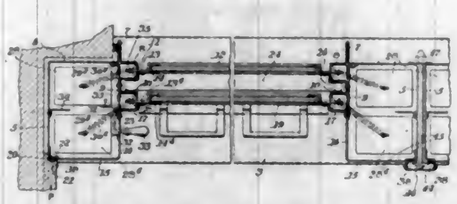
1,691,488. WHEEL. HERBERT V. LUDWICK, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1922. Serial No. 578,899. 7 Claims. (Cl. 301—9.)



1. In a wheel the combination of a hub having a radial flange, a wheel disc mounted on said hub, an annular member mounted on the hub and engaging the disc in two spaced zones of contact, said disc and flange having interengaging portions located between said zones of contact and preventing relative rotation of the disc and flange, and means mounted on said hub for forcing said annular member against the disc to clamp said disc against the flange.

---

1,691,489. DOUBLE-ACTING PLUNGER PUMP. BENJAMIN MILLER, Los Angeles, Calif., assignor of one-half to Jesse Arvel Culp, Van Nuys, Calif. Filed Sept. 28, 1927. Serial No. 222,582. 3 Claims. (Cl. 103—185.)

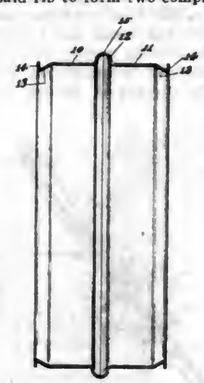


1. In a pump, a casing having a double wall providing an annular chamber closed at both ends, the inner wall of said chamber being formed by a pair of complementary piston cylinders, united with a coupling sleeve, the opposite ends of which are contained in the ends enclosing said annular chamber, there being ports through said inner wall near each end thereof, an apertured valve seat screwed into the ends of said coupling sleeve forming a conduit chamber, means near the mid-length of said annular chamber for conducting fluid there across to the interior of said conduit chamber, a spring seat screwed into said coupling sleeve in spaced relation with said apertured valve seats, a valve disk to close the apertures in said valve seat, a spring to seat upon said spring seat, to oppose the opening of said valve disks, pistons within said piston cylinders, valves in said pistons, said valves cooperating with said

valve disks in controlling the longitudinal flow of liquid flowing within said piston cylinders, through said ports into said annular chamber, an outlet conduit at one end of said piston cylinder and operating means for said pistons, said valves and pistons being adapted to alternately deliver fluid through said outlet conduit of said piston cylinder during the simultaneous reciprocation of said pistons.

---

1,691,490. WINDOW STRUCTURE. CRAIG MILLER, Huntington, W. Va. Filed Apr. 20, 1927. Serial No. 185,164. 6 Claims. (Cl. 189—65.)



1. In a window construction, a hollow frame member having a slot therein, a sash having a sidewise extending plate projecting into the slot, and a pair of weather strip portions extending over the slot from either side thereof, the portions being adapted to substantially close the slot when they are not engaged by the plate, but to move back from the slot when engaged by the plate.

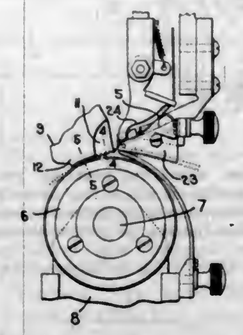
---

1,691,491. PROCESS OF MAKING RIMS. EMIL A. NELSON, Abington, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of the State of Pennsylvania. Filed Feb. 25, 1924. Serial No. 694,894. 1 Claim. (Cl. 29—159.)

The process of making asymmetrical rims having an upstanding fixed retaining flange on one side and a depressed gutter on the opposite side, comprising the forming of an integral metal strip with a central rib, plane portions on each side of said rib constituting the body of the rim, and gutters on the outer edges of said plane portions whereby a symmetrical combined cross-section is devised, bending said strip into circular form, joining the ends of said strip to form an annulus and severing said annulus along the central line of said rib to form two complete, identical and

mutually independent asymmetrical rims, each adapted to retain a tire upon the seating of a detachable flange in the said gutter.

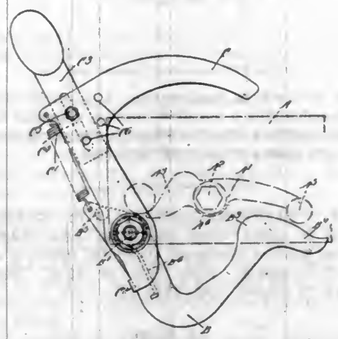
---



1,691,492. AUTOMOBILE BUMPER. WILLIAM NICHOLAS, Bellevue, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 12, 1926. Serial No. 147,906: 5 Claims. (Cl. 293—55.)

4. Bumper structure, comprising a pair of vertically-spaced impact bars one of which has a recess in its outer edge, and a fitting member secured to said bars and having an offset portion fitting within said recess.

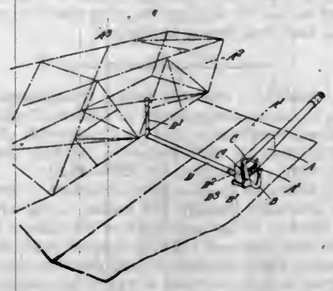
---



1,691,493. SEAM-PRESSING MACHINE. WALTER P. OSGOOD, Malden, Mass., assignor to Boston Machine Works Company, Lynn, Mass., a Corporation of Massachusetts. Filed Dec. 30, 1927. Serial No. 243,733. 2 Claims. (Cl. 12—51.)

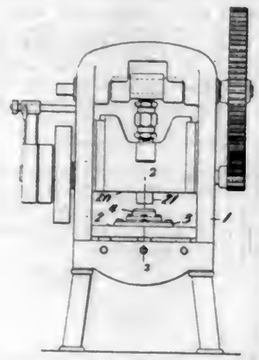
1. In a seam-pressing and tape-applying machine, the combination with a work support over which is fed work in the form of two pieces seamed together by a seam presenting a seam ridge, said work support having a groove of a size to receive the seam ridge after it is pressed or flattened, of means for laying an adhesive tape over the seam ridge as the work is fed to the machine, and an intermittently acting presser co-operating with the work support to press the seam ridge and apply the tape thereto, said presser having the portion thereof with which the seam ridge first contacts relatively narrow so that it will engage the seam ridge and press the latter into the groove, the rear portion of said presser being wider than said groove and so disposed relative to the relatively narrow portion that as the work passes under said rear portion the latter will engage the portions of the tape outside the flattened seam and press said portions of the tape against the portions of the work supported either side of the groove.

---



1,691,494. AUTOMATIC GUN CARRIED BY AIRCRAFT. HAROLD JAMES PAYN, Weybridge, England, assignor to Vickers Limited, Westminster, England. Filed Jan. 19, 1928, Serial No. 247,847, and in Great Britain Jan. 19, 1927. 5 Claims. (Cl. 89—2.)

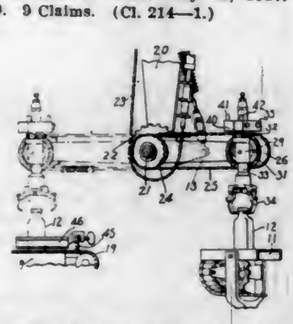
1. In an automatic gun having a cocking and loading lever under the control of the gunner and serving when actuated to reproduce the movements of the barrel and the gun mechanism which occur during firing; an auxiliary member movable in a direction opposite that of the lever in cocking and loading the gun to strike the crank handle of the gun and thereby cause the lock to be forced into its forward or firing position so as to insert an oversize cartridge fully into the cartridge chamber of the barrel.



---

1,691,495. AUTOMATIC GUN CARRIED BY AIRCRAFT. HAROLD JAMES PAYN, Weybridge, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Jan. 23, 1928, Serial No. 248,900, and in Great Britain Jan. 19, 1927. 3 Claims. (Cl. 89—40.)

1. In an automatic gun, a cocking and loading lever for reproducing manually movements of the gun mechanism that occur during operation of the gun, an operating handle remotely located with respect to the gun, and a rigid connection between said handle and the cocking and loading lever.

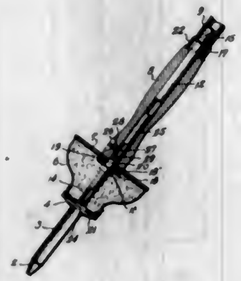


1,691,496. PRESS FOR DRAWING SHEET METAL. CHARLES JOSEPH RHODES, Wakefield, England. Filed June 24, 1927, Serial No. 201,185, and in Great Britain Feb. 12, 1927. 13 Claims. (Cl. 113—46.)

12. In a press in combination, a movable die and a fixed die embodying a movable forming ping and means to move the plug in a direction opposite the movement of the movable die upon actuation of the latter.

---

1,691,497. TRANSFER DEVICE FOR GLASSWARE. GEORGE E. ROWE, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 23, 1927. Serial No. 207,849. 9 Claims. (Cl. 214—1.)

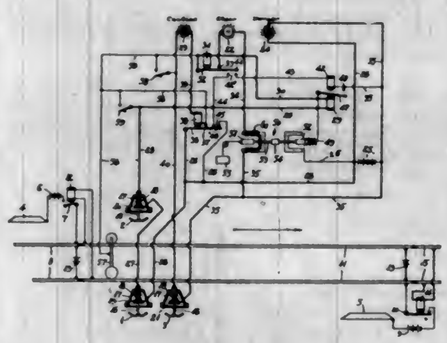


1. In a device for transferring glassware from a receiving station to a delivery station, means for gripping the ware, means for revolving it about a horizontal axis to transfer it from the receiving station to the delivery station, and means for rotating the ware about its vertical axis during such tranferring movement.

---

1,691,498. NOZZLE. SOLOMON SACHS, Washington, D. C., assignor, by mesne assignments, to Utilities Corporation of Maryland, Washington, D. C., a Corporation of Maryland. Filed May 11, 1927, Serial No. 190,473. Renewed Sept. 26, 1928. 4 Claims. (Cl. 299—112.)

1. In a device of the character described, a nozzle, a rigid tube extending through the nozzle, a pin arranged across the interior of the outlet end of the tube, a flexible hose within the tube and abutting against said pin, said pin preventing water passing through the hose from driving the latter out of the tube, a handle surrounding the tube and arranged exteriorly of the nozzle, said hose extending into the portion of the tube which is surrounded by the handle means extending through the tube and handle and engaging the hose for use in compressing the latter, and a supply hose connected to said tube.



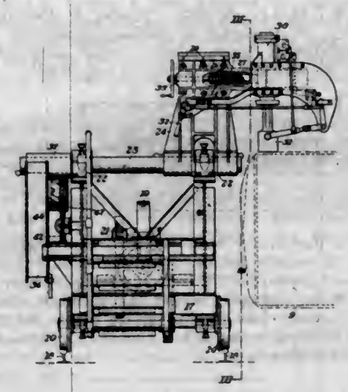
4. In combination, a nozzle having an apertured end, a rigid tube extending through the aperture in the end of the nozzle and having threads arranged within the nozzle, a handle through which the tube extends, means at the outlet end of the handle for limiting the movement thereof in one direction on the tube, a packing washer arranged on the tube between the handle and the apertured end of the nozzle, another packing washer on the tube and abutting the inner surface of the apertured end of the nozzle, a nut engaging the threads of the tube for securing the

handle to the nozzle and for compressing the packing, a pin extending across the interior of the outlet end of the tube, a flexible hose within the tube and abutting against said pin for preventing the hose from being driven out of the tube by water flowing through the latter, said hose extending into the portion of the tube surrounded by the handle and means for compressing said hose within the handle, said last mentioned means having a part projecting through the handle.

---

1,691,499. AUTOMATIC TRAIN CONTROL. DANIEL HERBERT SCHWEYER, Easton, Pa. Filed Dec. 24, 1924. Serial No. 757,835. 10 Claims. (Cl. 246—180.)

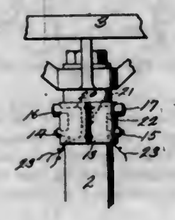
1. Train control apparatus including two normally closed electrical vehicle circuits having normally energized visual signal devices therein for different controlling conditions, and means, having cooperable elements on the vehicle and track, controlling said circuits when passing control locations of the track for deenergizing either one or both of said devices.



---

1,691,500. DYEING OF WOOL AND/OR SILK. CECIL SHAW, Huddersfield, England. Filed Nov. 7, 1927, Serial No. 231,776, and in Great Britain Nov. 26, 1926. 2 Claims. (Cl. 8—5.)

1. In the dyeing of wool and/or silk, the employment of dyestuffs of water-soluble 1.4 dihydroxy-2.5 dihalogenbenzoquinones applied from an acid dye bath.

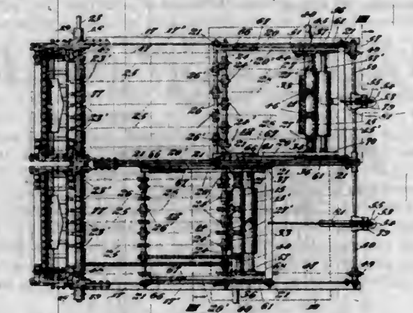


1,691,501. WELDING APPARATUS. WILLIAM P. SHIPMAN, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 17, 1925. Serial No. 23,837. 4 Claims. (Cl. 78—84.)

1. Welding apparatus, comprising a frame, a shaft rotatably mounted therein, a hammer connected to said shaft for rotation therewith and mounted laterally of said shaft for effective impact movement radially toward the axis of said shaft, and means for operating said hammer.

---

1,691,502. VEHICLE DIRECTION SIGNAL. HIRAM L. SNYDER, St. Louis, Mo. Filed Apr. 14, 1926. Serial No. 101,950. 2 Claims. (Cl. 177—311.)



1. The combination with a steering column, a sleeve carried by said column adjacent its upper end, indicating lamps carried by opposite sides of said sleeve, circuit makers and breakers carried by opposite sides of said sleeve below the respective indicating lamps, said circuit makers and breakers controlling circuits to the lamp.

---

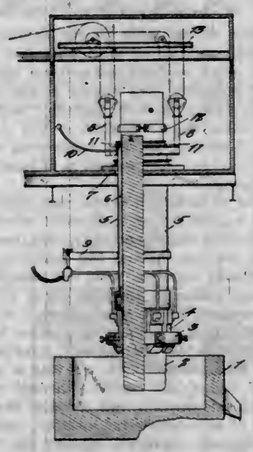
1,691,503. METHOD AND APPARATUS FOR HANDLING SHEET MATERIAL. LAWRENCE C. STEELE, Baltimore, Md. Filed Oct. 4, 1924. Serial No. 741,064. 14 Claims. (Cl. 271—27.)

1. In apparatus for conveying sheets from a pack resting on edge, the combination of a frame, a conveyor movable endwise of the frame and including movable conveyor elements, a depending roller carried by the forward end of the conveyor and adapted to contact laterally with the sheets and to adhere thereto with sufficient force to raise the sheets and to feed them to the conveyor, a driving sprocket for the roller, a pair of sprockets on the conveyor, a sprocket chain having one side engaging over the con-

veyor sprockets, passing therebetween, and looping over the roller sprocket, whereby the tension in said chain is effective to pull the roller into contact with the sheets.

---

1,691,504. MUCIN-SOLVENT TOOTH PASTE. CLARENCE C. VOGT, Pittsburgh, Pa., assignor to Glenn F. Bowman, Oakmont Borough, Pa. Filed Aug. 12, 1926. Serial No. 128,914. 11 Claims. (Cl. 167—9.)

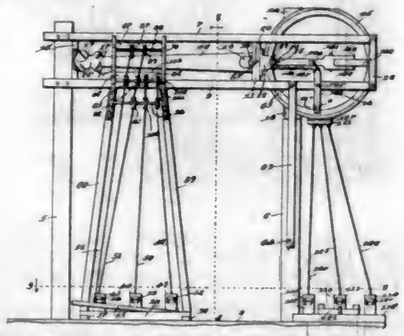


1. A mucin-dissolving tooth paste containing powdered abrasive, soap, glycerine and trisodium phosphate.

3. A mucin-dissolving tooth paste, containing a powdered abrasive, soap, glycerine and a mucin-dissolving compound of an alkali metal which produces in water solution a PH value greater than that which would be produced by the soap alone.

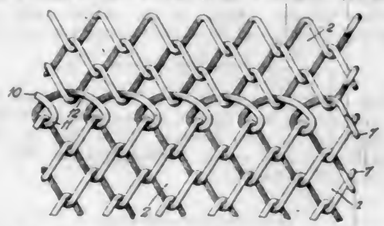
6. The method of making the herein described tooth paste which consists in dissolving trisodium phosphate in glycerine, thereafter adding to the mixture soap and a powdered abrasive, and thoroughly mixing the materials.

---



1,691,505. ELECTRODE. MARTIN WALTHER, Oslo, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Oslo, Norway. Filed May 14, 1926. Serial No. 109,190, and in Norway May 15, 1925. 14 Claims. (Cl. 266—1.6.)

1. The combination of an electrode baked while in use in the electric furnace, and having a mantle enveloping the electrode mass, an electrode holder, and a casing sur-

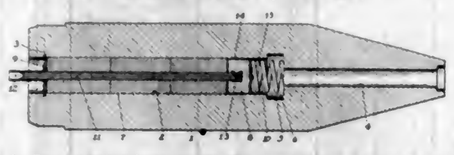


rounding and spaced from the mantle, and arranged above the electrode holder, the mantle together with the electrode therein contained being movable longitudinally with respect to the casing.

1,691,506. STRINGED-INSTRUMENT PLAYER. JOEL B. WOLFE, Fruitland, Wash. Filed Nov. 27, 1925. Serial No. 71,768. 12 Claims. (Cl. 84—320.)

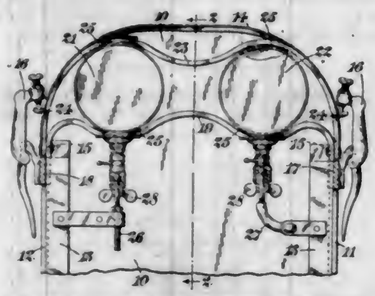
1. In a means for playing a stringed instrument having a sounding body and a neck, a frame for holding the instrument, pedal operated mechanism on said frame for plucking the strings abreast of the sounding body, and pedal operated mechanism for pressing and stopping the strings along the neck of the instrument, said last named mechanism being slidably mounted on said frame for movement to different positions along the instrument's neck.

1,691,507. WOVEN-WIRE FABRIC AND METHOD OF MAKING IT. JOHN C. ANDERSON, Keyport, N. J. Filed Jan. 28, 1925. Serial No. 5,281. 6 Claims. (Cl. 245—6.)



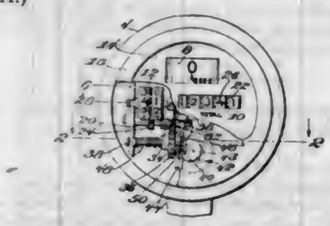
1. A sectional woven wire fabric having unconfined outer edges and composed of sections woven from right-hand coils and other sections woven from left-hand coils, and connecting members each having means for engaging and holding the end coils of the adjacent sections in substantially the same space relation as the corresponding coils within each section, thereby connecting said sections so that their unconfined outer edges are in substantial alinement with one another.

3. The method of making a woven wire fabric that comprises weaving a plurality of sections of wire fabric composed of coils having right-hand curvature, weaving a plurality of other sections having left-hand curvature, and joining said sections together, with the right and left sections alternating and with the side edges of all of said sections in alinement, by placing adjacent to the end of each successive section a connecting member having openings which are alternately adapted to interengage with the right and left wires respectively, weaving a wire similar to the wires of one of said sections through the loops of the end wire of said section and through the proper set of the openings of said connecting member, and then weaving a wire of opposite curvature through the loops of the end wire of the next section and through the remaining openings of said connecting member.



5. A joint for connecting sections of right-woven and left-woven wire fabric, comprising a connecting wire formed into sets of loops on opposite sides of said wire, the set of loops on one side of said connecting wire being interengaged with the loops of the end-wires of the right-woven section, and the set of loops on the other side of said connecting wire being interengaged with the loops of the end wires of the left-woven section.

1,691,508. FLOAT LIGHT. ROBERT J. ANDERSON, Sewickley, Pa., assignor to National Fireworks, Inc., a Corporation of Massachusetts. Filed June 23, 1927. Serial No. 200,792. 6 Claims. (Cl. 9—8.3.)



1. In a pyrotechnic torch the combination with a body adapted to contain and carry the charge as it burns and to that end possessing a charge-containing chamber formed within it, an abutment within the chamber adapted to sustain a charge, and yielding means within the chamber adapted to engage a charge and hold it as it burns to place upon said abutment.

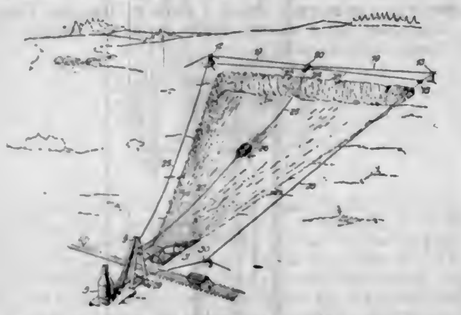
1,691,509. TANK FOR INFLAMMABLE LIQUIDS. PERCY BENJAMIN ASHWORTH, Cam, England, assignor to R. A. Lister & Company, Limited, Kursley, Gloucestershire, England, a British Company. Filed Feb. 4, 1928, Serial No. 251,926, and in Great Britain Apr. 7, 1927. 6 Claims. (Cl. 280—5.)

1. A housing for a tank containing inflammable liquid that is supplied from said tank to an internal-combustion engine, comprising a removable closure-member for the housing and a bracket within said housing so arranged that the tank is gripped between the closure-member and the bracket when the housing is closed, but released when it is open.

1,691,510. ODOMETER. ALBERT L. BARRETT, Dorchester, Mass., assignor to Standard Thermometer Company, Roxbury, Mass., a Corporation of Maine. Filed Aug. 6, 1925. Serial No. 48,477. 1 Claim. (Cl. 235—144.)

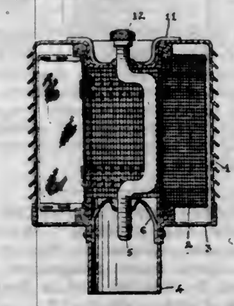
An odometer having, in combination, a counter supporting shaft, total and trip counter on the shaft, one of the wheels of the total counter being connected to rotate the shaft, an advancing gear shaft, two adjacent pinions loosely mounted on the advancing gear shaft, connections between one of the pinions and the counter supporting shaft, the other pinion connecting with the trip counter, an intermediate gear normally meshing with both of the adjacent gears and having a cam surface, a shaft on which the intermediate gear is mounted, a resetting button having a gear adapted to engage with the intermediate gear and provided with a flange to engage with the cam whereby the intermediate gear may be disengaged from the first of said pinions and rotated independently of the total counter to reset the trip counter.

1,691,511. PROCESS OF MAKING CHEMICAL PULP. JOHN S. BATES, Bathurst, New Brunswick, Canada. Filed Mar. 2, 1925. Serial No. 12,546. 21 Claims. (Cl. 23—185.)



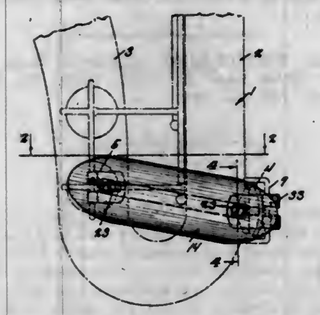
1. In the manufacture of chemical pulp, the steps of settling kraft green liquor; separating the supernatant clear liquor from the underlying dregs; and causticizing the clear liquor.

1,691,512. FASTENING DEVICE FOR ADJUSTABLE SKI EARS. RASMUS BERGE, Oslo, Norway, assignor to A. Gresvig, Oslo, Norway. Filed Nov. 26, 1926, Serial No. 150,973, and in Norway Nov. 28, 1925. 2 Claims. (Cl. 208—184.)



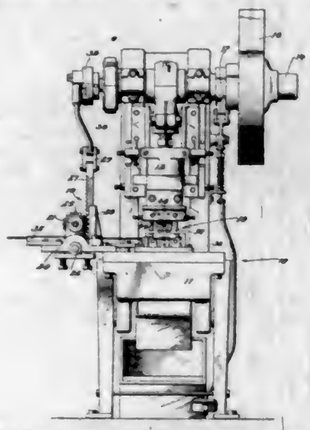
1. A fastening device for ski-ears comprising a toe-plate having an upturned flange, said plate being provided with a circular aperture, a disk cooperating with said aperture, and means for securing said disk to the ski, said means being positioned eccentrically with respect to said aperture to permit adjustment of the plate.

1,691,513. LOADING AND DUMPING DEVICE. IRA EDWIN BURKETT. Macon, Ga. Filed Apr. 2, 1924. Serial No. 703,767. 1 Claim. (Cl. 214—105.)



In a loading and dumping device, the combination of a scraper, pulling cables attached respectively to the front and rear of said scraper and secured to take-up and let-out devices located at a predetermined point for drawing the scraper forward and backward; a standing cable extended at a substantial angle to a mesne line of movement of the scraper between fixable anchorages remote from said take-up and let-out devices; a cable carrier mounted to move along said standing cable from end to end of the latter and having a pulley over which the backward pulling cable of the scraper passes for drawing the latter to its limit of backward movement, a pulley connected with one of said anchorages over which said backward pulling cable directly passes from the cable carrier to its take-up and let-out device; a holding cable having one end fixed to the cable carrier and its other end secured to a take-up and let-out device at said predetermined point of control for holding and shifting said carrier to the point along a line from which the scraper movement is desired; a pulley connected to the other of said anchorages over which said holding cable passes direct from said cable carrier to its take-up and let-out device for holding the carrier normally stationary from a point adjacent one limit of the latter's movement along said standing cable; means for upsetting and dumping the scraper along its variably directable line of movement; and power-driven means associated with said take-up and let-out devices for selectively operating the latter to reel and unreel said pulling and holding cables from said predetermined point of control remote from the operative area of said scraper, substantially as described.

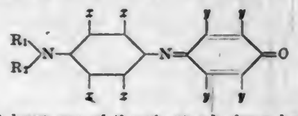
1,691,514. MEANS FOR CLEANING FILTERS. LEWIS L. DOLLINGER, Rochester, N. Y., assignor to Staynew Filter Corporation, Rochester, N. Y., a Corporation of New York. Filed Apr. 12, 1926. Serial No. 101,294. 4 Claims. (Cl. 183—61.)



1. In a filter, the combination of a casing having an inlet, a continuous filtering screen mounted within said casing and having an outlet, a draw bolt projecting into said filtering screen from one end of said casing and adapted to clamp said filtering screen in place in said casing, an air duct in said draw bolt having an inlet at one end, an outlet in the side of said draw bolt, said draw bolt being adapted to be rotated to direct said outlets in said draw bolt progressively over sectional areas of the inside of the continuous filtering screen.

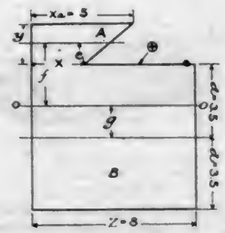
1,691,515. REST ATTACHMENT FOR SAXOPHONES. FRANK L. GESFORD, Alturas, Calif. Filed Mar. 15, 1927. Serial No. 175,575. 12 Claims. (Cl. 84—385.)

1. The combination with a valved wind musical instrument of the saxophone type including the usual valves, of a rest position in outwardly spaced relation to one of the valves and constituting a guard therefor.



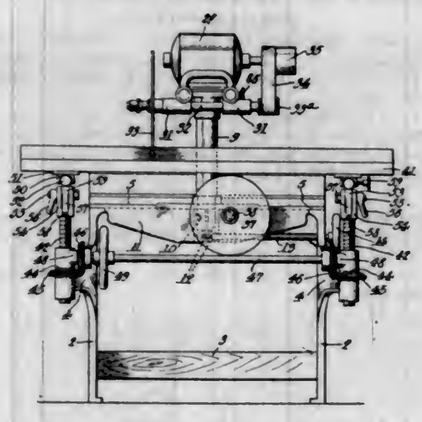
1,691,516. MACHINE FOR MAKING HAIRPINS. HARRY V. GLOBE, Oakland, Calif., assignor, by direct and mesne assignments, to Veitch Manufacturing Company, a Corporation of Nevada. Filed Sept. 7, 1926. Serial No. 133,833. 5 Claims. (Cl. 140—87.)

1. A die for forming a hairpin comprising a stationary die part, a reciprocable die part, supporting means for supporting a billet of material intermediate the die parts in position to be operated upon thereby, cooperative means on the die parts for shearing the material to proper length, removing the supporting means and forming the hairpin in a continuous operation.



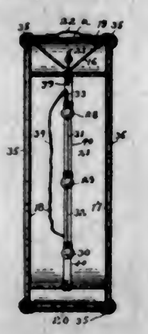
1,691,517. PROCESS FOR THE DYEING OF CELLULOSE ESTERS AND ETHERS. ARMIN GOESCHKE, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Nov. 4, 1926, Serial No. 146,283, and in Switzerland Nov. 14, 1925. 24 Claims. (Cl. 8—5.2.)

1. A process for the dyeing of a group of cellulose derivatives comprising cellulose esters and ethers which consists in dyeing this material with indophenols which may be represented by the general formula:



wherein at least one of the *y*'s stands for a halogen atom and wherein the other *y*'s mean halogen atoms or hydrogen atoms, the *x*'s representing hydrogen atoms or substituents which contain at the most two carbon atoms and $R_1$ and $R_2$ a hydrogen atom, alkyl, aryl or aralkyl residues.

1,691,518. PISTON RING. ELBERT J. HALL, Berkeley, Calif. Filed Sept. 22, 1925. Serial No. 57,932. 7 Claims. (Cl. 74—109.)

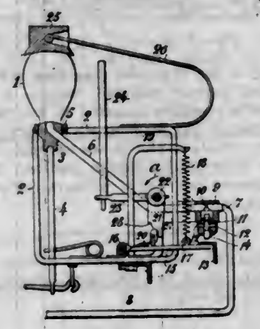


1. A wear compensated piston ring having an outer cylinder wall engaging surface, an undercut therefrom to provide an inward taper adapted as the ring wears in thickness to simultaneously reduce the area of the cylinder wall engaging surface, the angle of the undercut being such as to maintain approximately constant the pressure per unit area exerted by the ring on the cylinder wall throughout the life of the ring.

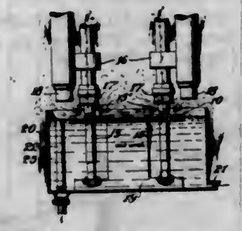
1,691,519. WOODWORKING MACHINE. MACKINTOSH HUTCHINSON, Philadelphia, Pa. Filed Apr. 12, 1922. Serial No. 551,892. 4 Claims. (Cl. 144—3.)

1. In a woodworking machine comprising a saw and means for driving the same; a work supporting table beneath the saw, a track upon which the table is adjustable laterally, spaced apart screws with which said track is connected for raising and lowering the table, two-part member sleeves through which the screws pass, nuts in threaded engagement with said screws and disposed between the members of the sleeves, gears connected to said nuts, and a counter-shaft fitting at opposite ends in sockets formed as a part of the two-part member sleeves provided with gears coacting with the gears of said nuts for simultaneously adjusting both screws for raising or lowering the table.

1,691,520. ELECTRIC SIGN. JOHN F. IRELAND, Pennville, Ind. Filed May 31, 1927. Serial No. 195,267. 1 Claim. (Cl. 40—132.)



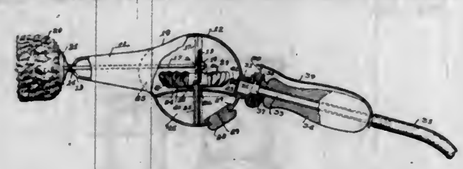
A sign comprising in combination, two side members identical with each other and spaced apart parallel with each other and formed of metal tubing, cross members rigidly connecting said side members and together with the side members forming a skeleton frame-work, a shaft secured to the upper cross members and located midway of and parallel with said side members and extending out



therefrom at one end, an eye bolt mounted on said shaft, a brace strip secured at its ends to two of the lower cross members with its central portion attached to said eye bolt, fabric covering said framework and secured thereto, transparent material known as aeroplane dope applied to said fabric, advertising matter applied to said fabric, means for adjustably suspending the sign by said shaft, electric light fixtures located between said two sides of the frame, means for conducting electric current through said fixtures, and means for reinforcing the edges of the sign, all substantially as set forth.

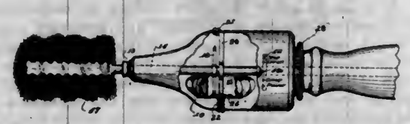
1,691,521. RACING GAME VALVE. THOMAS CHRISTIAN JENSEN, Copenhagen, Denmark. Filed Aug. 1, 1927. Serial No. 209,991. 2 Claims. (Cl. 273—86.)

1. In a game with a series of inflatable dolls, a rail, above this rail a series of valves, adapted to be opened when said rail is lifted, said rail fitted on arms held down by a cam rail on a shaft operatable under action of the exploding of a doll, springs adapted to lift said arms, on the said cam being turned.



1,691,522. METHOD OF ELECTRIC RIVETING. FRANK P. KOBERT, Amityville, N. Y. Filed Jan. 22, 1921, Serial No. 439,191. Renewed Mar. 23, 1928. 4 Claims. (Cl. 219—2.)

1. The method of assembling metal articles by electric riveting which comprises positioning a plurality of metal rivets in a metal piece, passing electric current through the heads of said rivets and through said piece so as to heat said heads locally without substantially heating the shanks of said rivets while dissipating the heat from said shanks by cooling the same, and thereafter heading said rivets so as to hot forge said heads over and into said piece.



1,691,523. WASHING MACHINE. OTHMAR MAYCEN, New York, N. Y. Filed May 9, 1927. Serial No. 189,952. 7 Claims. (Cl. 15—29.)

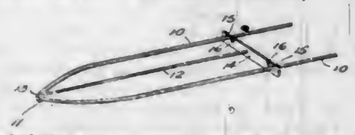
1. In a washing machine the combination comprising a hollow shell having a pointed end, a rotary shaft projecting from said shell at its pointed end, gearing means secured to said shaft, a bracket to serve as a journal for said rotary shaft, gearing means engaging the gearing on said rotary shaft, water actuated means driving said gearing means, a plate with an aperture dividing off a compartment within the shell, an entrance into said compartment, means to close

said entrance, means to supply water to the water actuated means, and a wiper detachably secured to the end of the shaft projecting from the shell.

1,691,524. WASHING MACHINE. OTHMAR MAYCEN, New York, N. Y. Filed June 20, 1927. Serial No. 200,172. 13 Claims. (Cl. 15—24.)

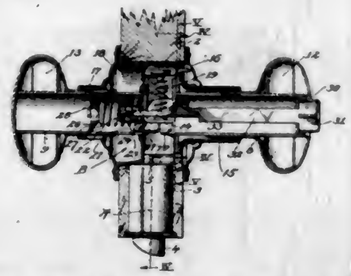
1. In a washing machine the combination of a bottle shaped shell open at its large end, an axially disposed hollow rotary tool shaft, projecting from said shell at its neck and mounted within the shell, gearing secured to said shaft, water actuated means engaging said gearing, a compartment tightly inserted into and held within the rear part of the aforesaid shell, an opening in the outside wall and a central aperture in the inside wall of said compartment opening into said shell, a handle detachably secured in the opening of the outside wall, a tube passing through said handle and being adapted to be connected to a water supply and terminating closely to aforesaid aperture, another aperture in the inside wall of aforesaid compartment for directing a stream of water against said water actuated means, a slot in the side of the shell, a plate valve for controlling the flow of the water, rotatably secured to the inside wall of the compartment, and a double spiral brush attached to the front of the hollow tool shaft.

1,691,525. CLOSURE FOR BOTTLES. ANTHONY F. MCDONNELL, Dunmore, Pa., assignor of one-third to William Aloysius Quinn, Scranton, Pa. Filed Apr. 17, 1928. Serial No. 270,748. 1 Claim. (Cl. 215—39.)



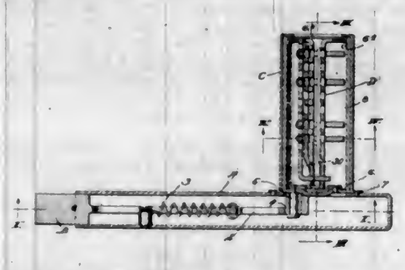
A bottle or other container having its neck formed with beads whose upper sides form shoulders inclined upwardly and peripherally toward the mouth and whose outer sides form parts inclined upwardly and outwardly toward the mouth, so that the upwardly and peripherally inclined shoulders will engage the inward projections of a cap crimped or contracted thereon and lift the cap off the neck when turned, and the outwardly inclined parts will assist in locking the cap when contracted on the neck, and ease its lifting by the shoulders when it is turned.

1,691,526. CLOSURE FOR CONTAINERS. ANTHONY FRANCIS MCDONNELL, Dunmore, Pa., assignor of one-third to William Aloysius Quinn, Scranton, Pa. Filed Apr. 17, 1928. Serial No. 270,749. 2 Claims. (Cl. 215—39.)



1. A bottle or other container having its neck formed with shoulders inclined peripherally and upwardly toward the mouth and arranged in pairs converging downwardly so as to be engaged by intervening inward projections on the rim of the cap and lift the cap when turned in either direction, and with parts intervening the shoulders inclined outwardly and upwardly toward the mouth to engage and lock the cap-rim contracted around the neck and to expand the rim when the cap is lifted by the inclined shoulders.

1,691,527. KNITTING FRAME. HIDEICHI SAKURAI and TARANO SAKURAI, Seattle, Wash. Filed May 27, 1926. Serial No. 111,977. 3 Claims. (Cl. 66—1.)

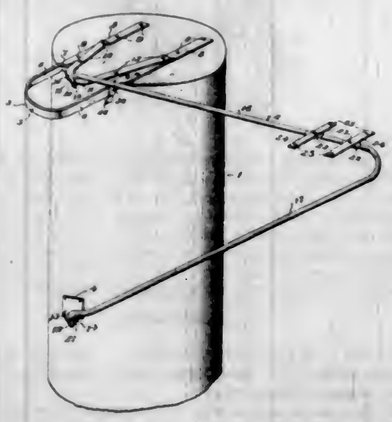


2. A knitting device comprising a frame having a substantially U-shaped member, a bar member located intermediate the length thereof and connected to said arms to retain the same parallel with each other, and a rod rigidly secured at one end thereof to said bar and connected at its other end to the first named member at the bend thereof.

1,691,528. DOOR LATCH. WALTER R. SCHLAGE, San Francisco, Calif., assignor to Schlage Lock Company, San Francisco, Calif., a Corporation of California. Filed Mar. 6, 1926. Serial No. 92,703. 18 Claims. (Cl. 292—169.)

1. In a latch of the character described, a housing, a bolt mounted therein, an inner and an outer knob journalled in the housing, means actuated by each knob whereby the bolt may be retracted and means carried by the inner knob whereby the outer knob and bolt actuating mechanism is released so as to be free to rotate without retracting the bolt.

1,691,529. KEY LOCK. WALTER R. SCHLAGE, San Francisco, Calif., assignor to Schlage Lock Company, San Francisco, Calif., a Corporation of California. Filed Jan. 24, 1927. Serial No. 163,024. 7 Claims. (Cl. 70—46.)

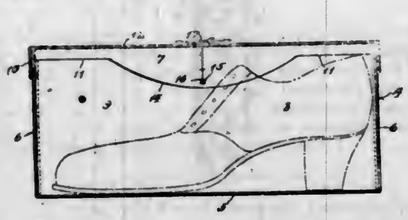


1. In a lock of the character described, a housing, a rotatable tumbler carrier mounted therein, a plurality of radially movable tumblers mounted in the carrier, means in opposite sides of the housing with which the tumblers are adapted to interlock, and means engaging the tumblers and normally maintaining certain tumblers projected for locking engagement and other tumblers retracted and out of locking engagement.

1,691,530. GLASS-TUBE CUTTER. FRANK A. SLAYTON, Waskom, Tex. Filed Nov. 18, 1926. Serial No. 149,228. 1 Claim. (Cl. 49—52.)

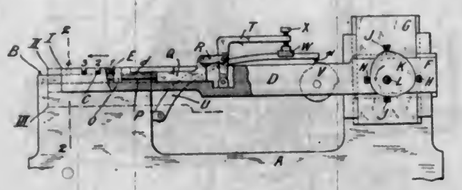
A glass cutting tool comprising a pair of parallel rods with hardened steel rollers at their ends movable transversely at the edges of the rods, a bow spring controlling the resiliency of the rods, a grooved annular spacer between the rods, and an adjustable clamp to vary the pressure of cutting movable relative to the spacer.

1,691,531. ADJUSTABLE MAIL-BOX SUPPORT. JAMES A. SLUSS, Knoxville, Tenn. Filed Apr. 26, 1927. Serial No. 186,753. 8 Claims. (Cl. 232—40.)



1. A device of the character described comprising a standard, a support, means carried by the standard and loosely engaged by the support to pivotally connect the support with said standard for movement in a horizontal plane, a bracket extending from said standard beneath a portion of said support to brace the support, and a latch movably connected with said bracket and adapted to be moved into and out of position to engage said support and releasably hold the support in a set position.

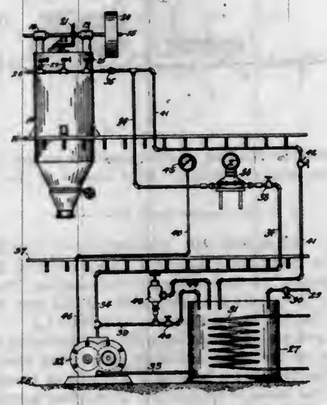
1,691,532. SOLDER FOR ALUMINUM. OSKAR SPENGLER, Dessau in Anhalt, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort, Germany. Filed July 13, 1925, Serial No. 43,399, and in Germany Sept. 24, 1924. 2 Claims. (Cl. 75—1.)



1. As a solder for aluminum, an alloy comprising about 85–95% aluminum and about 5–15% of silicon.

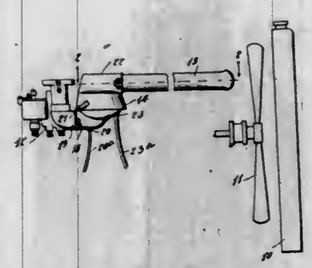
1,691,533. SHOE BOX. DELMAR ALBERT STEVENS, Chicago, Ill. Filed May 28, 1927. Serial No. 194,961. 3 Claims. (Cl. 229—15.)

1. A shoe box having a width and length for accommodating a pair of shoes side by side and resting upon the soles and heels in an upright position, a cover for the box, a longitudinal fixed partition within the box for forming a compartment for each shoe, a central recess in the upper edge of the partition so arranged as to allow easy accessibility to the shoes when removing them from the box.



1,691,534. MACHINE FOR THE MANUFACTURE OF FISHHOOKS. MATHIAS TOPP, Gjovik, Norway, assignor to O. Mustad & Son, Oslo, Norway. Filed Jan. 21, 1926, Serial No. 82,820, and in Germany Jan. 24, 1925. 10 Claims. (Cl. 29—9.)

1. In a machine for making fish hooks, a horizontal work surface for supporting the hook blanks, a blank feeder extending along one side of said surface and having notches therein for the reception of the blanks, means in the feeder for clamping the blanks in the notches, means to impart to the feeder a reciprocating motion in rectilinear directions comprising a slide in which said feeder is mounted, and means to move the feeder horizontally in the slide and to move the latter vertically between the movements of the feeder.

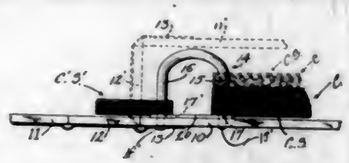


1,691,535. APPARATUS FOR MIXING DRY AND LIQUID MATERIALS. LIONEL TRUE, Springville, N. Y. Filed Feb. 23, 1928. Serial No. 256,174. 21 Claims. (Cl. 259—23.)

1. An apparatus of the character described comprising in combination with a mixing chamber having means therein for mixing dry pulverulent materials; means for distributively supplying liquid to the interior of the chamber for mixture with the dry materials mixing therein, said means including a plurality of delivery nozzles discharging into

different parts of said chamber from points above the materials under mixing operation, a reservoir tank for liquid to be supplied through said nozzles, a pump for forcing the liquid from said tank to the nozzles, and means for heating the liquid in the tank.

1,691,536. AIR CLEANER. CHARLES A. WINSLOW, Vallejo, and ELBERT J. HALL, Berkeley, Calif. Filed Sept. 25, 1924. Serial No. 739,960. 10 Claims. (Cl. 183—82.)



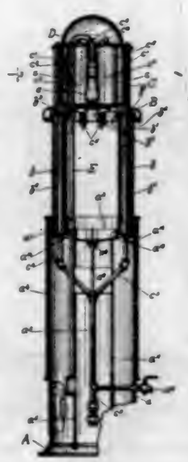
1. An air cleaner of the character specified comprising a casing having an air inlet at one end and an air outlet at the opposite end and an opening adjacent the outlet for the escape of impurities eliminated from the air, a nozzle within the outlet end of the casing and a cooperating petticoat within the inlet end of the casing, said parts serving to deflect the air from a straight course to assist materially in the separation of the impurities therefrom.

1,691,537. FLAT-FOLD BINDER DEVICE. WILLIAM J. WRIGHT and ARTHUR S. WHITEHEAD, Seattle, Wash. Filed Feb. 7, 1927. Serial No. 166,331. 6 Claims. (Cl. 281—25.)

6. A leaf attaching clip of an inverted U-shape having each of its legs formed to provide intermediate the length thereof a shoulder and a reduced portion below the plane

of the respective shoulder, each of said reduced portions being of a substantially oblong shape in horizontal section

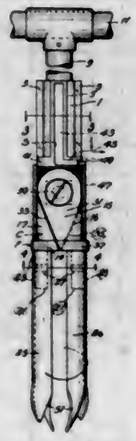
to facilitate the bending of the respective reduced portions of the legs in a direction at right angles to the plane of the clip.



---

1,691,538. PROCESS OF PRESERVING BEVERAGES. FRANK J. ANDRESS, Cincinnati, Ohio, assignor, by mesne assignments, to The Brownie Corporation, New York, N. Y., a Corporation of Delaware. Filed May 16, 1925. Serial No. 30,879. 2 Claims. (Cl. 99—1.)

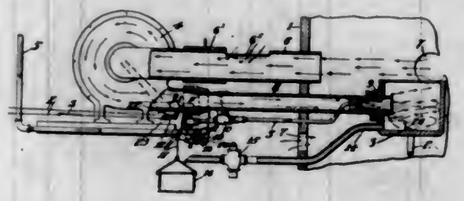
1. The process of preparing milk and flavoring beverage substances of the class described comprising the steps of treating the same with hydrogen peroxide at temperatures at which the same is active as a germicidal agent, but at temperatures below which the beverage is injuriously affected, determining the acidity of the resulting product and adding an innocuous acid neutralizing agent in sufficient quantity to eliminate the acidity.



---

1,691,539. VISIBLE DISPENSING APPARATUS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Dec. 30, 1925. Serial No. 78,318. 4 Claims. (Cl. 221—67.)

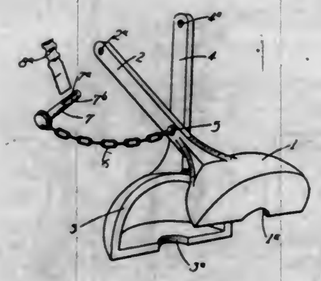
4. In combination with a liquid dispensing apparatus, a plurality of independent transparent liquid containers in close proximity to each other, a transparent casing enclosing said containers, incandescent means between said containers and inside of said casing, illuminating and heating the liquid in said containers, and separate valve means for withdrawing liquid from each of said containers.



1,691,540. AUGER. THEODORE BIRKENMAIER, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 9, 1926. Serial No. 128,083. 10 Claims. (Cl. 255—65.)

10. An auger comprising relatively hinged blade members cylindrically formed at the hinging portion therebetween, a locking sleeve adapted to slide over said hinge portions to lock said blades in closed position, and to slide therefrom, a tortuous guide means formed in one of the members and a lug on said sleeve adapted to slidably engage said guide means.

---

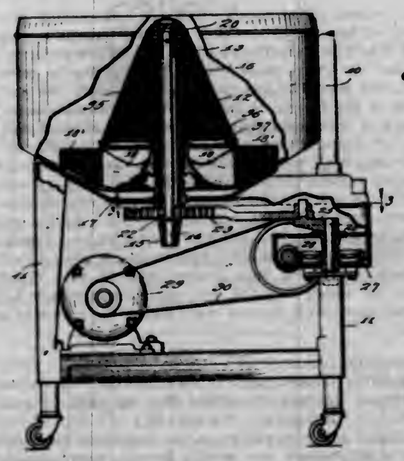


1,691,541. OIL BURNER. IWAN E. CARLSON, Watertown, and LOREN R. CHURCHILL, Wollaston, Mass. Filed Aug. 17, 1925. Serial No. 50,614. 2 Claims. (Cl. 158—28.)

1. In an oil burner, a combustion chamber adapted to be mounted within a heating plant, an air pipe delivering to said chamber, a Venturi tube in said air pipe, a fuel pipe entering said air pipe and terminating within said Venturi tube, a blower operatively connecting with said air pipe, an air intake for said blower having its inlet end disposed within the heating plant in juxtaposition to said combustion chamber, whereby the air is pre-heated before delivery to said blower, said Venturi tube entering the chamber laterally thereof whereby the mixture delivered against the chamber wall is given a swirling effect within the chamber, an automatic control for said fuel supply, and an actuating mechanism for said control operated automatically by the overflow fuel from said combustion chamber.

1,691,542. VALVE SEAL FOR REVOLUBLE-STEM VALVES. REX SCRIPPS CLARK, Norco, Calif., assignor to Norco Mfg. Co., Norco, Calif., a Corporation of California. Filed Mar. 24, 1926. Serial No. 96,045. 6 Claims. (Cl. 70—123.)

1. In an apparatus for sealing revoluble valve stems, a pair of duplicate members provided with recesses adapted to fit over the extended end of the valve stem and provided with extended arm members, means for pivotally connecting the said arm members together intermediate their ends, and means for sealing the extended ends of the said arms in alignment with each other.



---

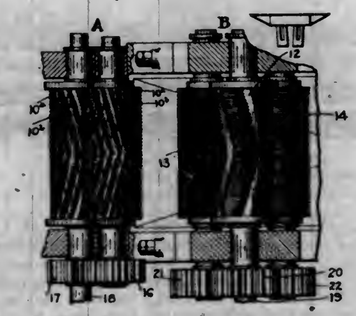
1,691,543. COMBINED WATERPROOF AND ADHESIVE COMPOSITION. CARROLL ALBERT CRAWFORD, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 12, 1922. Serial No. 587,845. 6 Claims. (Cl. 134—15.)

1. A combined waterproof and adhesive composition consisting of paracumarone resin, carnauba wax, and raw linseed oil.

---

1,691,544. WASHING MACHINE. ROBERT J. DOW, St. Paul, Minn. Filed June 11, 1926. Serial No. 115,290. 8 Claims. (Cl. 259—101.)

1. In a washing machine having a tub, an agitator oscillatable about a vertical axis in said tub, and means for oscillating said agitator, said agitator including a bowl portion adjacent to the bottom of said tub and one or more water-agitating blades which are flexible in the plane of their oscillation.

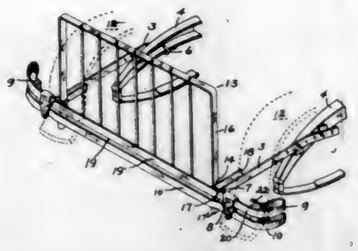


1,691,545. GAUGE-GLASS ATTACHMENT. GEORGE EARNST, Newark, N. J. Filed Dec. 17, 1925. Serial No. 76,048. 7 Claims. (Cl. 73—54.)

1. A device of the character described, including a gauge glass, heads at the upper and lower ends thereof communicating with a boiler, a reservoir containing coloring liquid positioned remotely below the lower head, means connecting said reservoir with said lower head, and means controlling the flow of liquid from said reservoir into said glass.

---

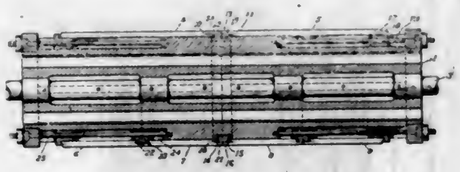
1,691,546. CANE MILL. FRANKLIN FARREL, Jr., New Haven, Conn., assignor, by mesne assignments, to Farrel Birmingham Company, Incorporated, Ansonia, Conn., a Corporation of Connecticut. Filed Feb. 16, 1921. Serial No. 445,527. 2 Claims. (Cl. 100—47.)



1. In a cane mill, two coacting cane crushing and juice expressing rolls, each having circumferential grooves forming ribs, the ribs of one roll adapted to mesh with those of the other roll, and each roll having generally longitudinally disposed grooves extending between the ends of said rolls and interrupting the ribs thereon to form teeth to hook into and draw in the cane, the longitudinal grooves in the upper roll having portions diverging from a point intermediate the ends of said roll in such a manner that the teeth formed at the ends of said grooves will attack the cane passing between said rolls before the teeth formed at the apex of the grooves, the longitudinal grooves in the lower roll having portions diverging from a point intermediate the ends of said rolls in such a manner that the teeth formed at the apex of said grooves will attack the

cane passing between said rolls before the teeth formed at the ends of said grooves, and means to drive said rolls, said means including means to drive one of said rolls at a greater surface speed than the other.

---

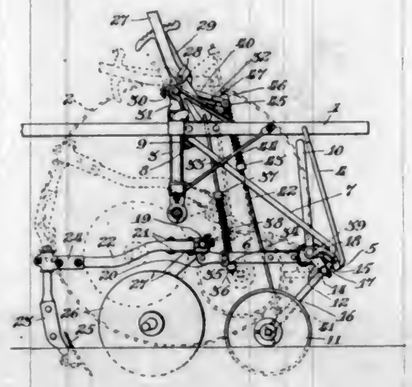


1,691,547. COMBINED BUMPER AND LUGGAGE CARRIER. ELECIE P. FARUM and EDWARD H. SPECHT, Oakland, Calif., assignors to Oakland Machinery Company, Oakland, Calif., a Corporation of California. Filed Jan. 5, 1925. Serial No. 517. 10 Claims. (Cl. 293—55.)

1. In a combined bumper and luggage carrier for automobiles, a pair of brackets adapted to be secured to the automobile, bumper extremities secured to said brackets and spaced transversely of the automobile, a pivotally mounted luggage carrier member interposed between said extremities, and a bumper secured to said extremities extending substantially from one to the other.

---

1,691,548. STEREOTYPE PLATE. JOHN J. HALLIWELL, Tuckahoe, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 14, 1926. Serial No. 154,666. 3 Claims. (Cl. 101—378.)



1. In a printing machine, the combination of a plate cylinder, a clamp bar extending around the cylinder and projecting above the surface thereof less than the thickness of a plate, a plurality of printing plates arranged on the cylinder and provided with adjacent shoulders engaging the bar and with abutting projections beyond the shoulders so as to form a continuous printing surface, and straight sided bars projecting above the cylinder less than the thickness of plate and extending longitudinally of the cylinder for preventing a movement of the plates around the cylinder.

---

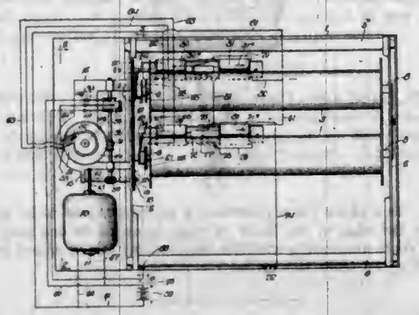
1,691,549. DISK-LISTER ATTACHMENT FOR CULTIVATORS. ROY H. KIPP, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 25, 1925. Serial No. 71,325. 7 Claims. (Cl. 97—54.)

1. A lister cultivator comprising a wheel supported frame, a pair of cultivator beams pivotally supported at their forward ends on the frame, earth working elements carried by the beams so as to operate near the rear ends of the beams, a pair of furrow guide wheels mounted on drag bars pivoted at positions spaced from the positions at which the beams are pivotally mounted, and a single lever having separate connections to a beam and a guide wheel

actuable to elevate a beam and a guide wheel differentially, the guide wheel having an angular movement about its pivot greater than the angular movement of the beam moved by the same lever.

---

1,691,550. VEHICLE SPRING. SAMUEL J. LESSING, St. Joseph, Mich. Filed Feb. 23, 1926. Serial No. 89,953. 3 Claims. (Cl. 267—47.)

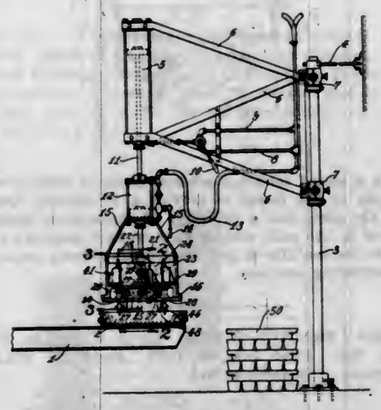


1. In leaf spring construction, the combination of a plurality of superposed leaves of different lengths having end and intermediate portions which are flat in cross section, so that the leaves engage each other flatwise in cross section, and means of interengagement between the end portions of the leaves, to hold the leaves in alinement, said means of interengagement comprising a reduced end portion forming a substantially flat tongue on the end of a leaf, and comprising opposing shoulders on the substantially flat exposed surface of the next longer leaf, disposed entirely within the width of the leaves, so that the side edges of the leaves are flush and smooth, said shoulders spaced apart a distance less than the width of the leaves and disposed in position to engage the side edges of said tongue, permitting endwise motion of said tongue between said shoulders, when the spring is flexed, but holding said tongue against lateral movement, thereby maintaining the leaves in alinement.

---

1,691,551. CHANGEABLE EXHIBITOR. WELCOME C. MARTIN, Chicago, Ill. Filed May 12, 1922. Serial No. 560,410. 11 Claims. (Cl. 40—53.)

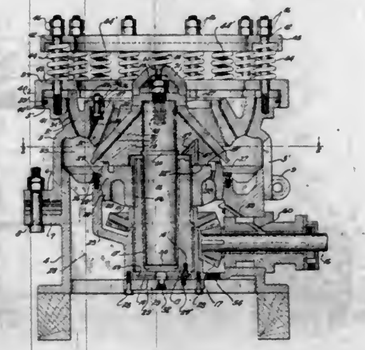
1. In a device of the character described, the combination of two reels, a web carried thereby, a live spindle for each reel, electrically actuated clutch means for each reel for connecting and disconnecting the same to and from its spindle, a motor, a gear train connecting the motor with said spindles for rotating the latter in opposite directions, means in circuit with said clutch means and controlled by the movement of the web for making and breaking the circuit through the clutch means of the winding reel, and rotary switch mechanism driven by the gear train and in said circuit and having segmental contact members of peripheral lengths proportionate to the length of the web



for reversing the action of said clutch means to change the direction of the movement of the web at predetermined points in its length.

---

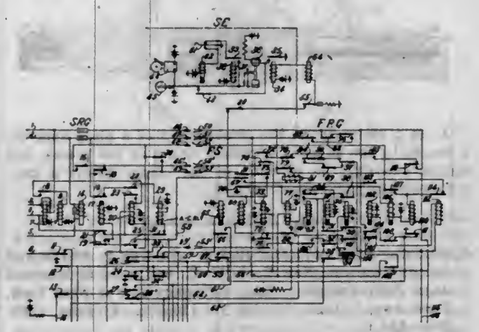
1,691,552. PIG-STACKING MACHINE. WILLIAM E. NEWNAM, Collinsville, Ill., assignor to National Lead Company, St. Louis, Mo., a Corporation of New Jersey. Filed Mar. 30, 1922. Serial No. 548,056. 16 Claims. (Cl. 214—6.)



1. A device for stacking pigs, comprising, a support, a carrier, a yielding screw on said carrier adapted to penetrate the pig, and means for mounting said carrier for manipulation on said support.

---

1,691,553. CRUSHER. HARVEY H. RUMPEL, Milwaukee, Wis., assignor to Smith Engineering Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 20, 1926. Serial No. 155,934. 28 Claims. (Cl. 83—10.)

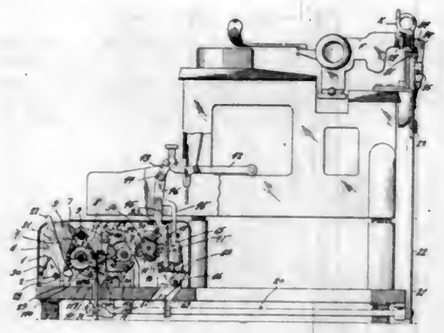


1. In a crushing machine, the combination of a frame, an eccentric member mounted therein and movable in a parallel plane, an inner crusher head mounted on the member and also movable therewith in a plane parallel to the plane of movement of the eccentric member, a fixed support upon which the inner crusher head bears, an outer crushing member spaced from the crusher head, the space between the two crushing members forming a passage for the material to be crushed, and yielding means acting to hold the outer crushing member in its normal crushing position, but permitting said crushing member to move in a direction to widen the passage between it and the crusher

head, when undue pressure is exerted against the outer crushing member by the material traveling through said passage.

---

1,691,554. TELEPHONE SYSTEM. WILLIE SAVILLE, Liverpool, England, assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 29, 1926, Serial No. 105,382, and in Great Britain May 26, 1925. 14 Claims. (Cl. 179—27.)

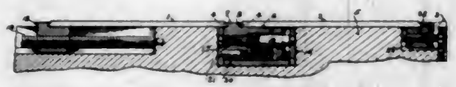


9. In a telephone system, a plurality of exchanges, subscribers' stations thereat, an observation operator's position in one of said exchanges, means for automatically connecting any one of said stations with said position upon the initiation of a call at said station, and means responsive to ringing current for automatically connecting any one of said stations to said position when said station is being called.

---

1,691,555. CALCULATING MACHINE. EDWARD C. SCHINKE, St. Louis, Mo., assignor to The Accountograph Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 1, 1921. Serial No. 497,791. 10 Claims. (Cl. 235—59.)

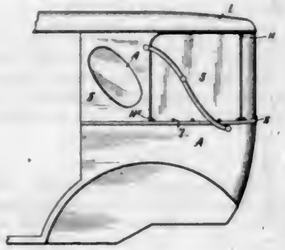
1. The combination of a typewriter having a platen carriage, a calculating mechanism comprising an accumulator provided with an actuator and a traveling denominational carriage movable step by step to change the denominational relation of the actuator to the accumulator, and feeding devices whereby motion is transmitted from said platen carriage to said denominational carriage, said feeding devices comprising a traveling power transmission member carried by said platen carriage, a driven member through which motion is transmitted to said denominational carriage, a



pair of abutment fingers pivoted to one of said members and extending into the path of the other member to provide for the transmission of movement to said driven member,

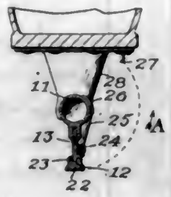
and automatic means whereby both of said pivoted abutment fingers are deflected laterally to prevent the transmission of movement to said driven member.

---



1,691,556. PLATE CLAMP. LOUIS A. SCHMIDT, Brooklyn, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed June 6, 1927. Serial No. 196,705. 7 Claims. (Cl. 101—378.)

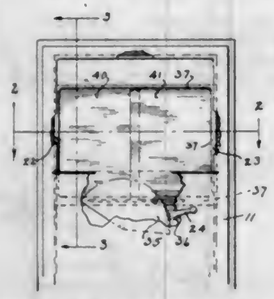
4. In a plate clamp, the combination of a plate support, a recess in the support, a rotary clamp in the recess, and means whereby the rotation of the clamp effects a sidewise adjusting movement thereof.



---

1,691,557. AUTOMOBILE BODY. ARTHUR P. SMITH and SAMUEL EICHEL, New York, N. Y., assignors to Harvard Auto Body Company, Inc., a Corporation of New York. Filed Aug. 2, 1926. Serial No. 126,502. 1 Claim. (Cl. 296—138.)

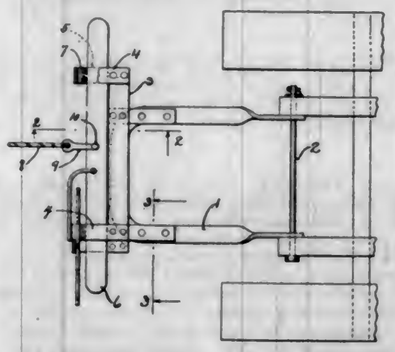
A passenger automobile body of the laundalet type having a rear door opening on each side, a horizontal frame rearwardly of the door openings, a rigid top, a side rigid member connecting the top and horizontal frame rearwardly of each door frame, and a plurality of flexible panels in combination with interlocking means at their marginal edges and co-acting interlocking means therefor at the rear edge of each of said side rigid members and at the said rigid top and extending horizontally thereof, as and for the purpose described.



1,691,558. SKATE-BLADE PROTECTOR. ROY D. TOLMAN, Worcester, Mass. Filed Feb. 11, 1925. Serial No. 8,443. 5 Claims. (Cl. 208—183.)

1. In a skate blade protector, a guard adapted to be held over the edge of the blade by flaps attached to one side of the skate and means whereby the covering can be raised and held away from the blade.

---

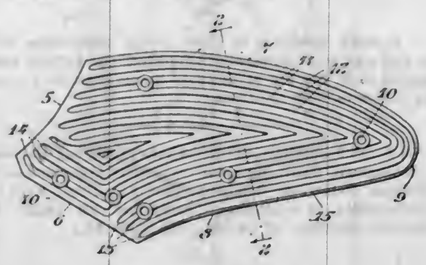


1,691,559. TWO-WAY ADJUSTABLE WINDOW. CHARLES H. WISHMEIER, near Indianapolis, Ind., assignor to Hubig Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 18, 1926. Serial No. 149,110. 2 Claims. (Cl. 296—44.)

1. In a closed vehicle a window frame, a sash movable vertically in the frame to provide a ventilating opening above the sash, and a plurality of transparent members mounted in the sash, one or more of said members being movable horizontally to provide a hand opening below the top ventilating opening.

---

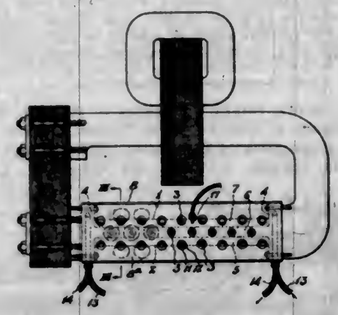
1,691,560. TRACTOR HITCH. LOUIS A. BASLER, Hartford, Wis. Filed Jan. 29, 1927. Serial No. 164,572. 3 Claims. (Cl. 280—33.10.)



1. A tractor hitch for a trailing implement comprising a frame for attachment to a tractor, a transverse slide carried by said frame and having means for attachment to

the trailing implement, a hand lever pivotally mounted upon said frame, a link connecting said lever and said slide, and means for locking said lever in any one of a plurality of adjusted positions, said lever being formed of two pivotally joined portions having relative rocking motion, and means for locking said portions together in any one of a plurality of relative positions of adjustment.

---

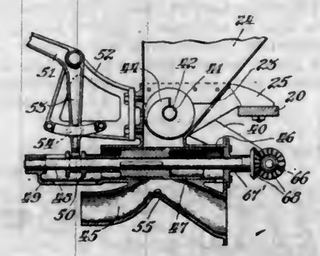


1,691,561. MOLDBOARD. WILLIAM LESLIE BEALL, Chattanooga, Tenn., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 4, 1924. Serial No. 735,736. 10 Claims. (Cl. 97—115.)

1. A cast metal moldboard having its rear or under side formed with a plurality of longitudinally extending grooves said grooves being formed in series paralleling the free edges thereof.

---

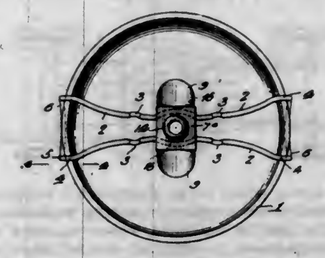
1,691,562. APPARATUS FOR ELECTRICALLY HEATING METAL PARTS. RICHARD E. BISSELL, Cleveland Heights, Ohio, assignor to Thompson Products, Incorporated, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 17, 1926. Serial No. 148,817. 4 Claims. (Cl. 219—47.)



1. An apparatus for heating metal parts comprising a primary winding and a short circuited secondary unit, including a heating element having one or more recesses adapted to receive the parts to be heated and a laminated element adapted to allow for relative expansion in the other parts of said unit.

---

1,691,563. POWDER-DUSTING MACHINE. LEOPOLD F. BURGER, Riverside, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 9, 1924. Serial No. 705,164. 9 Claims. (Cl. 221—137.)

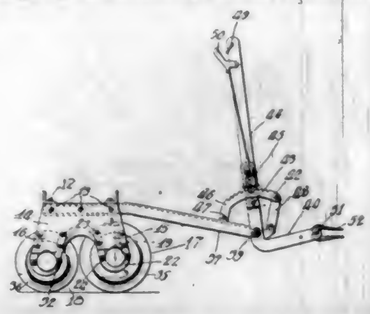


1. A dusting machine having in combination, a frame, a hopper supported thereon and provided with an opening in its bottom, feeding means in the hopper for feeding material therein to the opening, a chamber below the opening communicating with the hopper, a cutting tool in the

chamber for cutting into and discharging the material from the hopper, and means for adjusting said cutting tool to vary the quantity of material discharged thereby.

---

1,691,564. SMOKER'S NOVELTY. EDWIN CALDWELL, New York, N. Y. Filed Sept. 19, 1924. Serial No. 738,597. 13 Claims. (Cl. 131—51.)

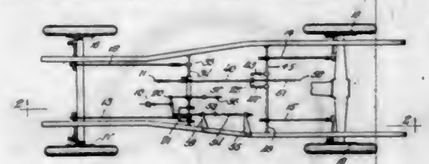


10. An ash receptacle including a tray member, a bridge comprising an elongated closed loop of resilient wire bent lengthwise to make the plane of the two stretches of wire arch-shaped and with the distance between the ends of the loop slightly less than the distance between the opposite walls of said tray and over which the ends may be sprung for support, an element having opposed hooks which may be hooked over the two longitudinal stretches of wire of the loop when said stretches are sprung toward one another, and a snuffer carried by said element having a converging passage, the walls of which are formed of good heat conducting material and the cross section of the passage at its smaller end being somewhat less than the normal cross section of a cigarette whereby when a cigarette is inserted, lighted end first, into said passage, the lighted end will be compressed in the converging passage, causing a retardation of the burning and finally extinguishment by reason of the chilling of the burning tobacco by conduction of its heat through the walls of the passage.

---

1,691,565. SOIL-PULVERIZING IMPLEMENT. WILLIAM D. DEWEND, South Bend, Ind., assignor to Oliver Chilled Plow Works, a Corporation of Indiana. Filed Jan. 28, 1924. Serial No. 688,978. 4 Claims. (Cl. 55—73.)

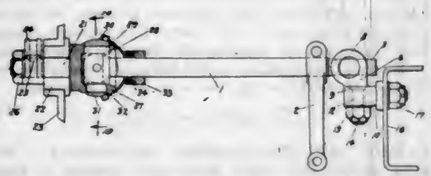
1. In a soil pulverizing implement, the combination of a frame, front and rear pulverizing gangs operatively connected to said frame by a pair of parallel axles fixed in relation to said frame and extending from side to side thereof, a draft member rigidly secured to said frame, a supplemental draft member pivotally connected to said first



mentioned draft member and extending forwardly therefrom and being adapted to be supported at a relatively fixed height at the forward end thereof, a hand lever op-

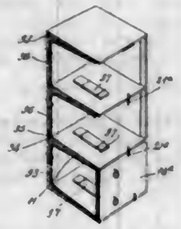
eratively related to said draft members for adjusting said members with respect to each other to vary the pressure on said front and rear gangs.

---



1,691,566. BRAKE. ADIELY Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1924. Serial No. 697,981. 11 Claims. (Cl. 188—204.)

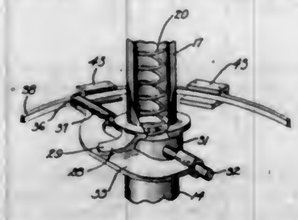
1. A steering wheel brake construction comprising an axle provided with a pair of steering knuckles, one at each end, a pair of steerable wheels mounted on said knuckles respectively to swing about the axis thereof, a pair of brakes for said wheels respectively and means for actuating said brakes, comprising an operating member common to both brakes, said actuating means having provisions whereby the relative braking effect on the two wheels is varied when the wheels are swung in steering, said actuating means comprising a triangular equalizing lever actuated by said common operating member.



---

1,691,567. CONTROL MECHANISM FOR VEHICLE WHEEL BRAKES. ADIEL Y. DODGE, South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 29, 1924. Serial No. 702,767. 10 Claims. (Cl. 188—194.)

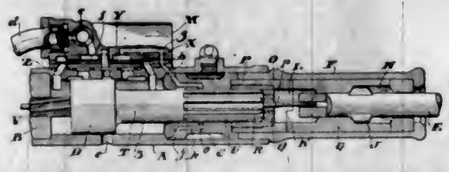
4. In a control mechanism for vehicle wheel brakes, a control shaft, means for operating the control shaft, a support for the end of the control shaft comprising; a joint consisting of a cylindrical member having a transverse bore for the end of said control shaft, a forked carrier member supporting the cylindrical member so said shaft end passes therethrough between said forks, and means for supporting the carrier member so it may have an oscillatory movement.



1,691,568. BURIAL VAULT. WALTER J. GORMAN, Jersey City, N. J. Filed Mar. 19, 1927. Serial No. 176,664. 7 Claims. (Cl. 72—7.)

1. A vault, L-shaped in cross section comprising back, top and end walls integrally connected, the bottom being adapted to fit the top of the next lower vault in a stack, and a door to close the front.

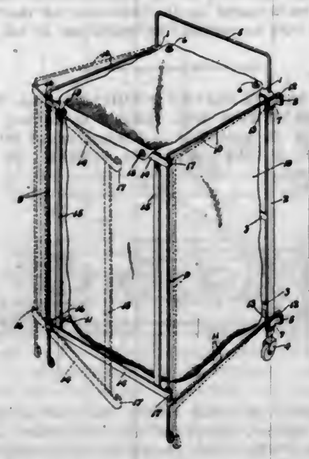
---



1,691,569. INDICATOR. VALENTINE FORD GREAVES, Burlingame, Calif., assignor, by mesne assignments, to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Jan. 23, 1922. Serial No. 531,079. 17 Claims. (Cl. 250—11.)

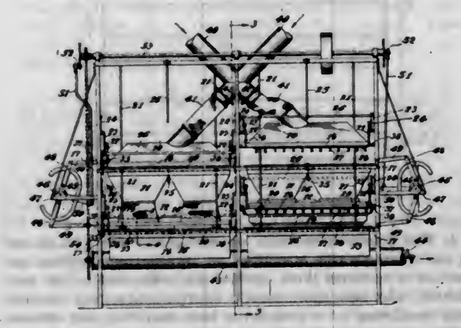
1. In a radio compass for ships or the like, means adapted to be rotated to point to a source of radiant energy, a rotatable member coaxially arranged with the first mentioned means, a tensioned member secured at opposite ends to said rotatable members respectively and tending to cause relative rotation thereof, and means controlling the amount of relative rotation operted in accordance with the position of one of the shafts relative to the ship.

---



1,691,570. ROCK DRILL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 7, 1926. Serial No. 114,232. 1 Claim. (Cl. 121—6.)

In a rock drill, the combination of a cylinder, a bushing in the front end of the cylinder, said bushing having a bore, a reciprocatory hammer piston in the cylinder, an extension on the piston slidable in the bore, said extension having flutes in its front end and a smooth cylindrical rearward portion, a valve chest on the cylinder having a valve chamber, a passage in the valve chest leading from a source of supply to the valve chamber, a throttle valve controlling the passage, and a passage leading from the valve chamber to the bore constantly exposed to pressure fluid from the valve chamber during the operation of the drill, said passage being controlled by the cylindrical portion of the extension for obtaining an uninterrupted flow of pressure fluid through the flutes during a portion of both the forward and rearward strokes of the piston.



1,691,571. PORTABLE AND COLLAPSIBLE BAG HOLDER. JOHN H. HAVEN, Grand Rapids, Mich. Filed Apr. 30, 1928. Serial No. 273,821. 6 Claims. (Cl. 83—26.)

3. In a device of the class described, a rear vertical frame having spaced apart legs at its sides, castors attached to the lower ends of said legs, a side frame pivotally connected to each leg to swing about a vertical axis, interengaging means on said side frames and legs for limiting the swing of the side frames in one direction to positions substantially at right angles to the rear frame and at the front thereof, the lower outer parts of said side frames being adapted to bear upon the same support as said castors, a front frame pivotally connected at one vertical edge at the front of one of said side frames to swing about a vertical axis, hooks at the opposite vertical edge of the front frame to engage with the other side frame and detachably connect therewith, pins extending upward from the upper end of the rear frame, other pins extending forward from the front frame near the upper edge thereof, and means connected to the upper end of the rear frame adapted to be manually grasped to tilt the device to the rear upon said castors whereby it may be moved thereon.

---

1,691,572. BOLTER FOR CARBON BLACK, ETC. WILLIAM S. HOSKINS, Warren, Pa., assignor to Columbian Carbon Company, Williamsport, Pa., a Corporation of Delaware. Filed Dec. 13, 1924. Serial No. 755,604. 8 Claims. (Cl. 209—405.)

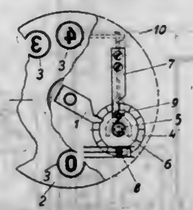
1. A bolter for pulverulent material including a casing having upper and lower separable sections, a screen within said casing, a frame above said screen, brushes carried by said frame in operative relationship to said screen, means for moving said frame back and forth, guiding means for said frame carried by said upper section, lost motion connections between said guiding means and said frame and permitting relative vertical movement, whereby the weight of the brushes is supported by said screen, and means for effecting a relative vertical movement of said sections to separate them, said guiding means serving to support said frame and brushes when the casing sections are separated.

---

1,691,573. PROCESS OF MAKING DIPOLYMER. IRVIN W. HUMPHREY, Wharton, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed July 20, 1926. Serial No. 123,812. 10 Claims. (Cl. 134—56.)

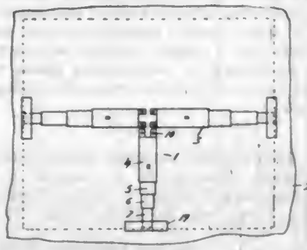
2. The process of preparing Dipolymer from pine oil which includes vaporizing pine oil and passing the vapors in intimate contact with a catalyst for such length of time and at such temperature as will effect dehydration and finally polymerization of a substantial part of the pine oil vapors to form "Dipolymer."

---



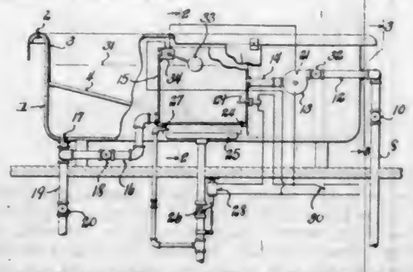
1,691,574. METHOD OF MAKING ROD PACKING. GEORGE C. JEROME, Chicago, Ill., assignor to Stewart Manufacturing Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 15, 1923. Serial No. 681,019. 1 Claim. (Cl. 29—156.61.)

The method of making a complete sectional rod packing or ring which comprises initially casting a plurality of sections each formed throughout to an oversize, and, without further treatment, finishing the ring by reducing each said section to the proper and identical size and shape throughout by pressing in a die whereby the sections of successively formed rings are of identical size and shape with interchangeable joint surfaces.



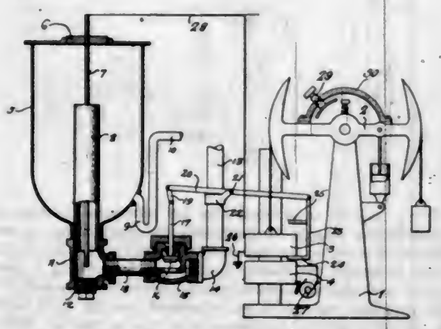
---

1,691,575. IMPULSE-DIAL APPARATUS FOR AUTOMATIC TELEPHONE SYSTEMS. WILHELM KRUSE, Berlin, Germany. Filed Apr. 7, 1927, Serial No. 181,684, and in Germany Apr. 10, 1926. 3 Claims. (Cl. 179—90.)



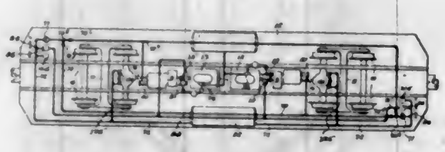
1. An impulse dial apparatus for telephone systems of the character described comprising in combination means adapted to send out a consecutive number of sets of impulses according to special indications for calling a particular subscriber, a step-by-step mechanism associated with said dial apparatus and operated once by each sending out of a set of impulses, and a spring contact short-circuiting the impulse contacts of the dial apparatus and operated by said contacting mechanism after a distinct number of sets of impulses has been sent out.

1,691,576. DISPLAY RACK. EUGENE G. LA BARRE, Detroit, Mich. Filed June 9, 1924. Serial No. 718,912. 6 Claims. (Cl. 211—17.)



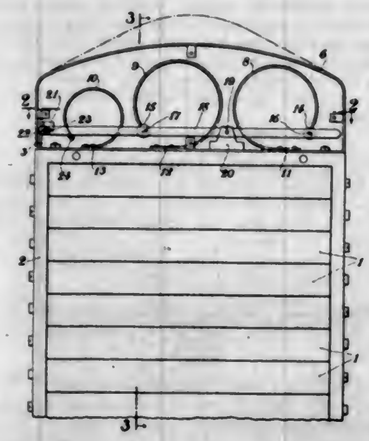
1. A display rack comprising a plurality of supporting arms, each arm having sections provided with telescopically engaged open return-bent flanges at the top and bottom edges thereof providing for variation of the combined lengths of the sections, and a laterally extending sectional elbow connected to each arm having a flange substantially parallel to said arms for holding the articles carried by said arms.

1,691,577. BATH APPARATUS. JOHN LANG, Wauwatosa, Wis. Filed Mar. 29, 1928. Serial No. 265,534. 6 Claims. (Cl. 4—172.)



1. A bath apparatus comprising a tub adapted to receive a patient, and means for circulating a fluid through the tub, said tub having an adjustable inclined support for holding the patient in an inclined position, said support having a cut-away portion to expose the spine and the associated regions of the patient's body.

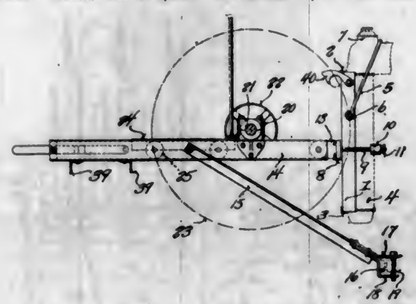
1,691,578. MEANS FOR SEPARATING ASSOCIATED LIQUIDS. CHARLES W. MCKIBBEN, Houston, Tex. Filed Apr. 8, 1926. Serial No. 100,526. 2 Claims. (Cl. 204—24.)



1. In a system of apparatus for the separation of associated liquids, the combination with a treater device forming a part of said system, of an emulsified oil supply pipe connected with said treater device, a transformer mechanism having a stationary and a movable coil, a control valve in said supply pipe near said treater device, a pivotally supported beam, a link connecting said beam with said valve and operating means connected with said beam adapted to be actuated by the movement of the movable transformer coil to control the operation of the treater device.

1,691,579. MOTOR-DRIVEN VEHICLE. LEE W. MELCHER, West De Pere, Wis., assignor to Railway Motors Corporation, De Pere, Wis., a Corporation of Wisconsin. Filed Mar. 5, 1923. Serial No. 622,751. 20 Claims. (Cl. 105—62.)

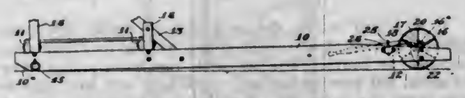
1. In a motor propelled vehicle, the combination of a plurality of motors, traction-wheels, mechanism for driving the traction-wheels from the motors comprising variable speed transmission gearings driven by said motors respectively, and controlling mechanisms for said gearings whereby they may be conjointly or individually operated, comprising electro-magnets and switches for controlling said magnets.



1,691,580. RADIATOR-SHUTTER CONTROL. FREDERICK WILLIAM MILLER, Hockley Heath, England. Filed Feb. 8, 1928, Serial No. 252,734, and in Great Britain Jan. 19, 1927. 10 Claims. (Cl. 236—35.)

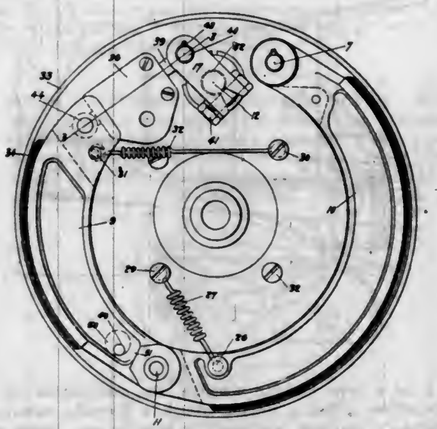
1. The combination with an air-shutter for a radiator in the cooling-water circuit of an internal combustion engine, of a two-arm lever operatively connected to the air-shutter, and two thermostatic shutter-controlling devices each consisting of a bi-metallic heat-sensitive and deflecting member mounted adjacent to a water container in the said cooling-water circuit so as to lie and move in a plane parallel to the said container, the said thermostatic devices acting in unison on opposite arms of the said lever.

1,691,581. SAW-RIG ATTACHMENT FOR TRACTORS. THEODORE G. MUELLER, ALFRED R. BUCHHOLZ, PAUL O. DALLMANN, GEORGE C. MOERSCHEL, WILLIAM C. DALLMANN, MAX J. KUJAWSKI, and WILLIAM H. SCHMIDT, Milwaukee, Wis., assignors to Dallmann Machine and Manufacturing Co., Milwaukee, Wis. Filed Nov. 22, 1923. Serial No. 676,360. 3 Claims. (Cl. 143—43.)



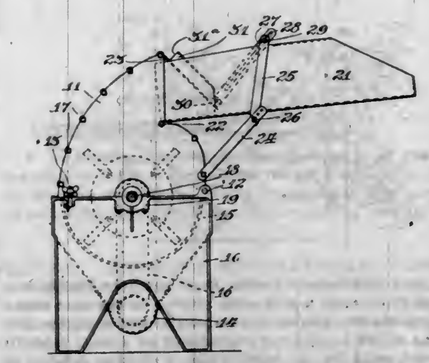
1. A saw rig for detachable engagement with the front end of a tractor comprising a frame adapted to contact with such front end, means for supporting such frame, means for clamping said frame to the front end of said tractor, a pair of outwardly projecting members pivotally carried by said frame, a circular saw revolubly carried by said outwardly projecting members, and a workplate carried by said outwardly projecting members and adapted to reciprocate relatively to said members.

1,691,582. PROTECTOR FOR BACKS OF SHOES. EMMA NOWAK, Brooklyn, N. Y. Filed Nov. 2, 1927. Serial No. 230,679. 2 Claims. (Cl. 36—72.)



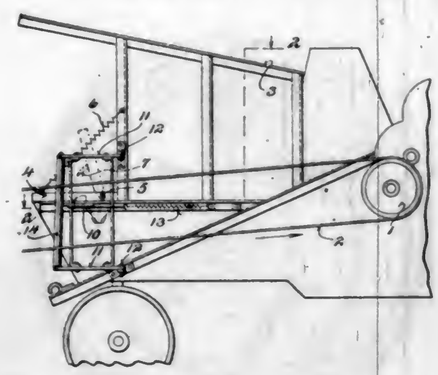
1. A protector for the back of a low shoe comprising a body portion of flexible material adapted for disposition on the back of the shoe and covering substantially the entire back of the shoe and the upper part of the heel, catches associated with the body portion for engaging the top edge of the shoe, and a strap attached along the bottom edge of the body portion and adapted to extend and to be tightened around the heel for drawing the body portion taut in service on the shoe.

1,691,583. TRANSPORT TRUCK. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 18, 1923. Serial No. 646,039. 6 Claims. (Cl. 280—44.)



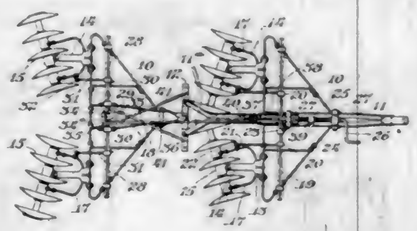
1. A transport device for hay-stackers comprising a crank axle having its ends journaled in the base frame of the hay-stacker, two ground wheels journaled on the crank portion of the axle for vertical adjustment relative to the hay-stacker, and means for swinging the crank axle to raise and lower the hay-stacker, said means comprising a hand lever in the form of a single pivoted bar having its fulcrum end swingable on a pivot member which is rigidly related to the crank portion of the axle and closely adjacent thereto, said hand lever having locking means on the hay-stacker for holding the crank axle in such position that the hay-stacker is held off the ground.

1,691,584. VEHICLE BRAKE MECHANISM. HENRI PERROT, Paris, France, assignor to Bendix Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1924, Serial No. 742,156, and in France May 23, 1924. 24 Claims. (Cl. 188—194.)



4. In a brake mechanism, a drum, an internal brake for engaging said drum, having one end relatively fixed, an operating member, and a positive adjustable linkage between said operating member and the other end of said brake, said linkage including a turnbuckle device, comprising a worm adjustable from the exterior of the drum, and a gear wheel internally threaded with a connector extending from each end thereof, one connector being attached to the end of the brake shoe and the other adapted to be connected to said operating member.

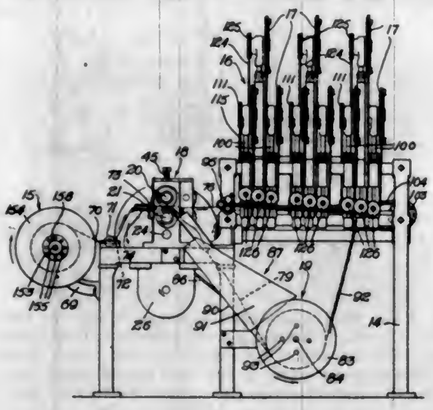
1,691,585. FEEDING MEANS FOR CENTRIFUGAL GRINDERS. CHARLES A. A. RAND, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 17, 1923. Serial No. 681,073. 8 Claims. (Cl. 83—11.)



1. An improvement in centrifugal grinders comprising a casing having a lateral feed opening, a trough shaped chute extending substantially horizontally from said casing for guiding material to said lateral feed opening, a gate pivotally mounted so as to extend within the said chute downwardly and outwardly with respect to said casing, the gate having an air port formed therein, a shield covering the port, and means for adjustably supporting the gate.

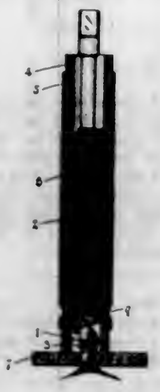
1,691,586. POWER CONTROL DEVICE. AUGUST ROSENTHAL, West Allis, Wis., assignor to Rosenthal Mfg. Co., West Allis, Wis. Filed Jan. 8, 1927. Serial No. 159,933. 3 Claims. (Cl. 192—129.)

1. In a corn husking machine, the combination of a belt driven pulley, a feeding trough, a pivotally mounted operator's platform positioned to provide easy access of the operator to said feeding trough, a spring urging said platform towards raised position, a prong carried by said platform, a pivotally mounted belt shifter provided with an elongated roller adapted to engage the belt, a spring urging said belt shifter to belt shifting position for throwing said belt from said pulley, and a catch carried by said belt shifter and normally engaged by the prong of the operator's platform, whereby when the operator leaves his platform said belt shifter will be unlatched and will throw the belt from the pulley.



1,691,587. TANDEM-DISK HARROW. ARTHUR ALFRED SCARLETT, Hamilton, Ontario, Canada, assignor, by mesne assignments, to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed July 16, 1923. Serial No. 651,747. 11 Claims. (Cl. 55—83.)

2. In a disk harrow having front and rear flexibly connected frames and a disk gang pivoted on the rear frame, the combination therewith of a compensating device comprising a link having one end pivoted at a fixed laterally disposed point on the front frame, a rocking member on the rear frame having oppositely directed arms, a connection between one of said arms and the link and a connection between the other arm and said gang.

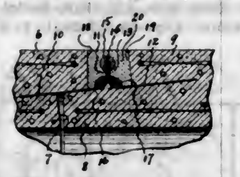


7. A disk harrow comprising front and rear frames, a pair of disk gangs pivoted on each side of the rear frame, a pair of independent links pivotally connected at one end to the front frame at laterally spaced points, said links being crossed and connected at their other ends with the gangs respectively, and flexible coupling means connecting the frames.

1,691,588. MATERIAL-WORKING MECHANISM. ARTHUR EHRHOLD SCHULZ, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,494. 14 Claims. (Cl. 164—65.)

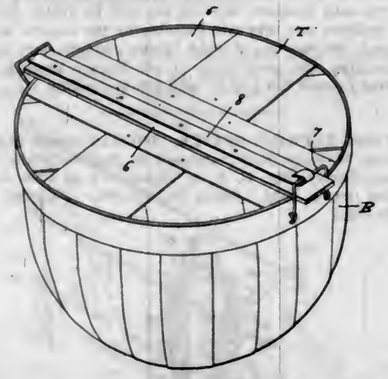
1. In a slitting and rewinding machine, means for slitting a strip of predetermined width from a web, and means for taking up said strip in a plane at right angles to its plane of severance.

1,691,589. METHOD OF AND MEANS FOR WAVING HAIR. WILLIAM GENTRY SHELTON, St. Louis, Mo. Filed Dec. 31, 1926. Serial No. 158,333. 7 Claims. (Cl. 132—36.2.)



1. In a hair waving device, a unitary double tube comprising a tube of absorbent paper having its inner face exposed to contact directly with the hair, and a tube of metal foil surrounding and contacting with said absorbent paper the outer face of said metal foil being exposed for the transmission of heat to the absorbent paper.

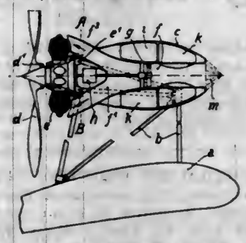
1,691,590. CONCRETE PIPE OR CONDUIT. FRANCIS H. SHERREND, East Orange, N. J., assignor to Newark Concrete Pipe Co., Newark, N. J., a Corporation of New Jersey. Filed June 15, 1925. Serial No. 37,166. 3 Claims. (Cl. 72—53.)



3. In a leak-proof expansion joint for concrete pipe the combination with metallic joint rings having opposed and abutting meeting flanges angularly extending from their outer extremities, of means for uniting and sealing together the free edges of said meeting flanges, compressible means entered in the angle of juncture between each

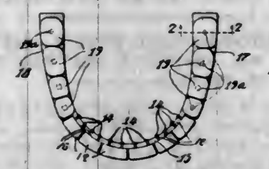
joint ring and its meeting flange, and relatively rigid means surrounding and holding said compressible means in place.

1,691,591. BASKET TOP. ALVIN W. SPENCER and FRANK A. FALCONER, Weslaco, Tex.; said Spencer assignor to said Falconer. Filed Aug. 23, 1926. Serial No. 130,960. 5 Claims. (Cl. 217—124.)



3. In combination, a basket, a cover for said basket, said cover being provided with a bar extending beyond the edges thereof and the edges of the basket, said basket being provided with bail handles through which the ends of said bar extend, and a strip of ductile material fastened longitudinally on top of said bar to extend co-extensively therewith and having its ends free from the bar so that they may be curved upwardly and over the bail handles.

1,691,592. VENDING MACHINE. SALVATORE SPINA and ALBERT COOK, New York, N. Y. Filed Dec. 23, 1927. Serial No. 242,048. 4 Claims. (Cl. 194—22.)

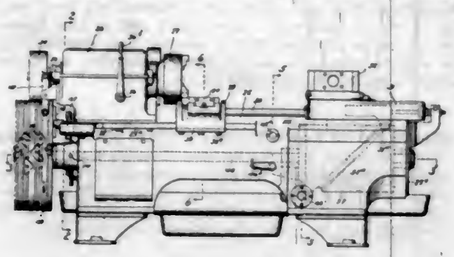


1. In a vending machine, in combination, a magazine for stacked articles, rollers at the bottom of said magazine, means for rotating said rollers, coin controlled means normally locking said rollers against rotation, including a pivoted lever having one end in normal locking engagement with one of said rollers and its other end adapted to receive a coin whereupon said lever is moved from locking engagement with said roller, and a pivoted trip lever having an end in engageable contact with said locking means and having an upturned portion adapted to be depressed by the vended article to restore the said locking means in locking engagement with said rollers.

1,691,593. AIRCRAFT WITH PUSHER SCREW. KURT TANK, Potsdam, near Berlin, and KARL FEYDAG, Schmargendorf, near Berlin, Germany, assignors to the Firm: Rohrbach Metall-Flugzeugbau G. m. b. H., Berlin, Germany. Filed Feb. 17, 1927, Serial No. 168,885, and in Germany Jan. 20, 1926. 14 Claims. (Cl. 244—31.)

1. In a power plant for aircraft an engine nacelle as an independent unit, a stationary air cooled engine located in the rear of the nacelle and having its axis arranged in the direction of flight, a pusher screw driven by said engine and disposed closely behind the same, the engine being located within the cylinder of revolution defined by the rotating pusher screw tip and means disposed in the fore part of the nacelle functioning independently of said pusher screw for inducing and introducing a cooling blast of air into said nacelle, causing the same to flow substantially in the direction of flight therethrough without sharp or pronounced deviations and supplying the same to said engine.

1,691,594. PROSTHETIC DENTISTRY. EUGENE A. THAYER, Pontiac, Ill. Filed June 27, 1921. Serial No. 480,784. 3 Claims. (Cl. 32—4.)



1. In a denture holder comprising a strip of yieldable material with the center portion thereof having slots therein lying at right angles to the longitudinal body portions of said strip, cups carried by the outer end of said strip.

1,691,595. AUTOMATIC SINGLE-SPINDLE-CHUCKING MACHINE. JOHN J. N. VAN HAMERSVELD, Cleveland, Ohio, assignor to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 11, 1924. Serial No. 731,409. 52 Claims. (Cl. 29—44.)

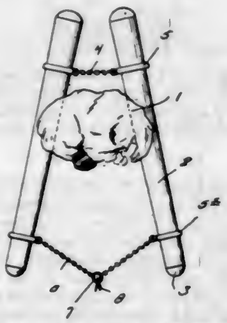
1. In a metal working machine, a bed having a head and a slide, a cam drum for operating the slide, a shaft supporting said drum, mechanism between the head and the drum for rotating the drum at different speeds, clutching means controlling said mechanism, means comprising a tappet drum mounted coaxially with said shaft for operating the clutching means, and means by which the tappet drum is driven by said shaft but at a different speed than the latter is driven.

25. In a metal working machine, a bed having a head provided with a rotatable spindle, a slide movable along

the bed, and mechanism between the head and the slide for operating the latter at different speeds, said mechanism being carried in part by the head and in part by the bed and including a gear box having a gear adapted to mesh

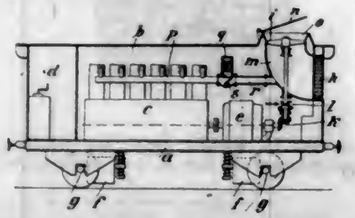
with a gear carried by the bed and including also a clutch having one element carried by the bed and another element carried by the gear box, said gears and said clutch elements being brought into co-operative relationship when the gear box is applied to bed.

---



1,691,596. OPHTHALMIC MOUNTING. JAMES WILSON WELSH, Providence, R. I., assignor to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed June 12, 1925. Serial No. 36,592. 4 Claims. (Cl. 88—47.)

1. An ophthalmic mounting comprising a non-metal member having a lens-receiving groove provided with a notch, a non-metal member seated in the notch and rigid with and projecting from the wall of the groove, the second-named member being adapted to engage a lens, and a metal member mounted on the first-named non-metal member adjacent to the notch and having wings embedded in the first-named non-metal member on both sides of the notch.



---

1,691,597. STONE-HAULING DEVICE. OLE M. WHITE, Clear Lake, Wis. Filed Sept. 3, 1927. Serial No. 217,515. 1 Claim. (Cl. 280—19.)

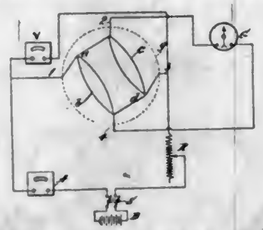
A stone hauling device comprising major members of circular cross section rounded at their ends and tapered from their rear rounded ends to their forward rounded ends, a flexible connection interposed directly between and connected to the rear portion of the said major members, a flexible connection interposed betwen and directly connected to the forward portion of the said major members, and draft means connected to said flexible connection.

1,691,598. INTERNAL-COMBUSTION-ENGINE LOCOMOTIVE. EUGEN ZEINDEN, Winterthur, Switzerland, assignor to Sulzer Freres Societe Anonyme, Winterthur, Switzerland. Filed Mar. 12, 1926, Serial No. 94,140, and in Germany Aug. 28, 1925. 1 Claim. (Cl. 123—171.)

In an internal combustion engine driven locomotive the combination with a radiator, of a housing forming an air chamber back of said radiator, a disconnectible fan positioned in said chamber and an engine intake conduit opening into said chamber, whereby air may be drawn through said radiator and into said chamber by the suction of said fan and the suction of said intake conduit, and means for varying the proportion of air drawn through said radiator by said fan and by said intake conduit.

---

1,691,599. LOCKING DEVICE. WILLIAM FRANK ZIMMERMANN, Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 2, 1926. Serial No. 139,099. 1 Claim. (Cl. 121—36.)

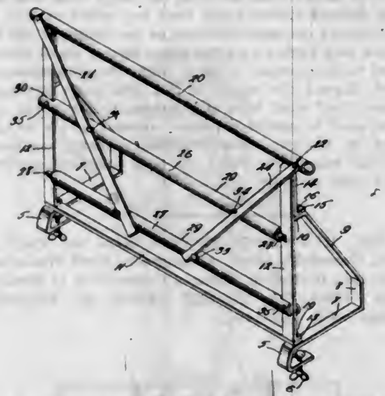


In a pneumatic tool, the combination of a cylinder, a hood screwed on the cylinder, teeth on the end of the hood, a key having teeth to interlock with the teeth on the hood, the teeth of said hood and said key being back-tapered longitudinally and radially to insure against disengagement of the key from the hood, and a spring anchored to the cylinder and to the key exerting a constant pull tending to tighten the connection between the hood and the cylinder.

---

1,691,600. METHOD OF MEASURING THE RATE OF MASS FLOW AND THE TEMPERATURE OF FLUIDS AND APPARATUS THEREFOR. CHARLES F. BRUSH, Jr., Cleveland, Ohio, and RICHARD D. FAY, Nahant, Mass., assignors, by direct and mesne assignments, to The Brush Laboratories Company, Cleveland, Ohio. Filed Mar. 24, 1920. Serial No. 368,455. 9 Claims. (Cl. 73—167.)

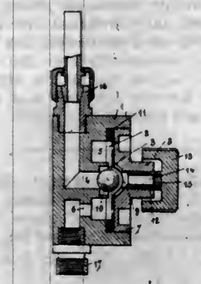
1. In the herein described method of measuring the rate of flow and other physical conditions of fluid, the steps consisting in exposing to the fluid, a conductor comprising a plurality of members so connected as to form parts of a Wheatstone bridge at least two of which members differ relatively in electrical resistance, passing an electric current through said conductor whereby members of said con-



ductor are heated to relatively different temperatures, regulating the electric heating current until a definite difference of potential between two points of said conductor is brought about, and measuring the current necessary to maintain such difference of potential.

---

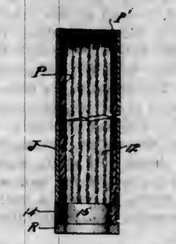
1,691,601. COMBINATION CAMP BED AND LUGGAGE CARRIER. DAVID G. CONN, Yakima, Wash. Filed Sept. 8, 1924. Serial No. 736,663. 4 Claims. (Cl. 5—119.)



1. A convertible luggage carrier and bed including in combination, a pair of clamps, a pair of standards supported on the clamps, a bar provided with openings adapted to receive the ends of the standards, legs pivotally mounted on the bar, a second and third bar of telescopic construction each including an inner member and an outer member, said bars embodying means whereby they may be supported on the standards below the first bar, the outer members of said bars being provided with hooked lugs for holding the legs in folded position against the bar, means connecting one end of the telescopic bars to the standards, the other ends being adapted to be received within the openings of the first mentioned bar when disengaged from the standards.

---

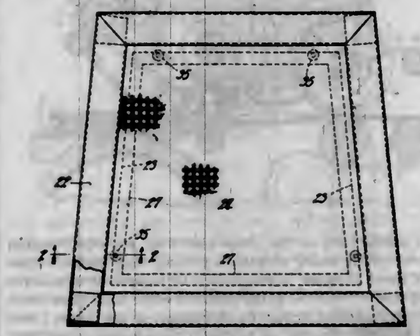
1,691,602. CLOSING AND REGULATING COCK FOR ALL LIQUIDS AND GASES. LOUIS FERRETTE, Paris, France. Filed May 4, 1926, Serial No. 106,772, and in France June 13, 1925. 2 Claims. (Cl. 251—139.)



2. A closing and regulating cock for all liquids, which comprises a cylindrical body, a fluid inlet passage formed radially in the said body and having a right-angled central part, the front side of said body being recessed so as to form a cup, a central flange in said cup open at its outer end and which communicates with said right-angled central part of the passage, a fluid outlet passage which is formed radially in said cylindrical body and separated by a wall from the fluid inlet passage and which communicates with the said cup by a right-angled passage, a closing ball disposed in the central flange of the cup, a screw threaded cover having a semispherical recess and screwed upon the front side of the said body, means affording a fluid-tight connection between the cover and said body comprising a concentrically corrugated diaphragm which is held at the

periphery against the inner face of the cover and is adapted to fit upon the said cup, said cover having an axial aperture, a hollow screw cooperating with the wall of said aperture, means for actuating the said screw, and a step-bearing disposed in the aperture of the said screw and bearing against the said diaphragm.

---



1,691,603. LONGITUDINAL FIBROUS PACKING FOR PLUNGER PUMPS. HENRY M. GREEN, Los Angeles, Calif., assignor, by mesne assignments, to C. M. O'Leary. Filed July 28, 1924, Serial No. 728,653. Renewed Oct. 3, 1927. 5 Claims. (Cl. 286—1.)

5. In a plunger pump, relatively slidable plunger and barrel means, an elongated sleeve of fibrous packing having longitudinally extending strands, and means for preventing end movement of the packing.

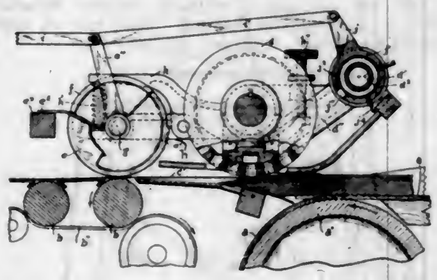
---

1,691,604. FLEXIBLE PANEL. FRANK B. HARMAN, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed July 26, 1923. Serial No. 653,843. 1 Claim. (Cl. 155—187.)

In an article of the class described, the combination of a supporting frame having an inwardly projecting seat flange adjacent its lower edge, and a panel removably seated

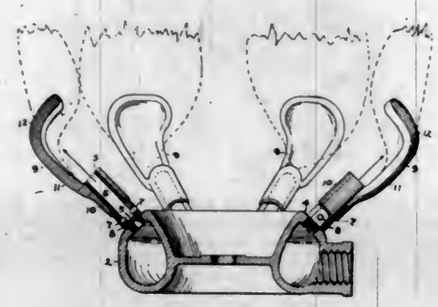
on said flange and surrounded by said supporting frame, and having its outer edge concealed by said surrounding frame, said panel comprising a marginal frame having side members which are U-shaped in cross section and which are arranged so as to face outwardly with their side walls disposed in substantially horizontal planes one above the other, a flexible panel sheet stretched over said frame and between opposite side portions thereof and having a marginal portion folded downwardly over the outer edge and inwardly under the bottom face of the top wall portion, and a filler strip inserted between said side walls for wedgingly holding said panel sheet in place.

---



1,691,605. FABRIC AND METHOD OF TREATING SAME. DANIEL E. HENNESSY, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1925. Serial No. 1,864. 1 Claim. (Cl. 154—2.)

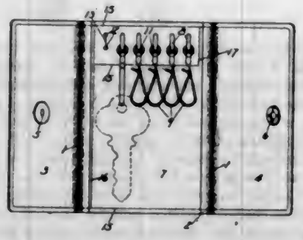
The method of cutting and handling a relatively wide web of tire material, formed of tire fabric bonded between two layers of rubber, which comprises forming successive cuts crosswise of the web and through the upper layer of rubber and the fabric without disrupting the underlying layer of rubber, the line of said cuts being on the bias with respect to the length of the web, and winding the so cut web into a liner directly, and continuously, from the cutting machine, one end of the so cut diagonally positioned sections entering the liner roll first, without tendency to disrupt the uncut layer of rubber and without presenting transverse severed edges, to form a uniform compact roll in which the tire material is substantially coextensive with its protecting liner.



---

1,691,606. SHEET DETECTOR FOR PAPER-FEEDING MACHINES. REUBEN HITCHCOCK, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 11, 1925. Serial No. 14,672. 11 Claims. (Cl. 271—47.)

1. In mechanism of the class described, the combination with two co-operative rotatable testing members between which a sheet of paper is adapted to be passed, of means for effecting their relative adjustment toward and from each other corresponding with the thickness of the paper; one of said members having an abruptly-terminated overriding eccentrically related portion adapted to engage a plurality of interposed sheets, and disabling means operated upon the actuation of the latter member, substantially as set forth.

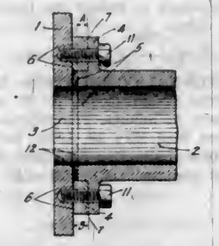


1,691,607. GAS BURNER. HARRY E. KERR, Cleveland, Ohio, assignor to The Cleveland Gas Burner & Appliance Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 2, 1926. Serial No. 99,213. 1 Claim. (Cl. 158—113.)

A gas burner, comprising a hollow gas distributing body, a series of short tubes extending upwardly from said body, a baffle member spaced apart from the mouth of each tube approximately the same distance as the length of the tube, and each tube having an axial gas orifice of small diameter adapted to jet a stream of gas at high velocity a substantial distance beyond the mouth of the tube under normal gas pressures, and each tube also having intake ports of restricted area to permit a limited amount of air to be entrained by the gas stream without causing combustion within the tube itself under the back pressure established by said baffle member.

---

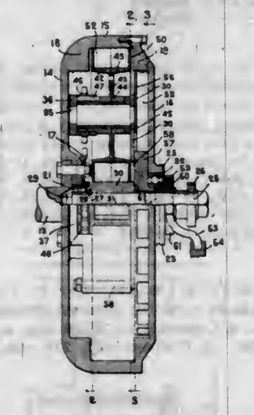
1,691,608. KEY CASE. FRANK A. KING and EMIL BEDFORD, Greenfield, Mass., assignors to Emil Weissbrod & Sons, Inc., Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 10, 1927. Serial No. 167,091. 3 Claims. (Cl. 150—40.)



1. In a key case, a flexible back, a perforated flexible backing, rings in the perforations in said backing and projecting behind the same, a thin flexible lock strip, rectangular in cross section, and flat-sided throughout, said strip passing through said rings behind said backing, and lines of stitching between said backing and said back outside of the ends of said strip to assist in holding the same in place.

---

1,691,609. PIPE AND PLATE CONNECTION. FRANK OSKRIT, Pittsfield, Mass. Filed Oct. 22, 1924. Serial No. 745,247. 2 Claims. (Cl. 285—25.)



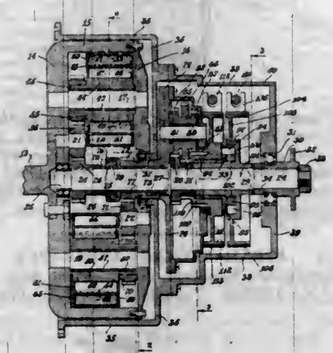
1. In a connection of the character described, the combination with a casing of comparatively thin metal having an opening therein, of a pipe, a flange on said pipe disposed from the end thereof, a plate provided with an opening therein adapted to receive the end of the pipe and welded to said casing around the opening, a gasket between the end of the pipe and the casing, and a plurality

of cap screws passing through said flange and engaging threaded openings in said plate for securing the pipe and casing together.

---

1,691,610. POWER TRANSMISSION. JOHN REECE, Boston, and FRANKLIN A. REECE, Brookline, Mass., assignors to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Nov. 27, 1923. Serial No. 677,281. 23 Claims. (Cl. 74—34.)

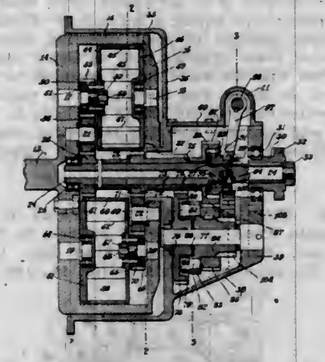
1. Power transmission apparatus comprising the rotary driving and driven members, combination with a hollow casing revolved by the driving member, an annular stream of liquid held peripherally in said casing by centrifugal force and traveling around therewith, and a diverting part (34) on the driven member within said casing having a portion extended into the annular stream of liquid continuously to divert liquid therefrom, the driven member formed with a channel of recurved shape to guide such diverted liquid in a reverse path to cause continuous driving thrust on the driven member, and a discharge passage leading therefrom, and the driving member formed with a passage receiving the liquid discharged from said discharge passage and redelivering it to the annular stream of liquid.



---

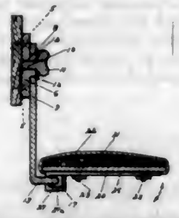
1,691,611. POWER TRANSMISSION. JOHN REECE, Boston, and FRANKLIN A. REECE, Brookline, Mass., assignors to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Sept. 30, 1924. Serial No. 740,753. 21 Claims. (Cl. 74—34.)

1. In power transmission apparatus the driving and driven members or shafts, a main transmitting means comprising a centrifugal device between the driving and driven members wherein is an inwardly and outwardly movable mass mounted on and carried around by the



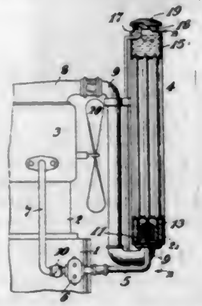
driving member, and connections between the driven member and mass whereby the mass is actuated to move inwardly and outwardly by reason of the speed difference between the members and operates by reacting through its centrifugal force to transmit power to the driven member at reduced ratio with increase of load and vice versa, and a supplemental transmitting means coming into action only at reduced ratio with increased load to sup-

plement the torque delivered by the main transmitting means, comprising a second such centrifugal device between the driving and driven members actuated at low ratios by reason of the speed difference between the members and reacting through centrifugal force to transmit supplemental torque to the driven member, and a one-way device associated with the supplemental transmitting means arranged to cause it to deliver torque at the reduced ratios but leaving it inoperative at high ratios.



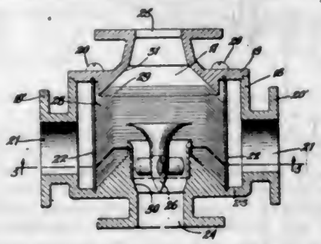
---

1,691,612. POWER TRANSMISSION. JOHN REECE, Boston, and FRANKLIN A. REECE, Brookline, Mass., assignors to Reece Transmission Company, Boston, Mass., a Corporation of Maine. Filed Mar. 25, 1925. Serial No. 18,115. 14 Claims. (Cl. 74—34.)



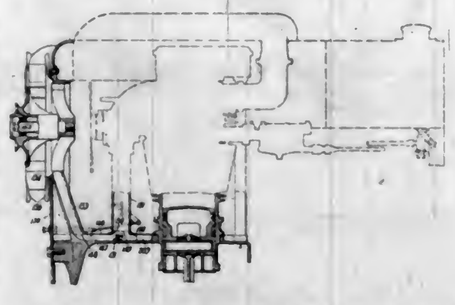
1. Power transmission apparatus comprising the driving and driven members, a main self-adjusting transmitting mechanism between the driving and driven members, operating both at the higher and lower transmitted speeds, and a normally inoperative supplemental transmitting mechanism between the driving and driven members, the same comprising a one-way device causing it to become operative only at the lower relative transmitted speeds, whereby with high loads both transmitting mechanisms deliver torque cooperatively at low speed to the driven member.

1,691,613. ARM REST. WILLIAM E. ROACH and DAVID J. ROACH, Owego, N. Y. Filed Oct. 1, 1927. Serial No. 223,454. 5 Claims. (Cl. 155—198.)



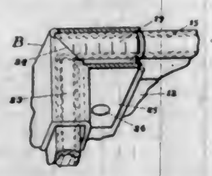
1. An arm rest comprising a bracket suspended from a support, an arm pad pivoted to said bracket, means for locking said pad in arm supporting position at right angles to said bracket, said pad being rockable on its pivot, out of arm supporting position, and means for frictionally retaining said pad in said last named position.

1,691,614. STEAM-COOLING APPARATUS. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Aug. 10, 1926. Serial No. 128,343. 7 Claims. (Cl. 123—174.)



1. An internal combustion engine having a water and steam cooling circuit serially including a force feed pump supplying water to the jacket of the engine, an outlet discharging hot water and steam from the jacket into the lower chamber of an air cooled, water filled radiator of the upright type having a multiplicity of small diameter cooling passages of great radiating capacity connecting said lower chamber with an upper chamber, in combination with discharge means arranged to discharge water and the steam from the engine in a region of said body of water that is below and in proximity to the lower ends of said passages, and flow restricting elements extending throughout the steam condensing regions of said passages.

1,691,615. FUEL VAPORIZER. LESTER C. SMITH, Springdale, Conn., assignor of one-half to N. Julien Thompson, Hartford, Conn. Filed Apr. 15, 1921. Serial No. 461,684. 2 Claims. (Cl. 48—180.)

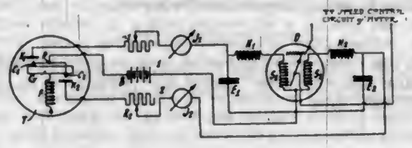


1. A device for volatilizing the entrained liquid particles carried by a gas mixture comprising a conduit, a plurality of closely spaced liquid-collecting plates lining at least a portion of the walls of said conduit and acting as a blanket therefor, means for externally heating the blanketed portion of said walls, and means in the path of flow of the mixture to deflect the liquid particles onto said collecting plates.

1,691,616. INTERNAL-COMBUSTION ENGINE. WILLIAM F. SMITH, Poughkeepsie, N. Y., assignor of one-half to Herman A. Schatz, Poughkeepsie, N. Y. Original application filed May 23, 1924, Serial No. 715,388. Divided and this application filed Jan. 12, 1925. Serial No. 1,902. 2 Claims. (Cl. 123—119.)

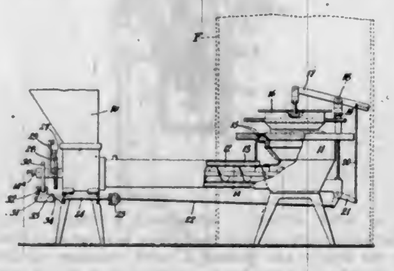
1. In an internal combustion engine having an air intake, a casting for supporting an engine cylinder, a plurality of raised portions on said casting and a cover plate cooperating therewith whereby a plurality of ducts are formed, a first duct opening to the atmosphere, means whereby air is caused to flow rapidly through said first duct and a passageway interconnecting with said first duct substantially at right angles thereto and also interconnecting with said air intake whereby air passed to said intake is freed from dirt.

1,691,617. BOTTLE CRATE. ROY D. TYLER, St. Paul, Minn., assignor to G. H. Tennant Company, Minneapolis, Minn., a Corporation. Filed Aug. 9, 1926. Serial No. 128,098. 6 Claims. (Cl. 217—69.)

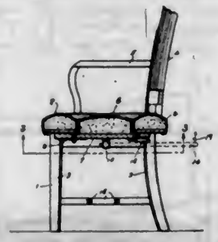


1. A bottle crate including, sides made of a series of slot members, inner and outer corner reinforcing members adapted to be clamped together to hold said slat members in place, reinforcing channel members dovetailed onto the lower edge of said side walls, cut out portions formed on said reinforcing members, and means formed on said outer reinforcing corner member adapted to overlap said cut out portions to rigidly secure the ends of said reinforcing members in the corners of said crate.

1,691,618. SPEED INDICATOR AND REGULATOR FOR ELECTRIC MOTORS. GEORG VON ARCO, WALTER SCHAFFER, and WILHELM MOSER, Berlin, Germany, assignors to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Jan. 16, 1923, Serial No. 2,778, and in Germany Jan. 28, 1924. 4 Claims. (Cl. 171—229.)



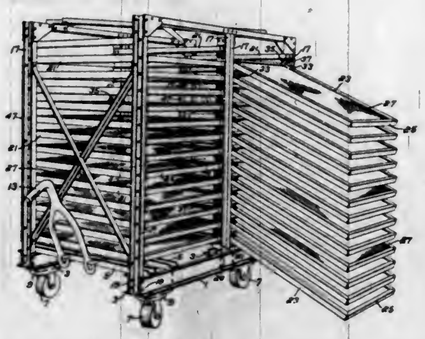
1. A speed regulator comprising a rotating element, a centrifugally affected mass mounted thereon, a spring for resiliently supporting said mass on said element, contacts mounted upon said mass and adapted to be alter-



nately closed by radial movement of said mass, a differential relay connected thereto, and current controlling means actuated by said relay.

1,691,619. STOKER. MERLE J. WIGHTMAN, West New Brighton, N. Y., assignor to Domestic Stoker Company, New York, N. Y., a Corporation of Delaware. Filed May 24, 1926. Serial No. 111,182. 4 Claims. (Cl. 110—45.)

2. In a device of the character described, a fire pot of the underfeed type, means for feeding fuel into said fire pot, and means for breaking up fused masses forming in the fire pot comprising a tamping member and means for periodically raising and dropping said tamping member.

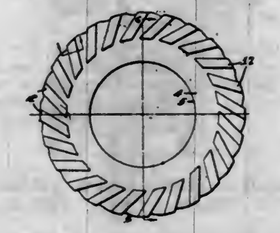


1,691,620. SANITARY SEAT FOR INVALID CHAIRS. CECELIA CLAPHAM WILSON, Oakland, Calif. Filed July 23, 1927. Serial No. 207,962. 1 Claim. (Cl. 155—31.)

An invalid chair having a central opening therein, a central portion removably disposed in said opening, hinges securing said portion to said seat for permitting said portion to swing downwardly when released, said hinges being slidably connected to said seat for permitting said portion to be moved laterally away from said opening after said portion has been swung into open position.

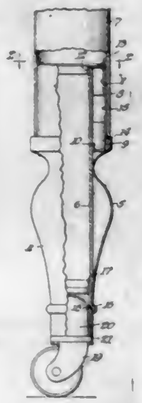
1,691,621. TRUCK. CLARENCE H. YOUNG, Boston, Mass. Filed Nov. 10, 1925. Serial No. 68,162. 5 Claims. (Cl. 280—49.)

1. A truck of the character described, having in combination, a base comprising girder members at opposite sides of the truck, each girder member comprising a pair of spaced structural steel members having vertically disposed parallel webs, spaced vertical posts supported by said girder members, said posts being between said parallel webs



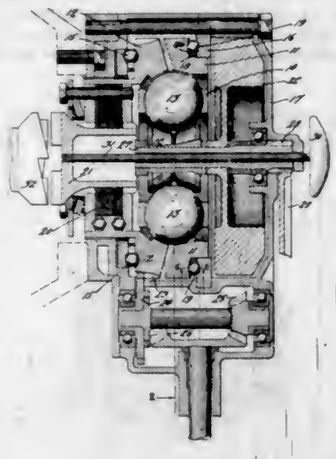
and each having parallel flanges abutting with and secured to said parallel webs, bars extending from the posts at one side of said truck to the posts at the opposite side of the truck, and trays slidably supported on said bars.

1,691,622. FISHING REEL. WALTER L. ADAMS and CHARLES T. PFLUEGER, Akron, Ohio, assignors to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed May 23, 1925. Serial No. 32,437. 19 Claims. (Cl. 242—844.)



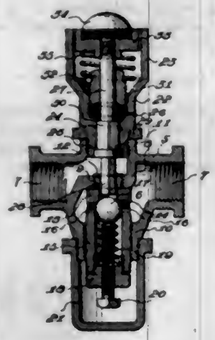
1. In a fishing reel, a reel structure including front and back plates, a spool and spool driving mechanism, a casing located at the side of the reel structure, said casing having flanges at the ends thereof adapted to fit against the front and back plates respectively, means to secure the flanges against said plates, and a level wind mechanism within the casing.

1,691,623. WELL-DRILLING TOOL. LESTER C. BLACK, Los Angeles, Calif. Filed June 17, 1925. Serial No. 37,657. 12 Claims. (Cl. 255—71.)



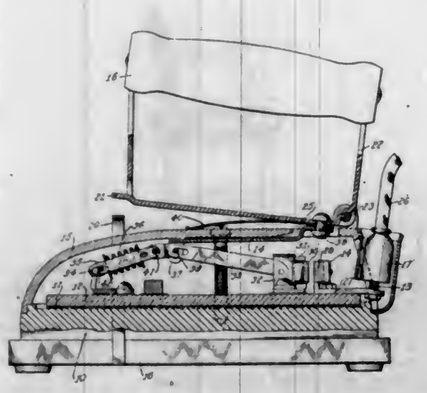
1. A self sharpening rotary disc cutter for rotary earth boring drills comprising a single metal disc and circumferentially spaced pads of harder metal than the metal of the disc arranged on one side of the disc at the cutting edge.

1,691,624. FURNITURE. CHARLES H. BUSCH, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Feb. 24, 1921. Serial No. 447,391. 9 Claims. (Cl. 5—279.)



1. In an article of furniture, a supporting leg comprising an inner stem and an outer metallic shell having an interlocking connection between their upper ends comprising an inturned flange on said outer shell and a cap on said inner stem, said cap engaging the top of said inner stem and the under side of said inturned flange.

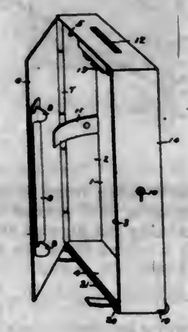
1,691,625. FRICTION TRANSMISSION. ROLAND CHILTON, Keyport, N. J., assignor, by mesne assignments, to Aeromarine Starter Company, Inc., a Corporation of New York. Filed May 26, 1926. Serial No. 111,761. 8 Claims. (Cl. 74—34.)



1. In apparatus of the class described the combination of an inner pair and an outer pair of axially separable concentric driving members, planetary means having rolling contact with each member, torque responsive means tending to close together one pair of members, spring means tending to close together the other pair of members in opposition to said torque responsive means.

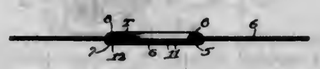
1,691,626. VALVE. JOHN H. COOK, Salt Lake City, Utah. Filed Sept. 20, 1926. Serial No. 138,548. 6 Claims. (Cl. 251—50.)

1. A valve structure comprising a casing having a bridge and a port through the bridge, a valve cage threaded into the casing and having a valve chamber, a valve in said chamber, a plug for the outer end of the chamber, a spring in the chamber between the valve and the plug, and an abutment for the valve adjustably mounted in the plug.



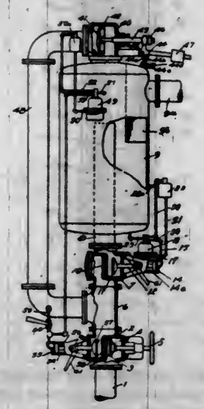
1,691,627. ELECTRIC FLATIRON. WILLIAM A. DE HART, Teaneck, N. J., assignor to Frances Rockefeller King, New York, N. Y. Filed June 16, 1923. Serial No. 645,744. 11 Claims. (Cl. 200—157.)

8. The combination with a body, and a handle movably attached thereto, of a circuit interrupter including a movable contact member, a pair of toggle links adapted to force the circuit interrupter closed when overset, an actuating arm arranged and adapted to be moved in response to pressure on the handle for setting the toggle and closing the interrupter when pressed downwardly and for releasing the toggle and opening the interrupter when moved upwardly, one of said toggle links being composed of a rigid member pivoted on a fixed support by a pin and slot connection, and a spring surrounding the rigid member and tending to press it away from the fixed support and the other of said toggle links being connected to the movable contact member of the circuit interrupter, the arrangement being such that the contacts are forcibly pressed together and wear between them is taken up by the spring-pressed link.



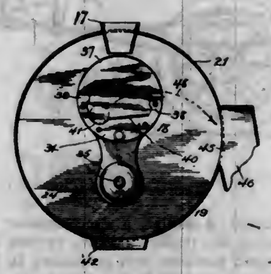
1,691,628. SAVINGS BANK. BUTLER F. GREER, San Francisco, Calif. Filed Apr. 6, 1927. Serial No. 181,348. 7 Claims. (Cl. 232—6.)

1. A savings bank having a locked opening; a frame attached to said receptacle and having a flange overhanging a portion of one side thereof; and a pedestal base slidably engaging said frame and having a flange completing the flange on said frame.



1,691,629. MATTRESS VENTILATOR. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed May 10, 1926. Serial No. 107,891. 1 Claim. (Cl. 5—347.)

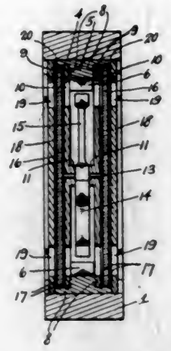
In a ventilated mattress, the combination of a tick portion having an aperture therein, a tubular member having a reticulated closure member extending thereacross, said tubular member being of greater outside size than the size of said aperture and being adapted to be inserted into said aperture so as to project therethrough, whereby a portion of said tick adjacent said aperture will be caused to lie along said tubular member, a shoulder at one end of said tubular member for positioning the latter with respect to said tick, said projecting portion of said tubular member being adapted to be swaged outwardly and towards said shoulder so as to effectively clamp the tick surrounding said aperture between said shoulder and the swaged portion of the tubular member, said tick portion being folded over on the surrounding tick by reason of said swaging operation so as to form a double edge of ticking around said aperture and between said shoulder and swaged portion.



1,691,630. SAFETY STOP MECHANISM. OSCAR H. LUDEMAN, Glen Ridge, N. J., assignor to Ludeman Brothers Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1926. Serial No. 88,972. 6 Claims. (Cl. 183—39.)

1. In a safety stop mechanism, the combination of a steam supply pipe; a safety valve in the supply pipe; means responsive to water accumulations controlling said valve; and a bypass around said safety valve, the bypass leading from a higher level than the passage through the safety valve.

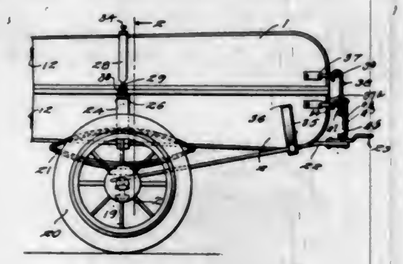
1,691,631. COIN-CONTROLLED MACHINE. ARTHUR W. BARNARD, Newton Center, Mass., assignor to Colonial Scale Company, Boston, Mass., a Corporation of Massachusetts. Filed May 29, 1926. Serial No. 112,574. 7 Claims. (Cl. 273—138.)



1. Coin return means for a coin-controlled machine, comprising a casing having a lateral coin outlet, a counterbalanced coin holder within said casing, and means for manually operating said coin holder to throw a coin toward said lateral coin outlet.

1,691,632. LEVEL. GEORGE A. BARTOW, Flushing, N. Y. Filed Dec. 13, 1927. Serial No. 239,685. 1 Claim. (Cl. 33—215.)

A level comprising, a frame having the intermediate portion thereof solid and formed with a circular opening therethrough, a ring disposed within said opening, a pair of discular plates having central openings therein and oppositely disposed within said ring, a pendulum adapted to swing between the plates and having its pivot mounted

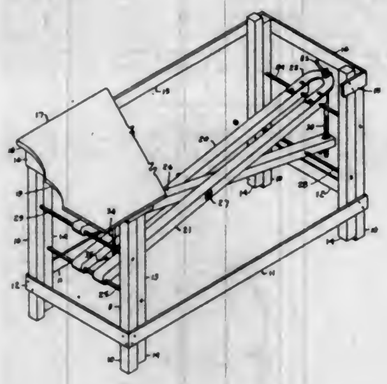


in the plate openings, means for securing said plates in position, said means including a pair of cover plates which are respectively secured to the opposite extremities of the

circular opening in the frame, and resilient means between each cover plate and adjacent circular disk for maintaining the latter in secured position.

---

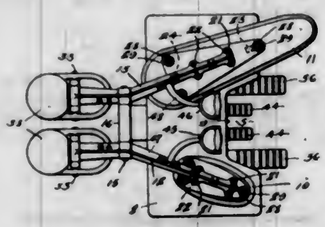
1,691,633. FOLDING BOAT AND TRAILER THEREFOR. BELLON BERTRAM, Sault Ste. Marie, Mich., assignor of one-half to Walter E. Huntley, Sault Ste. Marie, Mich. Filed Oct. 7, 1926. Serial No. 140,115. 1 Claim. (Cl. 9—1.)



In combination, a trailer, a drag member therefor, a saddle carried by the trailer, a saddle carried by the drag member, a folded sectional bolt positioned in the saddles, a strap connected to said first saddle and passing about the boat, eyes carried by the boat sections and drag member forwardly beyond said second saddle, and means detachably engaged with the eyes to secure the boat sections together and hold them in said second saddle.

---

1,691,634. WORKSTAND. FRANK ACHILLE BIENVENU, Montreal, Quebec, Canada, assignor, by mesne assignments, to Catelli Macaroni Products Corporation Limited, Montreal, Canada. Filed Aug. 1, 1927. Serial No. 209,952. 2 Claims. (Cl. 45—111.)



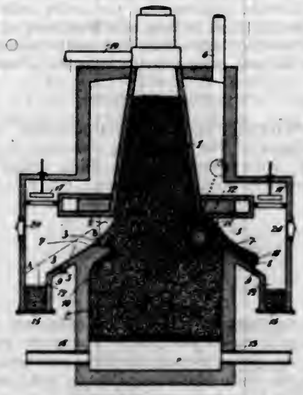
1. In a work stand, a standing frame and an elevatable frame, pivot bearings in rail form connecting the several end legs of said frames in pairs, parallel arms joined and spaced by yokes, at the ends and centrally by a spindle forming a pivot bearing, a single arm centrally mounted on said spindle pivot bearing, said parallel arms being mounted at one end on a rail pivot bearing on said standing frame and on a rail pivot bearing at the elevatable frame and said single arm being mounted at one end on a rail pivot bearing of the elevatable frame and on a rail

pivot bearing of the standing frame at the other end, an operating screw engaging said parallel and single arms at one end for separating and drawing them together and a guide rod having a locking device for holding the arms apart at the other ends.

---

1,691,635. MULTIPLE-PRESSING MACHINE. PHILIP N. BRAUN, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 27, 1927. Serial No. 222,369. 8 Claims. (Cl. 68—9.)

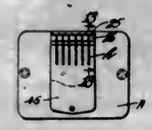
1. A pressing machine comprising a frame, a pair of bucks mounted on the frame adjacent each other and extending forwardly and rearwardly and converging toward each other toward their rear ends and thereby providing a working space between their front portions, yoke levers pivoted to the frame in the rear of the rear ends of the heads and extending lengthwise of the heads, and mechanism for actuating the levers independently of each other.



---

1,691,636. APPARATUS FOR PRODUCING GAS AND COKE IN ALTERNATELY-WORKING WATER-GAS GENERATORS. ALBERT BARISIC, Vienna, Austria. Filed May 4, 1926, Serial No. 106,742, and in Austria May 7, 1925. 6 Claims. (Cl. 209—9.)

1. In a combined coking retort and gas generator comprising an enlarged lower part and transversal channels branching off from the junction of the upper and the lower



part and constituting the out-let for the blow gases the inclination of the bottom of these channels slanting outwardly and the disposition of the bottom edge of the chan-

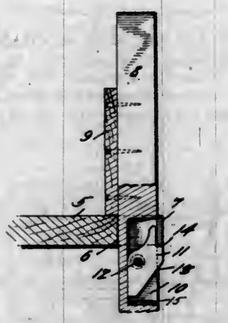
nels orifice at such height, that it lies approximately in the plane of the slope naturally formed by the coked material when settling in front of the orifice.

---

1,691,637. KEY CASE. WARNER R. BUXTON, Longmeadow, Mass. Filed Jan. 14, 1925. Serial No. 2,333. 11 Claims. (Cl. 150—40.)

7. The combination in a key case of a support for the key holders thereof, comprising, a back part, means for fastening the same to the case, and a front part for pivotally supporting the key holders, said front part being interengaged with the back part and serving to conceal said fastening means.

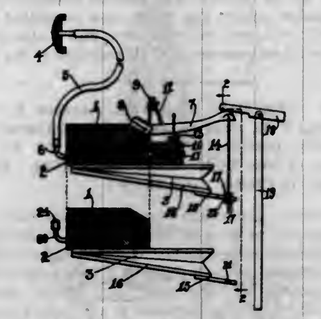
---



1,691,638. SIGN CHARACTER AND SECURING MEANS THEREFOR. JOSEPH D. CARNEY, Chicago, Ill. Filed Feb. 9, 1926. Serial No. 87,058. 3 Claims. (Cl. 40—142.)

1. In combination, a freely flexible article, a sign character having a recessed inner side and arranged with its edges in contact with the article, a bolt passing through the sign character and article, a nut applied to the bolt, means mounted on the bolt between the article and the nut and extending from edge to edge of the sign character to engage the article against the edges of the sign character, and a member surrounding the bolt and extending from the nut to the inner side of the sign character and adapted in conjunction with said means to limit the distance that the nut may be turned up and thus prevent the noticeable distortion of the article.

---

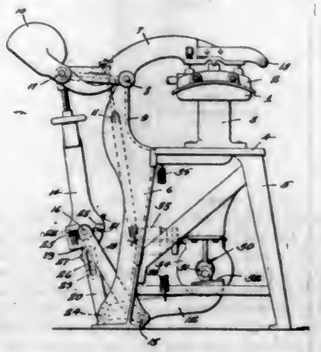


1,691,639. STAKE FOR VEHICLE SIDEBOARDS. FRANCIS J. CHARLEBOIS and ARTHUR H. MARTIN, Norwood, N. Y. Filed Jan. 19, 1928. Serial No. 247,949. 1 Claim. (Cl. 296—43.)

A stake for vehicle side boards and the like comprising an element having a laterally disposed recess in its edge near the lower end, a housing in the recess, a body structure having a socket for the stake, a latch in the housing, means for pivoting the latch therein, the said latch having an edge projecting beyond the edge of the stake under the structure having the socket, the said latch having an outer camming edge adapted to engage the structure having the socket for forcing the latch inwardly at the top, the said latch having weight above the pivot to cause its gravitation into operative relation with the under surface of the structure having the socket and means for limiting the swinging motion of the latch.

---

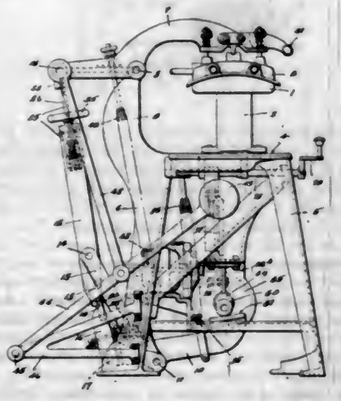
1,691,640. UNIVERSAL PLAYER ACTION. TOLBERT F. CHEEK, New York, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Jan. 19, 1924. Serial No. 687,251. 1 Claim. (Cl. 84—65.)



Means for adapting a standard player action to piano actions of various scales comprising the combination with the piano action and the individual hammer actions thereof of a player piano action including upper and lower stacks of pneumatics, a row of blocks individually mountable on top of the stacks at adjustable distances apart corresponding to the distances between the respective hammer actions, striker-fingers pivoted at one end to said blocks with their free ends extending horizontally into operative engagement with the respective hammer actions, a horizontal rail supported above said row of blocks, adjustable checks carried by the respective fingers to engage said rail to adjustably limit the up-stroke of the fingers, a horizontal rail supported below said fingers, regulating screws depending from said fingers to adjustably limit their down-stroke; striker-wires depending from the free ends of the respective fingers, the ends of the movable boards of the aforesaid pneumatics each having a plurality of

spaced holes affording a plurality of points for connection with the striker-wires whereby a point of connection may be selected which is substantially in alignment with the related striker-finger.

---



1,691,641. PRESSING-MACHINE MECHANISM. ALBERT B. CLISSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed June 12, 1924. Serial No. 719,693. 9 Claims. (Cl. 68—9.)

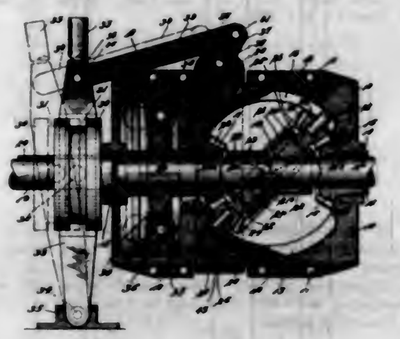
1. A pressing machine comprising a frame, co-operating pressing elements carried by the frame, and one movable toward and from the other, actuating mechanism for the movable element comprising a power member and motion transmitting connections between said member and the movable element including parts normally out of effective position and arranged to be carried to effective position to apply pressure to the movable element when said element is moved independently of the power member to closed position, said connections comprising a toggle including members, one connected to the movable element and the other to the frame, links pivoted respectively to the power member and to the toggle and connected together by a pivotal lost motion connection, and a stop for limiting the pivotal movement of the link pivoted to the toggle.

---

1,691,642. PRESSING MACHINE. ALBERT B. CLISSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 3, 1924. Serial No. 724,035. 12 Claims. (Cl. 68—9.)

1. In a pressing machine, the combination of cooperating pressing elements, one movable toward and from the other and means for actuating the movable element including a toggle comprising links pivoted together, one link being pivotally connected to the movable element and one of the toggle links comprising sections, one section being adjustable endwise relatively to the other, and the other section having an abutment, and the former section being slidable relatively to the latter into engagement with the abutment to form a stiff connection between the sections as the toggle closes and means for yieldingly holding the sections from relative endwise movement.

---

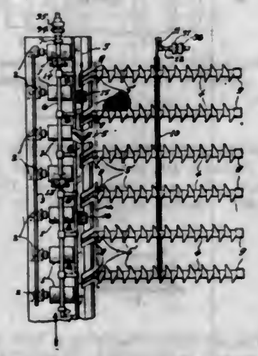


1,691,643. SPRING PAD. ALBERT B. CLISSON, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Feb. 24, 1926. Serial No. 90,424. 6 Claims. (Cl. 68—9.)

1. A pad for pressing machines, comprising opposing plates, springs between the plates, and stops projecting from one of the plates toward the other and being of less length than the springs the stops being distributed over the area of the plate from which they project.

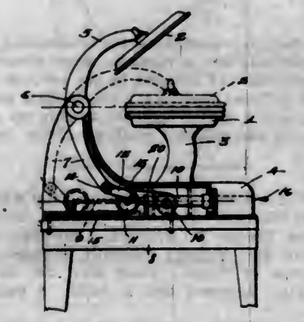
---

1,691,644. MECHANICAL MOVEMENT. JOSEPH S. CURRAN, Providence, R. I. Filed Apr. 6, 1928. Serial No. 267,979. 12 Claims. (Cl. 74—34.)



1. In mechanical movements, a rotatable sectional casing having opposed aligned bearings therein, internal arcuately shaped guide grooves in said casing, a shaft journaled in said casing having a cam journal member formed integral therewith or fixed thereto with its working peripheral face set on an angle to said shaft, a toothed gear rotatably mounted on said journal member and having means in engagement with said groove to hold said gear against rotation relative to said casing but adapted to impart a unitary motion to said gear with said casing, an internal friction band mounted in said casing, an operating lever and means associated therewith slidably keyed to said shaft and having means to expand said friction band to rotate said casing, an external friction band mounted on said casing and connected to said operating lever for holding said casing against rotation, a second shaft journaled in said casing, a pinion gear fixed to said shaft in engagement with said toothed gear to connect said shafts, whereby rotation of said shaft and cam journal member when said internal friction band is expanded will rotate the casing and other shaft in the same direction, or when said casing is free from frictional engagement with said internal friction band and held against rotation by said external friction band rotation of the shaft and pinion will rotate the shaft and cam journal member in the opposite or reverse direction.

---



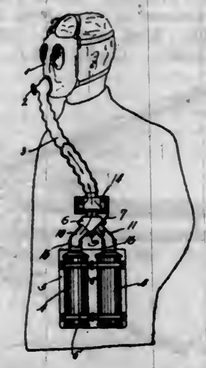
1,691,645. MECHANISM FOR PROCURING AND CONTROLLING THE BROADSIDE MOVEMENT OF METAL BARS. FRANK P. DAHLSTROM, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1927. Serial No. 178,436. 26 Claims. (Cl. 80—42.)

26. In mechanism of the class described, longitudinal conveying means for successively delivered bars, a cooling bed onto which are deposited successive sets of said bars in longitudinal alinement, automatic means set in operation by deposit of the last bar of each set for actuating said bed to move all the bars thereon broadside in unison, and means for further securing the actuation of said bed, for broadside movement of the bars thereon, at the will of an operator.

---

1,691,646. ACTUATING MECHANISM OR MECHANICAL MOVEMENT FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 9, 1926. Serial No. 100,985. 3 Claims. (Cl. 68—9.)

1. An actuating mechanism comprising a reciprocating prime mover, an oscillating driven element, connections between the prime mover and the driven element comprising a gear mounted on the reciprocating prime mover and having a rocking movement, an eccentric pin on the gear arranged when in starting position between the axis of the gear and the prime mover and movable through more than one half of a revolution and approximately three quarters of a revolution during the rocking of the gear and the movement of the prime mover in one direction, means for rocking the gear comprising a stationary rack with which the pinion meshes and a link connecting the eccentric pin and the oscillating driven element.



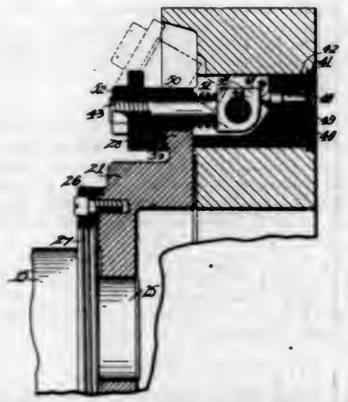
---

1,691,647. PROCESS FOR THE PREPARATION OF ANHYDRIDES OF ORGANIC ACIDS. FRITZ DOERINCKEL and MARTIN SCHLIEMANN, Leverkusen, near Cologne-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Jan. 21, 1927, Serial No. 162,675, and in Germany Jan. 28, 1926. 16 Claims. (Cl. 260—123.)

1. Process of preparing organic acid anhydrides, which comprises reacting a mixture containing the corresponding organic acid salt, a free organic acid, and a chloride of an element of the group including silicon titanium and tin, and separating the anhydride produced.

---

1,691,648. BREATHING DEVICE. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Alexander Bernhard Dräger, deceased. Filed Mar. 18, 1927, Serial No. 176,456, and in Germany Mar. 16, 1926. 2 Claims. (Cl. 128—141.)

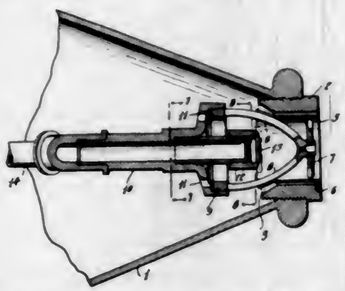


1. A breathing apparatus comprising a plurality of filter cartridges having inlets opening to the atmosphere, a chemical in one of said cartridges for purifying atmospheric air containing a certain poison, a different chemical in another one of said cartridges for purifying atmospheric air containing a different poison, a face piece, a conduit communicating therewith and terminating in a plurality of branches leading to said cartridges, an inhalation check valve inserted in said conduit and opening towards the face piece, an exhalation check valve inserted in the wall of said conduit at a point situated between said face piece and said inhalation check valve and opening to the atmopshere, and a valve means common to the branches of said conduit and adapted to shut off said branches selectively and individually.

---

1,691,649. CHUCK. ALDEN M. DRAKE, Greenfield, Mass., assignor to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1926. Serial No. 83,097. 5 Claims. (Cl. 279—1.)

1. In a machine tool chuck supporting and attaching means comprising, a work spindle having a face plate, a detachable work holding chuck having a recess to receive

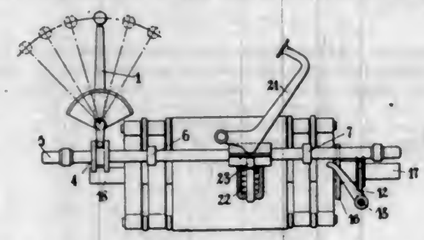


said face plate, and means to secure said chuck to said face plate, said face plate having a continuous circular flanged edge portion and said chuck having spaced clamp-

ing devices effective to engage any circumferential part of said edge portion and to secure said chuck firmly to said spindle in any angular relation relative thereto.

---

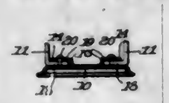
1,691,650. FUEL BURNER. OSCAR FALKENWALDE, Baltimore, Md., assignor of one-half to Robert H. Lyon, Baltimore, Md. Filed Aug. 16, 1924. Serial No. 732,549. 5 Claims. (Cl. 158—77.)



1. A burner of the class described having a shell, means at one end thereof to force air therethrough under pressure, a fan wheel adjacent the other end of said shell, and means to supply fuel into the shell substantially in line with said fan wheel and means mounting the fan wheel having a port therethrough for passing of a limited quantity of fuel.

---

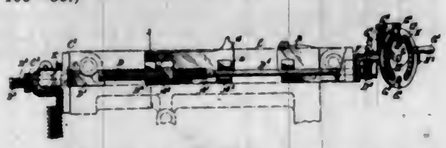
1,691,651. VARIABLE-SPEED GEAR. JOHN ALGERTON FURNESS, Bromley, England. Filed Dec. 19, 1927, Serial No. 241,188, and in Great Britain Dec. 23, 1926. 1 Claim. (Cl. 74—59.)



Variable speed gear of the epicyclic type comprising a driving and a driven shaft, a plurality of epicyclic gear trains adapted to provide a drive at different transmission ratios between said shafts, a brake member associated with each of the gear trains, a clutch adapted to engage the driving shaft with the driven shaft and thus provide a direct drive in high gear, selector members adapted to be moved in an axial direction and about their axes, a hand lever adapted to move axially said selector members to apply one or other of said brake members and enable as desired a driving connection through one or other of the gear trains to be obtained or to enable the clutch to be engaged for securing a drive in high gear, spring mechanism adapted to constrain the selector members to move about their axes in a given direction into the position to establish a driving connection, and a pedal adapted to move such selector members about their

axes in the reverse direction to interrupt the driving connection and permit a change in the transmission ratio to be effected.

---



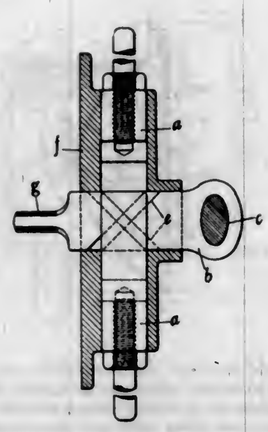
1,691,652. BOTTLE-CAPPING MACHINE. SIGMUND L. GOLDMAN, Chicago, Ill., assignor to Red Sun Products Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1927. Serial No. 209,708. 3 Claims. (Cl. 226—84.)

1. A capping machine comprising a base on which the article to be capped is supported, an upright rising therefrom and provided with a capping element, said base being formed with upwardly-deflected portions having lateral openings at the upper surface of said base and said upright being formed of legs having laterally-extending portions extending through said openings and beneath said deflected portions, and means securing said upright in position on said base.

---

1,691,653. LINE-CASTING MACHINE. ALFRED W. F. GUEST, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 22, 1928. Serial No. 263,611. 10 Claims. (Cl. 199—50.)

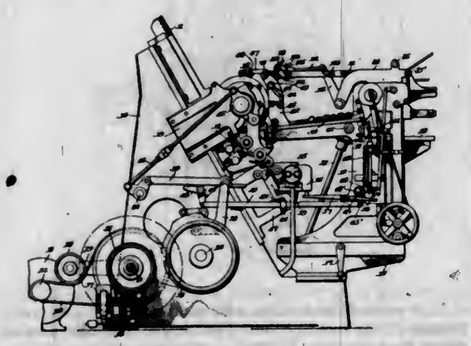
1. In a line casting machine, the combination of a movable line confining jaw, a rotatable screw operatively connected therewith and adapted by its rotation to adjust the jaw to different positions, a crank shaft for rotating the screw, and a device operable directly by said shaft for indicating the adjusted positions of the jaw.



---

1,691,654. PROCESS OF MAKING THICKENED LUBRICATING OIL. ROBERT W. HENRY, Port Arthur, Tex., and ELFORD D. STREETER, Bayonne, N. J., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Mar. 24, 1926, Serial No. 97,115. Renewed Oct. 3, 1928. 5 Claims. (Cl. 87—9.)

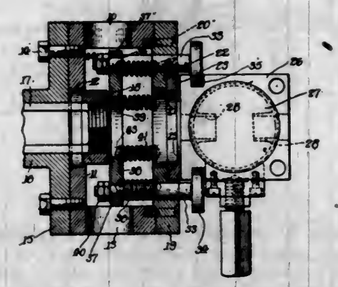
1. In the production of mineral castor oil of a constant viscosity and containing basic aluminum oleates, the process which comprises preparing an aqueous solution of soap, preparing a solution of an aluminum salt, and intermixing the two solutions in the presence of alkali, thereby precipitating a basic aluminum soap, and admixing the aluminum soap with mineral oil.



1,691,655. EMERGENCY-BOLT-OPERATING MEANS. CHARLES YEOMANS HOPKINS, Bordesley Green, Birmingham, England. Filed May 5, 1927, Serial No. 189,080, and in Great Britain May 31, 1926. 2 Claims. (Cl. 292—21.)

1. In emergency door bolts, the combination comprising a slidable actuating member formed on a pair of opposite sides with oppositely inclined slots, a pair of similarly formed slidable bolt members movable in opposite directions at right angles to the actuating member, an oblique integral projection on each bolt member adapted to engage one of the inclined slots of the actuating member, and a closely fitting body part adapted to enclose and support the adjacent portions of the bolt and actuating members, substantially as described.

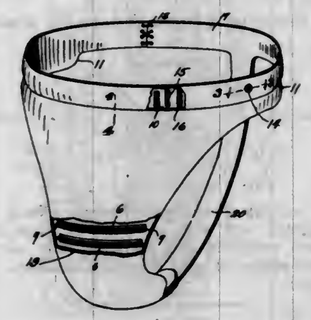
---



1,691,656. PRINTING PRESS. WILLIAM M. KELLY, Westfield, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 13, 1925, Serial No. 36,944. 25 Claims. (Cl. 101—278.)

1. In combination with a printing press having a reciprocating bed and an oscillating cylinder, receiving sheets at the lower side of the cylinder and printing them at one stroke, means for projecting the margins of the printed sheets from the cylinder during the terminal portion of the printing stroke, grippers moving towards and from the cylinder adapted to grasp said margins and strip the sheets from the cylinder at one end of their movement, and to open and release the sheets at the other end of their movement, and means to forward the sheets through the open grippers.

---

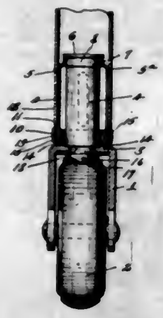


1,691,657. CHUCK. HERBERT E. KEMPTON, Chicago, Ill., and KEITH F. GALLIMORE and RAYMOND M. WOYTYCH, Fond du Lac, Wis., assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 20, 1924, Serial No. 721,172. Renewed Sept. 21, 1928. 4 Claims. (Cl. 279—1.)

3. A chuck having, in combination, a body, a face plate, a plurality of clamping members extending through said face plate, a disk having a lost motion connection with said members permitting a limited independent movement of each member, spring means for moving said members in one direction into clamping engagement with the work, and means for engaging said disk to move said members in the other direction.

---

1,691,658. PNEUMATIC GUARD. DANIEL J. KENNEDY, Yonkers, N. Y. Filed Feb. 17, 1928. Serial No. 255,033. 2 Claims. (Cl. 128—160.)

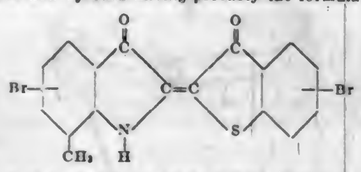


1. In an abdominal guard, a front pad of approximately triangular shape, a belt carrying the pad, and a strap connecting one angle of the pad with the rear portion of the belt, the front wall of the pad being made of flexible elastic material, and the rear wall of the pad being made of flexible inelastic material, whereby when the pad is inflated, it will assume a curved form and shape itself to the body of the wearer, means for inflating the pad, and transverse partitions connecting the front wall

of the pad with the rear wall of the pad, the ends of the partitions being spaced from the lateral edges of the pad to provide for a restricted shifting of air when the pad is subjected to pressure.

---

1,691,659. CASTER. FREDERICK K. KILIAN, Syracuse, N. Y. Filed Mar. 13, 1923. Serial No. 624,843. 1 Claim. (Cl. 16—39.)

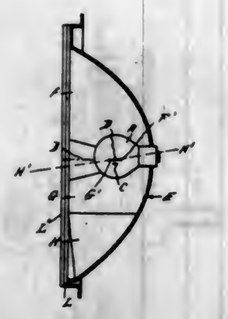


A caster for furniture and the like comprising a fork having an upwardly extending stud formed with a shoulder at its upper end and a resilient tubular shell on the stud and located below the shoulder, the shell being formed with lengthwise slots terminating short of its ends and being open at its ends and bulging between its ends, the shell also being provided at its lower end with an integral annular enlargement of greater diameter than the tubular portion of the shell, the outer face of the enlargement providing an exterior annular shoulder and raceways located within the enlargement and interposed between the bottom of the enlargement and the upper face of the fork around the stud.

---

1,691,660. VAT DYESTUFFS OF THE 2.2'-INDOLE-THIONAPHTHENE-INDIGO SERIES. CARL KRAUSS, Leverkusen-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 11, 1927, Serial No. 198,306, and in Germany June 15, 1926. 3 Claims. (Cl. 260—49.)

3. The new dyestuff having probably the formula—

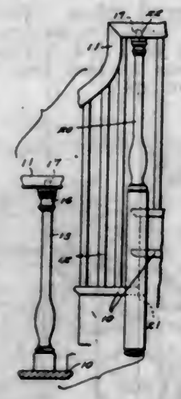


which is in a dry state a violet powder soluble in concentrated sulfuric acid with greenish-blue color dyeing the animal and vegetable fibre from a yellow vat beautiful clear violet shades of good fastness to chlorine, to boiling and to light.

---

1,691,661. VEGETABLE GLUE AND METHOD OF MAKING SAME. IRVING F. LAUCKS and GLENN DAVIDSON, Seattle, Wash., assignors to I. F. Laucks, Inc., Seattle, Wash., a Corporation of Washington. Original application filed Oct. 29, 1923, Serial No. 671,381. Divided and this application filed Mar. 9, 1927. Serial No. 174,093. 40 Claims. (Cl. 87—17.)

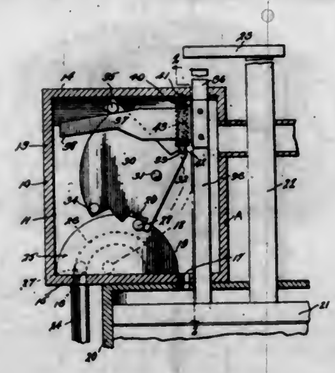
16. In an aqueous vegetable protein-containing adhesive an ingredient which functions as a water-resistance-increasing agent, the same being the reaction product of carbon bisulphide therewith.



1,691,662. AUTOMOBILE HEADLIGHT. CLARENCE A. MICHEL, Cleveland, Ohio, assignor to The Guide Motor Lamp Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 13, 1925. Serial No. 8,881. 2 Claims. (Cl. 240—41.)

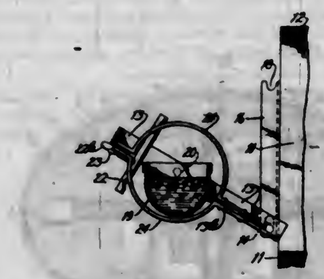
1. In a light projector, the combination with a reflector, of a lamp having two independently lighted filaments one of said filaments being located on the axis of the reflector and the other one below said axis, the upper and lower halves of said reflector having different focal lengths, the focus of the upper half of the reflector being at the rear of the filaments and the focus of the lower half of the reflector in front of said filaments, the filaments being located intermediate the focal points, the lower portion of the lower half of said reflector being tilted downwardly whereby rays of light from either filament will be reflected downwardly.

---



1,691,663. NEWEL POST. ROBERT E. MORRIS, Salisbury, Md., assignor to The Morris Brothers Company, Salisbury, Md. Filed Mar. 24, 1928. Serial No. 264,414. 2 Claims. (Cl. 20—10.)

1. A convertible landing and starting newel post, comprising a body having a base portion and a spindle portion rising from the base portion, a cap removably engaged on the upper end of the spindle portion and having a dowel extending upwardly from its upper end for engagement in an opening in the lower face of the hand-rail of a balustrade, and an upper newel post section having a socket in its lower end for the reception of said dowel, whereby the post serves as a landing newel when engaged with a hand rail and as a starting newel when carrying said section.

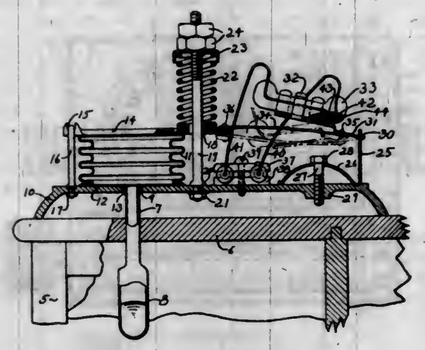


1,691,664. VALVE FOR WATER LIFTS. LOUIS E. MORRISON, Salida, Colo. Filed Oct. 16, 1924. Serial No. 744,035. 3 Claims. (Cl. 121—164.)

1. A valve structure of the character described, comprising a closed chest having an inlet, exhausts and a pair of outlets to an engine cylinder, an outlet, a sliding valve block acting when actuated to open or close one of said outlets and connect the other outlet with an exhaust, a pin member projecting from one face of said valve block, a quadrant body pivotally mounted within the chest and having a notch formed therein for loosely receiving said pin, a pair of spaced pin members upon one face of said body, a reciprocable arm within the chest alternately engaging the pin of said quadrant to oscillate the same upon its pivot and to cause the quadrant to impart reciprocatory movement to the valve block means controlling said quadrant for imparting a snap action to the movement thereof.

---

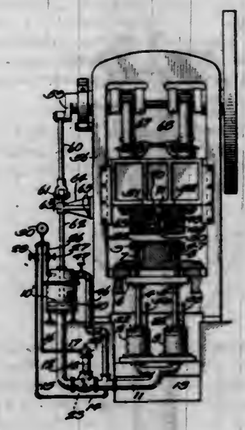
1,691,665. POULTRY-COOP DOOR AND TROUGH. FRANCIS X. MUDD, Chicago, Ill. Filed Dec. 1, 1927. Serial No. 236,958. 3 Claims. (Cl. 119—12.)



1. In combination with a hinged door for a poultry car, a trough pivotally supported on said door, the pivot points being located above the center of gravity of said trough.

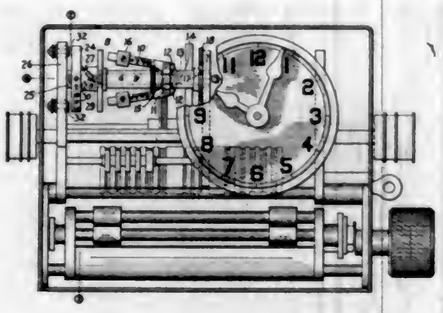
2. In combination with a door for a poultry coop pivotally mounted at its lower edge, a trough carried by said door and pivotally supported thereon, the pivot points of said trough being located above the center of gravity thereof.

3. In combination with a door for a poultry coop pivotally mounted on a horizontal axis, a trough carried by said door and pivotally mounted thereon, the pivot points of said trough being located above the center of gravity.



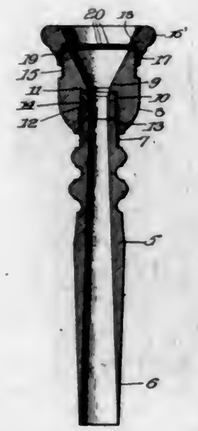
1,691,666. CONTROL FOR ELECTRIC CIRCUITS. GLENN MUFFLY, Detroit, Mich. Filed Nov. 26, 1926. Serial No. 150,714. 7 Claims. (Cl. 200—141.)

1. A control of the class described comprising a bellows adapted to be expanded and contracted in response to pressure variations, a plate overlying one end of the bellows and adapted to be moved by it, a flat spring member connected at one end to said plate and at the other end to a standard, said spring being held in arched position and being snapped from an arch in one direction to an arch in the other as said bellows expands and contracts, and a circuit make and break device connected with the spring and adapted to be actuated by its change of arch.



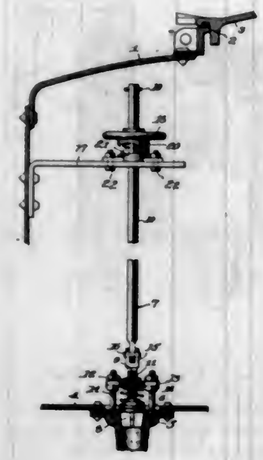
---

1,691,667. PUNCH PRESS. OLOF G. NILSON, Chicago, Ill., assignor to Press Cushion Co., a Corporation of Illinois. Filed Apr. 12, 1926. Serial No. 101,457. 29 Claims. (Cl. 113—46.)



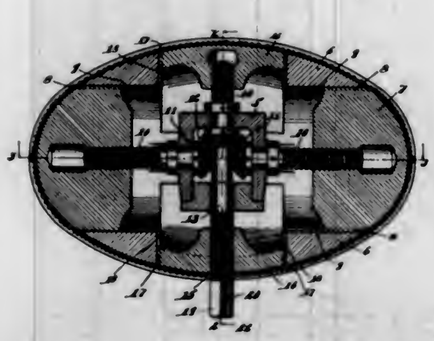
1. In combination, a punch press, a pressure pad moved in one direction by said press, separate means directly operated by the power which operates said press, for restoring said pressure pad to normal position, and means whereby the direct action of the restoring means itself will delay the operation of the said restoring means until the press has moved partly away from said pressure pad.

1,691,668. SPEED-CONTROLLING DEVICE FOR MOTOR VEHICLES. FREDERICK L. OHMER, Dayton, Ohio, assignor to John F. Ohmer, Dayton, Ohio. Filed Dec. 8, 1921. Serial No. 520,848. 6 Claims. (Cl. 200—80.)



1. In a speed controlling mechanism for automobiles and the like, a hollow shaft rotatably mounted in fixed bearings and having openings in the sides thereof, means for rotating said shaft, a rod slidably mounted within said hollow shaft and held against rotation therewith, weighted arms pivotally mounted on said hollow shaft and having parts extending through the openings therein and engaging said rod to impart longitudinal movement thereto, a circuit breaker and closer mounted near one end of said hollow shaft and comprising a member rotatable about an axis parallel with the axis of said shaft, and means actuated by the longitudinal movement of said rod to impart rotatory movement to said rotatable member.

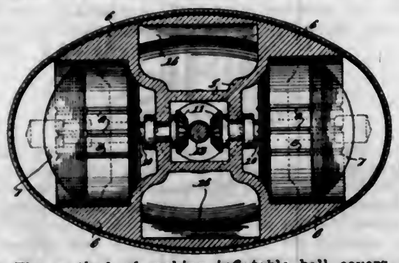
1,691,669. MUSICAL INSTRUMENT. WILLIAM J. OSTENDORF, Aurora, Ill. Filed Nov. 23, 1927. Serial No. 235,254. 2 Claims. (Cl. 84—399.)



1. A mouth-piece for "brasses" comprising a cup, a separate stem-portion detachably connected with said cup, said cup containing a socket presenting a shoulder and into which said stem extends, and a removable throat-forming member located in said socket and clamped in position therein by said shoulder and said stem-portion.

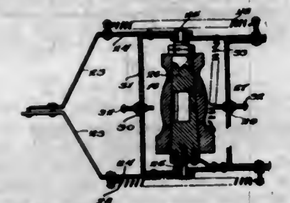
1,691,670. VALVE-EQUIPPED CONTAINER. OSTRANDER J. PARKS, River Forest, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed June 16, 1927. Serial No. 199,236. 20 Claims. (Cl. 137—21.)

1. In combination, a member having a valve seat, valve mechanism comprising a valve proper for engaging said seat and an operating rod having threaded engagement with a stationary part of the structure whereby said valve proper is movable toward and from said seat, and cam means operated automatically to resist accidental rotation of said valve mechanism in a direction to unseat said valve proper.

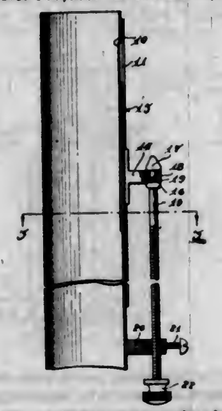


1,691,671. APPARATUS FOR MAKING INFLATABLE BALL COVERS. JOHN T. RIDDELL, Evanston, Ill. Filed Apr. 10, 1926. Serial No. 101,217. 3 Claims. (Cl. 69—8.)

1. A form member in the shape of the interior of a ball cover comprising a central frame having a portion thereof constituting a portion of the periphery of said form; guideways in said frame; end members movable in said guideways; and means for retracting and protruding said end members, substantially as described.

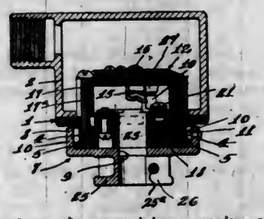


1,691,672. ART OF FORMING INFLATABLE-BALL COVERS. JOHN T. RIDDELL, Evanston, Ill. Original application filed Apr. 10, 1926, Serial No. 101,217. Divided and this application filed Dec. 29, 1926. Serial No. 157,605. 4 Claims. (Cl. 69—21.)



1. The method of making inflatable ball covers, comprising shaping and sewing coved parts together over a form and in the shape thereof; partially ripping said cover parts to permit removal from said form; removing the cover parts from the form; and then resewing said cover parts together substantially where ripped.

1,691,673. PRESSURE REGULATOR. LOUIS H. F. ROHE and SAMUEL ROHE, Mirando City, Tex., assignors of one-fourth to Johannes M. Rohe, Mirando City, Tex. Filed Apr. 30, 1926. Serial No. 105,791. 2 Claims. (Cl. 137—139.)



1. In a gas-regulating apparatus, a gas supply pipe, a cut-off valve in the gas supply pipe, a lever terminating in a yoke spanning the valve and mounted for rocking movement about the axis thereof, means for rocking said lever, a yoke disposed at the opposite side of the valve from the lever and connected with the valve, and a tension spring extending between and attached to said yoke and the lever whereby to yieldably maintain the lever in its raised or lowered position and hold the valve closed or opened.

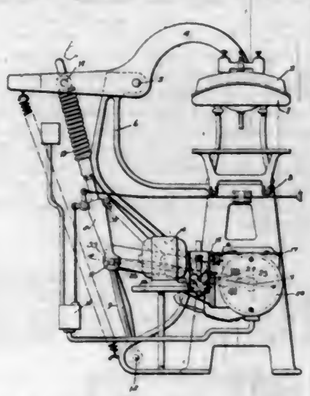
1,691,674. TUNING ATTACHMENT FOR PIPE-ORGAN PIPES. SILAS SILVERS, Detroit, Mich. Filed Apr. 30, 1926. Serial No. 105,660. 2 Claims. (Cl. 84—349.)

2. In combination with an organ pipe having an opening formed therein, a pair of guide members extending longitudinally of said pipe on the periphery thereof, one at each side of said opening; a closure for said opening slidably mounted between said guide members; a bracket projecting outwardly from said closure; a threaded stem projected through said bracket; a head on said stem engaging one side of said bracket; a head on said stem engaging the opposite side of said bracket, the portion of said stem between said brackets being reduced and projected through said bracket, rotatable therein; a bracket mounted on said pipe, said bracket having a threaded opening formed therein for the reception of a threaded portion of said stem, the rotation of said stem in said threaded opening effecting a movement of said plate longitudinally of said pipe and relatively to said opening; and a set screw threaded into said bracket for engaging said stem and locking the same against rotatable movement.

1,691,675. DROP-CORD ROSETTE. ELDA G. SMITH, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,922. 1 Claim. (Cl. 173—329.)

A drop cord rosette comprising a casing consisting of a ring-shaped base and a cap, the base having a cylindrical flange around the opening thereof and an outturned annular flange at the end of the cylindrical flange, the annular flange being formed with notches therethrough, and the cap being formed with notches therethrough, and the cap being formed with a cup-shaped portion to receive the cylindrical flange and with diametrically opposite shoulders for passing through the notches and interlocking with the annular flange upon successive endwise and partial rotary movement of the cap, a terminal block mounted on the base having hook-shaped terminals exposed to the opening in the base, and a terminal block on the cap having complemental hook-shaped terminals arranged to hook under the terminals associated with the base upon successive endwise and partial rotary movements of the cap.

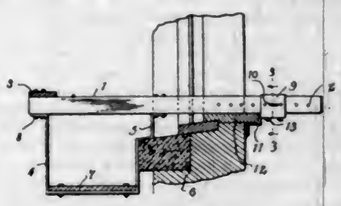
1,691,676. DENTAL IMPRESSION TRAY. ERNEST ROBERT SMITH, San Francisco, Calif. Filed May 18, 1926. Serial No. 109,856. 7 Claims. (Cl. 32—6.)



1. A dental impression tray comprising a pair of complementary sections, means including a nut having a plurality of symmetrically disposed cam faces for detachably clamping and unclamping said sections by a rotation of said nut in either direction.

1,691,677. MECHANISM FOR PRESSING MACHINES HAVING START AND STOP MOTORS. ALEXANDER J. SOCIA and JOSEPH P. DALY, Syracuse, N. Y., assignors, by mesne assignments, to The Prosperity Company, Inc., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,822. 15 Claims. (Cl. 68—9.)

1. In a pressing machine, the combination of cooperating pressing elements, one of which is movable toward and from the other, and mechanism for actuating the movable

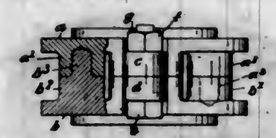


element including an intermittently rotatable shaft, motion transmitting means between the shaft and the movable element including a toggle, connections between the shaft and

the toggle for moving the toggle toward and from nearly straightened position, and additional connections between the shaft and the toggle for finally straightening the toggle and initially breaking the toggle.

---

1,691,678. WINDOW SCAFFOLD. SVEN GUNNAR SWANLIND, Chicago, Ill. Filed Apr. 6, 1927. Serial No. 181,476. 1 Claim. (Cl. 304—24.)

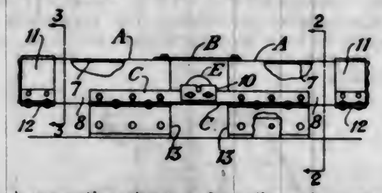


A window scaffold comprising two parallel bars of a length to project beyond opposite sides of a window sill, and having the inner end portion of each bar provided with a plurality of openings, a U-shaped hanger depending from the outer end portion of each of the bars and having its inner leg offset to provide a sill rest, a cross bar connecting the outer ends of the parallel bars and forming a guard, a staging connecting the lower portions of the hangers, cuffs adjustable on the inner ends of the parallel bars, pins adapted to pass through openings in the sides of the cuffs and selected openings of the parallel bars to secure the cuffs in the required adjusted position, and hooks carried by the cuffs to engage the stool of the window.

---

1,691,679. METHOD OF PRODUCING ANTHRAQUINONE SULPHONIC ACIDS. JOHN THOMAS, Carlisle, England, assignor to Scottish Dyes Limited, Carlisle, England. Filed Jan. 10, 1923, Serial No. 611,848, and in Great Britain Jan. 18, 1922. 1 Claim. (Cl. 260—57.)

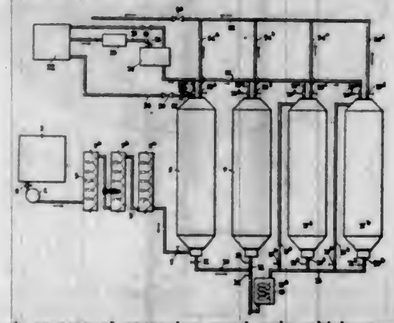
The process which consists in sulphonating about 100 parts of anthraquinone with about 210 parts of oleum containing 40% free $SO_3$, bringing down the sulphuric acid to a strength of about 80% by addition of about 500 parts of concentrated sulphuric acid of about 94–98% strength by weight, and about 90 parts of water, filtering off the alpha disulphonic acids which crystallize out, adding to the filtrates a mercury compound equivalent to about 3.5% of mercurous sulphate and heating at a temperature of about 180° C. for about 10 hours.



1,691,680. LINK FOR USE IN COAL-CUTTING MACHINES AND THE LIKE. THOMAS JOHNSON THOMPSON, Sunderland, England. Filed Jan. 21, 1928, Serial No. 248,427, and in Great Britain Dec. 6, 1926. 2 Claims. (Cl. 74—32.)

1. A link of the kind described comprising two complementary side plates, each plate having two bosses on one side thereof, dowel pins projecting from two of the bosses and recesses in the other complementary bosses into which said dowel pins are adapted to engage, a lug on each side plate adjacent the outer edge thereof, and means for clamping said lugs together.

---

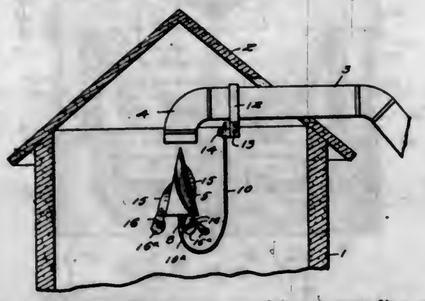


1,691,681. CONVEYER OF THE BELT TYPE. JAMES THOMSON, Glasgow, Scotland, assignor to Mavor and Coulson, Limited, Glasgow, Scotland. Filed Jan. 14, 1928, Serial No. 246,778, and in Great Britain Jan. 18, 1927. 4 Claims. (Cl. 198—129.)

1. A supporting structure for rollers of a conveyer of the belt type, comprising longitudinal units of inverted trough formation, each unit having a roofing and downwardly extending sides, connection means for connecting units arranged end to end with an intervening space between their adjacent ends, said connection means comprising a roofing extending longitudinally over the intervening space, carriers extending longitudinally across said intervening space, one carrier at each side, said carriers being at a distance below the level of the roofing, mountings on the longitudinal units for rollers for the upper run of the belting, mountings on the carriers for rollers for the lower run of the belting, the upper run being above the roofing the lower run being below the roofing, and pedestal supports at the ends of the longitudinal units, for the purposes set forth.

---

1,691,682. PROCESS AND APPARATUS FOR PRODUCING WOOD PULP. CARL BUSCH THORNE, Hawkesbury, Ontario, Canada. Filed Apr. 5, 1926. Serial No. 99,914. 16 Claims. (Cl. 92—7.)



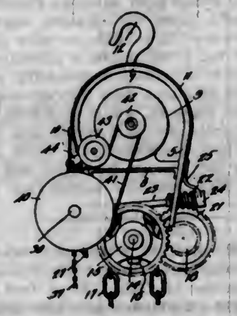
1. A process of preparing wood pulp which comprises injecting a preheated liquor into wood chips in a digester against a substantially constant pressure derived from an external gas and causing a circulation of said liquor in the digester, pressure for said circulation being derived from said external gas.

---

1,691,683. AUTOMATIC ENSILAGE DISTRIBUTOR FOR SILOS. HERBERT A. TOWNSEND, Stockton, Ill. Filed Jan. 15, 1926, Serial No. 81,495. Renewed Apr. 12, 1928. 2 Claims. (Cl. 198—128.)

1. An ensilage distributor comprising a spreading element, impelling elements secured to the spreading element, scattering elements pivoted to the impelling elements, and elements for supporting the scattering elements in different positions with respect to the impelling elements.

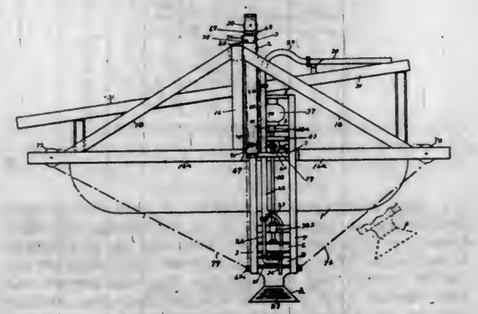
---



1,691,684. SAFETY LIGHTING DEVICE FOR VEHICLES. HARRY W. TROMANHAUSER, Waterloo, Iowa. Filed Aug. 12, 1927. Serial No. 212,523. 3 Claims. (Cl. 40—133.)

1. In a device of the character described, a signal carrying device comprising a bracket clamping means mounted removably upon a projecting part of a vehicle, a base body rockingly mounted upon said clamping means, means for resiliently yieldingly controlling the rocking movements of said base body, a lighting device mounted upon said base body, and a windowed housing removably mounted upon the base body surrounding said lighting device.

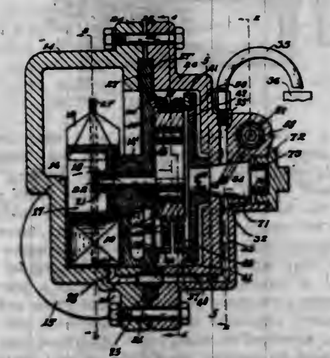
---



1,691,685. HOIST. THEODORE ULMER and GOTTLIEB ULMER, Alpena, S. Dak. Filed May 9, 1923. Serial No. 637,782. 1 Claim. (Cl. 254—168.)

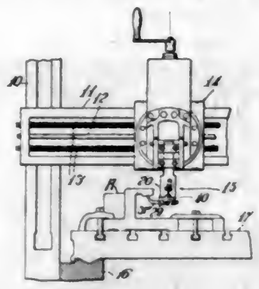
In a portable hoist a frame including a pair of end sections, the upper portions of the end sections being curved, a curved cover plate connecting the end sections, each end section including a lower bar, a shelf supported between the end sections and defining a motor support, gearing supported by the frame, a motor on the motor support for operating the gearing and a hook member secured to the curved cover plate, and said hook member adapted to be positioned in a supporting eye.

---



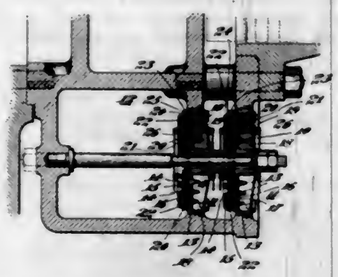
1,691,686. HYDRAULIC DREDGING MECHANISM. LEROY VORHIES, Denver, Colo. Filed Apr. 28, 1927. Serial No. 187,361. 5 Claims. (Cl. 37—63.)

2. In a hydraulic dredge, the combination with a boat provided with a frame carrying a horizontally disposed journal, of a vertically disposed open sleeve rotatably mounted on said journal; a frame slidably mounted in said sleeve; a ground engaging member mounted on the lower end of said slidably mounted frame, said ground engaging member being provided with a sand channel and two water channels, the water channels being open at the tops, each water channel being provided with an intake at the side and a tapered discharge at the bottom and a horizontally disposed centrifugal sand pump mounted on said ground engaging member and provided with two outlets.



---

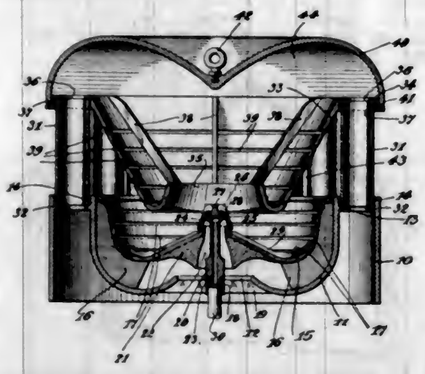
1,691,687. PIPE-LINE SAMPLING DEVICE. JOHN S. WATTS, Los Angeles, Calif. Filed Dec. 7, 1925. Serial No. 73,715. 7 Claims. (Cl. 73—21.)



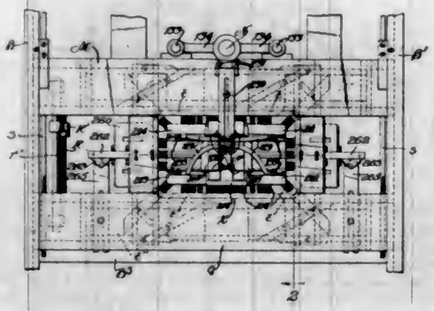
1. In an organization of the general character described: a main member interposable in a pipe line through which a fluid is advancing under pressure, said member providing a main passage, with which a subsidiary passage communicates, and a completely closed rotor chamber, said passages and chambers having walls adapting them to resist internal pressure; a revolving rotor in said chamber, operated by the main stream of fluid passing through the pipe line; and means, driven by said rotor, for causing successive unit quantities of fluid to advance through said subsidiary passage.

1,691,688. TOOL HOLDER. DANIEL D. WELLS, Albuquerque, N. Mex. Filed July 27, 1925. Serial No. 46,231. 11 Claims. (Cl. 90—52.)

1. In a metal working machine, a rigid head portion terminating at the bottom in a rearwardly depending spindle, a bit-holding member journaled on said spindle so as to have lateral swinging movement and disposed forwardly beneath said head portion, the head portion and said member being provided with interengaging surfaces whereby the extent of swinging movement is controlled, and controllable means for yieldingly holding said member in its operative positions.



1,691,689. VALVE. ARTHUR J. WEST, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Sept. 25, 1925. Serial No. 58,647. 5 Claims. (Cl. 251—119.)



5. In a valve, the combination of a seat member, a backing member, studs carried by the seat member for detachably supporting and spacing the backing member with respect to the seat member, a plate valve arranged between the backing and seat members and having openings for the studs, a plurality of bearing faces spaced equi-distantly angularly on the backing member and so arranged that when in position the uppermost of said faces will be substantially horizontal, and a plurality of lips extending laterally from the plate valve and spaced equi-distantly angularly and the uppermost one of said lips being arranged to engage the uppermost one of said bearing faces to sustain the weight or load of the valve in service.
